Attention: **Ms. Laurel McCreight, MCIP, RPP**

Dear Laurel:

Reference: **1200 Maritime Way - Claridge Development**
Serviceability and Stormwater Management Report

Enclosed is the Serviceability and Stormwater Management Report for the proposed 1200 Maritime Way development located along the Highway 417, Kanata Avenue and Maritime Way in the City of Ottawa. This report is submitted in support of the zoning amendment/site plan control applications and outlines how the site will be serviced with public infrastructure.

Trusting this report is adequate for your purposes. Should you have any questions, or require additional information, please contact me.

Yours truly,

NOVATECH

Greg MacDonald, P. Eng.
Director, Land Development and Public Sector Infrastructure

1.0 INTRODUCTION

Novatech has been retained by Claridge Homes to prepare a Servicing and Stormwater Management Report for the proposed residential development located 1200 Maritime Way within the City of Ottawa. The site is located between Maritime Way and Highway 417 and is part of the Kanata Town Centre – Central Business District (KTC-CBD). The purpose of this report is to support the site plan application for the subject development. **Figure 1** Key Plan shows the site location.

2.0 EXISTING CONDITIONS

The subject site has an approximate area of 1.24 hectares and is currently undeveloped. The site is bound by Maritime Way and Townplace Suites to the north, Vacant Land to the East, Highway 417 to the south and Timberwalk Retirement Home to the West. The site is generally flat with a gradual slope from the south to the north. The site currently contains a number of fill piles ranging in 1-2m in height in the southern portion of the site from previous development activities within the Business District. It should be noted that the Northern portion of the site also once contained a stormwater management pond which has since been filled in. **Figure 2** depicts the existing site conditions.

The Subject site is part of the Kanata Town Centre, Central Business District which was designed by JL. Richards and design information is provided in the following reports:

- Kanata Town Centre, Central Business District, Stormwater Management Report, J.L. Richards, January 1999 (Referenced as JLR Report)
- Servicing Brief (Revised) – Kanata Town Centre Central Business District Subdivision, Technical Memorandum, J.L. Richards, June 13, 2012
- Kanata Town Centre Central Business District Master Design Sheet Update – Sanitary Peak Flows Block 4, Block 5 and Block west of Block 9 (Zone 122), J.L. Richards, August 18,2017 (Referenced as JLR Memo).

3.0 PROPOSED DEVELOPMENT

The proposed development will include two (2) apartment buildings interconnected by a central access and a joint underground parking structure. The proposed buildings will be referred to the East Tower and West Tower for the remainder of the report. It is proposed to develop the site in two (2) phases with Phase 1 including the West Tower, central entrance, and the parking structure outside the footprint of the East Tower, and Phase 2 including the East tower and the parking structure below.

The West Tower will have a seven (7) storey podium and a twenty-eight (28) storey tower with an overall footprint of 1968m^2, and a total of 315 units. The East Tower will have a seven (7) storey podium and a thirty (30) storey tower with an overall footprint of 2489m^2, a total of 315 units, and 398m^2 of commercial area. The overall development will provide 634 parking spaces. **Figure 3** shows the proposed development.

Access to the site will be provided from the proposed central entrance from Maritime Way.

4.0 SITE CONSTRAINTS

A geotechnical investigation was completed by Paterson Group Inc. and a report prepared entitled 'Geotechnical Investigation, Proposed High-Rise Development', Report PG5281-1, dated July 16, 2020. The report included the following recommendations:

- Inferred bedrock surface was encountered at depths ranging from approximately 3.7 m at the west end of the site, descending to depths of approximately 16.2 m on the east end of the site.

- The long-term groundwater table can be expected at approximately 4 to 5 m below ground surface. It should also be noted that groundwater levels are subject to seasonal fluctuations. Therefore, the groundwater level could vary at the time of construction.

- Due to the presence of the silty clay deposit, a permissible grade raise restriction of 2 m is recommended for grading at the subject site. If higher than permissible grade raises are required, preloading with or without a surcharge, lightweight fill, and/or other measures should be investigated to reduce the risks of unacceptable long-term post construction total and differential settlements.

- The excavation side slopes above the groundwater level extending to a maximum depth of 3 m should be excavated at 1H:1V or shallower. The shallower slope is required for excavation below groundwater level. The subsurface soils are considered to be a Type 2 and 3 soil according to the Occupational Health and Safety Act and Regulations for Construction Projects.

- A temporary Ministry of Environment, Conservation and Parks (MECP) permit to take water (PTTW) may be required if more than 400,000 L/day of ground and/or surface water are to be pumped during the construction phase. At least 4 to 5 months should be allowed for completion of the application and issuance of the permit by the MECP.

- For typical ground or surface water volumes being pumped during the construction phase, typically between 50,000 to 400,000 L/day, it is required to register on the Environmental Activity and Sector Registry (EASR). A minimum of two to four weeks should be allotted for completion of the EASR registration and the Water Taking and Discharge Plan to be prepared by a Qualified Person as stipulated under O.Reg. 63/16. If a project qualifies for a PTTW based upon anticipated conditions, an EASR will not be allowed as a temporary dewatering measure while awaiting the MECP review of the PTTW application.

5.0 SANITARY SEWER

There is an existing 825mm diameter sanitary sewer within the Martime Way right-of-way along the frontage of the proposed development. It is proposed to service the East and West towers with individual 200mm services. The East Tower service will connect directly to the existing sewer within the Maritime Way right-of-way. The west tower will be serviced by connecting to the existing private service for the neighboring Timberwalk Retirement Home, which ultimately discharges to the Maritime Way sewer.

Sanitary flows for the proposed development were calculated using criteria from Section 4 of the City of Ottawa Sewer Design Guidelines as follows:

- Residential Average Flow = 280 L/capita/day
- 1 Bed apartment = 1.4 Person/unit
- 2 Bed apartment = 2.1 Person/unit
- Commercial flow = 125 L/seat/day
- Residential Peaking Factor = Harmon Equation (max peaking factor = 4.0)
- Commercial Peaking Factor = 1.0
- Peak Extraneous Flows (Infiltration) = 0.33L/s/ha

The peak sanitary flow including infiltration for the proposed development was calculated to be 12.11 L/s with 6.01 L/s for the West Tower, and 6.10L/s for the East Tower. Detailed sanitary flow calculations are provided in **Appendix B** for reference.

The existing 825 mm diameter sanitary trunk sewer on Maritime Way was designed by J.L. Richards in 1998 to accommodate the development of the KTC-CBD subdivision and upstream lands. At the time of the original design of the trunk sewer the land parcels were designated for commercial use and the sanitary flows were estimated using 50,000 L/ha/day per Ministry guidelines. Subsequently, land uses for various blocks have changed to include residential use. The original sanitary sewer design sheet for the 825mm diameter trunk sewer has been revised by J.L. Richards within the JLR Memo and is included in **Appendix C** for reference. The JLR Memo included the change in land use for Block 122 (Claridge lands at 1250 Maritime Way) as well as Blocks 4 and 5 east of Maritime Way and north of the stormwater management facility. J.L. Richards noted an increase in the theoretical design flows at the junction of Teron Road and Campeau Drive from 475.94 L/sec to 480.24 L/sec, with a potential capacity of 838.6 L/s.

The proposed site was designated as part of Block 9 in the above analysis and was assumed to be a commercial site with a flow of 50,000L/ha/day. With an area of 1.23ha this equates to an assumed peaked flow of 1.07L/s. Thus, the proposed development will result in an increase of 11.07L/s when compared to the previous design.

In addition to the proposed development, other developments have since been constructed that will impact the capacity of the downstream system. As such we preformed a review of the downstream system, utilizing the available reports and aerial mapping data under two (2) scenarios. The first scenario utilized the same design criteria as the original JLR design. The second scenario was preformed using the current City of Ottawa Guidelines listed above.

The first analysis using the original design guidelines indicates that several downstream pipes would be surcharging with a maximum of 109% of the available pipe capacity. Although the original design parameters were highly conservative which is why the City of Ottawa has since revised the standards.

Utilizing the current design guidelines indicates that all pipes in the downstream system will have capacity with the worst pipe having a flow of 93% of the pipe capacity. It should be noted that even the current design standards are conservative and are not representative of the real-world flow values.

As, such we do not anticipate any negative impacts due to the proposed development. Refer to **Appendix C** for detailed calculations

6.0 STORM SEWER AND STORMWATER MANAGEMENT

There is an existing 1650mm diameter storm sewer within the Maritime Way right-of-way fronting the proposed development. There is also an existing 375mm diameter private storm sewer on the adjacent Timber walk Retirement home property to the west, which ultimately discharges to the 1650mm sewer in Maritime Way. It is proposed to service the subject development with connections to both the existing 1650mm Storm Sewer and the private 375mm sewer. In total there are four (4) proposed connections; one (1) connection to the private 375mm sewer and three (3) connections to the existing 1650mm sewer. The connection to the private sewer will be an uncontrolled 300mm diameter foundation drainage connection for the West Tower. The three (3) connections to the 1650mm sewer include: a 300mm diameter foundation drain connection for the East Tower, a controlled 375mm diameter rear yard drainage system, and a controlled 450mm diameter cistern outlet. Refer to the General Plan of Services (120144-GP) for details.

Through correspondence with the City of Ottawa it is understood that the existing hydraulic Grade line (HGL) within the storm sewer is quite high fronting the site. The existing HGL varies in elevation from 94.30-94.40m along the frontage of the site. As such it is proposed to place the service connection inverts at or above the existing HGL at the building connection to mitigate potential flooding issues. It is also proposed to provide a pump within the proposed Cistern maximize the available storage while avoiding potential tailwater issues. Refer to **Appendix C** for details.

6.1 Storm Water Management Criteria

Stormwater management (SWM) design criteria for the proposed development were established by the City of Ottawa Sewer Design Guidelines (October 2012), and within the JLR Report. The SWM design criteria are as follows:

- Control post-development peak flows up-to and including the 100-year storm event to the allowable release rate. Provide on-site water quantity control for all flow in excess of the allowable release rate. The allowable release rate is to be determined by applying the following parameters to the site area:
    - A runoff coefficient of 0.8 (refer to Dwg 15712-STM in **Appendix C**)
    - A time of concentration of 20 minutes
    - A 5-year intensity using the City of Ottawa Intensity-Duration-Frequency (IDF) curves
- Minimize the impact on the downstream receiving watercourses by minimizing the potential erosion and volume of sediment entering the watercourses both on a temporary basis (during construction) and on a permanent basis.
- Provide guidelines to ensure that site preparation and construction is in accordance with the current Best Management Practices for Erosion and Sediment Control.

6.2 Existing Site Drainage

As mentioned previously the site is currently undeveloped and contains several a number of fill piles ranging in 1-2m in height in the southern portion of the site. The site generally drains towards Maritime Way, with a small amount of drainage directed towards the highway 416 corridor due to obstructions caused by the fill piles.

6.3 Quantity Control

The allowable release rate for the 1.24 ha site was calculated to be 193.4 L/s based on the SWM criteria provided within the JLR report.

Design Storms

The design storms are based on City of Ottawa design storms. Design storms were used for the 5 and 100-year return periods (i.e. storm events).

Model Parameters

Post-development catchments were modelled based on the proposed site plan and grading as shown on **Drawing 120144-SWM,** within **Appendix C**. All the sub-catchments over proposed underground parking areas are assumed to be 100% impervious. The building roofs were assumed to have no depression storage.

The site has been divided into six (6) drainage areas for the post development condition. The drainage areas are as follows:

Area A-01, R-01, R-02

- Flows from the proposed central access, West Tower Roof and East Tower Roof will be conveyed to the existing storm sewer in Maritime Way. These flows will be captured by area drains, and roof drains which will be conveyed to a proposed cistern under the main entrance within the P1 level of underground parking garage. Flows from the cistern to the existing sewer in Maritime Way will be pumped to the proposed service, where the flows will drain by gravity to the existing sewer system. The pump (designed by the mechanical consultant) is required to convey flow at 133 L/s. A “stand-by”pump will be provided for emergency and/or maintenance purposes. An emergency back-up power supply will also be provided. The storm service will be equipped with a backflow prevention device to protect the building from any potential sewer back-ups. Storage will be provided for storms up to and including the 100-year event within the cistern. Flows in excess of the 100-year event will overflow through a proposed 150mm overflow pipe, and a vented lid will be provided on the tank for emergencies which will convey flows directly to the Maritime Way right-of-way.

Area A-02:

- Flows from the proposed landscaped area on the southern portion of the property will be captured by a proposed storm system consisting of landscape drains catch basins, and catchbasin manholes that will convey flows to the existing Maritime Way sewer system. The proposed system will include a 152mm orifice and will store flows within the underground pipe system. Flows in excess of the 100-year event will overflow though the catch basin lids and be conveyed through the swale system to Maritime Way Right-of-way.

