**DST Consulting Engineers Inc.**

## Executive Summary

DST Consulting Engineers Inc. (DST) was retained by Windmill Development Group Ltd. (the “Client”) to conduct a Phase One Environmental Site Assessment (Phase I ESA) of the property (formerly known as the Domtar Ottawa Mill) located on Chaudière and Albert Islands in Ottawa, Ontario (“the Site” or “phase one property”). A Site Location Map is attached in Appendix A, as Figure 1.

DST has performed this Phase I ESA in accordance with the scope of work, Ontario Regulation 153/04 *Records of Site Condition* (O. Reg. 153/04), as amended.

The objective of this Phase I ESA was to evaluate actual and potential environmental concerns on the Site and to assess the potential for the Site to be impacted by the current and/or historical uses of the Site and surrounding properties.

The objective of this Phase I ESA was to evaluate actual and potential environmental concerns on the Site and to assess the potential for the Site to be impacted by the current and/or historical uses of the Site and surrounding properties. Information regarding the phase one study area was compiled through a records review, Site reconnaissance and an interview with a knowledgeable phase one property representative.

Federal, provincial, and private agencies and other databases were searched during the records review for indicators of potentially contaminating activities with regards to the Site. A response from the Ministry of Environment was received by DST and no new relevant information that would change the conclusions of this report was identified.

The phase one property is developed with twenty-nine (29) buildings and is currently unoccupied. The property was formerly predominantly used as a pulp and paper production facility. Industrial operations at the property were ceased in March 2006. The Site reconnaissance was conducted on April 7, 2014. It should be noted that observations of exterior ground conditions were limited during the Site reconnaissance on April 7, 2014 due to the snow and ice cover. As such, DST completed additional reconnaissance of the Site on August 12, 2014.

Several potentially contaminating activities on the phase one property and adjacent property were identified. These activities are summarized in the table below.

**Potentially Contaminating Activities**

PCA #	Potentially Contaminating Activity	Details	Location of PCA
PCA 1	Acid and Alkali Storage	Fire Insurance Plans of the phase one property from 1912 show three (3) former acid storage tanks and a sulphite storage area on the east side of Chaudière Island.	East side of Chaudière Island, immediately west of the board mill and in Building 533
PCA 18	Electricity Generation	Building 507 was formerly used for coal storage. The coal was used to fuel boilers located in Building 507.	Building 507
		Two (2) hydroelectric turbines are housed in the basement of Building 510 for electricity generation	Building 510 basement
PCA 28	Gasoline and Associated Products Storage in Fixed Tanks	This includes all current and former fuel/oil ASTs and USTs on the phase one property and adjacent properties	Various interior and exterior locations across the phase one property and adjacent properties (refer to Figure 5 in Appendix A)
PCA 30	Importation of Fill Material of Unknown Quality	Based on DST's Phase II ESA (2008), fill material was noted to be overlying bedrock throughout the majority of the phase one property	Entire phase one property
PCA 39	Paints Bulk Storage	Fire Insurance Plans of the phase one property from 1901 and 1912 indicate that a former paint shop was located in Building 543.	Eastern portion of Building 543.
PCA 45	Pulp, Paper and Paperboard Manufacturing and Processing	The phase one property was operated as a pulp and paper mill from approximately 1905 to 2006.	Paper Mill (Buildings 501 to 509)
PCA 55	Transformer Use (including PCB storage)	Five (5) transformers are currently stored in Building 523. The Board Mill was used for PCB storage in the 1980s and 1990s.	Board Mill (Buildings 523 to 534)

PCA #	Potentially Contaminating Activity	Details	Location of PCA
		Two (2) transformers are located in the basement of Building 510	Building 510 basement
PCA 58	Waste Disposal (thermal treatment)	Fire Insurance Plans of the phase one property show a former waste burner located south of Building 510.	Immediately south of Building 510

Based on the above-noted PCAs, several areas of potential environmental concern on the phase one property were identified. These areas are summarized in the table below.

#### Areas of Potential Environmental Concern (APECs)

APEC #	Potential Source of Contamination	Contaminants of Potential Concern (COPCs)
APEC 1	Former acid storage tanks located on the east side of Chaudière Island, immediately west of the Board Mill (PCA 1)	Metals, inorganics
APEC 2	Former sulphite storage in Building 533 (PCA 1)	Metals, inorganics
APEC 3	Former coal storage in Building 507 used to fuel boilers in the same building (PCA 18)	PAHs
APEC 4	Former Bunker C fuel oil AST located west of Building 511 (PCA 28)	PHC F1 – F4, PAHs
APEC 5	Former gasoline UST (approximately 4,500 L in capacity) located west of Building 543 (PCA 28)	PHC F1 – F4, BTEX
APEC 6	Suspected former gasoline UST located east of Building 542 (PCA 28)	PHC F1 – F4, BTEX
APEC 7	Former fuel oil AST (approximately 45,500 L in capacity) located immediately north of Building 507 (PCA 28)	PHC F1 – F4, BTEX
APEC 8	Three (3) ASTs of unknown contents in the basement of Building 532 (PCA 28)	PHC F1 – F4, VOCs, PAHs, metals, inorganics
APEC 9 (ASTs and oiler shack within Building 502)	Former thermoil AST (approximately 1,000 L in capacity) located in the basement of Building 502 (PCA 28)	PHC F1 – F4, PAHs, VOCs
	Two (2) former kerosene ASTs (each approximately 1,000 L in capacity) located in the basements of Building 502 (PCA 28)	PHC F1 – F4, VOCs, PAHs

APEC #	Potential Source of Contamination	Contaminants of Potential Concern (COPCs)
	Lubricant oil AST (approximately 1,000 L in capacity) located in the basement of Building 502	PHC F1 – F4, BTEX
	Former oiler shack located in the basement of Building 502 (PCA 28)	PHC F1 – F4, BTEX
APEC 10	Former diesel UST located west of Building 511 (PCA 28)	PHC F1 – F4, BTEX
APEC 11	Fill of unknown quality throughout the majority of the phase one property (PCA 30)	Metals, PAHs
APEC 12	Former paint shop located in eastern portion of Building 543 (PCA 39)	VOCs
APEC 13	Former pulp and paper manufacturing and processes in the Paper Mill buildings (PCA 45)	Metals, inorganics, dioxins and furans
APEC 14	Transformer use and PCB storage in the Board Mill buildings (PCA 55)	PCBs
APEC 15	Former waste burner located south of Building 510 (PCA 58)	PAHs, metals
APEC 16	The great fire of 1900 which burnt down most of the buildings on the phase one property at the time	PAHs, metals

**Notes:**

BTEX – Benzene, Toluene, Ethylbenzene, Xylenes  
 PHCs – Petroleum Hydrocarbons Fractions (F1-F4)  
 PAHs – Polycyclic Aromatic Hydrocarbons  
 VOCs – Volatile Organic Compounds

Based on the findings of this Phase I ESA, several areas of potential environmental concern were identified within the phase one property (as noted above). An intrusive soil and groundwater quality investigation in the form of a Phase II ESA is required in these areas of potential environmental concern.

