Appendix M – TDM Checklist

1 Screening

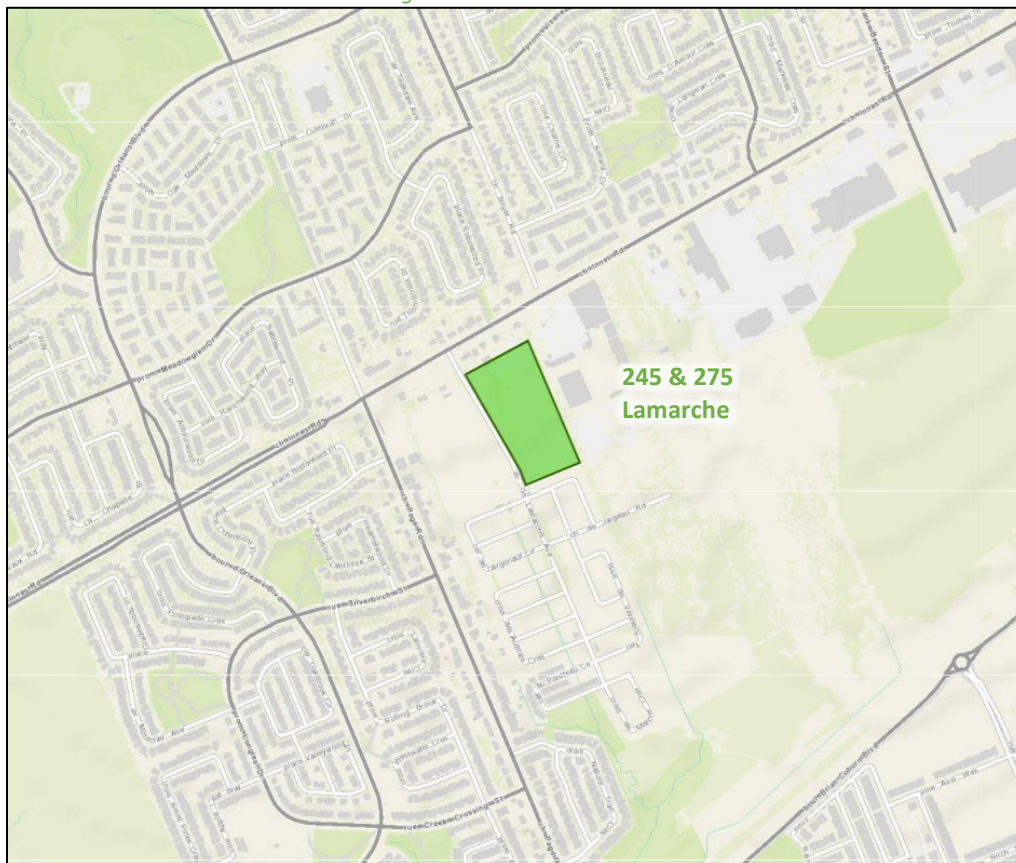

This study has been prepared according to the City of Ottawa’s 2017 Transportation Impact Assessment (TIA) Guidelines. Accordingly, a Step 1 Screening Form has been prepared and is included as Appendix A, along with the Certification Form for the TIA Study PM. As shown in the Screening Form, a TIA is required including the Design Review component and the Network Impact Component. This study has been prepared to support a zoning by-law amendment and draft plan of subdivision application.

2 Existing and Planned Conditions

2.1 Proposed Development

The existing site, located at 245 and 275 Lamarche Avenue, is zoned as Development Reserve (DR). The proposed development consists of 103 townhomes and 68 back-to-backs dwellings. The new development will constitute the second phase of the Orleans Village subdivision. The concept plan includes two full-movement accesses onto Lamarche Avenue. The anticipated full build-out and occupancy horizon is 2025 with construction occurring in a single phase. The site is located within the Innes Arterial Mainstreet area. Figure 1 illustrates the study area context. Figure 2 illustrates the proposed concept plan.

2.2 Existing Conditions

2.2.1 Area Road Network

Innes Road: Innes Road is a City of Ottawa arterial road. It has a divided four-lane cross-section west of Page Road, and five-lane urban cross-section including a two-way left-turn lane to the east. Bike lanes and sidewalks are provided on both sides of the road east of Orleans Boulevard, and bike lane is also present on the north side of the road west of Orleans Boulevard. The posted speed limit is 60 km/h within the study area and the City-protected right-of-way is 37.5 metres. Innes Road is designated as a truck route.

Orleans Boulevard: Orleans Boulevard is a City of Ottawa arterial road with a four-lane divided cross-section and a two-lane cross-section south of Silverbirch Street. Sidewalks are present on both sides of the road to the north and on the west side of the road to the south of Silverbirch Street. The posted speed limit is 60 km/h north of Innes Road, and 50 km/h to the south. The city-protected right-of-way is 37.5 metres north of Innes Road, and the measured right-of-way is 34.0 metres south of Innes Road. Orleans Boulevard is designated as a truck route north of Innes Road.

Viseneau Drive: Viseneau Drive is a City of Ottawa collector road with a two-lane cross-section. A sidewalk is present on the west side of the road. The posted speed limit is 40 km/h and the city-protected right-of-way is 26.0 metres.

Page Road: Page Road is a City of Ottawa local road with a two-lane semi-urban cross-section north of Innes Road and a collector road with a two-lane urban cross-section south of Innes Road. Sidewalks are present on the west side of the road and for 205 metres south of Innes Road on east side of the road. The posted speed limit is 40 km/h and the measured right-of-way varies between 20.0 and 22.0 metres north of Silverbirch Street, and the City-protected right-of-way is 24.0 metres south of Silverbirch Street.

Lamarche Avenue: Lamarche Avenue is a City of Ottawa local road with a two-lane cross. A MUP is present on the west side of the road. A sidewalk is present on the east side of the road south of Argonaut Circle and is planning to be provided on the east side of the road north of Argonaut Circle. On-street parking is permitted on both sides of the road. The unposted speed limit is assumed to be 50 km/h, and the measured right-of-way is 24.0 metres.

2.2.2 Existing Intersections

The key existing signalized area intersections within one kilometre of the site have been summarized below:

Innes Road at Orleans Boulevard

The intersection of Innes Road at Orleans Boulevard is a signalized intersection. The northbound and southbound approaches each consist of an auxiliary left-turn lane, two through lanes, and an auxiliary channelized right-turn lane. The eastbound approach consists of two auxiliary left-turn lanes, two through lanes, and an auxiliary channelized right-turn lane, and the westbound approach consists of an auxiliary left-turn lane, two through lanes, a bike lane, and an auxiliary channelized right-turn lane. Trucks are restricted on southbound movement.

Innes Road at Page Road

The intersection of Innes Road at Page Road is a signalized intersection. The northbound and southbound approaches each consist of a shared all-movement lane. The eastbound approach consists of an auxiliary left-turn lane, a through lane, a shared through/right-turn lane, and a bike, and westbound approach consists of an auxiliary left-turn lane, which develops from the two-way left-

turn lane, a through lane, a shared through/right-turn lane, and a bike lane. No turn restrictions were noted.

Innes Road at Lamarche Avenue

The intersection of Innes Road at Lamarche Avenue is a T-intersection stop-controlled on the minor approach of Lamarche Avenue. The northbound approach consists of a shared all-movement lane. The eastbound approach consists of a through lane and a shared through/right-turn lane, and westbound approach consists of two through lanes. A two-way left-turn lane is present through the intersection on Innes Road. No turn restrictions were noted.

Innes Road at 3615 Innes Road/3636 Innes Road Access

The intersection of Innes Road at the 3615 Innes Road/3636 Innes Road access is a signalized intersection. The northbound approach functions as a left-turn lane and a shared through/right-turn lane, and the southbound approach consists of a shared all-movement lane. The eastbound approach consists of an auxiliary left-turn lane, which develops from the two-way left-turn lane, a through lane, a shared through/right-turn lane, and a bike lane, and the westbound approach consists of an auxiliary left-turn lane, a through lane, a shared through/right-turn lane, and a bike lane. No turn restrictions were noted.

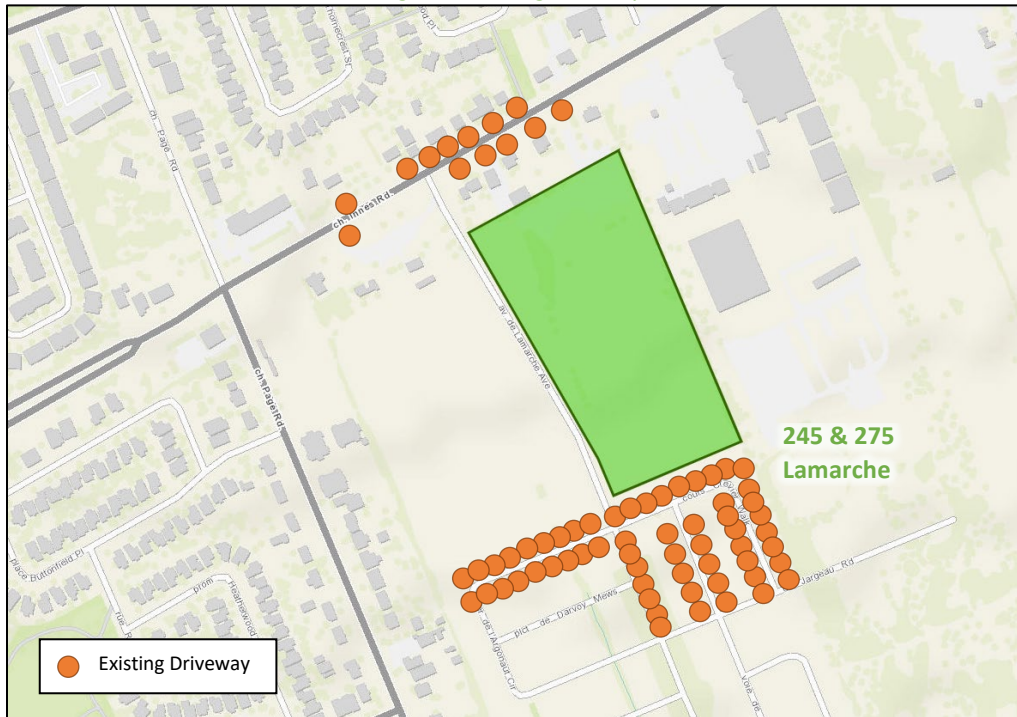

Innes Road at Viseneau Drive

The intersection of Innes Road at Viseneau Drive is a signalized intersection. The northbound approach consists of a left-turn lane, a through lane, and an auxiliary right-turn lane, and the southbound approach consists of a shared all-movement lane. The eastbound approach consists of an auxiliary left-turn lane, two through lanes, a bike lane, and an auxiliary right-turn lane, and the westbound approach consists of an auxiliary left-turn lane, a through lane, a shared through/right-turn lane, and a bike lane. No turn restrictions were noted.

2.2.3 Existing Driveways

Within 200 metres of the site accesses, six driveways to detached homes and one to a clinic are located on the north side of Innes Road, and one driveway to a school bus parking lot, one to an office, one to a food truck and three to detached homes are located on the south side of Innes Road. South of the future access, driveways are provided to townhouses. Figure 3 illustrates the existing driveways.