Area D-01:

- The drainage along the frontage of the property will flow uncontrolled to the Maritime Way Right of way

Area D-02:

- A small portion of the landscaped area at the rear of the East Tower will drain uncontrolled to the Highway 416 corridor.

Table **6.1 below** summarizes the flow, storage required, and storage provided for each of the site drainage areas.

Table 6.1 Stormwater Management Summary

Area ID	Area (ha)	1:5 Year Weighted Cw	Orifice Size & Type	5 Year Storm Event			100 Year Storm Event		
				Flow (L/s)	Req Vol (cu.m)	Max. Vol. Provided (cu.m.)	Flow (L/s)	Req Vol (cu.m)	Max. Vol. Provided (cu.m.)
D-01	0.029	0.57	N/A	4.8	N/A	N/A	9.2	N/A	N/A
D-02	0.008	0.20	N/A	0.50	N/A	N/A	1.0	N/A	N/A
A-02	0.290	0.38	150mm Plate	32.0	9.65	27.91	49.6	23.81	27.91
A-01, R-01, R-02	0.910	0.90	Pump	133.0	62.57	294.41	133.0	205.72	294.4
Post-Development Release Rate				**170.3**			**192.8**		
Allowable Release Rate				**193.4**			**193.4**		

Refer to **Appendix C** for Rational and Modified Method calculations, and **Drawing STM** Post Development Drainage Area Plan.

6.4 Water Quality Control

The proposed site is tributary to the downstream SWM facility which has been designed to provide quantity and quality control for the proposed development as detailed within the JLR Report. Refer to **Appendix C** for excerpts.

6.5 Major Overland Flow Route

A major overland flow route will be provided for storms greater than the 100-year storm event. Stormwater will be directed to the Maritime Way right-of-way. The major overland system is shown on the Grading Plan (drawing 120144-GR).

7.0 WATERMAIN

There is an existing 600mm watermain, and a 200mm local watermain within the Maritime Way right-of-way fronting the development. It is proposed to provide service to the proposed development by connecting to the existing 200mm local watermain with two (2) 200mm services separated by an isolation valve to provide redundancy.

The proposed water service will be sized to provide both the required domestic water demand and fire flow. A shut-off valve will be located on the proposed service at the property line and a water meter and remote water meter will be provided. The proposed buildings are to be sprinklered and will be equipped with a Siamese connection located near the front entrance of each building, within 45m of a fire hydrant. Refer to the General Plan of Services drawing (120144-GP) for servicing details.

Water demand calculations have been calculated using criteria from Section 4 of the City of Ottawa Water Distribution Guidelines and the Ontario Building Code. The required fire demand was calculated using the Fire Underwriters Survey (FUS) Guidelines. The water demand and fire flow calculations are provided in **Appendix D** for reference. A summary of the water demand and fire flows are provided in **Table 7.1**.

Table 7.1: Domestic Water Demand Summary

Building	Population	Commercial Area (m^2)	Ave. Daily Demand (L/s)	Max. Daily Demand (L/s)	Peak Hour Demand (L/s)	Fire Flow (L/s)
West Tower	526	0	1.70	4.26	9.38	100
East Tower	533	399	1.87	4.54	9.89	117
Total Domestic Demands	**1059**	**399**	**3.58**	**8.80**	**19.27**	

Detailed calculations are included in **Appendix D – Fire Demand.**

This water demand info was submitted to the City to obtain boundary conditions from the City's water model. Once the requested boundary conditions are received, calculations will be performed to ensure that adequate pressure is available to service the proposed development.

8.0 EROSION AND SEDIMENT CONTROL

Temporary erosion and sediment control measures will be implemented on-site during construction in accordance with the Best Management Practices for Erosion and Sediment Control. This includes the following temporary measures:

- Filter socks (catchbasin inserts) will be placed in existing and proposed catchbasins and catchbasin manholes, and will remain in place until vegetation has been established and construction is completed;
- Silt fencing will be placed along the surrounding construction limits;
- Mud mats will be installed at the site entrances;
- Strawbale or rock check dams will be installed in swales and ditches;
- The contractor will be required to perform regular street sweeping and cleaning as required, to suppress dust and to provide safe and clean roadways adjacent to the construction site;

Erosion and sediment control measures should be inspected daily and after every rain event to determine maintenance, repair or replacement requirements. Sediments or granulars that enter site sewers shall be removed immediately by the contractor. These measures will be implemented prior to the commencement of construction and maintained in good order until vegetation has been established. Refer to the Erosion and Sediment Control Plan (drawing 120144-ESC) for additional information.

9.0 CONCLUSIONS

Watermain

The analysis of the existing and proposed watermain network confirms the following:

- The two (2) proposed 200mm dia. watermain services which connect to he existing 200mm dia. watermain in Maritime Way will service the proposed development.
- It is anticipated that there are adequate pressures in the existing watermain infrastructure to meet the required domestic demands for the development.
- It is anticipated that there is adequate flow to service the proposed fire protections system.

Sanitary Servicing

The analysis of the existing and proposed sanitary system confirms the following:

- It is anticipated there is adequate capacity within the existing sanitary infrastructure to service the proposed development based on the information provided in the existing JLR Memo, and the available mapping data.

Stormwater Management

The following provides a summary of the storm sewer and stormwater management system:

- The proposed storm sewer system is to connect to the existing 1650mm diameter storm sewer in Maritime Way.
- Underground storage is be provided within the storm sewer system and underground Cistern.

- Inlet control devices and underground storage have been designed to ensure no static ponding is achieved in the 2-year event.
- Storm flows will be attenuated through the implementation of inlet control devices.
- Parking lots have been graded to ensure that static ponding depths do not exceed 0.30m.
- As per existing conditions a major overland flow route is provided to Maritime Way.
- Quality control of stormwater will be provided in the downstream SWM facility.

Erosion and Sediment control

- Erosion and sediment control measures (i.e. filter fabric, catchbasin inserts, silt fences, etc.) will be implemented prior to construction and are to remain in place until vegetation is established.

Please contact the undersigned should you have questions or require additional information.

FLOW l/s	PEAK DESIGN FLOW L/S	LENGTH (m)	PIPE SIZE (mm)	SLOPE %	CAPACITY (L/s)	FULL FLOW VELOCITY (m/s)	RATIO (Q/Qfull)

1) As per Kanata Town Centre Sanitary Trunk Sewer Study revised March 27, 1996 by Robinson Consultants Inc.
2) Park or open space area.
3) Equivalent population base on 208 rooms and 20 staff members.
4) Allowance for an ultimate flow of 188 l/s to provide flexibility in future development as per Kanata Town Centre Sanitary Trunk Study.
5) Additional flow associated with hotel amendities including swimming pool with bathrooms and laudry as per design calculations for Block 1 provided by WSP (October 2016).
6) Additional flow associated with overall amenities including beauty salon, staff, dining and laundry as per design calculations for 1250 Maritime Way (Timberwalk Retirement Home) provided by Novatech (July 31, 2017).

Design Parameters:

1) Q(p) = (PxqxM/86,400)
2) Q(d) = Q(p) + Q(e)

Definitions:

P = Population
q = Average per capita flow = 350 L/person/day
M = Residential Peaking Factor (Harmon Formula from section 4.4.1 of the City Sewer Design Guidelines):
M = 1+[14/(4+Pop/1000)^1/2]*1 - (Maximum of 4.0)

Q(d) = Design Flow (L/sec)
Q(p) = Population Flow (L/sec)
Q(r) = Commercial Flow (L/sec)
Q(e) = Extraneous Flow (L/sec) 0.28 l/s/ha

Units		
Single	**3.4**	pers/unit
Town	**2.7**	pers/unit
Hotel/ Apartmentt	**1.8**	pers/unit
Retirement Home	**1.6**	pers/unit
Commercial Flow	**50000**	L/ha/day
Commercial Peak Factor	1.5

Notes:
1) As per Kanata Town Centre Sanitary Trunk Sewer Study revised March 27, 1996 by Robinson Consultants Inc.
2) Park or open space area.
3) Equivalent population base on 208 rooms and 20 staff members.
4) Allowance for an ultimate flow of 188 l/s to provide flexibility in future development as per Kanata Town Centre Sanitary Trunk Study.
5) Additional flow associated with hotel amendities including swimming pool with bathrooms and laudry as per design calculations for Block 1 provided by WSP (October 2016).
6) Additional flow associated with overall amenities including beauty salon, staff, dining and laundry as per design calculations for 1250 Maritime Way (Timberwalk Retirement Home) provided by Novatech (July 31, 2017).
7) JLR Spreadsheet up-dated to include development flows from 1200 Maritime Way. Reference Appendix A of Serviceability Report for 1250 Maritime Way attached in Appendix of 1200 Maritime Way Serviceability Report (Novatech January 28, 2021)..

Design Parameters:

1) Q(p) = (PxqxM/86,400)
2) Q(d) = Q(p) + Q(e)

Definitions:
P = Population
q = Average per capita flow = 350 L/person/day
M = Residential Peaking Factor (Harmon Formula from section 4.4.1 of the City Sewer Design Guidelines):
M = 1+[14/(4+Pop/1000)^1/2]*1 - (Maximum of 4.0)

Q(d) = Design Flow (L/sec)
Q(p) = Population Flow (L/sec)
Q(r) = Commercial Flow (L/sec)
Q(e) = Extraneous Flow (L/sec) 0.28 l/s/ha

Units		
Single	**3.4**	pers/unit
Town	**2.7**	pers/unit
Hotel/ Apartmentt	**1.8**	pers/unit
Retirement Home	**1.6**	pers/unit
Commercial Flow	**50000**	L/ha/day
Commercial Peak Factor	1.5

Notes:
1) As per Kanata Town Centre Sanitary Trunk Sewer Study revised March 27, 1996 by Robinson Consultants Inc.
2) Park or open space area.
3) Equivalent population base on 208 rooms and 20 staff members.
4) Allowance for an ultimate flow of 188 l/s to provide flexibility in future development as per Kanata Town Centre Sanitary Trunk Study.
5) Additional flow associated with hotel amendities including swimming pool with bathrooms and laudry as per design calculations for Block 1 provided by WSP (October 2016).
6) Additional flow associated with overall amenities including beauty salon, staff, dining and laundry as per design calculations for 1250 Maritime Way (Timberwalk Retirement Home) provided by Novatech (July 31, 2017).
7) JLR Spreadsheet up-dated to include development flows from 1200 Maritime Way. Reference Appendix A of Serviceability Report for 1250 Maritime Way attached in Appendix of 1200 Maritime Way Serviceability Report (Novatech January 28, 2021)..

Design Parameters:

1) Q(p) = (PxqxM/86,400)
2) Q(d) = Q(p) + Q(e)

Definitions:
P = Population
q = Average per capita flow = 280 L/person/day
M = Residential Peaking Factor (Harmon Formula from section 4.4.1 of the City Sewer Design Guidelines):
M = 1+[14/(4+Pop/1000)^1/2]*0.8 - (Maximum of 4.0)

Q(d) = Design Flow (L/sec)
Q(p) = Population Flow (L/sec)
Q(r) = Commercial Flow (L/sec)
Q(e) = Extraneous Flow (L/sec) 0.33 l/s/ha

Units		
Single	**3.4**	pers/unit
Town	**2.7**	pers/unit
Hotel/ Apartmentt	**1.8**	pers/unit
Retirement Home	**1.6**	pers/unit
Commercial Flow	**28000**	L/ha/day
Commercial Peak Factor	1.5	if <20% of area
	1.0	if >20% of area

Re: Kanata Town Centre Central Business District
Master Design Sheet Update - Sanitary Peak Flows
Block 4, Block 5 and Block west of Block 9 (Zone 122)

We understand that the City is requesting an update to the Master Sanitary Sewer Design Sheet for the Kanata Town Centre Central Business District (KTC-CBD) from JL Richards such to incorporate the proposed peak flow revision from Block 4, Block 5, and the parcel west of Block 9 (previously Robinson'96 - Zone 122). Refer to attached JLR Sanitary Drainage Plan and Robinson Consultants Figure 7.1 for locations of Block 4, Block 5 and Zone 122.

We understand that the City will ultimately decide (as the owner of the existing sewers within the KTC-CBD and downstream system) whether the proposed peak flow increase is acceptable and that if accepted, it will not require a reduction of the allowable peak flows for the remaining future development in the KTC-CBD.