## **1. Introduction**

---

### **1.1 General**

DST Consulting Engineers Inc. (DST) was retained by Windmill Development Group Ltd. (the “Client”) to conduct a Phase One Environmental Site Assessment (Phase I ESA) of the property (formerly known as the Domtar Ottawa Mill) located on Chaudière and Albert Islands in Ottawa, Ontario (“the Site” or “phase one property”). A Site Location Map is attached in Appendix A, as Figure 1.

DST has performed this Phase I ESA in accordance with Ontario Regulation 153/04 Records of Site Condition (O. Reg. 153/04), as amended.

The objective of this Phase I ESA was to evaluate actual and potential environmental concerns on the Site and to assess the potential for the Site to be impacted by the current and/or historical uses of the Site and surrounding properties. This Phase I ESA is intended to be utilized for the filing of a Record of Site Condition in accordance with O. Reg. 153/04 (as amended).

Information regarding the Site and phase one study area was compiled through a records review, site reconnaissance, and interviews. The phase one study area, as defined by O. Reg. 153/04, is the area within 250 m of the phase one property boundaries. A Site Plan and a figure showing the boundaries of the phase one property and the phase one study area are attached in Appendix A, as Figures 2 and 3, respectively.

It is DST’s understanding that a Record of Site Condition will be required for the phase one property due to the change of land use from commercial/industrial to residential. The Phase I ESA was therefore completed with the intention of filing a Record of Site Condition for the Site.

### **1.2 Phase one Property Information**

The phase one property is located at 3, 4 and 6 Booth Street, in Ottawa, Ontario. The study limits included Albert Island in its entirety and Chaudière Island, excluding an area extending from the northern to the northwestern portion of the island (currently occupied by Chaudière Water Power Inc.), the Hydro Lease at the east end of the island, and the Booth Street right-of-way. The Site Location Map and Phase One Study Area are illustrated in Figures 1 and 3 in Appendix A, respectively.

The phase one property covers a total land area of approximately 5.1 hectares. The phase one property portion located on Chaudière Island covers approximately 4.5 hectares, while the portion located on Albert Island covers approximately 0.6 hectares. Chaudière Island has a length of approximately 559 m and a maximum width of approximately 216 m. Albert Island has a length of approximately 203 m and a maximum width of approximately 51 m.

The legal descriptions of the individual lots that comprise the phase one property are as follows:

Parcel Water Lot-17, Section Ottawa River A; Part of the Bed of the Ottawa River lying in front of Lot 40, Concession A, Broken Front, formerly in the Township of Nepean, City of Ottawa, being also parts of Water Lot Location CL4467, designated as Parts 4 and 36 on Reference Plan 4R-26534.

PIN 04097-0214(LT)

Lots 12, 13, 14, 15, 16, and 17, Plan 10, except part of Lot 18 as in Instrument CR259644 on the south side of Head Street; Part of Head Street, lying west of Booth Street as in Instrument No. CR416955; Lots 1, 2, 3, 4, 5, and 6, Plan 10, north side of Head Street; Lots 22, 23 and 24 and Part of Lots 19, 20 and 21, Plan 10, south side of Chaudière Street; Part of Lot 40, Concession A, Ottawa Front, shown as Union Square on Plan 10, as in Instrument CR259644, designated as parts 7 and 37 on Reference Plan 4R-26534, save and except Parts 10, 11 and 13 on Reference Plan 4R-26574, in the City of Ottawa.

PIN 04097-0216(LT)

Part of Albert Island, Plan 10, as in Instrument No. NS120593; Lots 1, 2, 3, 4 and 5, Plan 10, Albert Island, City of Ottawa.

PIN 04097-0090(LT)

Parcel Water Lot-17, Section Ottawa River A, Part of the Bed of the Ottawa River lying in front of Lot 40, Concession A, Broken Front, Ottawa River, formerly in the Township of Nepean, City of Ottawa, being also part of Water Lot CL4467, designated as Part 3 on Reference Plan 4R-5277.

PIN 04097-0087(LT)

Part of Lot 40, Concession A, Ottawa Front, shown as Union Square, Plan 10 as in Instrument No. CR259644 (Secondly); Lots 7, 8, 9, 10, 11, north side of Head Street, Plan 10; Part of Chaudière Street, Plan 10, lying east of Booth Street as closed by By-Law registered as Instrument No. CR410131, as in Instrument No. CR416955; Part of Head Street, Plan 10, lying east of Booth Street, closed by By-law registered as Instrument No. CR410131, as in Instrument No. CR416955, except part of Lot 9 and Lots 10, 11, north side of Head Street, Plan 10, designated as Part 9 on Reference Plan 5R-8158, City of Ottawa.

PIN 04280-0138(LT)

Parcel Water Lot-17, Section Ottawa River A, Part of the Bed of the Ottawa River in front of Lot 40, Concession A, Broken Front, City of Ottawa, designated as Parts 4, 5 and 9 on Reference Plan 4R-5277.

PIN 04280-0040(LT)

PIN 04280-0041(LT)

PIN 04280-0042(LT)

Part of Booth Street, Plan 10, as in Instrument No. CR259644, City of Ottawa.

PIN 04280-0067(LT)

Part of Chaudière Island, Plan 10, lying west of Chaudière Street and Head Street, lying south of Lots 12, 13 and 14 on the south side of Head Street, Plan 10, City of Ottawa.  
Part of PIN 04097-0212(LT)

Lots H, I and J, Plan 10, south side of Head Street, City of Ottawa.  
PIN 04280-0144(LT)

Part of Lot 40, Concession A, Ottawa Front, designated as Part 7 on Plan 4R-10322 (shown as Bridge Reserve, Plan 10), City of Ottawa.  
PIN 04280-0007(LT)

Part of Lot 9, Lots 10 and 11, Plan 10, designated as Part 9 on Plan 5R-8158, City of Ottawa.  
PIN 04280-139(LT)

Parcel Water Lot 12, Section of Ottawa River A; Part of the bed of the Ottawa River adjacent to Chaudière Island and Alberta Island in front of Lot 40, Concession A Broken Front, designated as Parts 6, 7 and 8 on Plan 4R-5277, City of Ottawa.  
PIN 04280-0043(LT)

Unpatented land designated as Parts 1 and 3 on Plan 4R-24620.

Part of Chaudière Island, Plan 10, lying west of Chaudière Street and Head Street, lying south of Lots 15, 16, 17 and 18 on the south side of Head Street, Plan 10, City of Ottawa.  
Part of PIN 04097-0212(LT)

Water Lot Parcel 12; being Part of the Bed of the Ottawa River lying in front of Lot 40, Concession A, Broken Front, formerly in the Township of Nepean, now in the City of Ottawa, designated as Parts 19 and 35 on Reference Plan 4R- 26534.  
Part of PIN 04097-0089(LT)

Domtar Inc. (Domtar) is the current owner of most of the above-listed lots of land. The lots that are not owned by Domtar, are owned by the Crown and leased to Domtar. The contact information of Mr. Paul Rankin, an employee and on-Site representative of Domtar, is provided below:

Name: Paul Rankin  
Rationale: Domtar employee  
Phone No.: (613) 738-5499 ext. 7065  
Address: 6 Booth Street, Ottawa, ON

## **2. Scope of Investigation**

---

### **2.1 Scope of Investigation**

DST's scope of work was to perform a Phase I ESA investigation for the filing of a Record of Site Condition in accordance with O. Reg. 153/04 (as amended), and included the following:

- A records review;
- A Site reconnaissance visit;
- Interviews with a knowledgeable phase one property representative;
- An evaluation of the information gathered from the records review, Site reconnaissance visit and interview; and,
- The preparation and submission of a written report to the Client.