Figure 3: Existing Driveways

Source: <http://maps.ottawa.ca/geoOttawa/> Accessed: March 21, 2022

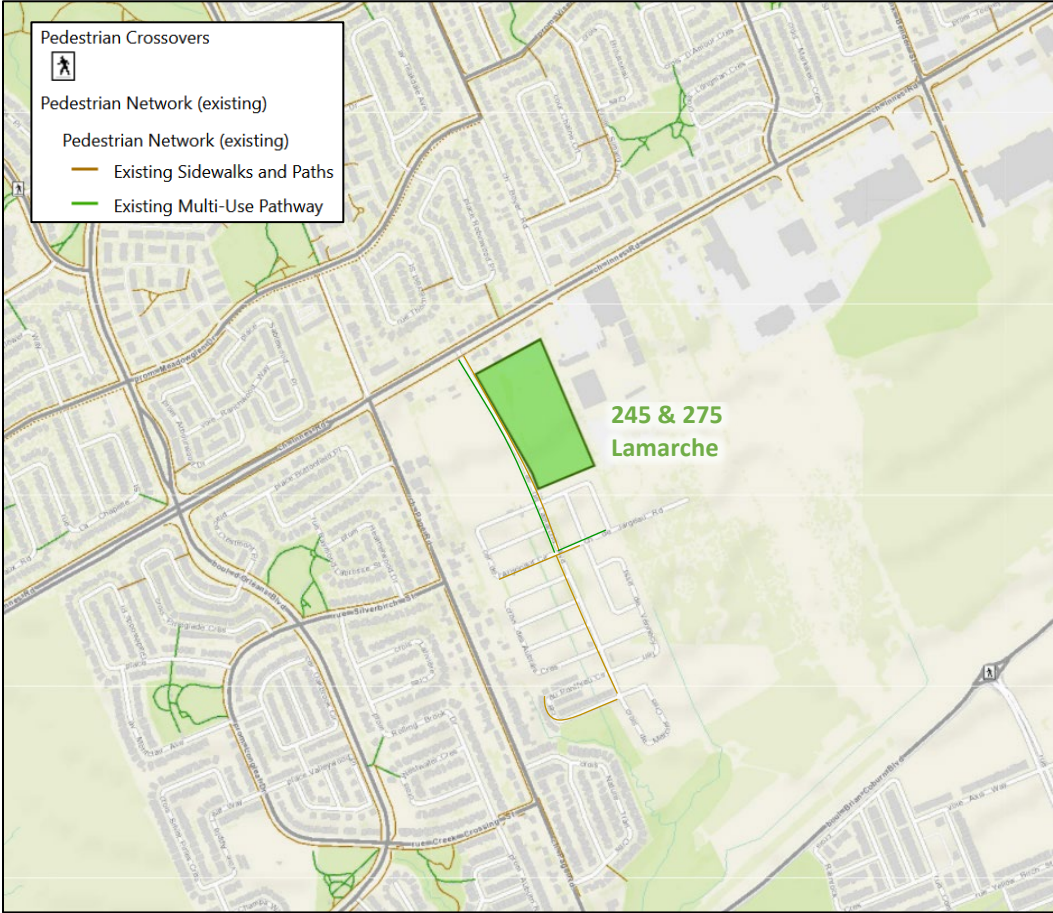

2.2.4 Cycling and Pedestrian Facilities

Figure 4 illustrates the pedestrian facilities in the study area and Figure 5 illustrates the cycling facilities.

Sidewalks are provided along both sides of Innes Road, on the west side of Page Road, on east side of Page Road for 205 metres south of Innes Road, and on the east side of Lamarche Avenue south of Argonaut Circle.

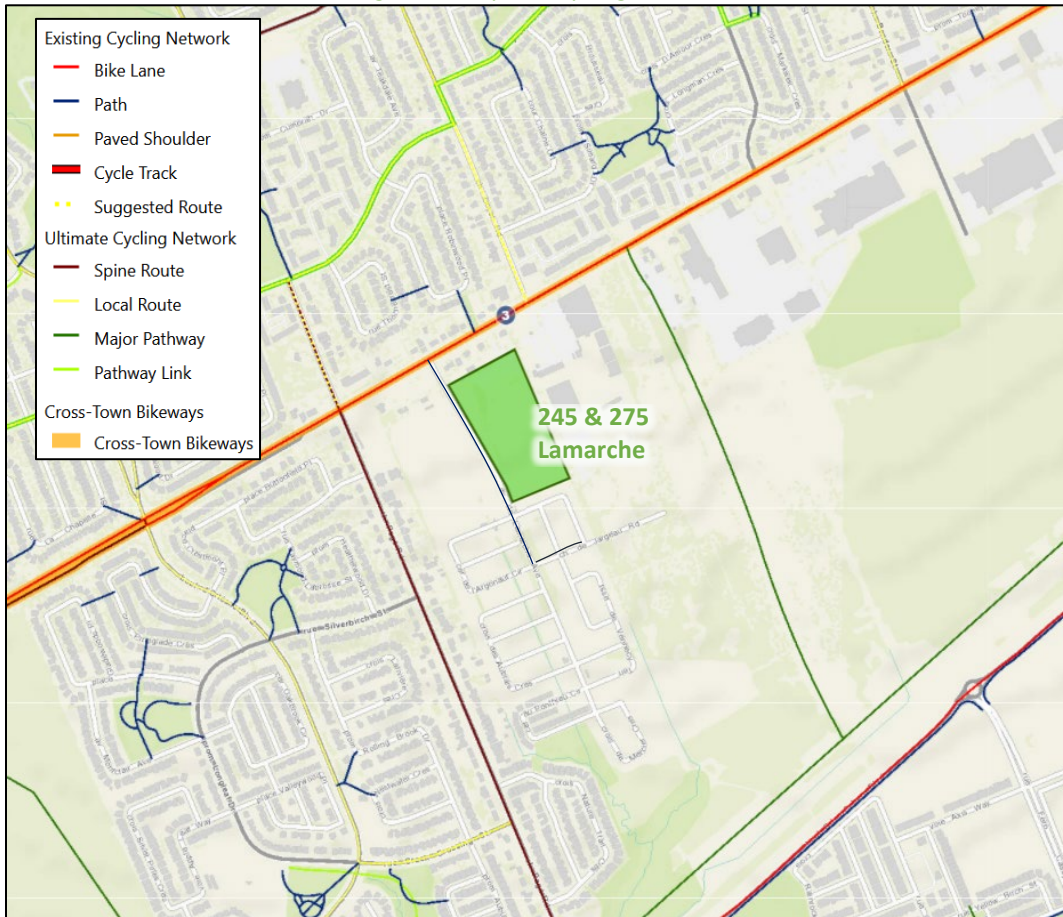

Cycling facilities include bike lanes along both side of Innes Road. A path is provided to connect Innes Road and Robinwood Place. A MUP is provided on the west side of Lamarche Avenue, and a major pathway is planned to be provided along Fern Casey Street connecting Innes Road to the Brian Coburn pathways. Innes Road, Orleans Boulevard are spine route, and Page Road north of Innes Road is suggested route. Innes Road is a cross-town bikeway.

Figure 4: Study Area Pedestrian Facilities

Source: <http://maps.ottawa.ca/geoOttawa/> Accessed: March 21, 2022

Figure 5: Study Area Cycling Facilities

Source: <http://maps.ottawa.ca/geoOttawa/> Accessed: March 21, 2022

Pedestrian and cyclist volumes included in study area intersection counts, presented in Section 2.2.7, have been compiled and are illustrated in Figure 6 and Figure 7, respectively.

Figure 6: Existing Pedestrian Volumes

Figure 7: Existing Cyclist Volumes

2.2.5 Existing Transit

Within the study area, routes # 25, #612, and #648 travel along Innes Road, and route # 34 travels along Orleans Boulevard. Primary stops are located at Innes Road at 3615 Innes Road/3636 Innes Road access and Innes Road at Page Road. The frequency of these routes within proximity of the proposed site currently are:

- Route # 25 – 10-15-minute service in the peak period/direction, 15-minute daytime service, 30-minute service after 8:00 PM

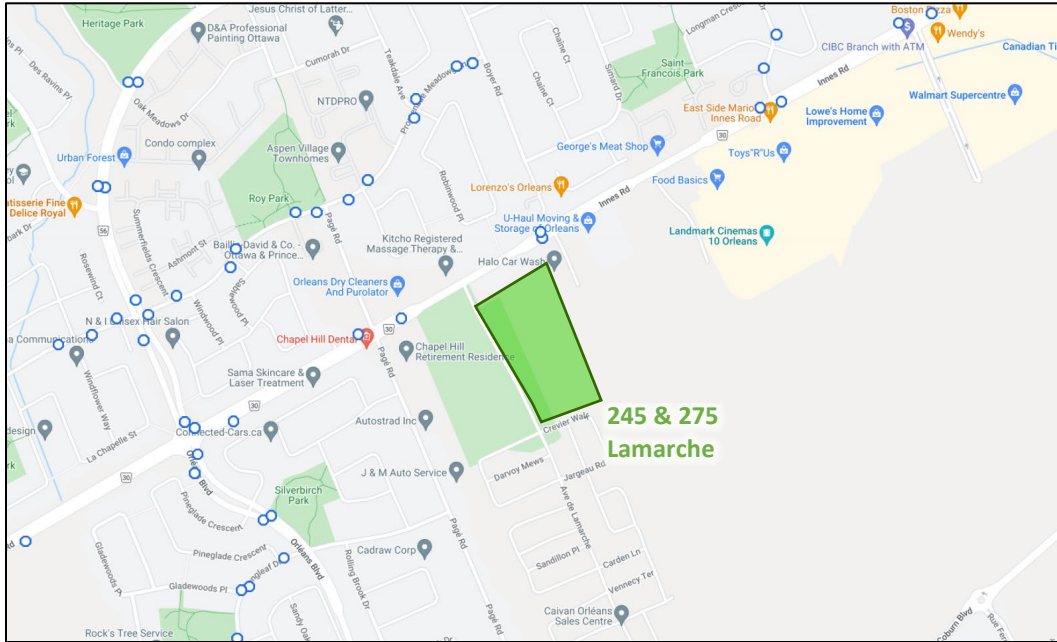

Figure 8 illustrates the transit system map in the study area and Figure 9 illustrates nearby transit stops.

Figure 8: Existing Study Area Transit Service

Source: <http://www.octranspo.com/> Accessed: March 21, 2022

Figure 9: Existing Study Area Transit Stops

Source: <http://www.octranspo.com/> Accessed: March 21, 2022

2.2.6 Existing Area Traffic Management Measures

On-street parking is permitted on both sides of Lamarche Avenue and speed humps are present on Page Road north of Innes Road.

2.2.7 Existing Peak Hour Travel Demand

Existing turning movement counts were acquired from the City of Ottawa for the existing study area key intersections. It is confirmed that 131 townhomes and 121 detached houses of the 3490 Innes Road Phase 1-3 development have been constructed and are occupied, and the development trip generation using the TRANS Trip Generation Manual (2020) has been included in the existing conditions. The intersection of Innes Road at Lamarche Avenue has been estimated from the site trip generation of the previous phase of 3490 Innes Road development, and all intersections were balanced and grown to 2022. Table 1 summarizes the intersection count dates.

Table 1: Intersection Count Date

Intersection	Count Date	Source
Innes Road @ Orleans Boulevard	Wednesday, May 03, 2017	City of Ottawa
Innes Road @ Page Road	Tuesday, January 08, 2019	City of Ottawa
Innes Road @ 3615 Innes Road/3636 Innes Road Access	Thursday, January 31, 2019	City of Ottawa
Innes Road @ Viseneau Drive	Wednesday, January 25, 2017	City of Ottawa

Figure 10 illustrates the existing traffic counts balanced along Innes Road and Table 2 summarizes the existing intersection operations. The level of service for signalized intersections is based on volume-to-capacity (v/c) calculations for individual lane movements and HCM 2000 v/c calculations for the overall intersection, and HCM 2010 average delay for unsignalized intersections. Detailed turning movement count data is included in Appendix B and the Synchro worksheets are provided in Appendix C.

Figure 10: Existing Traffic Counts

Overall	B	0.62	10.1	-	D	0.87	29.3	-	

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 0.90
 Delay = average driver delay in seconds

m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

During both the AM and PM peak hours, capacity issues are noted at the intersection of Innes Road at Orleans Boulevard. At this intersection, the southbound right-turn movement during AM peak hour and the eastbound through movement are over theoretical capacity during the PM peak hour and may be subject to high delays and extended queues. Extended queues may be exhibited on the eastbound left-turn and westbound through movements during the AM peak hour, and on the eastbound and southbound left-turn movements during PM peak hour. High delays and are anticipated on the eastbound left-turn movement during AM peak hour.

The intersection of the Innes Road and Page Road may be subject to high delays and extended queues on the westbound left-turn movement during PM peak hour. The City may improve the operation by changing the eastbound and westbound left-turn to be protected/permissive phasing, and it would be subject to coordination of the Innes Road corridor.