As requested, we have incorporated the proposed sanitary peak flow increase associated with your following developments:

a) Proposed Block 4 - Residential development
The proposed development will result in a theoretical increase in peak flow from 3.88 L/s to 4.71 L/s at MH 513 where the Block 4 development outlets to Maritime Way. This represents a theoretical peak flow increase of 0.83 L/s from the anticipated 2012 land use (i.e., hotel use, based on 270 L/pers/day).

b) Proposed Block 5 - Residential development
The proposed development will result in a theoretical increase in peak flow from 3.52 L/s to 5.13 L/s at MH 511 where the Block 5 development outlets to Maritime Way. This represents a theoretical peak flow increase of 1.61 L/s from the anticipated 2012 land use (i.e., hotel use, based on 270 L/pers/day).

c) Proposed parcel west of Block 9 (previously identified in the 1996 Robinson KTC Sanitary Design as Zone 122) – Retirement Home – Claridge Homes
The proposed development will result in a theoretical increase in peak flow from 2.84 L/s to 7.19 L/s at MH 7A where Claridge Homes development outlets to Maritime Way. This represents a theoretical peak flow increase of 3.57 L/s from the anticipated 2012 land use (i.e., Commercial use based on 2787m2 office space and Infiltration based 1.5ha). Theoretical flows for Zone 122 were taken from Robinson Consultants Sanitary Trunk Information from Table 4.7 and Figure 7.1, see attached copies.

At the most downstream MH at the intersection of Teron Rd and Campeau Dr (MH Ex. 2) shown on the attached Sanitary Sewer Design Sheet for the Kanata Village Green subdivision (prepared in 1998 by JLR), the proposed 3 developments would result in a theoretical increase in peak flow from 475.94 L/s to 480.24 L/s which corresponds to a 4.3 L/s (0.9%) peak flow increase.

Based on the available theoretical residual capacities noted in the attached updated Master Sanitary Sewer Design Sheet, the existing sanitary sewer system from the intersection of Rock Mountain Gate and Maritime Way to the intersection of Campeau Dr and Teron Rd has the capacity to accommodate the additional theoretical peak flows of Block 4, Block 5 and Zone 122. Downstream of the Campeau Drive intersection, JLR does not have on record design sheets for the City's existing downstream sanitary sewer system.

Should you have any questions or require anything further, please do not hesitate to call.

(1) As per Kanata Town Centre Sanitary Trunk Sewer Study, revised March 27, 1996, by Robinson Consultants Inc.

(2) Park or open space area.

(3) Equivalent population base on 208 rooms and 20 staff members.

(4) Allowance for an ultimate flow of 188 l/s to provide flexibility in future development as per Kanata Town Centre Sanitary Trunk Study.

(5) Additional flow associated with hotel ammenities including swimming pool with bathrooms and laundry as per design calculations for Block 1 provided by WSP (October 2016)

(6) Additional flow associated with overall ammenities including beauty salon, staff, dining and laundry as per design calculations for 1250 Maritime Way (Timberwalk Retirement Home) provided by Novatech (July 31,2017)

Hi Lucie,

The sanitary info for the block 4 and 5 developments are as follows:

1088 Maritime Way (Block 4)

San service connection between SANMH 512-513
San Drainage Area = 1.121 ha
No. Units = 144
Population = 271

1136 Maritime Way (Block 5)

San service connection between SANMH 510-511
San Drainage Area = 0.915 ha
No. Units = 154
Population = 301

Regards,

Hi Matt,

There will be two stations in the hair salon and about 55 seats in the main dining room.

Let me know if you have any further questions.

Thanks,

Mike

Pascal,

Can you please send us over either the calculated dwelling units (I see you have the dwelling units on drawing A050 however we need to know 1 bedroom, 2 bedroom, etc.) or floor plans for each of the floors for the retirement home?

Thanks,

Matthew Linton, CAD Technologist

Follow Up Flag: Follow up
Flag Status: Completed

Hi Matthew.
Sorry for the dealy ... it's crazy here.

Here is my response to item #1.
There are commercial washers-dryers in the basement ...

- 2 gas heater tumble dryers 75 lbs
- 1 high-performance washer extractor 65 lbs
- 1 cabinet hardmount washer extractor 20 lbs

... and residential type washer-dryer (one of each) on floors 4 to 7

Mike can you please take care of items #2 & #3.

Best regards,

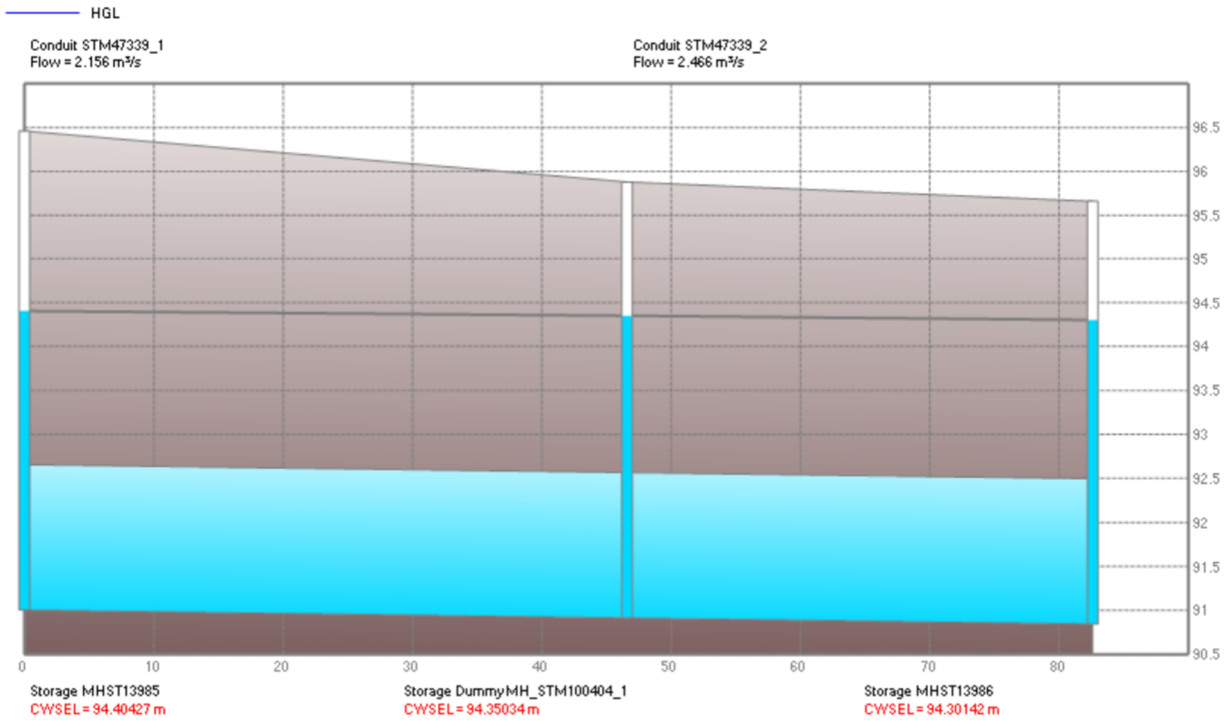
Subject: RE: D07-12-21-0017 - 1200 Maritime

Hi Anthony,

Following are the HGL data received from our water resources group for your use.

The 100 year HGL on Maritime from MHST13985- 13986 is: 94.40 to 94.30



Thanks,
Santhosh

From: Anthony Mestwarp <a.mestwarp@novatech-eng.com>
Sent: May 16, 2022 2:58 PM
To: Kuruvilla, Santhosh <Santhosh.Kuruvilla@ottawa.ca>
Subject: D07-12-21-0017 - 1200 Maritime

I am reviewing the SWM requirements for the 1200 Maritime site and would like to confirm the HGL within the STM sewer fronting the site.

Based on the design drawings for Maritime way the HGL varies 94.30-94.15 across the site frontage (refer to the attached). City Manhole numbers : MHST13985- 13986. Can you please confirm that this is still the case?

Thanks,

Anthony Mestwarp, **P.Eng.**, Project Engineer | Land Development Engineering

2.0 STORMWATER MANAGEMENT - MINOR/MAJOR SYSTEM DESIGN

2.1 General

Traditionally, urban drainage systems were designed considering only the "minor system". A more recent trend however is to design the drainage system according to the dual drainage concept which considers both, the "minor" and the "major" systems. The "minor" drainage system is comprised mainly of street gutters, inlet catch basins, storm sewers and manholes. This system is designed to capture and convey runoff during frequent storm events with return periods up to 1:5 year. The major system is formed by swales/ditches, streets, open channels, stormwater management facilities and will accommodate runoff during storms exceeding 1:5 year up to 1:100 year.

Stormwater servicing for all lands included in the Central Business District of the Kanata Town Centre will be designed using the dual drainage concept, also know as the minor/major drainage system. Furthermore, the minor system on Urbandale's lands (and other lands such as the Penex Kanata Ltd. lands) will also be designed allowing the use of inlet control devices (ICD). With the use of ICD's, flows captured by catch basins can be limited to the conveyance capacity of the storm sewers and therefore minimizing the risk of unacceptable surcharges. With the use of ICD's in catch basin inlets, a higher level of protection (1:100 year) against flooding of basements having foundation drains connected to storm sewers is provided.

2.2 Minor System Design

Storm sewers for Urbandale's lands in the Central Business District of the Kanata Town Centre were sized using the Rational Method. An inlet time of 20 minutes and runoff coefficients ranging from 0.2 (parks) to 0.9 (high density commercial) as presented in Table 1.0 were used.

Table 1.0 - Urban Runoff Coefficients

Land Use	Runoff Coefficient
Park	0.20
Residential: - low	0.40
- medium	0.45
- high	0.50 and 0.60
Commercial	0.80 and 0.90

Rainfall intensities required by the Rational Method were taken from the City of Kanata's Intensity-Duration-Curve (IDF). A time of concentration was calculated based on an inlet time of 20 minutes and the 5 year rainfall intensity was extracted using this information. The storm sewer layout (for Street 'A'), drainage area limits and respective runoff coefficients are presented on Drawings 15712-STM (attached in pocket). Plan and profiles for the future Street 'A' are presented on Drawings 15712-01, 15712-02 and 15712-03. The Rational Method storm sewer design sheet for Urbandale's lands (Street 'A') located in the Central Business District is provided in Appendix 'B'.

2.3 Major System Design

A properly designed, constructed and maintained minor/major drainage system is the keystone to good urban drainage. The purpose of the major system is to convey excess runoff generated from severe events which are not captured by the sewer system without causing any damages. With the combination of a properly designed major system and ICD's installed on the minor system, the risk of property damage due to surcharged storm sewer is essentially eliminated, provided that the storm sewer is properly operated and maintained.

Basements in Urbandale's lands in the Central Business District of the Kanata Town Centre will be protected against flooding resulting from a surcharged storm sewer system by setting basement floors 0.3 m above the 1:100 year hydraulic grade line. To achieve this, Scepter Type 'A' ICD's (with a capture of 20 L/s for a head = 1.22 m) will be used in street catch basins to limit the minor system's carrying capacity. Since the road grades for the internal roads have not been designed at this stage, the location of the proposed catch basins have not

been determined. During the detailed design of the internal road grades, the use of Scepter Type 'A' ICD's will be specified. The number of contributing catch basins will be limited to the carrying capacity of the minor system. Furthermore, all storm sewer manholes should be provided with solid covers to limit sources of water which were not accounted for during the design of the minor system.

Overall grading plans will be prepared for Urbandale's lands located in the Central Business District to ensure that the minor/major drainage concept is properly implemented. Overland flow corridors will be carefully selected for these lands. Once the detailed design of these lands is completed, detailed plan and profiles and grading plans will be included in the submission package for a Certificate of Approval by the MOE.

2.4 On-Site Controls

The 1993 Master Drainage Study discussed and recommended the use of the following on-site controls in addition to end of pipe control (stormwater management facility):

1. Rooftop storage on flat roofs and parking lot storage in the commercial area, where feasible, to detain post-development flows.

2. Use of catch basin equipped with ICD's to control the rate of inflow to the storm sewer system.

3. Direction of the building roof downspouts, where possible, to grassed areas to minimize the runoff from hard surfaces and increase the recharge of the groundwater table.

4. Provision of grassed swales along the rear of lots (in residential development) at minimum slope to retard runoff and provide opportunity for infiltration.

5. Use of perforated leads to connect rear yard catch basins to increase groundwater recharge, where soils conditions are favourable.

The above measures should be investigated and evaluated site-specifically during the detailed design of each subdivision. The investigation and evaluation should be incorporated in the individual Stormwater Site Management Plan.

11.0 SUMMARY

i) This Stormwater Management Report has been prepared to address a number of draft plan conditions for Urbandale's Kanata Town Centre Lands - Central Business District.

ii) A detailed design for a Stormwater Management Facility, as recommended in the "Kanata Town Centre - Master Drainage Study for Watts Creek" (Cumming Cockburn Limited, May 1993), is presented.