### **3. Records Review**

---

#### **3.1 General**

Requests for information were submitted to the City of Ottawa Historical Land Use Index (HLUI), the Ontario Ministry of Natural Resources (OMNR), the Ministry of Environment-Freedom of Information (MOE-FOI), Environment Canada (EC), Technical Standards and Safety Authority (TSSA) and Ecolog ERIS, in conjunction with RMS Historical Environmental Reporting System (HEIRS). The agencies contacted, information requested, and responses received are summarized in the following sub-sections.

##### **3.1.1 Phase One Study Area Determination**

The phase one study area encompasses all properties wholly and partly located within 250 meters of the phase one property boundaries. The phase one property and adjacent properties are shown on Figure 3 in Appendix A.

##### **3.1.2 First Developed Use Determination**

According to historical aerial photographs and fire insurance plans of the Site, dating back to 1878, it appears that the phase one property was first utilized predominantly for industrial purposes related to the lumber industry. Most of the current phase one property buildings are visible in the aerial photograph from 1921. Many of these buildings were destroyed by fire and rebuilt.

##### **3.1.3 Fire Insurance Plans**

Fire insurance plans were obtained from the National Map Collection (NMC) at the National Archives and Ottawa Public Library. Insurance plans are used to identify former property use, locations of former buildings, above and underground storage tanks, transformers, electrical rooms, and utilities servicing the property. Plans were viewed from 1878 to 1956 (refer to Appendix E) and findings are summarized below:

###### *1878 NMC # 0010731 – Sheet 3*

The phase one property is predominantly used for industrial purposes. The following are visible: sawmills, a lumber yard, grist mill, grain store, oatmeal mill and storage, kiln, planning mill, moulding shop, machine shop and several residential dwellings are visible on Chaudière Island. The tracks of a tramway servicing Chaudière Island are visible. It appears the tracks were simply used to move products and materials from one end of the island to the other. Residential dwellings and grain storage are visible on Albert Island.

###### *1901 NMC # 0013793 – Sheets 103 and 104*

Building materials and other refuse from the great fire of 1900 are noted on the east end of Chaudière Island. Most of the former buildings have been destroyed. A temporary boiler house is at the east end of the island, and several channels and flumes are under construction. Several mills and a powerhouse are visible on the west side of the island. Several former buildings have been demolished. A former refuse conveyor and refuse

dump are shown along the southern foundation of the old mill, off the phase property. Piles of boards and logs are scattered across the southern portion of Chaudière Island. The buildings currently occupying Albert Island are visible and are being used as stables, storage, offices, a smithing and machine shop, and a paint shop.

*1912 NMC # 009883 – Sheets 103 and 104*

The phase one property is used in its entirety by J. R. Booth for pulp and paper production and sawmills. The majority of the buildings present today have been constructed. The pulp and paper processes on the east side of the island include: ground wood pulp mill; cardboard beater mill; sulphite pulp mill; and storage for sulphite, lime and acid. Three (3) acid storage tanks are noted north of the sulphite pulp mill. A powerhouse is visible on the east side of the island with a covered flume leading to it and an uncovered tailrace leaving from it. A battery storage area is noted at the southeast corner of the powerhouse. The west side of the island has several sawmills that have since been demolished, in addition to paper mill and powerhouse buildings that are still on Site today. A waste burner and waste carrier are visible south of Building 510, north of the phase one property boundary. Ten (10) boilers and a boiler stack are visible in current Buildings 507 and 508. A hose tower is visible in the centre of the western side of Chaudière Island. The buildings currently occupying Albert Island are visible and are being used as stables, storage, offices, a machine shop, card shop and paint shop. Several tunnels and raised conveyors link structures on either side of the island and cross Booth St.

*1922 NMC # 0010837 – Sheets 103 and 104*

The Site is used in its entirety by J. R. Booth for pulp and paper production and sawmills. The majority of the buildings on Chaudière and Albert Islands are as they were in 1912. Building 514, located north of the phase one property boundary on Chaudière Island, has been converted to a hydroelectric powerhouse. An oil house is visible on the west side of Chaudière Island, southwest of Building 514. Three (3) additional boilers have been constructed in Building 507. Coal storage is visible on Albert Island adjacent to the southern headrace.

*1956 Sheets 103 and 104*

The Site is used in its entirety by J. R. Booth for pulp and paper production and sawmills. The majority of the buildings on Chaudière and Albert Islands are as they are currently. Several buildings visible in 1922 have since been demolished. The powerhouse on the east end of the Chaudière Island has been converted to pulp storage. Several of the boilers in Buildings 507 and 508 have been removed; however, seven (7) remain. An additional boiler chimney has been installed adjacent to Building 507. The waste carrier and burner are no longer shown south of Building 510. An underground gasoline storage tank is visible on the east end of Albert Island. Several buildings shown on the west end of Albert Island have since been removed. Railway tracks are visible crossing the sluice gates west of Albert Island, leading to the Paper Mill.

A review of the fire insurance plans revealed indicators of potential environmental concern with respect to the phase property from the following:

- Historic and current use of the phase one property as industrial facilities related to paper, lumber, and other industries;
- Smoke stacks, boilers and coal storage;
- Aboveground and underground fuel and acid storage tanks;
- Rail and tram tracks;
- Waste burner north of phase one property boundary on Chaudière Island ; and,
- Former building structures located within the subject property that have since been demolished.

### 3.1.4 Chain of Title

DST retained the services of EcoLog ERIS to conduct a title search for 6 Booth Street, Ottawa, Ontario. Table 3.1.4 - 1 provides the Chain of Title for the Phase one property:

**Table 3.1.4 - 1: Summary of Chain of Title Results for the Phase one property**

Lot No.	PIN No.	Date Acquired	Registered Owners

### 3.1.5 Ontario Ministry of Natural Resources

The Ontario Ministry of Natural Resources (OMNR) was contacted on April 3, 2014, for information pertaining to the phase one property. DST requested information regarding species at risk, environmentally sensitive sites, and Areas of Natural and Scientific Interest (ANSI) associated with the Phase one study area or other related information of environmental interest. The OMNR indicated that there is a potential for the following Threatened (THR) and Endangered (END) species on site or in proximity to it:

- American Eel (END),
- Lake Sturgeon (THR),
- Pale-bellied Frost Lichen (END),
- Barn Swallow (THR),
- Blanding's Turtle (THR),
- Butternut (END), and
- Chimney Swift.

The OMNR also indicated that there is a potential for the following species of Special Concern on site or in proximity to it:

- Milksnake (SC)
- Peregrine Falcon (SC)
- Snapping Turtle (SC)
- Northern Map Turtle (SC).

The following Natural Heritage values were identified:

- ANSI, Earth Science, VICTORIA ISLAND (Provincial)
- Lake, Lac Deschênes
- Spawning Area, Walleye Spawning Area.