At the intersection of Innes Road at Lamarche Avenue, the northbound movement experiences a delay of over 50 seconds during the PM peak hour. The intersection does not meet signal warrants, as provided in Appendix D.

The eastbound through movement at the intersection of Innes Road and Viseneau Drive may exhibit extended queues during PM peak hour.

2.2.8 Collision Analysis

Collision data have been acquired from the City of Ottawa open data website (data.ottawa.ca) for five years prior to the commencement of this TIA for the surrounding study are road network. Within the study area, the segments of Innes Road between Page Road and the 3615 Innes Road/3636 Innes Road access is the only location noted to have experienced collisions. Figure 11 illustrates the intersections and segments analyzed. Table 3 summarizes the collision types and conditions for the location. Collision data are included in Appendix E.

Figure 11: Study Area Collision Records – Representation of Study Area Collisions

Table 3: Segments of Innes Road between Page Road & The 3615 Innes Road/3636 Innes Road Access Collision Summary, 2016-2020

		Number	%
Total Collisions		16	100%
Classification	Fatality	0	0%
	Non-Fatal Injury	3	19%
	Property Damage Only	13	81%
Initial Impact Type	Angle	5	31%
	Rear end	4	25%
	Sideswipe	3	19%
	Turning Movement	1	6%
	SMV Other	3	19%
Road Surface Condition	Dry	12	75%
	Loose Snow	1	6%
	Slush	1	6%
	Packed Snow	2	13%
Pedestrian Involved		0	0%
Cyclists Involved		0	0%

The segments of Innes Road between Page Road and the 3615 Innes Road/3636 Innes Road access intersection had a total of 16 collisions during the 2016-2020 time period, with 13 involving property damage only and the remaining three having non-fatal injuries. The collision types are most represented by angle with five collisions, followed by four rear end collisions, three collisions each for the sideswipe and SMV Other, and with the remaining one collision as turning movement. No pattern is noted from the collision distribution summarized above. Weather conditions do not affect collisions at this location.

2.3 Planned Conditions

2.3.1 Changes to the Area Transportation Network

Within the Transportation Master Plan, the Rapid Transit and Transit Priority Network's Network Concept diagram shows an isolated transit priority measures along Innes Road. The subject development is not within the CDP Area.

The intersection of Innes Road and Lamarche Avenue is listed on the City's DC By-law funded projects and is anticipated to be constructed by 2025. The intersection would include signalization of the existing minor stop control, an auxiliary westbound left-turn lane, an auxiliary northbound left-turn lane, an auxiliary eastbound right-turn lane, and protected intersection features for pedestrian and cycling crossings. As noted in Section 2.2.7, the intersection does not currently meet signalization warrants.

2.3.2 Other Study Area Developments

3817-3843 Innes Road

The proposed development application includes a site plan application for three apartment buildings with a total of 97 residential units. The development is assumed to be built out in 2024 and is predicted to generate 35 new AM and 45 new PM two-way peak hour auto trips. (D. J. Halpenny & Associates Ltd, 2021)

3490 Innes Road - Phase 1-3

The proposed development application includes a zoning by-law amendment and plan of subdivision. Phase 1 consists of approximately 267 units and has been built, and Phase 2 consists of the remaining 267 units expected to be constructed by 2024. Phase 1 was forecasted to generate 130 new AM and 165 new PM two-way peak hour auto trips. Phase 2 is forecasted to generate 112 new AM and 137 new PM two-way peak hour auto trips (Parsons, 2016). It has been confirmed that 131 townhomes and 121 detached of the development have been constructed, which is estimated to generate 97 new AM and 118 new PM two-way peak hour auto trips, and the traffic is included in the existing conditions. Approximately 208 detached, which is forecasted to generate 99 new AM and 121 new PM two-way peak hour auto trips, and the traffic will be included in the future horizons.

3484 Innes Road, 240 & 270 Lamarche Avenue

The proposed development application includes a zoning by-law amendment and plan of subdivision. The current option includes five seven-storey with a total of 525 residential units, 10,631 ft² of commercial space, a 26,905 ft² grocery store, a 2,217 ft² coffee shop with drive-thru, and a 1,550 ft² gas bar. The full buildout is currently estimated by 2031 and is forecasted to generate 261 new AM and 276 new PM two-way peak hour auto trips. Zone 1 and Zone 2 including all residential units is forecasted to generate 75 new AM and 42 new PM two-way peak hour auto trips. Zones 1 and 2 are predicted to be completed by 2030 and will be included in the 2030 future horizons. (Parsons, 2021)

3604 Innes Road

The proposed development application includes a plan of subdivision for the construction of 180 single detached homes, 109 townhouse units and 168 stacked townhouses in two phases. Phase 1 is anticipated to be built by 2023 and is forecasted to generate 70 new AM and 92 new PM two-way peak-hour auto trips. Phase 2 is anticipated to be built by 2025 and is forecasted to generate 200 new AM two-way peak hour auto trips and 256 new PM two-way peak hour auto trips. (Novatech, 2019)

3443 Innes Road & 3437 Innes Road

The proposed development application includes a site plan application to include a six-storey, mixed-use building with ground floor commercial and 35 residential units. The development is anticipated to be built by 2023 and is forecasted to generate 24 new AM and 27 new PM two-way peak hour auto trips. (Novatech, 2018)

3672 Innes Road, 3730 Innes Road, and 3828 Innes Road

The proposed development application includes a zoning by-law amendment to permit the construction of 340 singles detached homes, 529 townhouses, 114 back-to-back townhomes, and 1,060 apartment units. Phase 1, which is anticipated to be built by 2037, is forecasted to generate 312-341 new AM and 380-415 new PM two-way peak hour auto trips. Phase 2, which is anticipated to be built by 2042, is forecasted to generate 603-659 new AM and 725-793 new PM two-way peak hour auto trips. Phase 3, which is anticipated to be built by 2047, is forecasted to generate 968-1,056 new AM and 1,166-1,275 new PM two-way peak hour auto trips. (Castleglenn Consultants, 2021)

3 Study Area and Time Periods

3.1 Study Area

The study area will include the intersections of:

- Innes Road at:
 - Orleans Boulevard
 - Page Road
 - Lamarche Avenue
 - 3615 Innes Road/3636 Innes Road Access
 - Viseneau Drive

The boundary road will be Innes Road and Lamarche Avenue and SL 47 screenlines is present within proximity to the site but will not be analyzed as part of this study.

3.2 Time Periods

As the proposed development is composed entirely of residential units the AM and PM peak hours will be examined.

3.3 Horizon Years

The anticipated build-out year is 2025. As a result, the full build-out plus five years horizon year is 2030.

4 Exemption Review

Table 4 summarizes the exemptions for this TIA.

Table 4: Exemption Review

Module	Element	Explanation	Exempt/Required
Design Review Component			
4.1 Development Design	4.1.2 Circulation and Access	Only required for site plans	Exempt
	4.1.3 New Street Networks	Only required for plans of subdivision	Required
4.2 Parking	4.2.1 Parking Supply	Only required for site plans	Exempt
	4.2.2 Spillover Parking	Only required for site plans where parking supply is 15% below unconstrained demand	Exempt
Network Impact Component			

Module	Element	Explanation	Exempt/Required
4.5 Transportation Demand Management	All Elements	Not required for site plans expected to have fewer than 60 employees and/or students on location at any given time	Required
4.6 Neighbourhood Traffic Management	4.6.1 Adjacent Neighbourhoods	Only required when the development relies on local or collector streets for access and total volumes exceed ATM capacity thresholds	Exempt
4.8 Network Concept		Only required when proposed development generates more than 200 person-trips during the peak hour in excess of equivalent volume permitted by established zoning	Exempt

5 Development-Generated Travel Demand

5.1 Mode Shares

Examining the mode shares recommended in the TRANS Trip Generation Manual (2020) for the subject district, derived from the most recent National Capital Region Origin-Destination survey (OD Survey), the existing average district mode shares by land use for Orleans have been summarized in Table 5.

Table 5: TRANS Trip Generation Manual Recommended Mode Shares – Orleans

Travel Mode	Multi-Unit (Low-Rise)	
	AM	PM
Auto Driver	47%	51%
Auto Passenger	15%	19%
Transit	29%	24%
Cycling	1%	1%
Walking	9%	6%
Total	100%	100%

5.2 Trip Generation

This TIA has been prepared using the vehicle and person trip rates for the residential dwellings using the TRANS Trip Generation Manual (2020). Table 6 summarizes the person trip rates for the proposed residential land uses for each peak period.

Table 6: Trip Generation Person Trip Rates by Peak Period

Land Use	Land Use Code	Peak Period	Person Trip Rates
Multi-Unit (Low-Rise)	220 (TRANS)	AM	1.35
		PM	1.58

Using the above person trip rates, the total person trip generation has been estimated. Table 7 summarizes the total person trip generation for the residential land use.

Table 7: Total Residential Person Trip Generation by Peak Period

Land Use	Units	AM Peak Period			PM Peak Period		
		In	Out	Total	In	Out	Total
Multi-Unit (Low-Rise)	171	69	162	231	151	119	270

Trip generation by peak hour has been forecasted using the prescribed peak period conversion factors presented in the TRANS Trip Generation Manual (2020) for the residential component. Table 8 summarizes the residential trip generation.

Table 8: Trip Generation by Mode

Travel Mode		AM Peak Hour				PM Peak Hour			
		Mode Share	In	Out	Total	Mode Share	In	Out	Total
Multi-Unit (Low-Rise)	Auto Driver	47%	15	36	51	51%	34	27	61
	Auto Passenger	15%	5	12	17	19%	12	10	22
	Transit	29%	11	26	37	24%	17	14	31
	Cycling	1%	1	1	2	1%	1	0	1
	Walking	9%	3	9	12	6%	5	4	9
	Total	100%	35	81	116	100%	66	52	119

As shown above, a total of 51 AM and 61 PM new peak hour two-way vehicle trips are projected as a result of the proposed development.

5.3 Trip Distribution

To understand the travel patterns of the subject development, the OD Survey has been reviewed to determine the travel for the residential component, and these patterns were applied based on the build-out of Orleans. Table 9 below summarizes the distributions.

Table 9: OD Survey Distribution – Orleans

To/From	Residential % of Trips
North	15%
South	0%
East	40%
West	45%
Total	100%

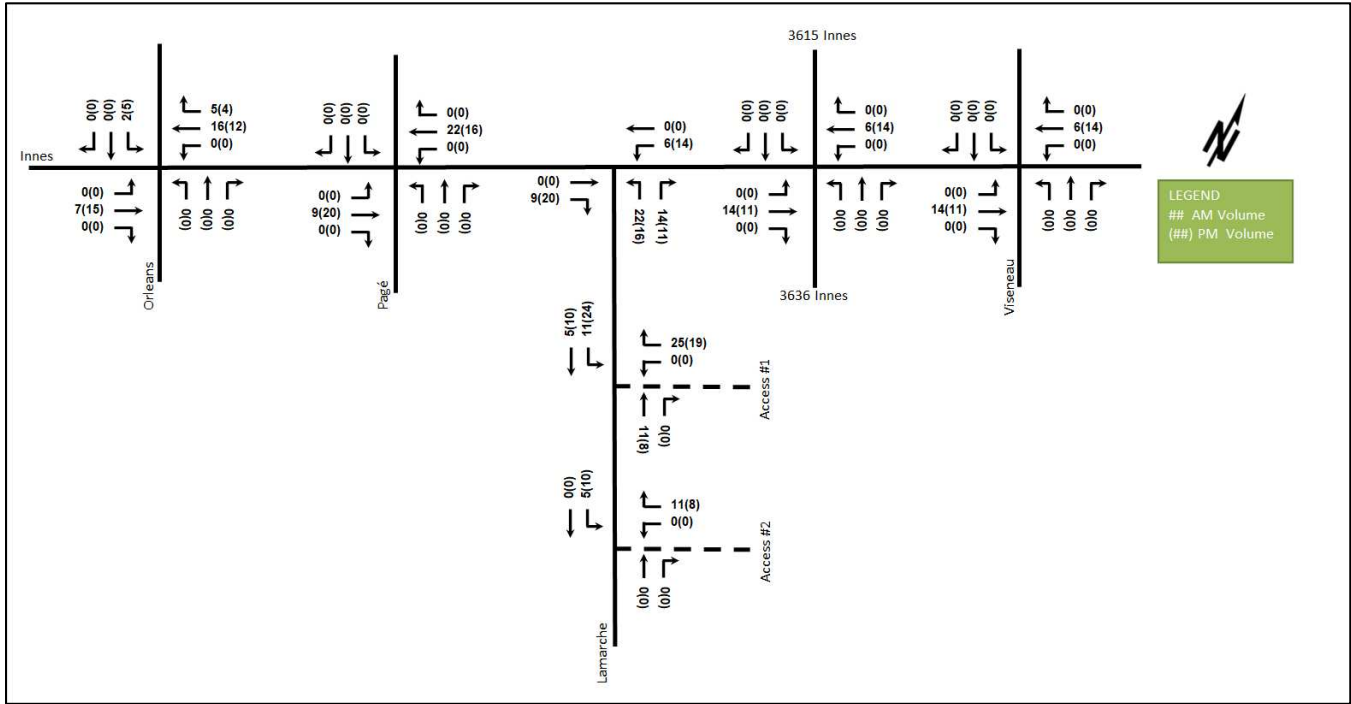

5.4 Trip Assignment

Using the distribution outlined above, turning movement splits, and access to major transportation infrastructure, the trips generated by the site have been assigned to the study area road network. Table 10 summarizes the proportional assignment to the study area roadways, and Figure 12 illustrates the new site generated volumes.

