March 8, 2021

Introduction

This report has been prepared to adhere with the City of Ottawa Tree Protection (By-law No. 2020-340). A site visit was conducted on Friday March 5, 2021 by ISA certified arborist Dave Buttivant(ISA ON1174A) at the above mentioned address to assess all trees affected by future development. **This report should be provided to The City of Ottawa forestry department for review and to ALL contractors working on site during demolition, excavation and construction.**

NO TREES SHALL BE REMOVED PRIOR TO CITY OF OTTAWA APPROVAL

Site/Owner information

Owner - See above

Arborist - See above

Contractor - To be determined

Municipal address and legal description -

6001 Renaud is Part 1 of Plan 5R-5324 P.I.N 04757-0040 and 6005 Renaud is known as Part of Lot 7, Concession 3, geographic Township of Gloucester, now in the City of Ottawa. P.I.N 04757-0019

Schedule - To be determined

Arborist Assessment

This property is a densely treed area bordering a more recently developed community. There are 70 trees over 10cm dbh on site including 12 trees greater than 50cm dbh. Cedar hedges and smaller trees can also be found throughout the property.

After the initial site visit it can be confirmed none of the following natural elements are present on this property.

Surface water features, including vernal pools, wetlands and watercourses;
Steep slopes, including valleys and escarpments;
Valued woodlots designated as Urban Natural Features or Natural Environment Areas, areas evaluated in the Urban Natural Areas Environmental Evaluation Study (UNAEES), or other areas that meet the criteria used in the UNAEES;
Significant woodlands;

***High quality, specimen trees; -**

Hazardous trees;

The presence of riparian woodlots, rare communities or other unique ecological features; and

Species at Risk and their habitat.

*** 12 trees would be considered Distinctive trees within the City of Ottawa suburban area(schedule F) but I would not describe them as High quality specimen trees.**

After reviewing the site plan and conducting a site visit it can be quickly determined there is not much room for tree retention on this property. Regardless of mitigation measures, all critical root zones will be affected by future construction. All trees within the building footprint, parking lot and lane ways will require removal. **There are no trees on adjacent properties affected by construction.**

Consideration was taken into place regarding the following trees for retention and reasonings below. Please note, root flare and root plates were not visible at this time.

White pine(#17-23) in particular, I would not retain these trees within close proximity to buildings for safety reasons. Recommend Removal

Red Pine(#27-36) trees closest to property line are leaning and other trees have poor taper and exposure. Recommend Removal

Scots Pine(#65,66) these two trees appear to be within the proposed Amenity Area but if all other trees are being removed, given this species response to stress I would not retain. Recommend Removal

Sugar Maple(#46) poor location for retention. Recommend Removal.

Red Pine (#68) this tree is on the property line and has a drastic lean towards the neighbours. Recommend Removal

Silver Maple(#2) this tree appears to be located between the SW lane way and the proposed building. If enough of the critical root zone can be protected and with proper pruning I believe this tree can be retained or at least considered. Further surveying required.

At this time it is my recommendation all trees be removed pre-demolition with the exception of Silver Maple #2 if planning allows and owner agrees to mitigation measures. It should also be taken into account that any trees to be retained(border trees in particular) will be newly exposed to the elements and even if root zones are not disturbed they will be susceptible to wind throw.

To make up for canopy loss I believe a significant tree planting program will need to be put in place both on this property and surrounding areas where permissible. Always plant native species and choose the proper size tree for the location.