### 3.1.6 Environment Canada

Environment Canada was contacted on April 11, 2014, under the Freedom of Information Act for information on the Phase one property related to environmental concerns (general correspondence, occurrence reports, and abatements), orders, tanks, spills, investigations and prosecutions, waste generators. This included certificates of approvals including air emissions,

water, sewage, waste water, industrial discharge, waste systems and pesticide licenses. Environment Canada indicated that no records were found concerning the Phase one property.

### **3.1.7 Ministry of Environment – Freedom of Information (MOE – FOI)**

The MOE-FOI was contacted for information on the phase one property, such as past or existing environmental permits, existing environmental orders, fuel storage tanks, or any other environmentally related information. The request for information was submitted on April 4, 2014, and a response was received from the MOE on April 7, 2014, stating that the search will be conducted. A response with historical information on the phase one property was received by DST and no new relevant information that would change the conclusions of this report was gathered.

### **3.1.8 Technical Standards and Safety Authority (TSSA)**

The TSSA Fuel Handling Division is responsible for records regarding licensing of fuel handling facilities in Ontario. Ms. Sarah Quibell of the TSSA was contacted on April 3, 2014, for any information with respect to environmental concerns, which could include past or existing environmental spills, information on fuel tanks, or any other related environmental information. The TSSA indicated that their records showed a cancelled private fuel outlet with one (1) Diesel underground storage tank (UST) with a capacity of 36,368 L, registered to 6 Booth Street. This record matched the record provided by the TSSA to DST during the previous Phase I ESA completed in 2008. Therefore, the TSSA report from the previous Phase I ESA was reviewed by DST.

The TSSA report indicated that the UST was a single walled steel tank with corrosion protection. The installation date was 1980. Records obtained from Domtar document the removal of this UST in 1994 (refer to Section 3.5 for a summary of documents related to this tank). The UST was located west of building 511, approximately 20 m north of the phase one property. Refer to Figure 2, in Appendix A, for an illustration of the location of the Site buildings.

The TSSA report also documented the presence of a propane tank with a capacity of 5,000 L. It was a horizontal tank manufactured in 1983 with paint as corrosion protection. Minor deficiencies were noted regarding the construction and installation of the propane tank. Records did not indicate whether the propane tank has been removed; however it was not observed during the Site visit.

### **3.1.9 City of Ottawa Historical Land Use Index (HLUI)**

DST issued a request to the City of Ottawa for Historical Land Use Inventory information for the Phase one property on April 10, 2014. Based on DST's review of the information provided (Appendix F), no additional concerns were identified.

### **3.1.10 Waste Disposal Site Inventory**

The MOE Waste Disposal Site Inventory (June 1991) was consulted and found five (5) former waste disposal sites within 1.5 km of the phase one property at the following locations: near

Lemieux Island, two (2) on Lebreton Flats, and one (1) near the Supreme Court Building. These sites should not impact the phase one property, as the Ottawa River provides a physical barrier between these former landfill sites and the property.

### 3.1.11 Environmental Reports

The following reports of historical environmental investigations at the phase one property were reviewed by DST:

- DST Consulting Engineers Inc. March 2008. “Environmental Site Assessment – Volume I – Phase I Environmental Site Assessment, Chaudière and Albert Islands, Ottawa, Ontario”. DST File No.: OE06544.
- DST Consulting Engineers Inc. March 2008. “Environmental Site Assessment – Volume II – Phase II Environmental Site Assessment, Chaudière and Albert Islands, Ottawa, Ontario”. DST File No.: OE06544.
- DST Consulting Engineers Inc. April 2008. “Environmental Site Assessment – Volume III – Designated Substance Survey, Chaudière and Albert Islands, Ottawa, Ontario”. DST File No.: OE06544.

The findings and conclusions/recommendations of the aforementioned reports are discussed in the following subsections.

#### 3.1.11.1 DST Consulting Engineers Inc., March 2008 – Phase I ESA

DST completed a Phase I ESA at the phase one property and the adjacent property on Chaudière Island in 2006, in order to identify the potential for soil and/or groundwater contamination from past and present land uses of the subject property.

The following potential environmental concerns were identified during the Phase I ESA:

- The nature of former and current industrial activities, including industrial buildings that had been demolished;
- The former presence of a large aboveground storage tank (AST) used to store Bunker C Fuel Oil west of Building 511. The tank had since been removed and the area partially filled;
- The former presence of a waste burner south of Building 510;
- The former presence of several boilers, a coal hopper, and coal storage in Building 507, as well as the presence of two (2) former smoke stacks. These had all been removed, with the exception of the coal hopper;
- Fire Insurance Plans had indicated a gasoline underground storage tank (UST) east of Building 542. It was unclear whether this UST had been decommissioned;
- Numerous leaks and spills of oils, hydraulic fluids, fuels or process chemicals, were visible, reported, or suspected as a result of pulp and paper manufacturing throughout many of the buildings;

- Records showed a former polychlorinated biphenyl (PCB) storage site in the Board Mill. The Board Mill housed five (5) transformers with low-level PCB oils at the time of the Phase I ESA;
- Many areas were identified with suspect fill materials. Cinders were visible in the fill between Buildings 509 and 510;
- Suspected mould growth was found in several areas;
- Animal feces were observed in and around several buildings;
- Fire Insurance Plans indicated that the majority of the buildings on Chaudière Island were destroyed by fire around the year 1900;
- The presence of fluorescent light ballasts, transformers and elevator hydraulic equipment, which may contain PCBs; and,
- The presence of air conditioners, water fountains and refrigerators, which may contain ozone depleting substances (ODSs).

Based on the findings of the Phase I ESA, the following recommendations were provided by DST:

- The completion of a Phase II ESA at the Site, consisting of the advancement boreholes around current and former buildings, in the vicinity of former ASTs and USTs, in areas of suspected fill material, in areas burnt by the fire of 1900, and in the basements of buildings used for industrial processes;
- The completion of a geophysical survey and/or intrusive investigation in the area of the UST, shown on the fire plans to be located east of Building 542, in order to determine if it had been removed;
- The inspection of transformers with low-level PCBs, as well as the sealing of openings with evidence of oil;
- Further inspection of areas showing signs of suspected mould growth;
- The cleaning of areas with evidence of animal feces (Buildings 505, 507, 508a, 514 and Board Mill) for health and safety purposes;
- Confirmation of the PCB content of fluorescent light ballasts, transformers and elevator hydraulic equipment prior to their disposal;
- The removal of ODSs from air conditioners, water fountains and refrigerators prior to their disposal; and,
- The completion of a Site investigation following the completion of Domtar's decommissioning activities to determine whether environmental conditions have changed since the Phase I ESA.

### 3.1.11.2 DST Consulting Engineers Inc., March 2008 – Phase II ESA

DST conducted a Phase II ESA at the Phase one property and the adjacent property on Chaudière Island in 2006.

The field program was completed between July and September, 2006, and consisted of the advancement of twenty-three (23) boreholes on the phase one property, sixteen (16) of which were instrumented with groundwater monitoring wells, and seven (7) boreholes on the adjacent property, six (6) of which were instrumented with groundwater monitoring wells, as well as the collection and laboratory analysis of soil and groundwater samples. Soil and groundwater samples were submitted for laboratory analysis of one (1) or more of the following parameters: petroleum hydrocarbon (PHC) fractions F1 – F4; benzene, toluene, ethylbenzene, and xylenes (BTEX); volatile organic compounds (VOCs); polycyclic aromatic hydrocarbons (PAHs); metals; and other chemical compounds including PCBs, sulphur, hardness and pH.