Table 10: Trip Assignment

To/From	Via
North	15% Orleans Boulevard (N)
South	-
East	40% Innes Road (E)
West	45% Innes Road (W)
Total	100%

Figure 12: New Site Generation Auto Volumes

6 Background Network Travel Demands

6.1 Transportation Network Plans

The transportation network plans were discussed in Section 2.3. The intersection of Innes Road and Lamarche Avenue is anticipated to become a signalized intersection with an auxiliary westbound left-turn lane, an auxiliary northbound left-turn lane, an auxiliary eastbound right-turn lane, and protected intersection features for pedestrian and cycling crossings.

6.2 Background Growth

A review of the background projections from the City’s TRANS Regional Model for the 2011 and 2031 horizons was completed to determine the background growth for each of the study area roadways. The background TRANS model growth rates are summarized in Table 11 and the TRANS model plots are provided in Appendix F.

Table 11: TRANS Regional Model Projections – Study Area Growth Rates

Street	TRANS Rate		Existing to 2031	
	Eastbound	Westbound	Eastbound	Westbound
Innes Road	-0.28%	-1.64%	-3.14%	-5.02%
	Northbound	Southbound	Northbound	Southbound
Orleans Boulevard	4.02%	-0.95%	0.45%	1.92%

In general, the growth rates in the study area derived from the two TRANS model horizons are projected to be negative along Innes Road in the eastbound and westbound directions and slightly positive along Orleans Boulevard in the northbound direction. The existing volumes are noted to be exceed the TRANS 2031 model forecasts for Innes Road.

As the continued development is expected in Orleans and result in additional volumes along the area road network, beyond the developments considered in Section 6.3, it is assumed that a 1.00% growth rate will be

applied to Innes Road and a 2.00% growth rate will be applied on Orleans Boulevard in peak directions. The modified growth rates have been applied to the study area network, and it is summarized in Table 12.

Table 12: Recommended Area Growth Rates

Street	AM Peak Hour		PM Peak Hour	
	Eastbound	Westbound	Eastbound	Westbound
Innes Road	1.00%	1.00%	1.00%	1.00%
	Northbound	Southbound	Northbound	Southbound
Orleans Boulevard	2.00%	-	-	2.00%

6.3 Other Developments

The background developments explicitly considered in the background conditions (Section 6.2) include:

- 3817-3843 Innes Road
- 3490 Innes Road - Phase 1-3
- 3443 Innes Road & 3437 Innes Road
- 3484 Innes Road, 240 & 270 Lamarche Avenue
- 3604 Innes Road

The background development volumes within the study area have been provided in Appendix G.

7 Demand Rationalization

7.1 2025 Future Background Operations

The intersection of Innes Road at Lamarche is anticipated to be signalized by 2025 and has been modelled as a signal for all future horizons. The intersection does not meet signalization warrants, which have been provided in Appendix D.

Figure 13 illustrates the 2025 background volumes and Table 13 summarizes the 2025 background intersection operations. The level of service for signalized intersections is based on v/c calculations for individual lane movements and HCM 2000 v/c calculations for the overall intersection, and average delay for unsignalized intersections. The synchro worksheets for the 2025 future background horizon are provided in Appendix H.

Figure 13: 2025 Future Background Volumes

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 1.00
 Delay = average driver delay in seconds

m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

Overall, the study area intersections will operate similar to the existing conditions, with decreasing operations due to the background growth and background development.

The westbound through movement during the PM peak hour at Innes Road at Orleans Boulevard intersection may exhibit extended queues.

The westbound left-turn movement at the intersection of Innes Road and Page Road may be subject to high delays and extended queues during the PM peak hour, which is similar to the existing conditions. A City review for a protected/permissive phasing should be conducted.

At the intersection of Innes Road at Lamarche Avenue, with the background development volumes, the northbound left-turn movement may be subject to high delays and extended queues during the AM peak hour. During the PM peak hour, the eastbound through movement may be subject to extended queues, and the westbound and northbound left-turn movements may be subject to high delays and extended queues. The operations are influenced by the expected protection for the cycling and pedestrian crossings, as it reduces the available green time for the auto movements.

7.1.1 2025 Future Background Operations - Unsignalized Innes and Lamarche Intersection

As an additional sensitivity was requested by City of Ottawa staff, the intersection of Innes Road and Lamarche Avenue has been assessed for the 2025 future background conditions assuming it remains as an unsignalized intersection. Table 14 summarizes the intersection operations and the synchro worksheets are provided in Appendix H.

Table 14: 2025 Future Background Operations- Unsignalized Intersection of Innes Road and Lamarche Avenue

Intersection	Lane	AM Peak Hour				PM Peak Hour			
		LOS	V/C	Delay	Q (95 th)	LOS	V/C	Delay	Q (95 th)
Innes Road at Lamarche Avenue <i>Unsignalized</i>	EBT/R	-	-	-	-	-	-	-	-
	WBL	A	0.02	8.7	0.8	C	0.19	19.9	5.3
	WBT	-	-	-	-	-	-	-	-
	NB	C	0.44	23.2	15.8	F	1.01	169.2	47.3
	Overall	A	-	1.6	-	A	-	6.1	-

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 1.00
 Delay = average driver delay in seconds

m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

The northbound movement may be subject to high delays during PM peak when the intersection is unsignalized. Compared to the existing condition, the delay will increase from 57.8 seconds to 169.2 seconds during the PM peak hour.

7.2 2030 Future Background Operations

Figure 14 illustrates the 2030 background volumes and Table 15 summarizes the 2030 background intersection operations. The level of service for signalized intersections is based on v/c calculations for individual lane movements and HCM 2000 v/c calculations for the overall intersection, and average delay for unsignalized intersections. The synchro worksheets for the 2030 future background horizon are provided in Appendix I. The signalization warrant for the Innes Road and Lamarche Avenue intersection is provided in Appendix D.

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 1.00
 Delay = average driver delay in seconds

m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

In general, the study area intersections will operate similar to the 2025 conditions, with decreasing operations due to the background growth and background development.

The westbound through movement at the intersection of Innes Road and Orleans Boulevard will become over theoretical capacity and may be subject to high delays and extended queues during AM peak hour.

At the intersection of Innes Road at Lamarche Avenue during PM peak hour, with the 3484 Innes Road, 240 & 270 Lamarche Avenue background development volumes, the eastbound through movement will become over theoretical capacity and may be subject to high delays and extended queues. The operations are influenced by the expected protection for the cycling and pedestrian crossings, as it reduces the available green time for the auto movements.

The westbound left-turn movement at the intersection of Innes Road at Access 3615 Innes Road/3636 Innes Road may be subject to extended queues during PM peak hour.

7.2.1 2030 Future Background Operations - Unsignalized Innes and Lamarche Intersection

As an additional sensitivity was requested by City of Ottawa staff, the intersection of Innes Road and Lamarche Avenue has been assessed for the 2030 future background conditions assuming it remains as an unsignalized intersection. Table 16 summarizes the intersection operations and the synchro worksheets are provided in Appendix I.

Table 16: 2030 Future Background Operations- Unsignalized Intersection of Innes Road and Lamarche Avenue

Intersection	Lane	AM Peak Hour				PM Peak Hour			
		LOS	V/C	Delay	Q (95 th)	LOS	V/C	Delay	Q (95 th)
Innes Road at Lamarche Avenue Unsignalized	EBT/R	-	-	-	-	-	-	-	-
	WBL	A	0.04	8.9	0.8	C	0.25	22.5	7.5
	WBT	-	-	-	-	-	-	-	-
	NB	D	0.61	31.7	28.5	F	1.41	326.6	70.5
	Overall	A	-	0.8	-	B	-	13.0	-

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 1.00
 Delay = average driver delay in seconds

m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

The northbound movement may be subject to high delays during PM peak when the intersection is unsignalized. Compared to the existing condition, the delay will increase from 57.8 seconds to 326.6 seconds during the PM peak hour. The intersection is recommended to be signalized by 2025 to provide acceptable operations for the northbound approach.

7.3 Modal Share Sensitivity and Demand Rationalization Conclusions

Capacity constraints have been noted along Innes Road during the existing and background horizons, which are subject to regional travel not associated with the development traffic. Given the forecasted auto trips are low, they are not anticipated to be contributing factors to the area operations. No further demand rationalization is required for this development.

8 Development Design

8.1 Design for Sustainable Modes

The proposed development is a residential subdivision where each dwelling will include a driveway and the typical townhomes will include a garage. Bicycle parking is assumed to be within the individual units. On-street parking will be provided along all new subdivision roadways. The existing Lamarche Avenue is expected to provide additional on-street parking opportunities. Figure 15 illustrates the pedestrian concept network with connections to adjacent pedestrian facilities, and Figure 16 illustrates the on-street parking plan.

Figure 15: Concept Pedestrian Network

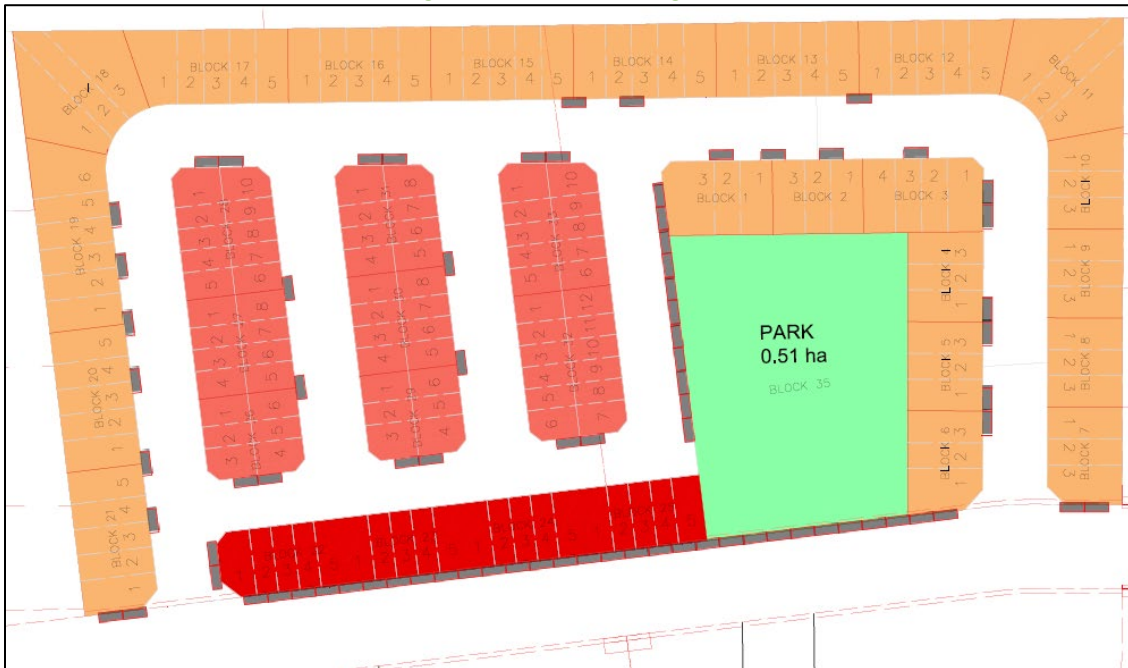

Figure 16: On-Street Parking Plan

8.2 New Street Networks

The planned street network will include 18-metre local roadways and a 14.75-metre laneway. The local roads will accommodate on-street parking. The local roads are proposed to be posted as 30 km/h.