Final approvals are required prior to construction.

Shows that the minor system be designed to 5-year and 100-year can safely be conveyed on the roadway.

iii) Stormwater servicing for the tributary areas to the SWMF will be designed using the dual drainage concept. The storm sewer system (on Street 'A') has been sized to capture and convey a 1:5 year flow. The surface drainage, grading, and overland flow corridors will be designed to accommodate the flows in excess of 1:5 year up to 1:100 year.

iv) Basements in future residential development will be protected against flooding during a 1:100 year event by installing Scepter Type 'A' ICD's in catch basins located within the streets and by setting the basement floor elevations 0.3 m above the 1:100 year HGL. As an additional precautionary measure, all lateral storm sewer services will be provided with a backwater valve.

v) To maintain the integrity of the performance of the storm sewer, storm sewer manholes will be provided with solid manhole covers.

vi) Building roof downspouts will be discharged onto grassed areas wherever possible, to reduce the volume and velocity of runoff as well as peak flows. This will also improve water quality slightly but, more importantly, will increase groundwater recharge.

SWMF provides quality control for the entire upstream drainage area, therefore no site-specific quality control is required.

vii) A SWMF will be constructed in the southeast corner of the lands. This facility will incorporate a permanent pool storage of 5949 m^3 (between elevations 88.90 m to 89.90 m), an extended detention storage of 2758 m^3 (between elevations 89.90 m to 90.20 m) and a water quantity storage of 36491 m^3 (between elevations 90.20 m to 93.25 m).

viii) Landscaping will be incorporated into the pond design to provide a natural appearance and to improve overall performance.

ix) A monitoring and maintenance program is proposed to demonstrate and ensure long-term acceptable performance. The parameters to be analyzed include total suspended solids (>70% TSS removal), dissolved oxygen, total and dissolved phosphorous, nitrates, nitrites, TKN, ammonia, chlorides, sodium and pH.

x) Appropriate erosion and sediment control measures during construction will be implemented to trap sediments on-site.

RE: Servicing Brief (Revised)
Kanata Town Centre
Central Business District Subdivision

PURPOSE OF UNDERTAKING

This Servicing Brief was prepared, in support of Urbandale Corporation's re-zoning application for the Kanata Town Centre - Central Business District (KTC-CBD) Subdivision. The following confirms that water, sanitary and storm sewer services are readily available to accommodate this subdivision.

DESCRIPTION OF PROPERTY

The subject lands encompass an area of approximately 18.8 hectares within the KTC-CBD, in the City of Ottawa (former City of Kanata). The lands are bounded to the north by Campeau Drive, to the west by a partial of land fronting Castlefrank Drive, south by Hwy. 417 and to the east by the Hydro One corridor (refer to Figure 1 attached). This subdivision is comprised of residential and commercial developments. Civil infrastructure (i.e., local watermains, storm and sanitary sewers) within the ROWs are all existing and in service. The trunk storm sewer, sanitary sewer, and watermain along the south leg of Maritime Way were constructed by Urbandale Corporation in 1998 and the remaining local infrastructure in 2007-2008. The 900 mm dia. feedermain on Great Lakes Avenue was constructed for the City of Ottawa in 2008-2009.

STORM SEWER SERVICING

Outlet:

The KTC-CBD lands are tributary to the KTC-CBD Stormwater Management Facility (SWMF) located in the southeast corner of the subdivision (refer to Figure 1 for Pond location), which subsequently drains to Watts Creek. This SWMF was designed, and subsequently constructed, to accommodate the development of the KTC-CBD subdivision and provides quantity as well as quality control for the stormwater flows. Details of the SWMF can be found in the Stormwater Management Report, Kanata Town Centre, Central Business District, dated January 1999 and prepared by J.L. Richards & Associates Limited.

Minor/Major System:

The KTC-CBD storm drainage system has been designed using the dual drainage concept, consisting of a minor and a major system. The minor system conveys storm runoff generated during frequent storm events (i.e., 1:5 year or less) via a local storm sewer collection system outletting to the KTC-CBD

SWMF where, as noted, water quality and quantity treatment is provided. In accordance with the noted SWMF Design Report, the following runoff coefficients were used at detailed design of the local storm sewers

Residential - Low Density	C=0.40
Residential - Medium Density	C=0.45
Residential - High Density	C=0.50 and 0.60
Commercial Area	C=0.80 and 0.90
Parkland	C=0.20

An excerpt from the noted 1999 Stormwater Management Report, indicating assigned runoff coefficients 'C', allowable capture rates, and required on-site storage volumes for the specific land parcels is included in Attachment 1. The servicing design for each Block in the KTC-CBD shall adhere to these SWM design requirements.

The major system was established at the detailed design stage to convey excess runoff generated during severe events which would not be captured in the minor system. The excess runoff will be conveyed via overland routes to the KTC-CBD SWMF. The grading plans of the KTC-CBD lands have been developed with roadway sags. Local Blocks of land are expected to incorporate parking lot, cistern and roof top storage (or a combination thereof) at Site Plan Control, to ensure that the minor / major drainage concept, as specified in the Attachment 1 Table, is properly implemented.

A Hydraulic Grade Line (HGL) Analysis was carried out during detailed design to verify the anticipated amount of freeboard provided between the maximum storm sewer HGL elevations and the building underside of footing elevations. At detailed design of each Block, and as required at Site Plan Control, the on-site HGL clearance will require confirmation. The analysis was based on the estimated maximum water elevations of the KTC-CBD SWMF.

WATER SERVICING

The local network of water servicing for the KTC-CBD Subdivision was originally developed based on the existing 610 mm and 406 mm diameter watermains on Maritime Way. Water servicing specifics for the subdivision were addressed in detail in the Hydraulic Network Analysis (HNA) Report, which was prepared and submitted to the City in conjunction with the detailed servicing design of this project. The HNA Report for KTC-CBD demonstrated that the proposed (now existing) watermain sizing satisfied the water demand during the maximum hourly and fire flow conditions, as per the City of Ottawa Design Guidelines. Furthermore, the analysis included an assessment of pressures during low demand conditions (i.e., high pressure check) ensuring that the system pressures do not exceed the maximum pressure requirements set by the Ontario Building Code (OBC).

Since then a 900 mm diameter feedermain was constructed in 2008-2009 on Great Lakes Avenue, linking the existing 610 mm diameter feedermain on Maritime Way to the existing 900 mm diameter feedermain on Campeau Drive. At detailed design of each Block, and as required at Site Plan Control, the designer will have to obtain boundary conditions from the City of Ottawa and carry out an HNA for their respective Block.

SANITARY SEWER SERVICING

There is an existing 825 mm diameter trunk sanitary sewer along the south leg of Maritime Way and extends easterly along a service easement to Gray Crescent in Village Green. This sanitary trunk sewer was designed by JLR (1998) to accommodate the development of the KTC-CBD subdivision and upstream lands. Local sanitary sewers were subsequently designed by JLR (2007) and constructed. At the time of the original design of the trunk sewer the land parcels were designated for commercial use and the sanitary flows were estimated using 50,000 L/ha/d (MOE guidelines for sanitary flow for commercial zones). Subsequently, the land use was revised to include residential use, as well as commercial use. As such, in 2007, JLR revised the original sanitary flow estimate according to the projected land use to design the local sewers. Currently, Blocks 3, 6 and 8 have been sold and either developed or partially developed. As such, the estimated sanitary flows generated by the local Blocks have currently been updated to reflect exiting conditions and projected development of local Blocks. Table 1 provides a summary of the existing and anticipated land uses.

Table 1 - Kanata Town Centre Existing and Anticipated Land Uses

Block No.	Land Use Description	Number of Units/Rooms	Population	Daily Sewage Flow	Area
1	Hotel Suites	167	301	270 L/pp/d*	1.48
2	Commercial			50,000 L/pp/d	1.36
3	Retirement Home	208	333		1.02
4	Apartments	120	216	350 L/pp/d	1.37
5	Apartments	120	216	350 L/pp/d	1.02
6	Apartments with Community Centre			350 L/pp/d**	2.83
7	Commercial	N/A		50,000 L/pp/d	1.70
8	Hotel	125	225	270 L/pp/d*	1.02
9	Commercial	N/A	N/A	50,000 L/pp/d	4.96
10	Walkway Easement	N/A	N/A	N/A	0.28

Note: * Additional flow of dining room and staff accounted for in design
** Additional flow from Community Centre pool 40 L/pp/d accounted for in design

The current peak flow estimate has been revised in accordance with the land uses presented in Table 1. A comparison of the original peak flow estimate (1998) and the current peak flow estimate is presented in Table 2. The revised peak flow estimate, based on the current land use projections and existing land uses, creates an increase of estimated flow of 4.05 L/s (274.66 L/s – 270.61 L/s) at the Trunk easement. This flow, however, with a reduction in the downstream peaking factor due to the increase in residential units in the CBD, normalizes close to the original (1998) estimated flow and actually estimates a small reduction of 0.15 L/s (475.94 L/s - 475.79L/s) at the end of the residential subdivision at the intersection of Campeau Drive and Teron Road. The original peak flow design estimate (1998) and the updated detailed design spreadsheet, as well as the sanitary drainage boundary plan, can be found in Attachment 2.

Table 2 - Kanata Town Centre Estimated Sanitary Peak Flow

Location	Tributary Area	Up MH	Down MH	Original Assigned Flow Estimate (1998)	Current Flow Estimate (2012)
Trunk Easement	Upstream + KTC-CBD	500	94	**270.61**	**274.66**
Total Flow at end of Residential	Upstream + KTC-CBD + Residential to Teron Road	Ex.	Ex. 2	**475.94**	**475.79**

SUMMARY

The existing trunk (1998) and local (2007-2008) infrastructure servicing the subject lands, which are referred to as KTC-CBD, have capacity to service the local Blocks, with regards to stormwater and wastewater; based on the SWM design parameters provided in Attachment 1 and wastewater based on the revised existing and proposed land uses as per Table 1 of this report.. Domestic water is available along the frontage of each Block with the understanding that a site specific HNA is to be carried out at Site Plan Control to demonstrate conformance with the City Guidelines

Hi Anthony,

Is your fire flow calculations based on the attached report? If it is, I can make a request for the boundary conditions.

Please let me know.

Thanks,

Santhosh

Subject: RE: 120144- Boundary Conditions Request - 1200 Maritime Way

Hello Anthony,

If I remember correctly, during our last meeting, I mentioned that you will have to provide the fire flow calculations based on the final FUS method. FUS is currently under review and the City doesn't have a copy of the final report. Once it is finalized, please make a new boundary condition request based on the new fire flow calculations.

Thanks,
Santhosh

Subject: RE: 120144- Boundary Conditions Request - 1200 Maritime Way

Hi Santhosh,

Please find attached the supporting documents for the updated boundary conditions request for 1200 Maritime way.

The proposed site will have a total of 633 units (387 1-bed, & 246 2-bed), and 399m2 of commercial area.

Total demands and fire flows are summarized below;

- Average Daily Demand: 3.57 L/s
- Max Daily Demand: 8.79 L/s
- Peak Hour Demand: 19.25 L/s
- Fire Flow (FUS): 117 L/s

In response to the below the proposed development will have 2 water services connecting to the existing 200mm local watermain separated by an isolation valve. The local watermain was installed as part of the neighboring 1250 Maritime way site and covers the entire frontage of 1200 Maritime way, and is capable of providing redundancy for the site.

Please let us know if you have any questions.