Soil analytical results were compared against the provincial, Ontario Ministry of Environment (MOE, 2004) Table 1 and Table 3 standards for both residential/parkland and commercial/industrial land uses (for coarse textured soils), as well as the federal, Canadian Council of Ministers of the Environment (CCME) guidelines for both residential/parkland and commercial/industrial land uses (for coarse textured soils). A review of the soil sample analytical results indicated the following:

- Soil contamination above MOE (2004) Table 1 standards for one or more parameters was identified at borehole / monitoring well locations BHMW2 to 4, BHMW13, BHMW14, BHMW16 to 19, BHMW22 to 26, BHMW29, BHMW31, and BHMW32 at the Phase one Property; and BHMW7, BHMW8, BHMW11, BHMW12 and BH15 at the adjacent property on Chaudière Island. Parameters that exceeded MOE (2004) Table 1 standards included PHCs, VOCs, PAHs, metals and PCBs (one location).
- Soil contamination above CCME and/or MOE (2004) Table 3 residential/parkland land use criteria for one or more parameters was identified at borehole / monitoring well locations BHMW2 to 4, BHMW 13, BHMW14, BHMW 17 to 19, BHMW22, BHMW 24 to 26, BHMW29, BHMW31, and BHMW32 at the Phase one Property; and BHMW8 and BH15 at the adjacent property on Chaudière Island. Parameters that exceeded the federal/provincial criteria included PHCs, VOCs, PAHs and metals. In addition, soil pH values outside the CCME-regulated range were reported at the majority of the borehole / monitoring well locations.
- Soil contamination above CCME and/or MOE (2004) Table 3 industrial/commercial land use criteria for one or more parameters was identified at borehole / monitoring well locations BHMW2 to 4, BHMW14, BHMW17 to 19, BHMW22, BHMW 24 to 26, BHMW29, BHMW31, and BHMW32 at the Phase one Property and BH15 at the adjacent property on Chaudière Island. Parameters that exceeded the federal/provincial criteria included PHCs, VOCs, PAHs and metals. In addition, soil pH values outside the CCME-regulated range were reported at the majority of the borehole / monitoring well locations.

Based on the soil analytical results, the volume of impacted on-Site soils was approximated as follows:

- Approximately 78,288.1 m<sup>3</sup> (172,233.8 metric tonnes) of on-site soils exceeded MOE (2004) Table 1 standards;

- Approximately 47,606 m<sup>3</sup> (104,733.2 metric tonnes) of on-site soils exceeded MOE (2004) Table 3 residential/parkland standards;
- Approximately 36,815 m<sup>3</sup> (80,993.5 metric tonnes) of on-site soils exceeded MOE (2004) Table 3 commercial/industrial standards;
- Approximately 54,769.6 m<sup>3</sup> (120,493.1 metric tonnes) of on-site soils exceeded CCME residential/parkland guidelines; and,
- Approximately 46,142.9 m<sup>3</sup> (101,514.4 metric tonnes) of on-site soils exceeded CCME industrial guidelines.

It should be noted that the above-noted contaminated soil quantities include areas from the property adjacent to the phase one property, on Chaudière Island.

Groundwater analytical results were compared against the provincial, MOE (2004) Table 1 and Table 3 (for coarse textured soils) standards, as well as the federal, CCME guidelines for the protection of aquatic life. A review of the groundwater sample analytical results indicated the following:

- Groundwater contamination above MOE (2004) Table 1 standards was identified at monitoring well / grab sample locations BMWGS1, BHMW 2 to 6, BHMW 13, BHMW 14, BHMW 16 to 24, BHMW26, BHMW31 and BHMW32 at the Phase one Property; and BHMW 7 to 12 at the adjacent property on Chaudière Island. Parameters that exceeded MOE (2004) Table 1 standards included PAHs, PCBs and metals.
- Groundwater contamination above CCME and/or MOE (2004) Table 3 criteria was identified at borehole / monitoring well locations BMWGS1, BHMW2 to 5, BHMW13, BHMW16, BHMW19, BHMW22, BHMW24 and BHMW32 at the Phase one Property. Parameters that exceeded the federal/provincial criteria included PAHs, PCBs and metals.

It should be noted that no non-aqueous phase liquid product was observed in any of the soil or groundwater samples.

### **3.1.11.3 DST Consulting Engineers Inc., April 2008 – Designated Substance Survey**

DST completed a DSS at the phase one property and the adjacent property on Chaudière Island in 2006. Building 513 and parts of the Board Mill (Buildings 523 to 534) were inaccessible for health and safety reasons. The results of the DSS confirmed that the following designated substances and hazardous building materials were present in forms and quantities expected to have a measurable impact on any future maintenance, renovation or demolition plans at the Site:

- Asbestos-containing materials (ACMs);
- Lead;
- Mercury;
- Silica;
- Benzene; and,
- PCBs.

The following conclusions/recommendations were provided by DST, based on the findings of the DSS:

- Due to the confirmed presence of asbestos, DST indicated that an asbestos management plan must be completed for the entire Site, including a full asbestos survey.
- Access to areas containing ACM debris should be limited to personnel wearing protective equipment.
- Due to the levels of lead detected in all paint samples collected during the survey, all paints in all buildings should be treated as containing moderate to high levels of lead, unless proven otherwise by laboratory analysis.
- Lead was also suspected to be present in the solder on the joints of copper piping as well as in the caulking inside the drainage piping and spigot joints,
  - Copper piping to be removed can be cut a small distance (e.g. 50 mm) from the joints to avoid direct disturbance of the lead solder; and,
  - Cast iron drain pipes can be cut away from the joints to avoid direct disturbance of the lead caulking (and possible asbestos packing as well) in the joints.
- Liquid mercury is present in the fluorescent light fixtures throughout the Site. It is also potentially present in thermostats, thermometers, pressure gauges, electrical switches and other mechanical equipment present on Site.
- Silica is present in concrete building materials, mortar, and hard plaster finishes. Silica-containing materials were found in all buildings on Site. Dust control procedures during renovation and demolition projects are usually sufficient to control airborne silica levels.
- When the fluorescent light fixtures are eventually taken out of service prior to building renovations or demolition, the ballasts should be examined to determine their PCB content.

### **3.2 Environmental Source Information**

An EcoLog ERIS report for the phase one property, and the surrounding area within a 250 m radius of the property, was obtained and reviewed by DST as part of this Phase I ESA. EcoLog ERIS searches selected databases for information pertaining to the phase one study area and surrounding properties within a 250 m radius, and summarizes the search results. A total of 77 databases were searched. EcoLog ERIS located 83 records for the phase one property, and 193 records for properties within 250 m of the phase one property. The results of the EcoLog ERIS report for the phase one property are summarized in the following subsections.

It should be noted that the records search was completed for properties within 350 m of the phase one property; however, only records for properties within 250 m of the phase one property were evaluated, in accordance with O. Reg. 153/04 (as amended).