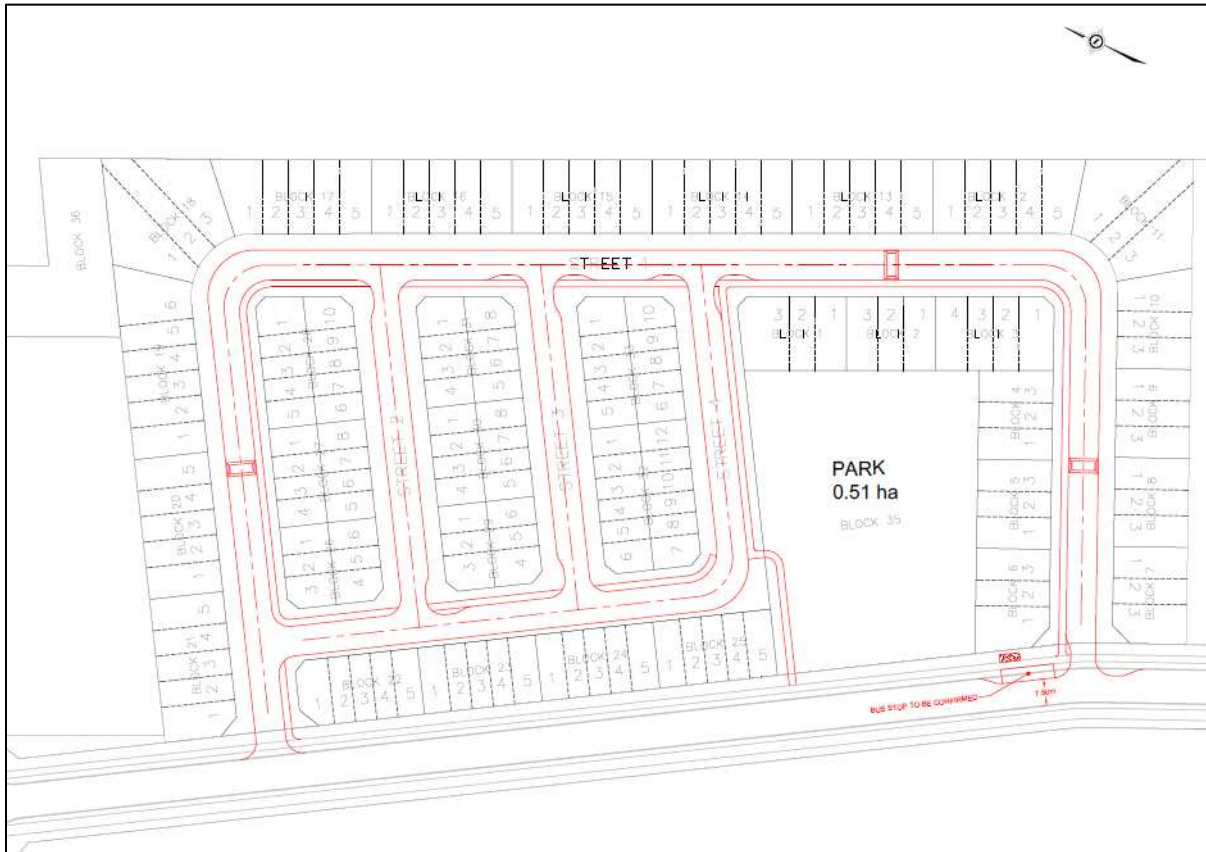

The new local intersections with Lamarche Avenue are proposed at the north and south ends of the subdivision limits. The north intersection is located approximately 50 metres south of Innes Road and over 30 metres north

of the proposed access from the 3484 Innes Road, 240 & 270 Lamarche Avenue site on the west side of Lamarche Avenue. Similarly, the south intersection is located beyond the 30 metre offset requirements from the west side development and previously approved roadways within the community. The proposed signalization of the Innes Road and Lamarche Avenue intersection will need to consider the storage length and taper requirements for this turn lane to avoid undue impacts to both the subject property roadways and the west side development access.

The internal road intersections are recommended to be stop-controlled on the minor approaches of all intersections.

To support the pedestrian and cycling connectivity within the subdivision, Figure 17 illustrates the concept traffic calming plan. Traffic calming elements are recommended at the internal intersections, including bulb-outs to narrow each approach to the intersection (e.g. reduced crossing distance). The location of speed humps is subject to minor changes and will need to be refined as part of the detailed engineering submission once the locations of the driveway, stormwater flows, surface ponding, and servicing elements, such as utilities and fire hydrants, have been established.

Figure 17: Concept Traffic Calming Plan

9 Boundary Street Design

Table 17 summarizes the MMLOS analysis for the boundary streets of Lamarche Avenue. The boundary street analysis is based on the land use of general urban area. The MMLOS worksheets has been provided in Appendix J.

Table 17: Boundary Street MMLOS Analysis

Segment	Pedestrian LOS		Bicycle LOS		Transit LOS		Truck LOS	
	PLOS	Target	BLOS	Target	TLOS	Target	TrLOS	Target
Lamarche Avenue (Existing/ Future)	A	C	A	D	N/A	N/A	N/A	N/A

Lamarche Avenue meets MMLOS targets for the area and no mitigation or additional elements are required.

10 Access Intersections Design

10.1 Location and Design of Access

The residential accesses will connect to the adjacent road network via local roads connection to Lamarche Avenue. Within the subdivision, no turn lanes are proposed for the internal intersections which will be controlled by minor stop control.

10.2 Intersection Control

Based upon the projected volumes, the site accesses will have stop-control on the minor approach. No further traffic control is necessary to address operational issues.

10.3 Access Intersection Design

10.3.1 2025 Future Total Access Intersection Operations

The 2025 future total intersection volumes are illustrated in Figure 18 and the access intersection operations are summarized below in Table 18. Synchro 11 has been used to model the unsignalized intersections and HCM 2010 methodology was used for unsignalized intersection operations. The synchro worksheets have been provided in Appendix K.

Figure 18: 2025 Future Total Volumes

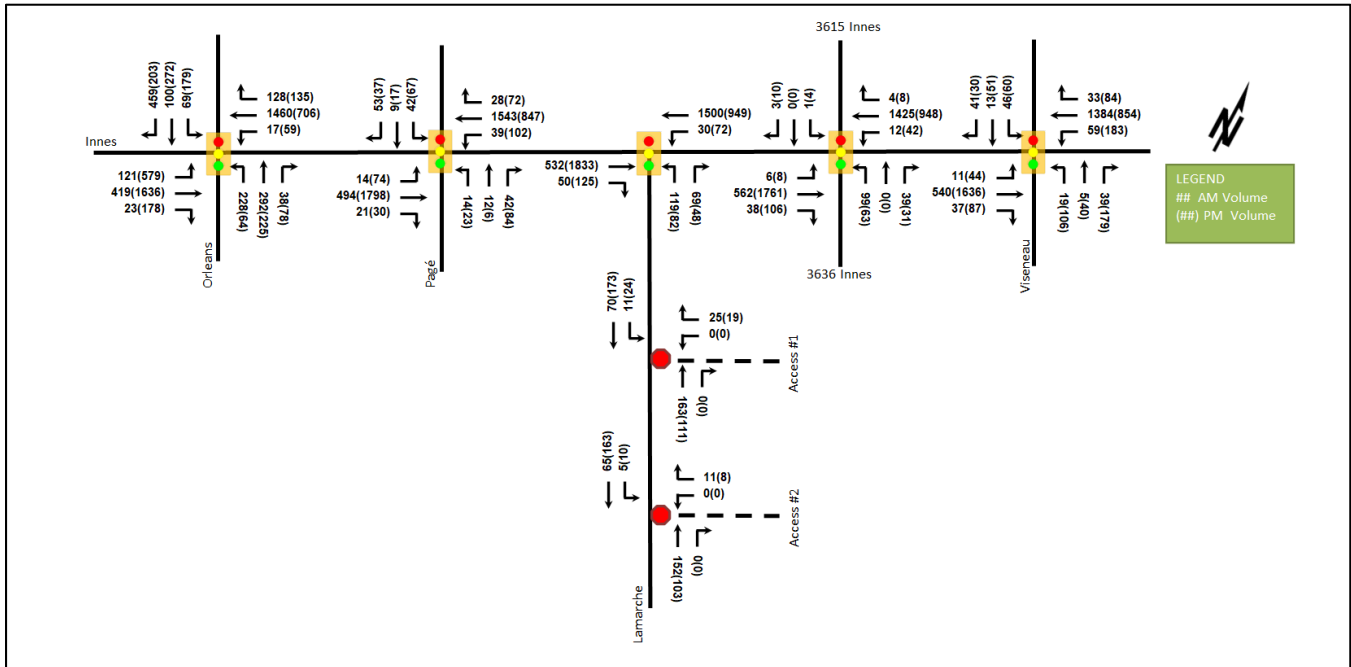

Table 18: 2025 Future Total Access Intersection Operations

Intersection	Lane	AM Peak Hour				PM Peak Hour			
		LOS	V/C	Delay	Q (95 th)	LOS	V/C	Delay	Q (95 th)
Access #1 at Lamarche Avenue Unsignalized	WB	A	0.03	9.5	0.8	A	0.02	8.9	0.8

	SB	A	0.01	7.7	0.0	A	0.02	7.5	0.0
	Overall	A	-	0.9	-	A	-	1.1	-
Access #2 at Lamarche Avenue Unsignalized	WB	A	0.01	9.3	0.0	A	0.01	8.8	0.0
	NB	-	-	-	-	-	-	-	-
	SB	A	0.00	7.6	0.0	A	0.01	7.4	0.0
	Overall	A	-	0.5	-	A	-	0.5	-

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 1.00
 Delay = average driver delay in seconds

m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

The 2025 future total access intersections operate satisfactorily.

10.3.2 2030 Future Total Access Intersection Operations

The 2030 future total intersection volumes are illustrated in Figure 19 and the access intersection operations are summarized below in Table 19. Synchro 11 has been used to model the unsignalized intersections and HCM 2010 methodology was used for unsignalized intersection operations. The synchro worksheets have been provided in Appendix L.