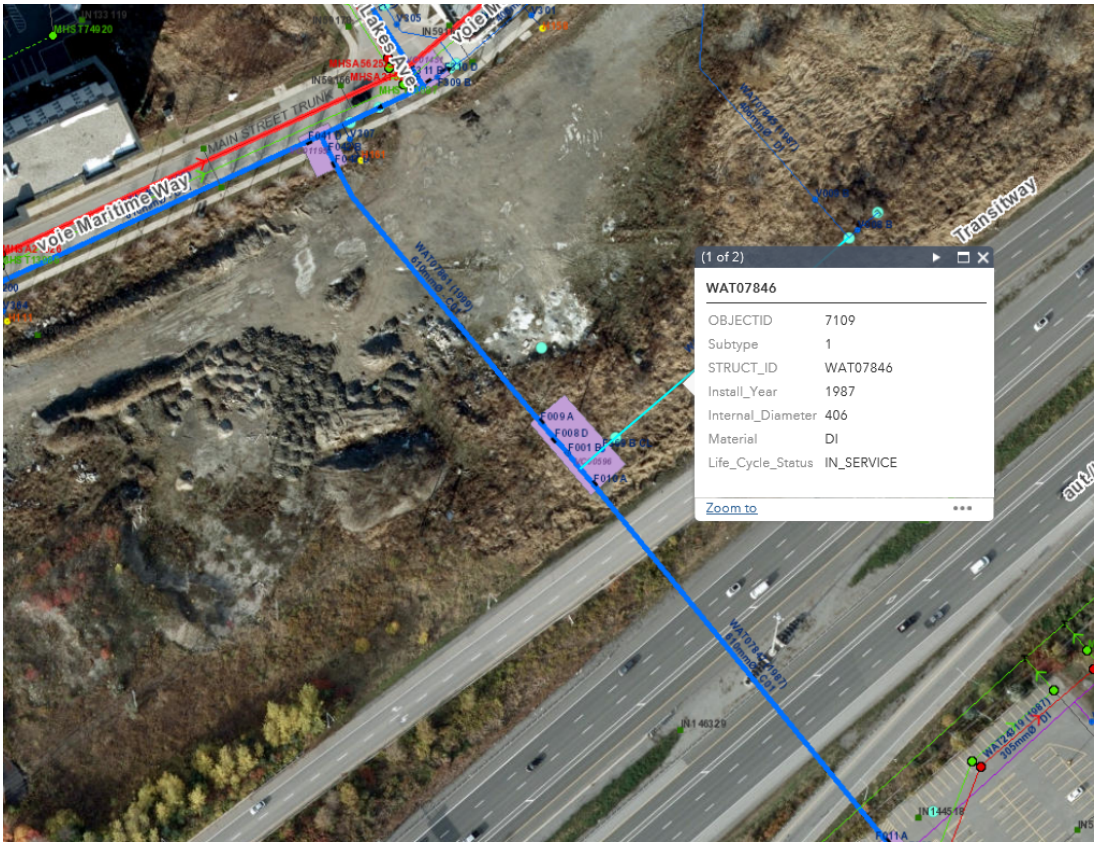
Subject: RE: 120144- Boundary Conditions Request - 1200 Maritime Way

Hi Curtis,

I would like to provide you the following information I received from our Infrastructure Planning unit regarding water service connections for this development

"Hi Santosh,

I will wait to receive the updated request. So far, their request only shows a map with service connection from the 200mm watermain on Maritime. They need to establish how they are getting the redundancy. Are they extending the Maritime way watermain further east upto Great lakes Ave and proposing 2 connections separated by a valve? Or is the second connection from the 406mm watermain that I highlighted below?



In the next submission Novatech should provide clarity how the redundancy is met. The request should include a siteplan, proposed watermain extensions (if any), and connection locations."

Santhosh

APPENDIX E

Servicing Study Guidelines Checklist

Development Servicing Study Checklist

4.1 General Content	**Addressed (Y/N/NA)**	**Comments**
Executive Summary (for larger reports only).	NA	
Date and revision number of the report.	Y	
Location map and plan showing municipal address, boundary, and layout of proposed development.	Y	Refer to figure 1
Plan showing the site and location of all existing services.	Y	Refer to Grading and Servicing Plans
Development statistics, land use, density, adherence to zoning and official plan, and reference to applicable subwatershed and watershed plans that provide context to which individual developments must adhere.	Y	Refer to Site Plan
Summary of Pre-consultation Meetings with City and other approval agencies.	Y	Refer to Appendix F
Reference and confirm conformance to higher level studies and reports (Master Servicing Studies, Environmental Assessments, Community Design Plans), or in the case where it is not in conformance, the proponent must provide justification and develop a defendable design criteria.	Y	
Statement of objectives and servicing criteria.	Y	Report Sections: 5.0 Sanitary sewer, 6.0 Storm Sewer and Stormwater Management, 7.0 Water Servicing
Identification of existing and proposed infrastructure available in the immediate area.	Y	
Identification of Environmentally Significant Areas, watercourses and Municipal Drains potentially impacted by the proposed development (Reference can be made to the Natural Heritage Studies, if available).	NA	
Concept level master grading plan to confirm existing and proposed grades in the development. This is required to confirm the feasibility of proposed stormwater management and drainage, soil removal and fill constraints, and potential impacts to neighboring properties. This is also required to confirm that the proposed grading will not impede existing major system flow paths.	Y	Refer to Grading Plan and Stormwater Management Plan

4.1 General Content	**Addressed (Y/N/NA)**	**Comments**
Identification of potential impacts of proposed piped services on private services (such as wells and septic fields on adjacent lands) and mitigation required to address potential impacts.	NA	
Proposed phasing of the development, if applicable.	Y	
Reference to geotechnical studies and recommendations concerning servicing.	Y	
All preliminary and formal site plan submissions should have the following information:		
Metric scale	Y	All Drawings
North arrow (including construction North)	Y	All Drawings
Key plan	Y	All Drawings
Name and contact information of applicant and property owner	Y	Drawings/Report
Property limits including bearings and dimensions	Y	Report
Existing and proposed structures and parking areas	Y	All Drawings
Easements, road widening and rights-of-way	Y	All Drawings
Adjacent street names	Y	All Drawings

4.2 Water	**Addressed (Y/N/NA)**	**Comments**
Confirm consistency with Master Servicing Study, if available.	NA	
Availability of public infrastructure to service proposed development.	Y	Report Sections: 5.0 Sanitary sewer, 6.0 Storm Sewer and Stormwater Management, 7.0 Water Servicing
Identification of system constraints.	NA	
Identify boundary conditions.	N	Awaiting City of Ottawa
Confirmation of adequate domestic supply and pressure.	N	Awaiting boundary conditions from City of Ottawa
Confirmation of adequate fire flow protection and confirmation that fire flow is calculated as per the Fire Underwriter's Survey. Output should show available fire flow at locations throughout the development.	N	Awaiting boundary conditions from City of Ottawa
Provide a check of high pressures. If pressure is found to be high, an assessment is required to confirm the application of pressure reducing valves.	N	Awaiting boundary conditions from City of Ottawa
Definition of phasing constraints. Hydraulic modeling is required to confirm servicing for all defined phases of the project including the ultimate design.	NA	
Address reliability requirements such as appropriate location of shut-off valves.	Y	Refer to Grading and Servicing Plans
Check on the necessity of a pressure zone boundary modification.	NA	
Reference to water supply analysis to show that major infrastructure is capable of delivering sufficient water for the proposed land use. This includes data that shows that the expected demands under average day, peak hour and fire flow conditions provide water within the required pressure range.	N	Awaiting boundary conditions from City of Ottawa
Description of the proposed water distribution network, including locations of proposed connections to the existing system, provisions for necessary looping, and appurtenances (valves, pressure reducing valves, valve chambers, and fire hydrants) including special metering provisions.	Y	Report Section 7.0 Water Servicing
Description of off-site required feedermains, booster pumping stations, and other water infrastructure that will be ultimately required to service proposed development, including financing, interim facilities, and timing of implementation.	NA	
Confirmation that water demands are calculated based on the City of Ottawa Design Guidelines.	Y	Report Section 7.0 Water Servicing
Provision of a model schematic showing the boundary conditions locations, streets, parcels, and building locations for reference.	NA	

4.3 Wastewater	**Addressed (Y/N/NA)**	**Comments**
Summary of proposed design criteria (Note: Wet-weather flow criteria should not deviate from the City of Ottawa Sewer Design Guidelines. Monitored flow data from relatively new infrastructure cannot be used to justify capacity requirements for proposed infrastructure).	Y	Refer to report section 5.0 Sanitary sewer
Confirm consistency with Master Servicing Study and/or justifications for deviations.	NA	
Consideration of local conditions that may contribute to extraneous flows that are higher than the recommended flows in the guidelines. This includes groundwater and soil conditions, and age and condition of sewers.	NA	
Description of existing sanitary sewer available for discharge of wastewater from proposed development.	Y	Refer to report section 5.0 Sanitary sewer
Verify available capacity in downstream sanitary sewer and/or identification of upgrades necessary to service the proposed development. (Reference can be made to previously completed Master Servicing Study if applicable)	Y	Refer to Appendix B
Calculations related to dry-weather and wet-weather flow rates from the development in standard MOE sanitary sewer design table (Appendix 'C') format.	NA	
Description of proposed sewer network including sewers, pumping stations, and forcemains.	Y	Refer to report section 5.0 Sanitary sewer
Discussion of previously identified environmental constraints and impact on servicing (environmental constraints are related to limitations imposed on the development in order to preserve the physical condition of watercourses, vegetation, soil cover, as well as protecting against water quantity and quality).	NA	
Pumping stations: impacts of proposed development on existing pumping stations or requirements for new pumping station to service development.	NA	
Forcemain capacity in terms of operational redundancy, surge pressure and maximum flow velocity.	NA	
Identification and implementation of the emergency overflow from sanitary pumping stations in relation to the hydraulic grade line to protect against basement flooding.	NA	
Special considerations such as contamination, corrosive environment etc.	NA	

4.4 Stormwater	**Addressed (Y/N/NA)**	**Comments**
Description of drainage outlets and downstream constraints including legality of outlet (i.e. municipal drain, right-of-way, watercourse, or private property).	Y	Refer to report section 6.0 Storm Sewer and Stormwater Management
Analysis of the available capacity in existing public infrastructure.	NA	Stormwater release rates less than or equal to city allowabale release rate critera
A drawing showing the subject lands, its surroundings, the receiving watercourse, existing drainage patterns and proposed drainage patterns.	Y	Refer to Stormwater Management Plan
Water quantity control objective (e.g. controlling post-development peak flows to pre-development level for storm events ranging from the 2 or 5 year event (dependent on the receiving sewer design) to 100 year return period); if other objectives are being applied, a rationale must be included with reference to hydrologic analyses of the potentially affected subwatersheds, taking into account long-term cumulative effects.	Y	Refer to report section 6.0 Storm Sewer and Stormwater Management
Water Quality control objective (basic, normal or enhanced level of protection based on the sensitivities of the receiving watercourse) and storage requirements.	Y	Refer to report section 6.0 Storm Sewer and Stormwater Management
Description of stormwater management concept with facility locations and descriptions with references and supporting information.	Y	Refer to report section 6.0 Storm Sewer and Stormwater Management
Set-back from private sewage disposal systems.	N/A	
Watercourse and hazard lands setbacks.	N/A	
Record of pre-consultation with the Ontario Ministry of Environment and the Conservation Authority that has jurisdiction on the affected watershed.	N/A	
Confirm consistency with sub-watershed and Master Servicing Study, if applicable study exists.	N/A	
Storage requirements (complete with calcs) and conveyance capacity for 5 yr and 100 yr events.	Y	Refer to Appendix C
Identification of watercourse within the proposed development and how watercourses will be protected, or, if necessary, altered by the proposed development with applicable approvals.	NA	
Calculate pre and post development peak flow rates including a description of existing site conditions and proposed impervious areas and drainage catchments in comparison to existing conditions.	Y	Refer to Appendix C
Any proposed diversion of drainage catchment areas from one outlet to another.	NA	
Proposed minor and major systems including locations and sizes of stormwater trunk sewers, and SWM facilities.	N/A	
If quantity control is not proposed, demonstration that downstream system has adequate capacity for the post-development flows up to and including the 100-year return period storm event.	N/A	

4.4 Stormwater	**Addressed (Y/N/NA)**	**Comments**
Identification of municipal drains and related approval requirements.	N/A	
Description of how the conveyance and storage capacity will be achieved for the development.	Y	Refer to report section 6.0 Storm Sewer and Stormwater Management
100 year flood levels and major flow routing to protect proposed development from flooding for establishing minimum building elevations (MBE) and overall grading.	N/A	
Inclusion of hydraulic analysis including HGL elevations.	N/A	
Description of approach to erosion and sediment control during construction for the protection of receiving watercourse or drainage corridors.	Y	Report Section 8.0 Erosion and Sediment Control
Identification of floodplains – proponent to obtain relevant floodplain information from the appropriate Conservation Authority. The proponent may be required to delineate floodplain elevations to the satisfaction of the Conservation Authority if such information is not available or if information does not match current conditions.	NA	
Identification of fill constrains related to floodplain and geotechnical investigation.	Y	Report section 4.0 Site Constraints

4.5 Approval and Permit Requirements	Addressed (Y/N/NA)	Comments
Conservation Authority as the designated approval agency for modification of floodplain, potential impact on fish habitat, proposed works in or adjacent to a watercourse, cut/fill permits and Approval under Lakes and Rivers Improvement Act. The Conservation Authority is not the approval authority for the Lakes and Rivers Improvement Act. Where there are Conservation Authority regulations in place, approval under the Lakes and Rivers Improvement Act is not required, except in cases of dams as defined in the Act.	NA	
Application for Certificate of Approval (CofA) under the Ontario Water Resources Act.	NA	
Changes to Municipal Drains.	NA	
Other permits (National Capital Commission, Parks Canada, Public Works and Government Services Canada, Ministry of Transportation etc.)	NA	

4.6 Conclusion	Addressed (Y/N/NA)	Comments
Clearly stated conclusions and recommendations.	Y	Report Section 9.0 Conclusions
Comments received from review agencies including the City of Ottawa and information on how the comments were addressed. Final sign-off from the responsible reviewing agency.	NA	
All draft and final reports shall be signed and stamped by a professional Engineer registered in Ontario.	Y	

APPENDIX F

PRE-CONSULTATION MEETING MINUTES

Please refer to the below regarding the Pre-Application meeting held on August 6, 2020 for the property at 1200 Maritime Way for a Site Plan Control Application and Zoning By-law Amendment for a residential development. I have also attached the required Plans & Study List for application submission. Despite the amount of hard copies identified in the list, they may not be required- please confirm with the Planner prior to submission.