### 3.2.1 Boreholes (BORE)

Eleven (11) records were found for boreholes at the phase one property, while forty-five (45) records were found for other properties within 250 m of the phase one property. All boreholes at the phase one property were advanced for geotechnical investigation purposes, to depths ranging between 5.3 and 39 meters below ground surface (mbgs).

Generally, the soil stratigraphy at the phase one property consisted of fill material (sand and gravel) underlain by bedrock (limestone). The bedrock layer was encountered at varying depths ranging from 1.7 to 11.2 mbgs.

### 3.2.2 Certificates of Approval (CA) & Environmental Compliance Approval (ECA)

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals.

Six (6) CA records were noted for the phase one property in the ERIS report. These records included Certificates of Approval for industrial air, wastewater and sewage works. The issuance dates for the CAs ranged between 1992 and 2006.

No ECA records were found for the phase one property or the phase one study area.

The noted CA records present a low potential environmental concern at the phase one property.

### 3.2.3 Certificates of Authorization (CA)

The Certificates of Authorization database was collected from the Québec Ministère du Développement durable, de l'Environnement et des Parcs and contains such information as the issue and expiry date of the approval, to whom it was granted, the reason for the request and the location in which it took place. Certificates are issued for road, rail, and plant construction/expansion, landfill expansions, hazardous materials recovery and waste water treatment to name a few. Please note that actual address locations are not provided for all records but can be obtained from the Ministry on a case-by-case basis.

No CA records were found for the phase one property; however, eleven (11) records were found for the Domtar (or E.B. Specialty Papers) property located at 3 Rue Eddy in Gatineau, QC, which is located approximately 230 m north of the phase one property. The records indicate that the Certificates of Authorization were issued between 1995 and 2003. Three (3) of the records were for Certificates of Authorization for the installation of a heat pump, the re-use of bio solids and the demolition of a building, respectively. No additional information was provided regarding the remaining records.

These records do not present an environmental concern at the phase one property.

### **3.2.4 Contaminated Site Inventory (CS)**

The Quebec Ministère du Développement durable, de l'Environnement et des Parcs (MDDEP) holds an up-to-date database on its contaminated sites. The database contains information regarding the location of the contaminated site and its land use (industrial, commercial, residential, agricultural, etc.), the types of contaminants found on the site and whether it is presently in use or not. In addition, it also contains information on sites that have gone through some sort of rehabilitation (clean up). This is a dynamic database that is subject to periodic updates.

No CS records were found for the phase one property; however, one (1) record was found for the property located at 3 Rue Eddy in Gatineau, QC, which is located approximately 230 m north of the phase one property. The record indicated the presence of petroleum hydrocarbon contamination in soil at the property. Due to the distance from the phase one property and the fact that the phase one property is surrounded by the Ottawa River, this record does not pose an environmental concern at the phase one property.

### **3.2.5 Environmental Effects Monitoring (EEM)**

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

No EEM records were found for the phase one property; however, one-hundred-and-one (101) records were found for the Domtar (or E.B. Eddy Specialty Papers) property located at 3 Rue Eddy in Gatineau, QC, which is located approximately 230 m north of the phase one property. The records are for effluent toxicity assessments on different aquatic species in the Ottawa River. These records do not present an environmental concern at the phase one property.

### **3.2.6 Environmental Registry (EBR)**

The Environmental Registry database lists proposal, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Two (2) records were found for the phase one property, from 2003 and 2004. The records pertain to instrument decisions for approval for discharge into the natural environment (air). No information was provided on the nature of the discharge products.

Based on this information, these records present a low potential environmental concern at the phase one property.

### **3.2.7 ERIS Historical Searches (EHS)**

EcoLog ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: Site location, date of report, type of report, and search radius.

Three (3) EHS records (2006, 2007 and 2011) were found for the phase one property, and one (1) record (2007) was found for the Domtar property located at 3 Rue Eddy in Gatineau, QC, approximately 230 m north of the phase one property.

### **3.2.8 TSSA Expired Facilities (EXP)**

This is a list of all expired facilities that fall under the TSSA (TSSA Act & Safety Regulations), including the six regulations that exist under the Fuels Safety Division. It includes facilities such as private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc. These tanks have been removed and automatically fall under the expired facilities inventory held by the TSSA.

Three (3) EXP records were found for the phase one property, registered to E.B Eddy Forest Products Ltd. The records are related to a fuels safety private fuel outlet, a liquid fuel tank and fuel supply piping previously present at the property. No additional information was provided regarding these instances.

The former presence of a private fuel outlet, a liquid fuel tank and fuel supply piping at the phase one property presents an environmental concern.

### **3.2.9 Contaminated Sites on Federal Land (FCS)**

The Federal Contaminated Sites Inventory includes information on all known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government.

No FCS records were found for the phase one property, while eight (8) records were found for other properties within 250 m of the phase one property. Since the Ottawa River provides a physical barrier between these properties and the phase one property, these records do not pose an environmental concern to the phase one property.

### **3.2.10 Ontario Regulation 347 Waste Generators Summary (GEN)**

Regulation 347 of the Ontario Environmental Protection Act (EPA) defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste

generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data.

Six (5) GEN records were found for the phase one study area, including three (3) for the phase one property. Tables 3.2.10 – 1 and 3.2.10 - 2 summarize these records.

**Table 3.2.10 – 1: Summary of Waste Generators at Phase One Property**

Business Name	Waste Description (Years of registration)
Domtar Inc.	<ul style="list-style-type: none"> <li>- Paint/pigment/coating residues (2002 – 2013)</li> <li>- Inorganic laboratory chemicals (2002 – 2013)</li> <li>- Light fuels (2002 – 2013)</li> <li>- Latex wastes (2002 – 2013)</li> <li>- Oil skimmings and sludges (2002 - 2013)</li> <li>- Waste oils and lubricants (2002 – 2013)</li> <li>- Waste compressed gases (2002 – 2013)</li> <li>- Aliphatic solvents (2002 – 2008, 2010 - 2013)</li> <li>- Other specified inorganics (2002 – 2012)</li> <li>- Petroleum distillates (2002 – 2012)</li> <li>- Polymeric resins (2002 – 2012)</li> <li>- Organic laboratory chemicals (2002 – 2012)</li> <li>- Pathological wastes (2002 – 2012)</li> <li>- Heavy fuels (2002 – 2008)</li> <li>- Halogenated solvents (2002 – 2008)</li> <li>- Other polymeric wastes (2002 – 2008)</li> <li>- PCBs (2002 – 2008)</li> <li>- Transfer station oils wastes (2002 – 2008)</li> <li>- Non-halogenated pesticides (2002 – 2008)</li> <li>- Other inorganic acid wastes (2002 – 2008)</li> <li>- Alkaline wastes – heavy metals (2002 – 2008)</li> <li>- Alkaline wastes – other metals (2002 – 2008)</li> <li>- Alkaline phosphates (2002 – 2008)</li> <li>- Aromatic solvents (2002 – 2008)</li> <li>- Organic acids (2002 – 2008)</li> <li>- Acid Waste – other metals (2009 - 2012)</li> <li>- Neutralized wastes – heavy metals (2009 - 2012)</li> <li>- Detergents/soaps (2010 - 2013)</li> </ul>

