Attention: **William Kollaard, P.Eng.**

Subject: **2050 Dunrobin Road, City of Ottawa – Floodplain Analysis**

Overview

J.F. Sabourin and Associates Inc. (JFSA) has been retained by Kollaard Associates Inc. (Kollaard) to investigate the current floodplain extents on a site located at 2050 Dunrobin Road (hereon referred to as "the subject property"), adjacent to Harwood Creek. Based on the current floodplain mapping of Harwood Creek provided by the Mississippi Valley Conservation Authority (MVCA), as well as the information submitted by MVCA on their review of the Application for Zoning By-law Amendment on June 17, 2022, the subject property is partially located within the floodplain and regulation limit of Harwood Creek. Under proposed conditions, the development area of 8 rural residential lots will de raised to ensure there is no floodplain encroachment on any part of the residential envelope. Additionally, the floodplain is considered a backwater area that does not contribute to the effective conveyance of flows on Harwood Creek. **Figure 1** shows the extent of the floodplain within the subject property for the existing conditions. The following memo assesses the potential flooding on these lands and quantifies the impacts of raising the grades in this location to ensure no encroachment on the residential development envelopes.

Hydraulic Analysis

To support this analysis, JFSA has purchased a copy of the hydraulic (HEC-RAS) model of Harwood Creek developed by MVCA as part of the floodplain mapping works recently undertaken on this watercourse. In addition to this, LiDAR has been obtained from the City of Ottawa which was flown in 2020. **Figure 2** provides an overview of both the HEC-RAS model and the LiDAR obtained for this project.

From the topographic mapping underlaid in **Figure 2**, it is seen that the floodplain bulges out on this site as the product of a lateral spill from Harwood Creek located between model cross-sections (XS) **1130** and **1214**. As the flooding potential on these lands would occur due to lateral spill/backwater conditions, this area provides no benefit to flow conveyance and in turn, cannot impact the conveyance of flows along Harwood Creek. This concept is also proven by comparing the results of the pre- and post-development floodplain analysis, which demonstrates that there are no changes to the inundation boundary along Harwood Creek despite the reduction of the inundated area within the subject lands due to the proposed site alteration. **Figure 3** shows the floodplain overview under proposed conditions and **Figure 4** shows a comparison/overlay between the existing and proposed floodplain conditions, identifying the floodplain removal within the subject lands and showing that there are no changes to the existing floodplain limits along Harwood Creek. Note that from **Figure 3,** none of the proposed units are at risk of flooding.

JFSA has updated the HEC-RAS model with the 2020 LiDAR obtained from the City of Ottawa and the inclusion of the proposed development as per the detailed grading design provided by Kollaard, see **Figure 5** for the proposed details grading plan for this site. **Attachment A** provides a full summary of existing and proposed results, which shows that the filling of these lands has no impact and that the peak water level results are identical. Additionally, by comparing the 100-year water surface elevation of **75.48 m** on Harwood Creek at **XS 1214** with the proposed underside of footing elevation (USF) of **75.80 m** at **Unit 8**, it can be concluded that the USF is above the 100-year water level on Harwood Creek, with a freeboard of **0.32 m**.

It should be noted that 1D HEC-RAS models, although capable of simulating lateral spills, are not well suited to capture the complex hydraulic phenomenon under such situations. As a secondary check, the floodplain storage loss caused by filling these lands has been assessed using simple GIS tools and data available.

Floodplain Storage Volume

Based on MVCA's HEC-RAS modelling, the 100-year water surface elevation on Harwood Creek at **XS 1214** is **75.48 m**. Overlaying this water surface elevation onto the City of Ottawa LiDAR within the subject property and summing up the total depth of flooding in each cell (1.0m x 1.0m cell) determined that the total existing floodplain storage volume at this location is approximately **3,008 m³**. By doing the same process for the proposed condition where a portion of the development is filled, the floodplain storage volume within the subject property is approximately **1,877 m³**. As such, filling this land would reduce the total floodplain storage volume to Harwood Creek by approximately **1,131 m³**. To provide some context, based on MVCA's HEC-RAS model, the total floodplain storage volume within the Harwood Creek for the 100-year event is **312,000 m³**, therefore the floodplain storage volume loss due to the filling within the subject property at 2050 Dunrobin Road equates to a **0.36%** reduction in total floodplain storage within Harwood Creek. As such, it is determined that filling these lands will have no impact on the hydraulic operations of this watercourse.