Below are staff's preliminary comments based on the information available at the time of the pre-consultation meeting:

Planning / Urban Design

General:

- You are encouraged to contact the Ward Councillor, Councillor Jenna Sudds, regarding the proposal.
- Urban Design Review Panel review is required for the proposed increase in height and site plan control application.
    - A pre-consult with the UDRP is also recommended.
- Cash-in-Lieu of Parkland will be required if proof of payment cannot be provided.

Zoning By-law Amendment:

- Staff do not have a concern with the proposed increase in height provided it meets Official Plan and Secondary Planning requirements and policies.
- Please ensure that adequate tower separation and associated setbacks on-site and from abutting property lines is achieved in accordance with the high-rise design guidelines.
- A zoning schedule and or FSI should be considered as part of the Zoning By-law amendment to increase the height on the subject property.

Site Plan Control:

- Current proposal does not adequately address Maritime Way.
- Please ensure that adequate setbacks (11.5 metres for a tower) are provided from the eastern property line, and the length of a podium is not designed to directly face this property line.
- Please utilize a 6-storey podium in lieu of a 9 storey podium.
- Please consider that if the towers are the same height, they have the same floor plate (pairing) vs. the current proposal.
- If different floor plates are desired for the two towers, they should be different heights.
- Three towers are possible on-site, one at the desired 30 storeys and two at a lower height (ex. 15).
- Need to study massing as it relates to other properties, buildings, shadowing, wind etc.

- Proposal needs to work with grades along Kanata Avenue.
- Connections to the MUP to the south need to be considered.
- Ensure that adequate outdoor amenity space is provided.
- Group “back” of house and functional requirements.
- Reduce surface parking to the greatest extent possible.
- Provide grade related units.
- Please see attached illustration.
- A Design Brief is required.
    - A terms of reference is provided. All applicable elements of the Design Brief have been highlighted.
- Please review the Building Code to make sure the proposed development will meet the accessibility requirements.

Engineering

General:

- It is the sole responsibility of the consultant to investigate the location of existing underground utilities in the proposed servicing area and submit a request for locates. The location of existing utilities and services shall be documented on an **Existing Conditions Plan**.
- All underground and above ground building footprints and permanent walls need to be shown on the plans to confirm that any permanent structure does not encroach within the right-of-way.
- Any easements on the subject site shall be identified and respected by any development proposal and shall adhere to the conditions identified in the easement agreement. A **legal survey plan** shall be provided and all easements shall be shown on the engineering plans.
- Please provide an **Existing Conditions/Removals Plan** as part of the engineering drawing set. Any existing services are to be removed or abandoned in accordance with City standards.
- Please note that the proposed servicing design and site works shall be in accordance with the following documents:
    - Ottawa Sewer Design Guidelines (October 2012)
    - Technical Bulletin PIEDTB-2016-01
    - Technical Bulletins ISTB-2018-01, ISTB-2018-02 and ISTB-2018-03.
    - Ottawa Design Guidelines - Water Distribution (2010)
    - Geotechnical Investigation and Reporting Guidelines for Development Applications in the City of Ottawa (2007)
    - City of Ottawa Slope Stability Guidelines for Development Applications (revised 2012)
    - City of Ottawa Environmental Noise Control Guidelines (January 2016)
    - City of Ottawa Accessibility Design Standards (2012) (City recommends development be in accordance with these standards on private property)
    - Ottawa Standard Tender Documents (latest version)
    - Ontario Provincial Standards for Roads & Public Works (2013)

- Record drawings and utility plans are also available for purchase from the City (Contact the City's Information Centre by email at InformationCentre@ottawa.ca or by phone at (613) 580-424 x.44455).

Stormwater Management Criteria and Information:

- It appears the subject site is located within **the KTC SWM Pond (Phase 2)** catchment (see attached). The consultant should review the attached report and confirm SWM criteria, flow allowance to the existing storm system, design assumptions, etc. Consult Operations staff to determine how the existing facility is currently performing (i.e. ability to achieve targets, condition of infrastructure within the SWM block, etc.
- **Water Quality Control:** Please consult with the local conservation authority regarding water quality criteria prior to submission of a Site Plan Control Proposal application to establish any water quality control restrictions, criteria and measures for the site. Correspondence and clearance shall be provided in the Appendix of the report.
- Please note that foundation drain is to be independently connected to sewermain unless being pumped with appropriate back up power, sufficient sized pump and back flow prevention.
- Please note that as per *Technical Bulletin PIEDTB-2016-01 section 8.3.11.1 (p.12 of 14)* **there shall be no surface ponding on private parking areas during the 2-year storm rainfall event**. Depending on the SWM strategy proposed underground or additional underground storage may be required to satisfy this requirement.
- **Underground Storage:** Please note that the Modified Rational Method for storage computation in the Sewer Design Guidelines was originally intended to be used for above ground storage (i.e. parking lot) where the change in head over the orifice varied from 1.5 m to 1.2 m (assuming a 1.2 m deep CB and a max ponding depth of 0.3 m). This change in head was small and hence the release rate fluctuated little, therefore there was no need to use an average release rate.
- When underground storage is used, the release rate fluctuates from a maximum peak flow based on maximum head down to a release rate of zero. This difference is large and has a significant impact on storage requirements. **We therefore require that an average release rate equal to 50% of the peak allowable rate shall be applied to estimate the required volume. Alternatively, the consultant may choose to use a submersible pump in the design to ensure a constant release rate.**
- In the event that there is a disagreement from the designer regarding the required storage, The City will require that the designer demonstrate their rationale utilizing dynamic modelling, that will then be reviewed by City modellers in the Water Resources Group.

- Note that the above will added to upcoming revised Sewer Design Guidelines to account for underground storage, which is now widely used.
- Provide sufficient details and information on any proposed underground storage system. A cross-section of any underground storage system is to be provided with sufficient details and information. In case of a pump failure or blockage an overflow should be provided. Backup power supply is required if using a pump.
- Please note that the minimum orifice dia. for a plug style ICD is 83mm and the minimum flow rate from a vortex ICD is 6 L/s in order to reduce the likelihood of plugging.
- Post-development site grading shall match existing property line grades in order to minimize disruption to the adjacent residential properties. A **topographical plan of survey** shall be provided as part of the submission and a note provided on the plans.
- Please provide a **Pre-Development Drainage Area Plan** to define the pre-development drainage areas/patterns. **Existing drainage patterns shall be maintained and discussed as part of the proposed SWM solution**.
- If rooftop control and storage is proposed as part of the SWM solutions sufficient details (Cl. 8.3.8.4) shall be discussed and document in the report and on the plans. Roof drains are to be connected downstream of any incorporated ICDs within the SWM system and not to the foundation drain system.

Storm Sewer:

- Storm sewer monitoring maintenance holes are required to be installed at the property line (on the private side of the property) as per City of Ottawa Sewer-Use By-Law 2003-514 (14) *Monitoring Devices*.
- As-built drawings of the existing services within the vicinity of the site shall be obtained and reviewed in order to determine proper servicing and SWM plan for the subject site(s).
- Storm service connections are to have backwater valves.

Sanitary Sewer:

- **An analysis and demonstration that there is sufficient/adequate residual capacity to accommodate any increase in wastewater flows in the receiving and downstream wastewater system is required to be provided**. **The City can provide flows for existing areas and direction on how to estimate future flows for vacant areas within the sewer shed.**
- Please apply the wastewater design flow parameters *in Technical Bulletin PIEDTB-2018-01.*

- Sanitary sewer monitoring maintenance holes are required to be installed at the property line (on the private side of the property) as per City of Ottawa Sewer-Use By-Law 2003-514 (14) *Monitoring Devices*.
- Sanitary service connections are to have backwater valves.

Water:

- **Water Supply Redundancy:** Residential buildings with a basic day demand greater than 50m^3/day (0.57 L/s) are required to be connected to a minimum of two water services separated by an isolation valve to avoid a vulnerable service area as per the *Ottawa Design Guidelines - Water Distribution, WDG001, July 2010 Clause 4.3.1 Configuration.* The basic day demand for each site anticipated to exceed 50m^3/day therefore 2 water services will be required. There shall be primary water service and a secondary connection.
- Please review Technical Bulletin ISTB-2018-0, maximum fire flow hydrant capacity is provided in Section 3 Table 1 of Appendix I. A **hydrant coverage figure** shall be provided and **demonstrate there is adequate fire protection**.
- Boundary conditions are required to confirm that the require fire flows can be achieved as well as availability of the domestic water pressure on the City street in front of the development. Use Table 3-3 of the MOE Design Guidelines for Drinking-Water System to determine Maximum Day and Maximum Hour peaking factors for 0 to 500 persons and use Table 4.2 of the Ottawa Design Guidelines, Water Distribution for 501 to 3,000 persons. Please provide the following information to the City of Ottawa via email to request water distribution network boundary conditions for the subject site. Please note that once this information has been provided to the City of Ottawa it takes approximately 5-10 business days to receive boundary conditions.
    - Type of Development and Units
    - Site Address
    - A plan showing the proposed water service connection locations.
    - **Average Daily Demand** (L/s)
    - **Maximum Daily Demand** (L/s)
    - **Peak Hour Demand** (L/s)
    - **Fire Flow** (L/min)
    - [*Fire flow demand requirements shall be based on Fire Underwriters Survey (FUS) Water Supply for Public Fire Protection*
    - *1999*]
    - *Exposure separation distances shall be defined on a figure to support the FUS calculation and required fore flow (RFF).*
    - Hydrant capacity shall be assessed to demonstrate the RFF can be achieved. Please identify which hydrants are being considered to meet the RFF on a fire hydrant coverage plan as part of the boundary conditions request.
- The subject site is located within the 1E Pressure Zone.

Snow Storage:

- Any portion of the subject property which is intended to be used for permanent or temporary snow storage shall be as shown on the approved site plan and grading plan. Snow storage shall not interfere with approved grading and drainage patters or servicing. Snow storage areas shall be setback from the property lines, foundations, fencing or landscaping a minimum of 1.5m. Snow storage areas shall not occupy driveways, aisles, required parking spaces or any portion of a road allowance. If snow is to be removed from the site please indicate this on the plan(s).

Permits and Approvals:

- The consultant shall determine if this project will be subject to an Environmental Compliance Approval (ECA) for Private Sewage Works. It shall be determined if the exemptions set out under Ontario Regulation 525/98: *Approval Exemptions* are satisfied. All regulatory approvals shall be documented and discussed in the report.

Geotechnical Investigation:

- A Geotechnical Study/Investigation shall be prepared in support of this development proposal.
- Reducing the groundwater level in this area can lead to potential damages to surrounding structures due to excessive differential settlements of the ground. The impact of groundwater lowering on adjacent properties needs to be discussed and investigated to ensure there will be no short term and long term damages associated with lowering the groundwater in this area.
- Geotechnical Study shall be consistent with the **Geotechnical Investigation and Reporting Guidelines for Development Applications**.
- https://documents.ottawa.ca/sites/default/files/documents/cap137602.pdf

Exterior Site Lighting:

- Any proposed light fixtures (both pole-mounted and wall mounted) must be part of the approved Site Plan. All external light fixtures must meet the criteria for Full Cut-off Classification as recognized by the Illuminating Engineering Society of North America (IESNA or IES), and must result in minimal light

spillage onto adjacent properties (as a guideline, 0.5 fc is normally the maximum allowable spillage). In order to satisfy these criteria, the please provide the City with a **Site Lighting Plan, Photometric Plan and Certification (Statement) Letter** from an acceptable professional engineer stating that the design is compliant.

Please contact Infrastructure Project Manager Ahmed Elsayed for follow-up questions.