	<ul style="list-style-type: none"> <li>- Latex wastes (1988 – 1990, 1992 – 2001)</li> <li>- Polymeric resins (1988 – 1990, 1992 – 2001)</li> <li>- Halogenated solvents (1988 – 1990, 1992 – 2001)</li> <li>- Oil skimmings and sludges (1988 – 1990, 1992 – 2001)</li> <li>- Organic laboratory chemicals (1988 – 1990, 1992 – 2001)</li> <li>- Organic acids (1988 – 1990, 1992 – 2001)</li> <li>- Other polymeric wastes (1992 – 2001)</li> <li>- PCBs (1992 – 2001)</li> <li>- Alkaline wastes – other metals (1992 – 2001)</li> <li>- Alkaline phosphates (1992 – 2001)</li> <li>- Alkaline wastes – heavy metals (1992 – 1993, 1996 – 2001)</li> <li>- Other specified inorganics (1992 – 1993, 1996 – 2001)</li> <li>- Waste compressed gases (1992 – 1993, 1996 – 2001)</li> </ul>
DST Consulting Engineers Inc.	<ul style="list-style-type: none"> <li>- Light fuels (2006)</li> </ul>

Based on the nature of the wastes that have been generated at the phase one property (as summarized in Table 3.2.7 – 1), these wastes pose a high environmental concern at the Site.

**Table 3.2.10 – 2: Summary of Waste Generators within 250 m of Phase One Property**

Business Name and Location	Distance to Site (m)	Waste Description (Years of registration)
Chaudière Water Power Inc. - 4 Booth Street	North and west adjacent to phase one property on Chaudière Island	No information provided
Energy Ottawa Inc. / Hydro Ottawa – 156 Middle Street	40 m east of the Site	<ul style="list-style-type: none"> <li>- Oil skimmings and sludges (1996 - 2001, 2004 - 2008)</li> <li>- Petroleum distillates (1996 - 2001, 2004 - 2012)</li> <li>- Light fuels (2004 - 2012)</li> <li>- Waste oils and lubricants (2004 - 2013)</li> <li>- Aliphatic solvents (1996 - 2001)</li> <li>- Emulsified oils (2013)</li> </ul>
Canadian Museum of Civilization Corporation – 1 Vimy Place	100 m south of the Site	<ul style="list-style-type: none"> <li>- Waste compressed gases (2005 - 2013)</li> <li>- Inorganic laboratory chemicals (2005 - 2013)</li> <li>- Organic laboratory chemicals (2005 - 2013)</li> <li>- Alkaline wastes - heavy metals (2005 - 2013)</li> <li>- Waste oils and lubricants (2005 - 2013)</li> <li>- Acid waste - heavy metals (2005 - 2013)</li> <li>- Paint/pigment/coating residues (2009 - 2013)</li> <li>- Aliphatic solvents (2009 - 2013)</li> <li>- Light fuels (2009 - 2013)</li> </ul>

Due to the distances of these properties from the phase one property and the fact that the phase one property is surrounded by the Ottawa River, these generated wastes do not pose an environmental concern at the phase one property.

### 3.2.11 Hazardous Waste Management Permits (HWM)

Section 70.9 from the Quebec Environmental Quality Act defines the criteria that would require a permit issued by the Minister for the purpose of managing hazardous waste materials. According to the act, there are five types of permits and any person who generates, receives, or uses hazardous waste materials is required to have such a permit. This database contains company name, address, permit type held, nature of the permit, and both the effective and expiry dates of permits.

No HWM records were found for the phase one property; however, one (1) record was found for the Domtar property located at 3 Rue Eddy in Gatineau, QC. The record indicates that the permit held by Domtar was of type 5, but no information is provided regarding the type or use of the hazardous waste handled. Due to the distance of this property from the Site, this record does not pose an environmental concern at the Site.

### 3.2.12 National Environmental Emergencies System (NEES)

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for all previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends 'which dates from approximately 1974 to 2003.

No NEES records were found for the phase one property; however, eight (8) records were found for spills at the Domtar property located at 3 Rue Eddy in Gatineau, QC, approximately 230 m north of the phase one property. These records are summarized as follows:

- On July 4, 2001, a spill of an unknown amount of sewage was reported. No information was provided regarding the recipient medium of the spill;
- On July 4, 2001, a spill of approximately 3,600 L of process effluent was reported. No information was provided regarding the recipient medium of the spill;
- On August 10, 2001, a release of an unknown amount of carbon dioxide was reported;
- On July 16, 2002, a spill of approximately 10 kg of non-chlorinated effluent was reported. No information was provided regarding the recipient medium of the spill;
- On October 11, 2002, a spill of an unknown amount of process effluent was reported. No information was provided regarding the recipient medium of the spill;
- On October 22, 2002, a spill of approximately 200 mL of mineral oil was reported. No information was provided regarding the recipient medium of the spill;
- On November 26, 2002, a spill of an unknown amount of processed water was reported. No information was provided regarding the recipient medium of the spill; and,
- On January 2, 2003, a spill of approximately 8 L of hydraulic oil was reported. No information was provided regarding the recipient medium of the spill.

Due to the distance of this property from the Site and the fact that the phase one property is surrounded by the Ottawa River, the above-noted spills do not pose an environmental concern at the phase one property.

### 3.2.13 National PCB Inventory (NPCB)

Environment Canada’s National PCB inventory includes information on in-use PCB-containing equipment in Canada including federal, provincial and private facilities. All federal out-of-service PCB-containing equipment and all PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed.

Six (6) NPCB records were found for the phase one study area, including five (5) for the phase one property. The NPCB records for the phase one property ranged between 1990 and 1996 and were registered to E.B Eddy Forest Products Ltd. Two (2) of the records reported on-Site storage of PCBs; however, no information regarding the quantities of stored material was provided. The on-Site storage of PCBs poses an environmental concern at the phase one property.

One (1) record was found for the Domtar property located at 3 Rue Eddy in Gatineau, QC, approximately 230 m north of the phase one property. The record is from an inspection completed on December 2, 1992. The record indicates storage of 30,450 kg of PCBs for disposal, and removal/treatment of 2,537 kg of PCBs. Due to the distance of this property from the Site, this record does not pose an environmental concern at the Site.

### 3.2.14 National Pollutant Release Inventory (NPRI)

Environment Canada has defined the National Pollutant Release Inventory as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Ten (10) NPRI records were found for the phase one property. A summary of these records is provided in Table 3.2.14 – 1.

**Table 3.2.14 – 1: National Pollutant Release Inventory Record Summary – Phase One Property**

Business Name	Year	Description
E.B. Eddy Forest Products Ltd.	1993	- An unknown quantity of chlorine was released to the environment (receiving medium was not specified)
E.B. Eddy Forest Products Ltd.	1994	- An unknown quantity of chlorine was released to the environment (receiving medium was not specified)
E.B. Eddy Forest Products Ltd.	1995	- 13.3 tonnes of ammonia (total) were released to water. - 15.5 tonnes of nitrate ion solution (pH ≥ 6) was released to water.
E.B. Eddy Forest Products Ltd.	1996	- 28.5 tonnes of ammonia (total) was released to water. - 36.4 tonnes of nitrate ion solution (pH ≥ 6) was released to water.
E.B. Eddy Forest Products Ltd.	1997	- 22.89 tonnes of ammonia (total) was released to water.