***See attached compensation chart for tree removal**

Information for contractors when working around trees

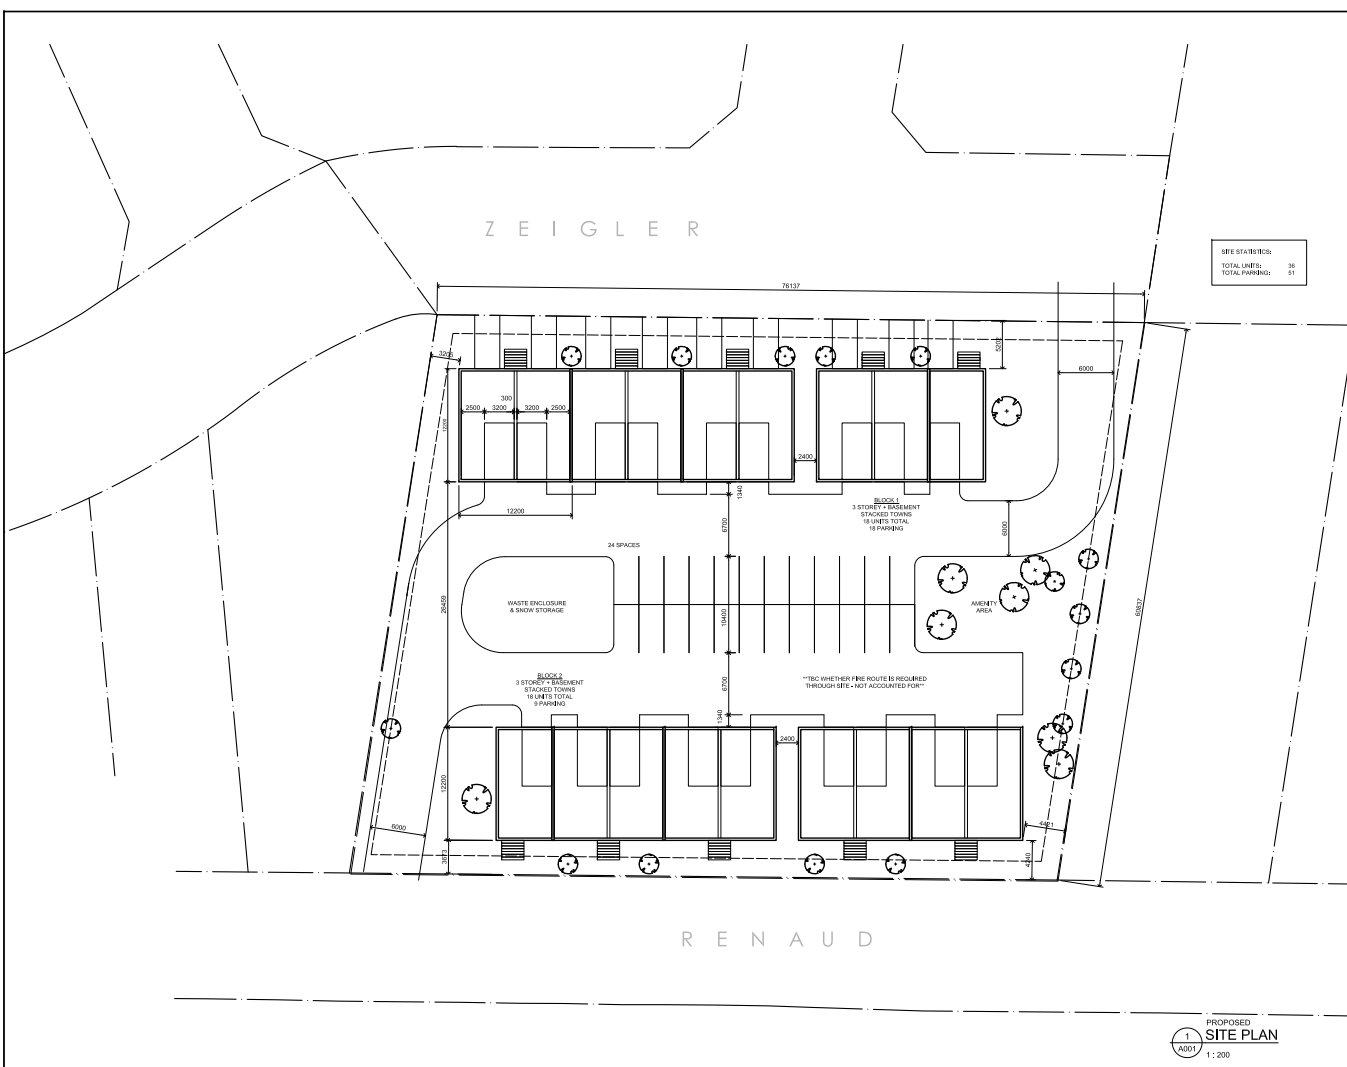

Soil compaction and vibrations from construction equipment can cause root damage. The Municipal Trees and Natural Areas Protection By-law requires that contractors working near trees must:

- erect a fence at the critical root zone (CRZ) of trees
- not place any material or equipment within the CRZ of the tree
- not attach any signs, notices or posters to any tree
- not raise or lower the existing grade within the CRZ of a tree without approval of Forestry Services
- not tunnel or bore when digging within the CRZ of any tree
- not damage the root system, trunk or branches of any tree
- ensure that exhaust fumes from all equipment are not directed towards any tree's canopy