Conclusion

Based on the above, JFSA has assessed the potential impacts of filling the area within 2050 Dunrobin Road, which is currently mapped as a floodplain in MVCA's recent floodplain mapping study. Based on updated HEC-RAS modelling, which assumes these lands are filled, JFSA has demonstrated that there is no increase in peak water level. It was noted that 1D HEC-RAS models are not well suited to assessing/simulating the complexities of lateral spills, and as such the floodplain storage lost due to filling these lands was approximated using 2020 LiDAR obtained from the City of Ottawa and the MVCA's simulated 100-year water surface elevation over these lands. Based on this analysis, it was found that filling the floodplain bulge on these lands will result in an approximate reduction in storage volume by **1,131 m³** or **0.36%** of the Harwood Creek 100-year floodplain. As such JFSA concludes that the proposed filling within the subject property will have no adverse impacts on the existing hydraulic operations of Harwood Creek.

Yours truly,
J.F Sabourin and Associates Inc.

GRADING & DRAINAGE NOTES

1. Finished grade to slope away from proposed and existing buildings at a minimum of 2% grade for the first 5.0 metres from building. Grade elevations are as indicated.
2. All roadside ditches, swales and exposed drainage channels to be treated with 75mm of topsoil and seeded/mulched or hydroseeded as soon as possible. (Unless noted otherwise)
3. All materials and construction methods to be in accordance with the City of Ottawa.
4. All disturbed areas to be reinstated to the satisfaction of the engineer and the City of Ottawa.
5. The owner (and/or Contractor) agrees to prepare and implement an erosion and sediment control plan at least equal to the stated minimum requirements and to the satisfaction of the City of Ottawa and the Mississippi Conservation, appropriate to the site conditions, prior to undertaking any site alterations (filling, grading, removal of vegetaiton, etc…) and during all phases of site preparation and construction in accordance with the current Best Management Practices for Erosion and Sediment Control such as but not limited to installing a light duty silt fence barrier as shown of Kollaard Associates Inc. dwg. No. 070415-3 (Erosion & Sediment Control Plan).
6. Match existing elevations at all exterior property lines. Ensure positive drainage whether indicated or not.
7. All lots to be graded to allow positive drainage away from tile beds and dwellings consistent with the drainage patterns outlined on this plan. All isolated low areas are to be eliminated.
8. Undersides of footing and terrace elevations have been set for grading drainage purposes only. Builders should consult the geotechnical report for the subdivision prior to construction. Builders should obtain a subgrade inspection report from qualified engineer prior to concrete placement.
9. Driveway entrance culverts to will consist of non-perforated 12.00 METRE – 600mm Ø Corragated Steel Pipel.
10. Roadway subgrade shall be inspected by a licensed Geotechnical engineer prior to the placement of granulars.
11. All drainage easements, road side ditches, and property line swales with slopes one percent (1%) or less require a subdrain (see typical detail).
12. Subdrain cover material to consist of a sand/peat mixture capable of supporting vegetative growth.

NOTE:
1. All dimensions are in metres.
2. All elevations are in metres and are based on a geodetic benchmark, TBM = Bell kiosk located sout/westh side of Dunrobin Road, across from proposed lot #2 , elevation = 79,82 m (geodetic)
3. This drawing does not represent a legal survey.
4. Finished grade to slope away from proposed building at a minimum of 2%. Grade elevations are as indicated.
5. All dimensions to be verified on site by contractor prior to construction.
6. All materials and construction methods to be in accordance with City of Ottawa Standards and Ontario Provincial Standards and Specifications.
7. All disturbed areas to be reinstated to the satisfaction of the engineer and the City of Ottawa.
8. The owner (and/or Contractor) agrees to prepare and implement an erosion and sediment control plan at least equal to the stated minimum requirements and to the satisfaction of the City of Ottawa, appropriate to the site conditions, prior to undertaking any site alterations (filling, grading, removal of vegetation, etc,) and during all phases of site preparation and construction In accordance with the current Best Management Practices for Erosion and Sediment Control
9. Any changes made to this plan must be verified and approved by Kollaard Associates Inc.