Figure 19: 2030 Future Total Volumes

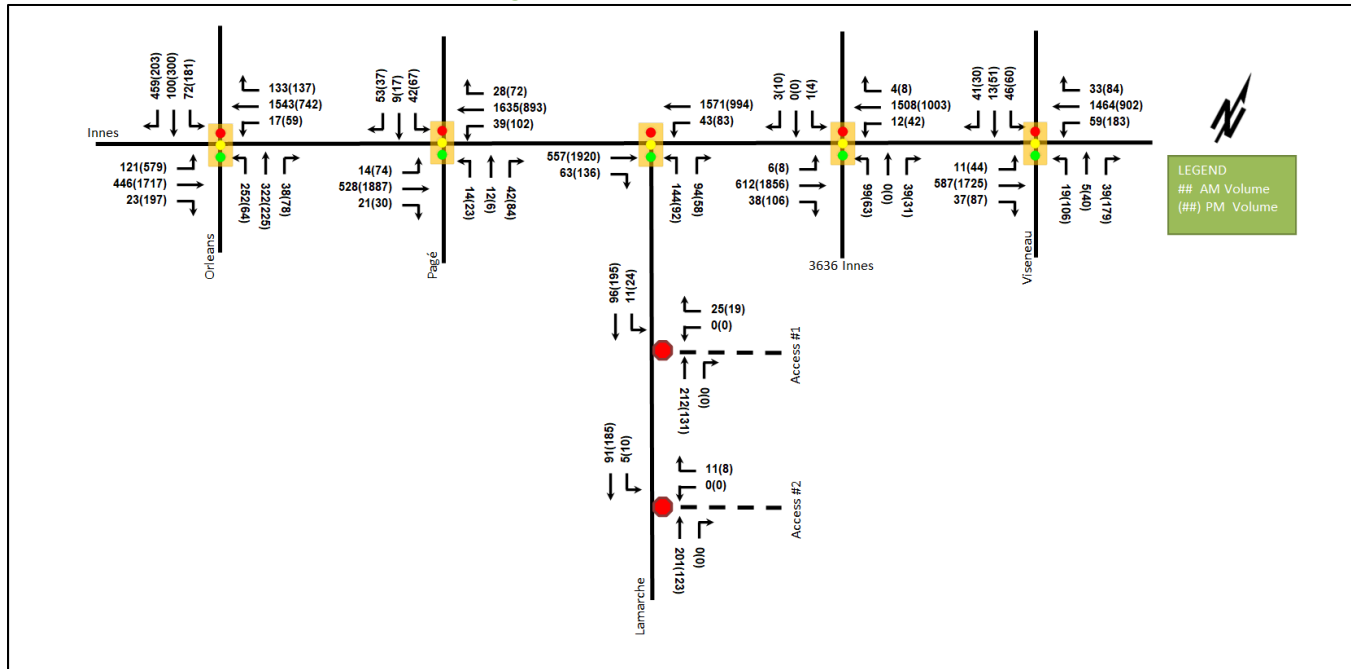

Table 19: 2030 Future Total Access Intersection Operations

Intersection	Lane	AM Peak Hour				PM Peak Hour			
		LOS	V/C	Delay	Q (95 th)	LOS	V/C	Delay	Q (95 th)
Access #1 at Lamarche Avenue Unsignalized	WB	A	0.03	9.5	0.8	A	0.02	9.0	0.8
	NB	-	-	-	-	-	-	-	-

Access #2 at Lamarche Avenue Unsignalized	WB	A	0.01	9.3	0.0	A	0.01	8.9	0.0
	NB	-	-	-	-	-	-	-	-
	SB	A	0.00	7.6	0.0	A	0.01	7.5	0.0
	Overall	A	-	0.5	-	A	-	0.5	-

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 1.00
 Delay = average driver delay in seconds

m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

The 2030 future total access intersections operate satisfactorily.

10.3.3 Access Intersection MMLOS

The access intersections are proposed to as minor stop-controlled intersections, therefore no access intersection MMLOS analysis has been conducted.

10.3.4 Recommended Design Elements

No changes to the site accesses are proposed.

11 Transportation Demand Management

11.1 Context for TDM

The mode shares used within the TIA represent the unmodified district mode shares. Overall, the modal shares are likely to be achieved and supporting TDM measures should be provided to encourage shifts towards sustainable modes.

The subject site is not within a design priority area. The total bedroom count within the development is subject to the final unit breakdown and layout selections by purchasers. No age restrictions are noted.

11.2 Need and Opportunity

The subject site has been assumed to rely predominantly on auto travel and those assumptions have been carried through the analysis. As the unmodified district mode shares have been applied, risks to other network users from failing to meet mode share targets are low.

11.3 TDM Program

The “suite of post occupancy TDM measures” has been summarized in the TDM checklists for the residential land uses. The checklist is provided in Appendix M. The key TDM measures recommended include:

- Inclusion of a 1-year Presto card for first time new townhome purchase, with a set time frame for this offer (e.g. 6-months) from the initial opening of the site
- Provide a multimodal travel option information package to new residents

12 Transit

In Section 5.1 the trip generation by mode was estimated, including an estimate of the number of transit trips that will be generated by the proposed development. Table 20 summarizes the transit trip generation.

Table 20: Trip Generation by Transit Mode

Travel Mode	Mode Share	AM Peak Period			PM Peak Period		
		In	Out	Total	In	Out	Total
Transit	Varies	11	26	37	17	14	31

The proposed development is anticipated to generate an additional 37 AM peak hour transit trips and 31 PM peak hour transit trips. Of these trips, 26 outbound AM trips and 17 inbound PM trips are anticipated. From the trip distribution found in Section 5.2, these values can be further broken down. Site-generated outbound AM trips break down to 16 trips west from the site and ten trips east from the site.

All trips are assumed to be served by bus route #25, which provides four buses in the peak hour/ direction. Overall, the forecasted new transit trips would result in an averaged increase of under three additional riders per bus. Therefore, no service changes are anticipated as being required to accommodate site-generated transit trips.

12.1 Transit Priority

Examining the study area intersection delays, negligible impacts are noted on most of transit movements at the study area intersections as a result of the development site traffic except for the eastbound through movement at Innes Road at Lamarche Avenue intersection. Ultimately, the transit delay at this intersection will be subject to the cycling and pedestrian crossing locations and types.

13 Network Intersection Design

13.1 Network Intersection Control

The intersection of Innes Road at Lamarche Avenue is not expected to meet signalization warrants by 2030 despite the expected front ending in 2025. Operationally, the existing intersection would benefit from the improvement to signal control and is still recommended to be carried forward by the City by 2025. The signal warrants for the 2025 and 2030 future total horizons are provided in Appendix D.

13.2 Network Intersection Design

13.2.1 2025 Future Total Network Intersection Operations

The 2025 future total network intersection operations are summarized below in Table 21. The level of service for signalized intersections is based on v/c calculations for individual lane movements and HCM 2000 v/c calculations for the overall intersection. The synchro worksheets have been provided in Appendix L.

Table 21: 2025 Future Total Network Intersection Operations

Overall	B	0.62	9.1	-	E	0.82	25.5	-	

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 1.00
 Delay = average driver delay in seconds

m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

Overall, the study area intersections operate similar to the existing and background conditions.

The peak operations in the eastbound direction along Innes Road will be at or over capacity at a number of locations and is a result on the background conditions for the corridor. The site traffic will contribute less than 2% of the total eastbound volumes and should be an acceptable increase for any roadway. The volumes along Innes Road may be reduced once the LRT is active and could be further reduced once Brian Coburn Boulevard is extended west to Blair Road. No mitigation is required for the subject site.

13.2.2 2025 Future Total Operations - Unsignalized Innes and Lamarche Intersection

As an additional sensitivity was requested by City of Ottawa staff, the intersection of Innes Road and Lamarche Avenue has been assessed for the 2025 future total conditions assuming it remains as an unsignalized intersection. Table 22 summarizes the intersection operations and the synchro worksheets are provided in Appendix L.

Table 22: 2025 Future Total Operations- Unsignalized Intersection of Innes Road and Lamarche Avenue

Intersection	Lane	AM Peak Hour				PM Peak Hour			
		LOS	V/C	Delay	Q (95 th)	LOS	V/C	Delay	Q (95 th)
Innes Road at Lamarche Avenue Unsignalized	EBT/R	-	-	-	-	-	-	-	-
	WBL	A	0.03	8.8	0.8	C	0.25	21.2	6.8
	WBT	-	-	-	-	-	-	-	-
	NB	D	0.55	27.5	23.3	F	1.37	299.6	71.3
	Overall	A	-	2.4	-	B	-	13.0	-

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 1.00
 Delay = average driver delay in seconds

m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

The northbound movement may be subject to high delays during PM peak when the intersection is unsignalized. Compared to the 2025 future background condition, the delay will increase from 169.2 seconds to 299.6 seconds during the PM peak hour.

13.2.3 2030 Future Total Network Intersection Operations

The 2030 future total network intersection operations are summarized below in Table 23. The level of service for signalized intersections is based on v/c calculations for individual lane movements and HCM 2000 v/c calculations for the overall intersection. The synchro worksheets have been provided in Appendix M.

Table 23: 2030 Future Total Network Intersection Operations

 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

The 2030 future total conditions are expected to operate similar to the background conditions.

At the intersection of Innes Road at Lamarche Avenue during the PM peak hour, the westbound and northbound left-turn movements will become over theoretical capacity and may be subject to high delays and extended queues. The site traffic will contribute less than 2% of the total eastbound and westbound volumes and should be an acceptable increase for any roadway. As discussed in Section 13.2.1, the PM peak eastbound volumes are near capacity on Innes Road and would require a regional solution, such as the LRT or Brian Coburn Boulevard to address potential capacity constraints.

13.2.4 2030 Future Total Operations - Unsignalized Innes and Lamarche Intersection

As an additional sensitivity was requested by City of Ottawa staff, the intersection of Innes Road and Lamarche Avenue has been assessed for the 2030 future total conditions assuming it remains as an unsignalized intersection. Table 24 summarizes the intersection operations and the synchro worksheets are provided in Appendix M.

Table 24: 2030 Future Total Operations- Unsignalized Intersection of Innes Road and Lamarche Avenue

Intersection	Lane	AM Peak Hour				PM Peak Hour			
		LOS	V/C	Delay	Q (95 th)	LOS	V/C	Delay	Q (95 th)
Innes Road at Lamarche Avenue Unsignalized	EBT/R	-	-	-	-	-	-	-	-
	WBL	A	0.05	8.9	0.8	C	0.31	24.2	9.8
	WBT	-	-	-	-	-	-	-	-
	NB	E	0.74	41.5	41.3	F	1.95	559.2	99.8
	Overall	A	-	4.1	-	F	-	26.2	-

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 1.00
 Delay = average driver delay in seconds

m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity
 v/c = volume to capacity ratio

The northbound movement may be subject to high delays during PM peak when the intersection is unsignalized. Compared to the 2030 future background condition, the delay will be increased from 326.6 seconds to 559.2 seconds during the PM peak hour. The intersection is recommended to be signalized by 2025 to provide acceptable operations for the northbound approach.

13.2.5 Network Intersection MMLoS

Table 25 summarizes the MMLoS analysis for the network intersections within the study area. The existing and future conditions for both intersections will be the same and are considered in one row. The intersection analysis

of Innes Road at Orleans Boulevard is based on the land use of general urban area, and other intersections analysis are based on the land use of arterial main street. The MMLOS worksheets has been provided in Appendix J.

Table 25: Study Area Intersection MMLOS Analysis

Intersection	Pedestrian LOS		Bicycle LOS		Transit LOS		Truck LOS		Auto LOS	
	PLOS	Target	BLOS	Target	TLOS	Target	TrLOS	Target	ALOS	Target
Innes Road at Orleans Boulevard	F	C	F	B	F	D	A	D	F	D
Innes Road at Page Road	F	C	F	B	C	D	N/A	N/A	F	D
Innes Road at Lamarche Avenue (Future)	E	C	A	B	F	D	N/A	N/A	D	D
Innes Road at Access 3615 Innes Road/3636 Innes Road	F	C	F	B	B	D	N/A	N/A	C	D
Innes Road at Viseneau Drive	F	C	F	B	F	D	N/A	N/A	D	D

The pedestrian LOS targets will not be met at the existing or future intersections within the study area. As typical for arterial roads, the crossing distance does not permit the targets to be met. To meet pedestrian LOS targets, the maximum crossing distance would need to be reduced to three lane-widths on all pedestrian crossings.

The bicycle LOS targets will not be met at the existing or future intersections within the study area expect for the future Innes Road at Lamarche Avenue intersection. To meet bicycle LOS targets, the left-turn configurations would need to be two-stage, turn boxes or protected facilities.

The transit LOS targets will not be met in the existing or future condition at the intersections of Innes Road at Orleans Boulevard and Innes Road at Viseneau Drive and in the future condition of Innes Road at Lamarche Avenue intersection. To meet transit LOS, the delay at the intersections would need to be reduced to below 30 seconds.

The auto LOS targets will not be met in the existing or future condition at the intersections of Innes Road at Orleans Boulevard and Innes Road at Page Road. To meet auto LOS, the volume to capacity ratio to less or equal to 0.90.

The improvements for these intersections are not the responsibility of the development and are provide for the City’s planning. The intersection of Innes Road at Lamarche Avenue is currently being reviewed and the exact facilities will be subject to the approval of a roadway modification approval.