Transportation

- Follow Traffic Impact Assessment Guidelines
  - A TIA is required. Please proceed to submit Scoping report.
  - Start this process asap. The application will not be deemed complete until the submission of the draft step 1-4, including the functional draft RMA package (if applicable) and/or monitoring report (if applicable).
  - Request base mapping asap if RMA is required. Contact Engineering Services (https://ottawa.ca/en/city-hall/planning-and-development/engineering-services)
- TMP shows:
  - Future BRT along Hwy 417 (affordable network) and future LRT along Hwy 417 (ultimate network); and
  - Plans to widen Kanata Avenue from two to four lanes, between Highway 417 and Campeau Drive (Phase 2: 2020-2025).
- Drive aisle width should be 6.7m wide.
- Reduce number of conflict points as much as possible within internal roadways.
- Noise Impact Studies required for the following:
  - Road
  - Stationary (if there will be any exposed mechanical equipment due to the proximity to neighbouring noise sensitive land uses)
- On site plan:
  - Show all details of the roads abutting the site up to and including the opposite curb; include such items as pavement markings, accesses and/or sidewalks.
  - Show clear throat length dimension on site plan.
  - Turning movement diagrams required for all accesses showing the largest vehicle to access/egress the site.
  - Turning movement diagrams required for internal movements (loading areas, garbage).
  - Show all curb radii measurements; ensure that all curb radii are reduced as much as possible
  - Show lane/aisle widths.
  - Sidewalk is to be continuous across access as per City Specification 7.1.
  - Grey out any area that will not be impacted by this application.
- AODA legislation is in effect for all organizations, please ensure that the design conforms to these standards.

Please contact Transportation Project Manager, Josiane Gervais for follow-up questions.

Other

Please refer to the links to "Guide to preparing studies and plans" and fees for general information. Additional information is available related to building permits, development charges, and the Accessibility Design Standards. Be aware that other fees and permits may be required, outside of the development review process. You may obtain background drawings by contacting informationcentre@ottawa.ca.

These pre-consultation comments are valid for one year. If you submit a development application(s) after this time, you may be required to meet for another pre-consultation meeting and/or the submission requirements may change. You are as well encouraged to contact us for a follow-up meeting if the plan/concept will be further refined.

Please do not hesitate to contact me if you have any questions.

Regards,
Laurel

GENERAL NOTES:

1. COORDINATE AND SCHEDULE ALL WORK WITH OTHER TRADES AND CONTRACTORS.
2. DETERMINE THE EXACT LOCATION, SIZE, MATERIAL AND ELEVATION OF ALL EXISTING UTILITIES PRIOR TO COMMENCING CONSTRUCTION. PROTECT AND ASSUME RESPONSIBILITY FOR ALL EXISTING UTILITIES WHETHER OR NOT SHOWN ON THIS DRAWING.
3. OBTAIN ALL NECESSARY PERMITS AND APPROVALS FROM THE CITY OF OTTAWA BEFORE COMMENCING CONSTRUCTION.
4. BEFORE COMMENCING CONSTRUCTION OBTAIN AND PROVIDE PROOF OF COMPREHENSIVE, ALL RISK AND OPERATIONAL LIABILITY INSURANCE FOR $5,000,000.00. INSURANCE POLICY TO NAME OWNERS, ENGINEERS AND ARCHITECTS AS CO-INSURED.
5. RESTORE ALL DISTURBED AREAS ON-SITE AND OFF-SITE, INCLUDING TRENCHES AND SURFACES ON PUBLIC ROAD ALLOWANCES TO EXISTING CONDITIONS OR BETTER TO THE SATISFACTION OF THE CITY OF OTTAWA AND ENGINEER.
6. REMOVE FROM SITE ALL EXCESS EXCAVATED MATERIAL, ORGANIC MATERIAL AND DEBRIS UNLESS OTHERWISE INSTRUCTED BY ENGINEER. EXCAVATE AND REMOVE FROM SITE ANY CONTAMINATED MATERIAL. ALL CONTAMINATED MATERIAL SHALL BE DISPOSED OF AT A LICENSED LANDFILL FACILITY.
7. ALL ELEVATIONS ARE GEODETIC.
8. REFER TO GEOTECHNICAL REPORT (No. PG5281-1, DATED JUL 16TH, 2020), PREPARED BY PATERSON, FOR SUBSURFACE CONDITIONS, CONSTRUCTION RECOMMENDATIONS, AND GEOTECHNICAL INSPECTION REQUIREMENTS. THE GEOTECHNICAL CONSULTANT IS TO REVIEW ON-SITE CONDITIONS AFTER EXCAVATION PRIOR TO PLACEMENT OF THE GRANULAR MATERIAL.
9. REFER TO ARCHITECT'S AND LANDSCAPE ARCHITECT'S DRAWINGS FOR BUILDING AND HARDSURFACE AREAS AND DIMENSIONS.
10. REFER TO STORMWATER MANAGEMENT REPORT PREPARED BY NOVATECH ENGINEERING CONSULTANTS LTD.
11. SAW CUT AND KEY GRIND ASPHALT AT ALL ROAD CUTS AND ASPHALT TIE IN POINTS AS PER CITY OF OTTAWA STANDARDS (R10).
12. PROVIDE LINE/PARKING PAINTING.
13. CONTRACTOR TO PROVIDE THE CONSULTANT WITH A GENERAL PLAN OF SERVICES INDICATING ALL SERVICING AS-BUILT INFORMATION SHOWN ON THIS PLAN. AS-BUILT INFORMATION MUST INCLUDE: PIPE MATERIAL, SIZES, LENGTHS, SLOPES, INVERT AND T/G ELEVATIONS, STRUCTURE LOCATIONS, VALVE AND HYDRANT LOCATIONS, T/WM ELEVATIONS AND ANY ALIGNMENT CHANGES, ETC.

SEWER NOTES:

1. SPECIFICATIONS:

ITEM	SPEC. No.	REFERENCE
CATCHBASIN (600x600mm)	705.010	OPSD
STORM / SANITARY MANHOLE (1200Ø)	701.010	OPSD
CB, FRAME & COVER	400.020	OPSD
STORM / SANITARY MH FRAME & COVER	401.010	OPSD
SEWER TRENCH - BEDDING (GRANULAR A) COVER (GRANULAR A OR GRANULAR B TYPE I, WITH MAXIMUM PARTICLE SIZE=25mm)	S6, S7, W17	CITY OF OTTAWA / OPSD
STORM SEWER	PVC DR 35	
SANITARY SEWER	PVC DR 35	
CATCHBASIN LEAD	PVC DR 35	
SEWER SERVICE CONNECTION - RIGID PIPE	S11	CITY OF OTTAWA
SEWER SERVICE ABANDONMENT	S11.4	CITY OF OTTAWA

2. INSULATE ALL PIPES (SAN/STM) THAT HAVE LESS THAN 1.5m COVER WITH 50mmX1200mm HI-40 INSULATION. PROVIDE 150mm CLEARANCE BETWEEN PIPE AND INSULATION.
3. SERVICES ARE TO BE CONSTRUCTED TO 1.0m FROM FACE OF BUILDING AT A MINIMUM SLOPE OF 1.0%.
4. PIPE BEDDING, COVER AND BACKFILL ARE TO BE COMPACTED TO AT LEAST 98% OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY. THE USE OF CLEAR CRUSHED STONE AS A BEDDING LAYER SHALL NOT BE PERMITTED.
5. FLEXIBLE CONNECTIONS ARE REQUIRED FOR CONNECTING PIPES TO MANHOLES (FOR EXAMPLE KOR-N-SEAL, PSX: POSITIVE SEAL AND DURASEAL). THE CONCRETE CRADLE FOR THE PIPE CAN BE ELIMINATED.
6. THE OWNER SHALL REQUIRE THAT THE SITE SERVICING CONTRACTOR PERFORM FIELD TESTS FOR QUALITY CONTROL OF ALL SANITARY SEWERS. LEAKAGE TESTING SHALL BE COMPLETED IN ACCORDANCE WITH OPSS 410.07.16, 410.07.16.04 AND 407.07.24. DYE TESTING IS TO BE COMPLETED ON ALL SANITARY SERVICES TO CONFIRM PROPER CONNECTION TO THE SANITARY SEWER MAIN. THE FIELD TESTS SHALL BE PERFORMED IN THE PRESENCE OF A CERTIFIED PROFESSIONAL ENGINEER WHO SHALL SUBMIT A CERTIFIED COPY OF THE TEST RESULTS.
7. STORM MANHOLES AND CBMHS ARE TO HAVE 300mm SUMPS UNLESS OTHERWISE INDICATED.
8. CONTRACTOR TO TELEVISE (CCTV) ALL PROPOSED SEWERS, 200mmØ OR GREATER PRIOR TO BASE COURSE ASPHALT. UPON COMPLETION OF CONTRACT, THE CONTRACTOR IS RESPONSIBLE TO FLUSH AND CLEAN ALL SEWERS & APPURTENANCES.
9. FULL PORT BACKWATER VALUES ARE REQUIRED ON THE SANITARY SERVICES. INSTALLED AS PER THE MANUFACTURES RECOMMENDATIONS AND A BACKWATER VALVE IS REQUIRED ON THE STORM SERVICES / FOUNDATION DRAINS FOR EACH BUILDING; INSTALLED AS PER STD. DWGS14
10. REINSTATE ALL EXISTING PAVEMENT, CURB AND BOULEVARDS AS PER CITY OF OTTAWA R10.
11. ALL EXISTING SANITARY AND STORM SERVICES ARE TO BE CAPPED AT THE PROPERTY LINE TO THE SATISFACTION OF THE CITY OF OTTAWA'S SEWER OPERATION.
12. MONITORING TEST PORTS FOR BUILDING SERVICES TO BE INSTALLED IN PARKING GARAGE.

WATERMAIN NOTES:

1. SPECIFICATIONS:

ITEM	SPEC. NO.	REFERENCE
WATERMAIN TRENCHING	W17	CITY OF OTTAWA
THERMAL INSULATION IN SHALLOW TRENCHES	W22	CITY OF OTTAWA
VALVE BOX ASSEMBLY	W24	CITY OF OTTAWA
CONNECTION DETAIL FROM EXISTING TO NEW WM	W25.1	CITY OF OTTAWA
WATERMAIN CROSSING BELOW SEWER	W25	CITY OF OTTAWA
WATERMAIN CROSSING OVER SEWER	W25.2	CITY OF OTTAWA
THERMAL INSULATED AT OPEN STRUCTURE	W23	CITY OF OTTAWA
WATER SERVICE INSULATION AT SEWER CROSSING	W38	CITY OF OTTAWA

2. SUPPLY AND CONSTRUCT ALL WATERMAINS AND APPURTENANCES IN ACCORDANCE WITH THE CITY OF OTTAWA STANDARDS AND SPECIFICATIONS. EXCAVATION, INSTALLATION, BACKFILL AND RESTORATION OF ALL WATERMAINS BY THE CONTRACTOR. CONNECTIONS AND SHUT-OFFS AT THE MAIN AND CHLORINATION OF THE WATER SYSTEM SHALL BE PERFORMED BY CITY OFFICIALS.
3. WATERMAIN SHALL BE MINIMUM 2.4m DEPTH BELOW GRADE UNLESS OTHERWISE INDICATED. OTHERWISE THERMAL INSULATION IS REQUIRED AS PER STD. DWGW22.
4. PROVIDE MINIMUM 0.50m CLEARANCE BETWEEN OUTSIDE OF PIPES AT ALL CROSSINGS WHEN WATERMIAN IS BELOW AND MINIMUM 0.25m CLEARANCE WHEN WATERMAIN IS ABOVE.
5. WATER SERVICE IS TO BE CONSTRUCTED TO WITHIN 1.0m OF FOUNDATION WALL AND CAPPED, UNLESS OTHERWISE INDICATED.
6. ALL EXISTING WATER SERVICES TO BE BLANKED AT MAIN BY CITY FORCES. EXCAVATION AND REINSTATEMENT BY CONTRACTOTR

GRADING NOTES:

1. ALL TOPSOIL, ORGANIC OR DELETERIOUS MATERIAL MUST BE ENTIRELY REMOVED FROM BENEATH THE PROPOSED PAVED AREAS AS DIRECTED BY THE SITE ENGINEER OR GEOTECHNICAL ENGINEER.
2. EXPOSED SUBGRADES IN PROPOSED PAVED AREAS SHOULD BE PROOF ROLLED WITH A LARGE STEEL DRUM ROLLER AND INSPECTED BY THE GEOTECHNICAL ENGINEER PRIOR TO THE PLACEMENT OF GRANULARS.
3. ANY SOFT AREAS EVIDENT FROM THE PROOF ROLLING SHOULD BE SUB-EXCAVATED AND REPLACED WITH SUITABLE MATERIAL THAT IS FROST COMPATIBLE WITH THE EXISTING SOILS AS RECOMMENDED BY THE GEOTECHNICAL ENGINEER.
4. THE GRANULAR BASE SHOULD BE COMPACTED TO AT LEAST 99% OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY VALUE, ANY ADDITIONAL GRANULAR FILL USED BELOW THE PROPOSED PAVEMENT SHOULD BE COMPACTED TO AT LEAST 95% OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY VALUE.
5. MINIMUM OF 2% GRADE FOR ALL GRASS AREAS UNLESS OTHERWISE NOTED.
6. MAXIMUM TERRACING GRADE TO BE 3:1 UNLESS OTHERWISE NOTED.
7. ALL GRADES BY CURBS ARE EDGE OF PAVEMENT GRADES UNLESS OTHERWISE INDICATED.
8. ALL CURBS SHALL BE BARRIER CURB (150mm) UNLESS OTHERWISE NOTED AND CONSTRUCTED AS PER CITY OF OTTAWA STANDARDS (SC1.1).
9. REFER TO LANDSCAPE PLAN FOR PLANTING AND OTHER LANDSCAPE FEATURE DETAILS.
10. CONTRACTOR TO PROVIDE THE CONSULTANT WITH A GRADING PLAN INDICATING AS-BUILT ELEVATIONS OF ALL DESIGN GRADES SHOWN ON THIS PLAN.