13.2.6 Recommended Design Elements

No study area intersection design elements are proposed as part of this study.

14 Summary of Improvements Indicated and Modifications Options

The following summarizes the analysis and results presented in this TIA report:

Proposed Site and Screening

- The proposed site includes 103 townhomes and 68 back-to-backs dwellings
- Two accesses on Lamarche Avenue will be provided
- The development is proposed to be completed as a single phase by 2025
- The trip generation, location, and safety triggers were met for the TIA Screening

Existing Conditions

- Innes Road and Orleans Boulevard are arterial roads, and Viseneau Drive is a collector road in the study area
- Sidewalks are provided along both sides of Innes Road, on the west side of Page Road, and on east side of Page Road for 205 metres south of Innes Road
- A MUP is provided on the west side of Lamarche Avenue
- Bike lanes along both side of Innes Road
- Innes Road, Orleans Boulevard are spine route, Page Road north of Innes Road is suggested route, and Innes Road is a cross-town bikeway
- The segments of Innes Road between Page Road and the 3615 Innes Road/3636 Innes Road access intersection, which is the only location noted to have experienced collisions, had a total of 16 collisions
- Capacity issues are noted at the intersections of Innes Road at Orleans Boulevard, Innes Road at Page Road, and Innes Road at Lamarche Avenue
- The Innes Road at Page Road intersection requires the City to review the signal timing and explore a protected/permissive phasing for the eastbound and westbound left-turn movements

Development Generated Travel Demand

- The proposed development is forecasted produce 118 two-way people trips during the AM peak hour and 122 two-way people trips during the PM peak hour
- Of the forecasted people trips, 53 two-way trips will be vehicle trips during the AM peak hour and 62 two-way trips will be vehicle trips during the PM peak hour
- Of the forecasted trips, 15 % are anticipated to travel north, 40 % to the east, and 45 % to the west

Background Conditions

- It is assumed that a 1.00% growth rate will be applied to Innes Road and a 2.00% growth rate will be applied on Orleans Boulevard in peak directions
- The study area intersections are expected to operate similar to the existing conditions in the 2025 and 2030 background horizons
- No demand rationalization was required for the site generated trips as they are forecasted to be low and not anticipated to be a contributing factor to the network constraints
- The intersection of Innes Road at Lamarche Avenue does not meet signal warrants in the future background horizons
- The Innes Road at Lamarche Avenue intersection is recommended to be signalized prior to 2025 due to operations for existing and future northbound movements
- Should the Innes Road at Lamarche Avenue intersection remain unsignalized, it is anticipated the delays for the northbound approach will increase to 31.7s during the AM peak and 326.6s during the PM peak by 2030, predominantly due to increased traffic along Innes Road

Development Design

- On-street parking will be provided along Lamarche Avenue and the subdivision roadways
- Traffic calming elements are recommended at the future internal road intersections including bulb-outs to narrow each approach to the intersection and reduce pedestrian crossing distances and speed humps

Boundary Street Design

- Lamarche Avenue meets MMLOS targets for the area and no mitigation or additional elements are required

Access Intersections Design

- The residential accesses will connect to the adjacent road network via local roads connection to Lamarche Avenue
- Within the subdivision, no turn lanes are proposed for the internal intersections which will be controlled by minor stop control
- The 2025 and 2030 future total access intersections operate satisfactorily

TDM

- Supportive TDM measures recommended to be considered within the future development include:
 - Inclusion of a 1-year Presto card for first time new townhome purchase, with a set time frame for this offer (e.g. 6-months) from the initial opening of the site
 - Provide a multimodal travel option information package to new residents

Transit

- The proposed development is anticipated to generate an additional 37 AM peak hour transit trips and 31 PM peak hour transit trips
- All trips are assumed to be served by bus route #25, which provides four buses in the peak hour/ direction
- No service changes are anticipated as being required to accommodate site-generated transit trips
- Negligible impacts are noted on most of transit movements at the study area intersections except for the eastbound through movement at Innes Road at Lamarche Avenue intersection, which is subject to the signalized intersection design and cycling/pedestrian facilities

Network Intersection Design

- The study area intersections are expected to operate similarly during the existing, background and future total horizons, and experiencing capacity constraints due to the volumes along Innes Road
- The site traffic will contribute less than 2% of the total eastbound and westbound volumes and should be an acceptable increase for any roadway
- The PM peak eastbound volumes are near capacity on Innes Road and would require a regional solution, such as the LRT or Brian Coburn Boulevard to address potential capacity constraints
- The intersection of Innes Road at Lamarche Avenue does not meet signal warrants in the future total horizons
- If the Innes Road at Lamarche Avenue intersection remain unsignalized, it is anticipated the delays for the northbound approach will increase to 41.5s during the AM peak and 559.2s during the PM peak by 2030
- The pedestrian LOS targets will not be met at the existing or future intersections within the study area, and no mitigation is recommended as the crossing distances would need to be reduced to equal or less than three lane widths
- Except for the future Innes Road at Lamarche Avenue intersection, the bicycle LOS targets will not be met at the existing or future intersections within the study area, and it is limited by the lack of dedicated facilities and improved left-turn configurations

- The transit LOS targets will not be met in the existing or future condition at the intersections of Innes Road at Orleans Boulevard and Innes Road at Viseneau Drive and in the future condition of Innes Road at Lamarche Avenue intersection, and require the delay to be below 30 seconds
- The auto LOS targets will not be met in the existing or future condition at the intersections of Innes Road at Orleans Boulevard and Innes Road at Page Road, and require the volume to capacity ratio to be improved to less or equal to 0.90
- The cycling, transit and auto targets will require a regional solution by the City to implement addition cycling facilities at the area intersections and reduce Innes Road volumes to meet the capacity and delay targets

15 Conclusion

It is recommended that, from a transportation perspective, the proposed development applications proceed.

Appendix A

TIA Screening Form and PM Certification Form

City of Ottawa 2017 TIA Guidelines
Step 1 - Screening Form

Date: 25-Mar-22
Project Number: 2022-023

Project Reference: 245 and 275 Lamarche Avenue

1.1 Description of Proposed Development	
Municipal Address	245 and 275 Lamarche Avenue
Description of Location	Ward 2. South of Innes Road between 3615 Innes Road/3636 Innes Road Access and Lamarche Avenue
Land Use Classification	Development Reserve (DR)
Development Size	approximately 103 townhomes and 72 back-to-backs dwellings
Accesses	One access onto Innes Road
Phase of Development	Single
Buildout Year	2025
TIA Requirement	Full TIA Required

1.2 Trip Generation Trigger	
Land Use Type	Townhomes or apartments
Development Size	175 Units
Trip Generation Trigger	Yes

1.3 Location Triggers	
Does the development propose a new driveway to a boundary street that is designated as part of the City's Transit Priority, Rapid Transit or Spine Bicycle Networks?	Yes
Is the development in a Design Priority Area (DPA) or Transit-oriented Development (TOD) zone?	Yes
Location Trigger	Yes

1.4. Safety Triggers	
Are posted speed limits on a boundary street 80 km/hr or greater?	No
Are there any horizontal/vertical curvatures on a boundary street limits sight lines at a proposed driveway?	No
Is the proposed driveway within the area of influence of an adjacent traffic signal or roundabout (i.e. within 300 m of intersection in rural conditions, or within 150 m of intersection in urban/ suburban conditions)?	Yes
Is the proposed driveway within auxiliary lanes of an intersection?	No
Does the proposed driveway make use of an existing median break that serves an existing site?	No
Is there is a documented history of traffic operations or safety concerns on the boundary streets within 500 m of the development?	No
Does the development include a drive-thru facility?	No
Safety Trigger	Yes

TIA Plan Reports

On 14 June 2017, the Council of the City of Ottawa adopted new Transportation Impact Assessment (TIA) Guidelines. In adopting the guidelines, Council established a requirement for those preparing and delivering transportation impact assessments and reports to sign a letter of certification.

Individuals submitting TIA reports will be responsible for all aspects of development-related transportation assessment and reporting, and undertaking such work, in accordance and compliance with the City of Ottawa's Official Plan, the Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines.

By submitting the attached TIA report (and any associated documents) and signing this document, the individual acknowledges that s/he meets the four criteria listed below.

CERTIFICATION

1. I have reviewed and have a sound understanding of the objectives, needs and requirements of the City of Ottawa's Official Plan, Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines;
2. I have a sound knowledge of industry standard practice with respect to the preparation of transportation impact assessment reports, including multi modal level of service review;
3. I have substantial experience (more than 5 years) in undertaking and delivering transportation impact studies (analysis, reporting and geometric design) with strong background knowledge in transportation planning, engineering or traffic operations; and
4. I am either a licensed¹ or registered² professional in good standing, whose field of expertise [check appropriate field(s)] is either transportation engineering or transportation planning .

1,2 License of registration body that oversees the profession is required to have a code of conduct and ethics guidelines that will ensure appropriate conduct and representation for transportation planning and/or transportation engineering works.

Note: These values are calculated by multiplying the totals by the appropriate expansion factor.

1.39

Note: These volumes are calculated by multiplying the Equivalent 12 hr. totals by the AADT factor.

1.00

Note: These volumes are calculated by multiplying the Average Daily 12 hr. totals by 12 to 24 expansion factor.

1.31

Comments:

Note: U-Turns provided for approach totals. Refer to 'U-Turn' Report for specific breakdown.

City TRANS Forecasts – Background Growth

TRANS Regional Model

Version 2.15 - Assigned June 16, 2020

AM Peak Hour Total Traffic Volume 245 and 275 Lamarche Avenue

2011 Model - Basecase

N/A

User Initials: TIMW
Plot Prepared: Feb, 2022
EMME Scenario: 21713

Legend

AM Peak Hour Total Traffic Volume

Distance (m)

The TRANS model is continuously refined & maintained, and all information is provided in good faith. However, model outputs are provided "as is", and no warranty or guarantee is provided as to the accuracy, reliability or reasonableness of the results. In using this data, you agree to accept any and all risks arising from any incorrect, incomplete, or misleading information.

Recipients are required to use caution and professional judgement in using and interpreting model outputs. In particular, caution should be used when focusing on a geographically limited area (such as a single road or intersection), as the model is primarily designed to simulate regional-scale phenomena and has been calibrated at a regional level.

As general good practice, it is recommended that the user confirm the network coding within the area of interest, and compare base year forecasts against traffic count data to assess the extent to which the model may be over- or under-estimating the travel demand.

Option 2 – Mixed Use: Residential and Commercial Uses

Option 2 proposes 525 residential units housed within 5 buildings varying between 6 and 7-storeys, a 26,905 ft² grocery store, 10,631 ft² retail store (treated as a small shopping center), a 2,217 ft² drive-thru (assumed a coffee shop with drive-thru facilities as envisioned by developer) and a 1,550 ft² gas bar.

Table 3 projects approximately 420 and 475 new residential trips during the AM and PM peak periods. Using the mode shares from **Table 5**, the person trips can be divided into trips per travel modes based on TRANS mode shares for Orléans in **Table 11** and based on target mode shares in **Table 12**.

Table 11: Option 2 Residential Peak Period Trips using TRANS 2020 Mode Shares

Travel Mode	AM Peak Period		PM Peak Period	
	Mode Share	Person Trip	Mode Share	Person Trips
Auto Driver	54%	227	61%	289
Auto Passenger	7%	29	12%	57
Transit	29%	122	21%	99
Cycling	0%	0	0%	0
Walking	10%	42	6%	28
Total Person Trips	100%	420	100%	473

Table 12: Option 2 Residential Peak Period Trips using Target Mode Shares

Travel Mode	AM Peak Period		PM Peak Period	
	Mode Share	Person Trip	Mode Share	Person Trips
Auto Driver	45%	189	45%	213
Auto Passenger	8%	34	8%	38
Transit	35%	147	35%	166
Cycling	2%	8	2%	9
Walking	10%	42	10%	47
Total Person Trips	100%	420	100%	473

Given the mixture of land uses, an internal reduction rate was applied based on mixed-use parameters described in Section 6.5 of the ITE Trip Generation Manual 3rd Edition, to account for multi-purpose trips such as local resident stopping at the gas station or coffee shop prior to travelling to work. These trips may be reduced to reflect double counted trips, which has been incorporated in the trip generation tables that follow. The base calculation for determining the quantity of internal reductions has been provided in **Appendix E**. Note that there were no studies available for mixed-use interactions with a gas station.

Using the conversion rates from **Table 4**, and the derived peak period trips by mode shares in **Table 11** and **Table 12**, the peak hour trip generation rates can be calculated. Table 9 within the TRANS 2020 Manual was also used to determine the inbound and outbound splits from the site during their respective peak hour. The residential

Table 20: Total Option 2 Peak Hour Trips Generated using TRANS 2020 Mode Shares

Travel Mode	AM Peak (Person Trips/hr)			PM Peak (Person Trips/hr)		
	In	Out	Total	In	Out	Total
Auto Driver	238	243	481	266	241	507
<i>Pre-Internal Reduction</i>	265	257	607	315	313	854
<i>Vehicles Reduced</i>	-30	-30	-92	-91	-91	-224
Auto Passenger	36	40	76	57	53	111
Transit	34	59	93	46	38	84
Cycling	7	7	14	10	10	20
Walking	16	24	39	19	16	35
Total Person Trips	361	403	763	489	449	938
Less Pass-by	-104	-104	-208	-108	-108	-216
Total 'New' Combined Auto Trips	134	139	273	158	133	291

Table 21: Total Option 2 Peak Hour Trips Generated using Target Mode Shares

Travel Mode	AM Peak (Person Trips/hr)			PM Peak (Person Trips/hr)		
	In	Out	Total	In	Out	Total
Auto Driver	235	234	469	256	236	492
<i>Pre-Internal Reduction</i>	262	261	523	338	318	656
<i>Vehicles Reduced</i>	-27	-27	-54	-82	-82	-164
Auto Passenger	37	41	78	53	50	103
Transit	38	69	107	64	51	115
Cycling	9	10	19	13	12	25
Walking	16	24	39	24	20	45
Total Person Trips	362	405	766	491	451	942
Less Pass-by	-104	-104	-208	-108	-108	-216
Total 'New' Combined Auto Trips	131	130	261	148	128	276

If the target mode shares are achieved, Option 2 is expected to generate approximately 765 and 940 new person trips during the morning and afternoon peak hours respectively. Among these, approximately 260 to 275 new vehicle trips, approximately 110 to 115 new transit trips, and approximately 60 to 70 new active mode trips.

Trip Generation Comparison – Option 1 vs Option 2

Overall, Option 2 is expected to generate more peak hour vehicle trips than Option 1. For this reason, **only Option 2 will be analyzed in the upcoming analysis**, as it represents the most conservative Option.

3.1.2. TRIP DISTRIBUTION

The estimated traffic distribution was based on a variation of the August 2021 turning movement count at Lamarche/Innes and the 2011 OD-Survey for Orléans as discussed in **Section 2.1.2: Peak Hour Travel Demands**. A more balanced distribution was developed that reflects these two sources, as outlined below:

Inbound vehicles to Lamarche Avenue

- 50% from Innes Road West;
- 50% from Innes Road East;

Outbound vehicles from Lamarche Avenue

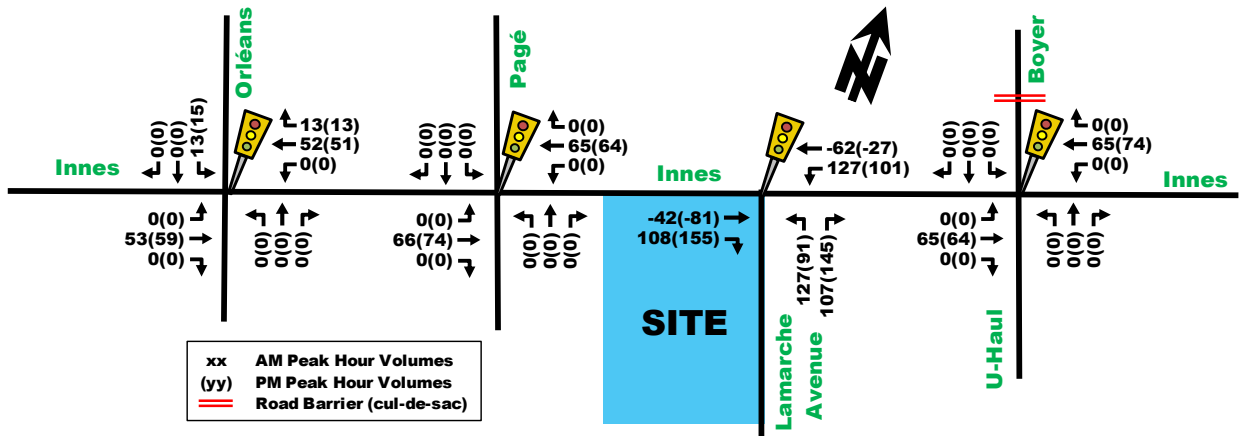

- 60% to Innes Road West;
- 40% to Innes Road East;

Pass-by trips were assumed to be more likely to originate from the west on Innes Road compared to the east, as the former consists mostly of right-turn movements, while the latter requires two separate left turns to/from Innes Road, making it less desirable.

3.1.3. TRIP ASSIGNMENT

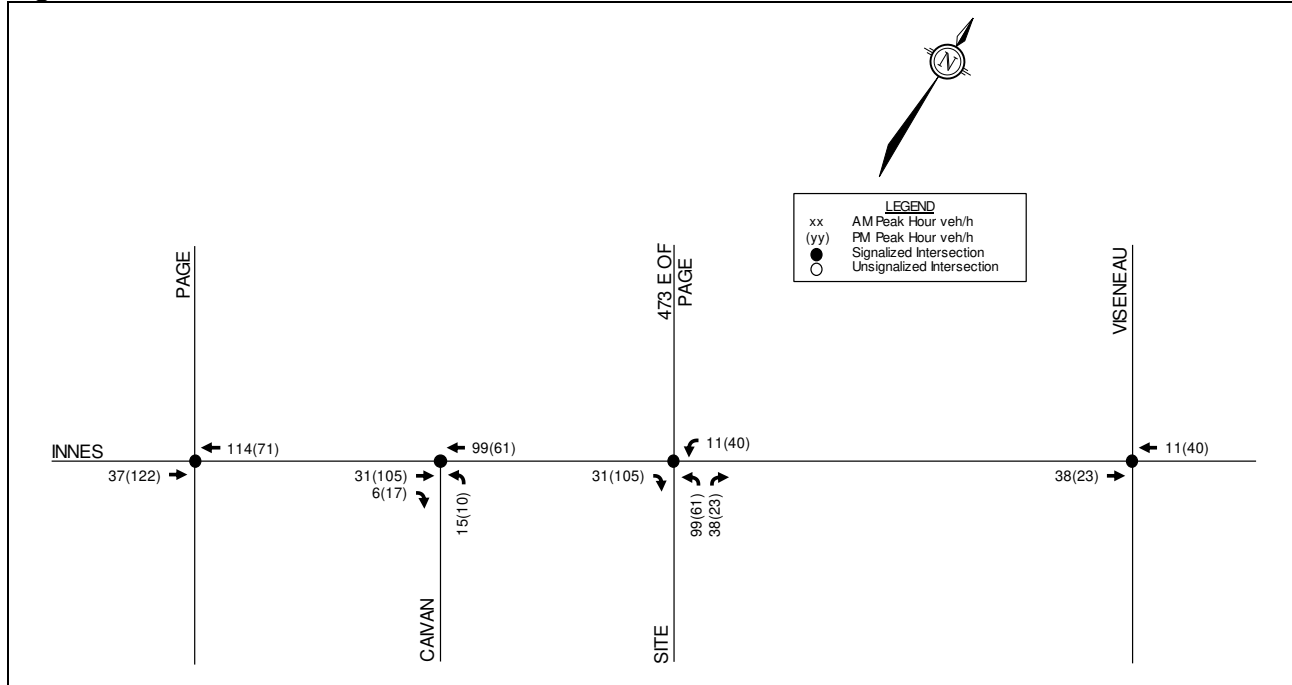

The 'new' site-generated vehicle trips outlined in **Table 21** were assigned to the study area network based on the trip distribution discussed above and are illustrated as **Figure 15**.

Figure 15: 'New' Site-Generated Peak Hour Traffic

Note that negative trips reflect pass-by deviated trips

Figure 6: 2023/2028 Site-Generated Traffic

TDM Checklist

TDM Measures Checklist:
Residential Developments (multi-family, condominium or subdivision)

Legend	
BASIC	The measure is generally feasible and effective, and in most cases would benefit the development and its users
BETTER	The measure could maximize support for users of sustainable modes, and optimize development performance
★	The measure is one of the most dependably effective tools to encourage the use of sustainable modes

TDM measures: <i>Residential developments</i>		Check if proposed & add descriptions
1. TDM PROGRAM MANAGEMENT		
1.1 Program coordinator		
BASIC	★ 1.1.1 Designate an internal coordinator, or contract with an external coordinator	<input type="checkbox"/>
1.2 Travel surveys		
BETTER	1.2.1 Conduct periodic surveys to identify travel-related behaviours, attitudes, challenges and solutions, and to track progress	<input type="checkbox"/>
2. WALKING AND CYCLING		
2.1 Information on walking/cycling routes & destinations		
BASIC	2.1.1 Display local area maps with walking/cycling access routes and key destinations at major entrances (<i>multi-family, condominium</i>)	<input type="checkbox"/>
2.2 Bicycle skills training		
BETTER	2.2.1 Offer on-site cycling courses for residents, or subsidize off-site courses	<input type="checkbox"/>

TDM measures: <i>Residential developments</i>		Check if proposed & add descriptions
3. TRANSIT		
3.1 Transit information		
BASIC	3.1.1 Display relevant transit schedules and route maps at entrances (<i>multi-family, condominium</i>)	<input type="checkbox"/>
BETTER	3.1.2 Provide real-time arrival information display at entrances (<i>multi-family, condominium</i>)	<input type="checkbox"/>
3.2 Transit fare incentives		
BASIC ★	3.2.1 Offer PRESTO cards preloaded with one monthly transit pass on residence purchase/move-in, to encourage residents to use transit	<input type="checkbox"/>
BETTER	3.2.2 Offer at least one year of free monthly transit passes on residence purchase/move-in	<input checked="" type="checkbox"/>
3.3 Enhanced public transit service		
BETTER ★	3.3.1 Contract with OC Transpo to provide early transit services until regular services are warranted by occupancy levels (<i>subdivision</i>)	<input type="checkbox"/>
3.4 Private transit service		
BETTER	3.4.1 Provide shuttle service for seniors homes or lifestyle communities (e.g. scheduled mall or supermarket runs)	<input type="checkbox"/>
4. CARSHARING & BIKESHARING		
4.1 Bikeshare stations & memberships		
BETTER	4.1.1 Contract with provider to install on-site bikeshare station (<i>multi-family</i>)	<input type="checkbox"/>
BETTER	4.1.2 Provide residents with bikeshare memberships, either free or subsidized (<i>multi-family</i>)	<input type="checkbox"/>
4.2 Carshare vehicles & memberships		
BETTER	4.2.1 Contract with provider to install on-site carshare vehicles and promote their use by residents	<input type="checkbox"/>
BETTER	4.2.2 Provide residents with carshare memberships, either free or subsidized	<input type="checkbox"/>
5. PARKING		
5.1 Priced parking		
BASIC ★	5.1.1 Unbundle parking cost from purchase price (<i>condominium</i>)	<input type="checkbox"/>
BASIC ★	5.1.2 Unbundle parking cost from monthly rent (<i>multi-family</i>)	<input type="checkbox"/>

TDM measures: <i>Residential developments</i>		Check if proposed & add descriptions
6. TDM MARKETING & COMMUNICATIONS		
6.1 Multimodal travel information		
BASIC ★	6.1.1 Provide a multimodal travel option information package to new residents	<input checked="" type="checkbox"/>
6.2 Personalized trip planning		
BETTER ★	6.2.1 Offer personalized trip planning to new residents	<input type="checkbox"/>