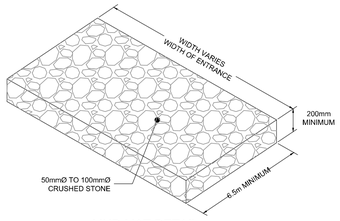
PAVEMENT STRUCTURE:

LIGHT DUTY
50mm HL3
150mm GRAN "A"
300mm GRAN "B" TYPE II

HEAVY DUTY
40mm HL3
50mm HL8
150mm GRAN "A"
450mm GRAN "B" TYPE II

EROSION AND SEDIMENT CONTROL NOTES :

1. ALL EROSION AND SEDIMENT CONTROLS SHALL BE INSTALLED TO THE SATISFACTION OF THE ENGINEER, CITY OF OTTAWA AND THE CONSERVATION AUTHORITY. THEY SHALL BE APPROPRIATE TO THE SITE CONDITIONS, PRIOR TO UNDERTAKING ANY SITE ALTERATIONS (FILLING, GRADING, REMOVAL OF VEGETATION, ETC.) AND DURING ALL PHASES OF SITE PREPARATION AND CONSTRUCTION THESE PRACTICES SHALL BE IMPLEMENTED IN ACCORDANCE WITH THE CURRENT BEST MANAGEMENT PRACTICES FOR EROSION AND SEDIMENT CONTROL AND SHOULD INCLUDE AS A MINIMUM THOSE MEASURES INDICATED ON THE PLAN.
2. TO PREVENT SURFACE EROSION FROM ENTERING THE DITCH OR STORM SYSTEM DURING CONSTRUCTION, FILTER SOCKS WILL BE PLACED UNDER GRATES OF ALL PROPOSED AND EXISTING CATCHBASINS AND STRUCTURES. A LIGHT DUTY SILT FENCE BARRIER WILL ALSO BE INSTALLED IN SELECTED LOCATIONS, AND STRAW BALE BARRIERS WILL BE INSTALLED WITHIN THE OUTLET DITCHES. THESE CONTROL MEASURES WILL REMAIN IN PLACE UNTIL VEGETATION HAS BEEN ESTABLISHED AND CONSTRUCTION COMPLETE.
3. THE SEDIMENT CONTROL MEASURES SHALL ONLY BE REMOVED WHEN, IN THE OPINION OF THE ENGINEER, THE MEASURES ARE NO LONGER REQUIRED. NO CONTROL MEASURES MAY BE PERMANENTLY REMOVED WITHOUT PRIOR AUTHORIZATION FROM THE ENGINEER.
4. THE CONTRACTOR SHALL IMMEDIATELY REPORT TO THE ENGINEER ANY ACCIDENTAL DISCHARGES OF SEDIMENT MATERIAL INTO ANY DITCH OR STORM SEWER SYSTEM. APPROPRIATE RESPONSE MEASURES, INCLUDING ANY REPAIRS TO EXISTING CONTROL MEASURES OR THE IMPLEMENTATION OF ADDITIONAL CONTROL MEASURES, SHALL BE CARRIED OUT BY THE CONTRACTOR WITHOUT DELAY.
5. THE CONTRACTOR ACKNOWLEDGES THAT FAILURE TO IMPLEMENT EROSION AND SEDIMENT CONTROL MEASURES MAY BE SUBJECT TO PENALTIES IMPOSED BY ANY APPLICABLE REGULATORY AGENCY.
6. THE CONTRACTOR SHALL PROVIDE DUST CONTROL WITH THE APPLICATION OF WATER AND/OR CALCIUM CHLORIDE AS REQUIRED.



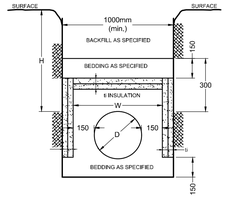
MUD MAT DETAIL
NOT TO SCALE

SEWER & WATERMAIN INSULATION NOTES:

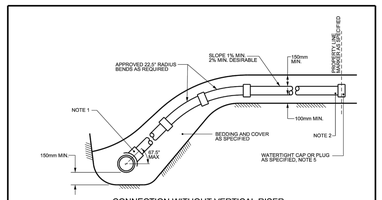
1. INSULATE ALL SEWER PIPES THAT HAVE LESS THAN 2.0m COVER AND ALL WATERMAIN WITH LESS THAN 2.4m OF COVER WITH EXPANDED POLYSTYRENE INSULATION AS PER OPSD 1109.030.
2. THE THICKNESS OF INSULATION SHALL BE THE EQUIVALENT OF 25mm FOR EVERY 300mm REDUCTION IN THE REQUIRED DEPTH OF COVER WITH 50mm MINIMUM (SEE TABLE)

COVER SEWER / WATER (mm)	INSULATION THICKNESS (mm)
2000-1700 / 2400-2100	50
1700-1400 / 2100-1800	75
1400 - / 1800-1500	100

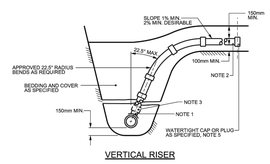
T = THICKNESS OF INSULATION (mm)
W = WIDTH OF INSULATION (mm)
W = D + 300 (1000 min.)
D = O.D OF PIPE (mm)



INSULATION DETAIL FOR SHALLOW SEWERS & WATERMAIN
N.T.S.



CONNECTION WITHOUT VERTICAL RISER

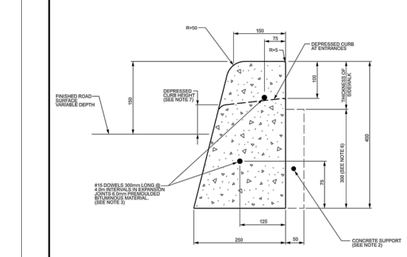


VERTICAL RISER

NOTES:
1. ALL DIAMETERS OF SERVICE CONNECTIONS THAT HAVE NOMINAL DIAMETERS NO GREATER THAN 50% OF THE NOMINAL DIAMETER OF THE SEWER SERVICE SHALL BE MADE USING A BELL END INSERT AS PER SS11.2 OR AN APPROVED RUBBER GASKETED INSERT, INSTALLED ABOVE THE SPRING LINE.
2. SANITARY SERVICES TO BE 135mm AND STORM SERVICES TO BE 100mm FOR NEW RESIDENCES UNLESS SPECIFIED OTHERWISE. SERVICE PIPE AND RADIUS BENDS TO BE APPROVED CSA B182.2, SERIES PRODUCTS UNLESS SPECIFIED OTHERWISE.
3. APPROVED CONTROLLED SETTLEMENT JOINTS OPTIONAL FOR SERVICE CONNECTIONS TO MAIN SEWERS UP TO 5m DEEP. WHERE APPROVED, CONNECTIONS TO SEWERS OVER 5m DEEP REQUIRE APPROVED CONTROLLED SETTLEMENT JOINTS.
4. VERTICAL RISER SHALL BE SAME AS SERVICE PIPE UNLESS OTHERWISE SPECIFIED.
5. CAP OR PLUG AT THE PROPERTY LINE SHALL BE ADEQUATELY BRACED TO WITHSTAND TESTING PRESSURE.
6. FOR NEW CONSTRUCTION, INSERTS MUST BE INSTALLED ON THE MAIN PIPE BEFORE THAT PIPE IS LAID. FOR SEWER/SEWERAGE REPAIRS WHERE DUCTILE IRON PIPE IS USED, A SADDLE STRAP MAY BE USED.
7. APPROVED CUT-IN TOOL MUST BE USED FOR FIELD MADE CONNECTIONS.
8. ALL DIMENSIONS ARE IN MILLIMETRES UNLESS OTHERWISE SHOWN.

N.T.S.

Ottawa	SEWER SERVICE CONNECTIONS FOR RIGID MAIN SEWER PIPE (MODIFIED OPSD-1006.010)	DATE:	MARCH 2006
		REV. DATE:	MARCH 2014
		DWG. No.:	S11

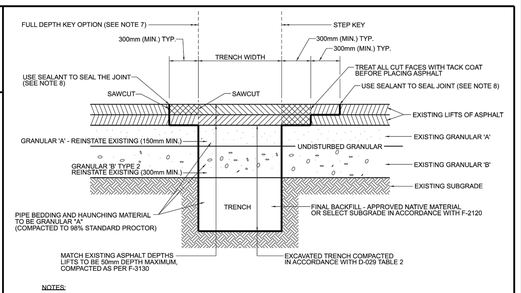


CONCRETE BARRIER CURB

NOTES:
1. THE FULL CURB DEPTH SHALL BE CARRIED THROUGH THE DEPRESSED ACCESS CROSSING.
2. A CONCRETE SUPPORT IS REQUIRED WHEN BUILT ADJACENT TO THE SIDEWALK.
3. IF AN EXTRUSION CURBING MACHINE IS USED, THE EXPANSION BITUMINOUS MATERIAL AND THE #15 DOWELS ARE TO BE PLACED AT THE END OF THE EXTRUSION.
4. ALL DIMENSIONS ARE IN MILLIMETRES UNLESS SHOWN OTHERWISE.
5. DUMMY JOINTS SHALL BE 25mm DEEP, FRONT, BACK AND TOP OF SECTION AT 4m SPACING OR MATCH JOINTING WHERE SIDEWALK IS ADJACENT.
6. FOR DEPRESSED CURB AT ENTRANCES USE 250.
7. DEPRESSED CURB HEIGHT - FOR PEDESTRIAN CURB RAMPS 0 TO 6 mm AND FOR PRIVATE ENTRANCES 0 TO 13mm.

N.T.S.

Ottawa	CONCRETE BARRIER CURB FOR GRANULAR BASE PAVEMENT (MODIFIED OPSD-600.110)	DATE:	JANUARY 2003
		REV. DATE:	MARCH 2021
		DWG. No.:	SC1.1



STANDARD TRENCH REINSTATEMENT IN PAVED SURFACE

NOTES:
1. ALL EXISTING ASPHALT TO BE SAW CUT.
2. UNLESS SPECIFIED ELSEWHERE, SURFACE COURSE ASPHALT SUPERPAVE 12.5mm AND BASE COURSE ASPHALT SUPERPAVE 19.0mm IS TO BE USED.
3. UNLESS SPECIFIED ELSEWHERE, ASPHALT MIX SHALL BE LEVEL 8 (PG58-34) FOR NON-BUS LOCAL ROADS, AND LEVEL 8 (PG58-34) FOR BUS ROADS.
4. UNLESS SPECIFIED ELSEWHERE WHERE EXISTING PAVEMENT STRUCTURE EXCEEDS 150mm IN DEPTH, ASPHALT REINSTATEMENT SHALL BE 150mm AND GRANULAR "A" FOR THE REMAINDER.
5. UNLESS SPECIFIED ELSEWHERE, WHERE AN UNDERLYING LAYER OF CONCRETE PAVEMENT EXISTS, REINSTATEMENT SHALL CONSIST OF 150mm OF SUPERPAVE 19.0mm LEVEL B (PG58-34) COMPACTED IN LIFTS.
6. UNLESS SPECIFIED ELSEWHERE, HOT MIX ASPHALT PLACEMENT AND CONSTRUCTION SHALL BE IN ACCORDANCE WITH F-3130.
7. STEP KEY REINSTATEMENT TO BE IMPLEMENTED UNLESS FULL DEPTH KEY OPTION APPROVED BY THE CITY.
8. ALL EDGES TO BE ROUTED AND SEALED WITH A BEAD OF HOT RUBBERIZED ASPHALT JOINT SEALING COMPOUND.