Business Name	Year	Description
		- 55.17 tonnes of nitrate ion solution (pH ≥ 6) was released to water.
Eddy Specialty Papers	1998	- 35.98 tonnes of ammonia (total) was released to air. - 41.97 tonnes of nitrate ion solution (pH ≥ 6) was released to water.
Domtar Inc.	1999	- 17.9 tonnes of ammonia (total) was released to water. - 36.71 tonnes of nitrate ion solution (pH ≥ 6) was released to water.
Domtar Inc.	2000	- An unknown quantity of nitrate ion solution (pH ≥ 6) was released to the environment (receiving medium was not specified)
Domtar Inc.	2002	- 247 tonnes of nitrogen oxides were released to air. - 44 tonnes of carbon monoxide were released to air. - 1035 tonnes of sulphur dioxide were released to air. - 74 tonnes of particulate matter (total) was released to air. - 65 tonnes of particulate matter (≤ 10 microns) was released to air. - 38 tonnes of particulate matter (≤ 2.5 microns) was released to air.
Domtar Inc.	2003	- 271 tonnes of nitrogen oxides were released to air. - 35 tonnes of carbon monoxide were released to air. - 1,344 tonnes of sulphur dioxide were released to air. - 96 tonnes of particulate matter (total) was released to air. - 83 tonnes of particulate matter (≤ 10 microns) was released to air. - 50 tonnes of particulate matter (≤ 2.5 microns) was released to air.

Due to the nature of the above-noted releases and the recipient media (air and water), these releases pose a low environmental concern at the phase one property.

Five (5) NPRI records were found for the Domtar property located at 3 Rue Eddy in Gatineau, QC, approximately 230 m north of the phase one property. These records indicate various amounts of yearly releases of nitrogen oxides, carbon monoxide, sulphur dioxide and particulate matter to the air between 2004 and 2007. No information was provided regarding the quantity and nature of releases in 2008. Due to the distance of this property from the phase one property, and the nature of the above-noted releases and recipient media (air), these releases do not pose an environmental concern at the phase one property.

### 3.2.15 Inventory of PCB Storage Sites (OPCB)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. O. Reg. 11/82 (Waste Management – PCB) and O. Reg. 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Six (6) OPCB records were found for the phase one property, while no records were found for other properties within 250 m of the phase one property. These records show that E.B. Eddy Forest Products Ltd. was listed as a PCB storage site in 1995, 1998, 1999, 2000, 2003 and 2004. The following is a summary of the records:

- In 1995, on-Site PCB storage included 4,429 kilograms of liquid with high level PCBs (> 1,000 parts per million – ppm), five (5) transformers with high level PCBs (> 1,000 ppm), 300 kilograms of material with low level PCBs (< 1,000 ppm), and two (2) drums with no indication of PCB quantity;
- In 1998, on-Site PCB storage included 3,407 kilograms of liquid with high level PCBs (> 1,000 ppm), five (5) transformers with high level PCBs (> 1,000 ppm), and 300 kilograms of liquid with low level PCBs (< 1,000 ppm);
- In 1999 and 2000, on-Site PCB storage included 300 kilograms of liquid with low level PCBs (< 1,000 ppm) and two (2) drums with no indication of PCB quantity; and,
- In 2003 and 2004, no information was provided regarding the quantity of PCB storage on Site.

On-Site storage of PCBs presents an environmental concern at the phase one property.

#### **3.2.16 Canadian Pulp and Paper (PAP)**

This information is part of the Pulp and Paper Canada Directory. The directory provides a comprehensive listing of the locations of pulp and paper mills and the products they produce.

Five (5) PAP records were found for the phase one property, listed as Domtar Inc., in 1999, 2002, 2004, 2005 and 2009. These records provided a summary of the paper production capacity of the mill (total capacity ranged between 425 and 542 tonnes/day) and the products produced. The record listed in 2009 indicated that the mill was inactive. Former pulp and paper manufacturing and processes at the phase one property pose an environmental concern.

No PAP records were found for other properties within 250 m of the phase one property.

#### **3.2.17 Petroleum Equipment Usage Permits (PEP)**

The Petroleum Equipment Usage Permits database is a regularly updated database once maintained by the Québec Ministry of Natural Resources and now maintained by Régie du Bâtiment Québec. Such information as: corporate name of license holder, address, license issue and expiration date, as well as, authorized capacity (litres) and authorized tank numbers for each site are all provided.

No PEP records were found for the phase one property; however, two (2) records were found for the Domtar property located at 3 Rue Eddy in Gatineau, QC, approximately 230 m north of the phase one property. These records indicate the following:

- Authorization for two (2) tanks with a capacity of 4,484,000 L from 2001 to 2007; and,
- Authorization for two (2) tanks with a capacity of 4,478,958 L from 2007 to 2013.

No information was provided regarding the contents of the tanks; however, due to the distance of this property from the phase one property and the fact that the phase one property is surrounded by the Ottawa River, these tanks do not pose an environmental concern at the Site.

### **3.2.18 Private and Retail Fuel Storage Tanks (PRT)**

The Fuels Safety Branch of the of the Ontario Ministry of Consumer and Commercial Relations (MCCR) maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the TSSA.

Two (2) PRT records were found for the phase one property, while no records were found for other properties within 250 m of the phase one property. The records are summarized as follows:

- A retail storage tank with a capacity of 5,000 L was registered to E.B. Eddy Forest Products Ltd. The tank's registration expired on July 31, 1995. No information was provided regarding the type of fuel stored or whether it was an underground or aboveground storage tank; and,
- A private storage tank with a capacity of 36,368 L was registered to E.B. Eddy Forest Products Ltd. No information was provided regarding the date of registration/expiry of the tank, the type of fuel stored, or whether it was an underground or aboveground storage tank.

These records match the records provided by the TSSA, as presented in Section 3.1.8. The record for the retail storage tank is for a propane tank, while the record for the private storage tank is for a diesel UST. As noted previously, the former presence of the diesel UST poses an environmental concern at the phase one property.

### **3.2.19 Scott's Manufacturing Directory (SCT)**

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

One (1) SCT record was found for the phase one property, while no records were found for other properties within 250 m of the phase one property. The record was for Domtar Inc. It describes Domtar as a paper mill with a date of establishment of 1851. As noted previously, former pulp and paper manufacturing and processes at the phase one property poses an environmental concern at the Site.

### **3.2.20 Ontario Spills (SPL)**

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988 to 2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills

Action Centre) handles all spills reported in Ontario. Legislation for spills in Ontario is included in the Environmental Protection Act Part X.

Twenty-one (21) SPL records were found for the phase one property, while no records were found for other properties within 250 m of the phase one property. Table 3.2.20 – 1 provides a summary of these records.

**Table 3.2.20 – 1: Ontario Spill Record Summary**

Business Name	Date (m/d/y)	Description
Domtar Inc.	9/19/2004	<ul style="list-style-type: none"> <li>- 113.75 L of calcium carbonate was spilled due to a valve/fitting leak or failure.</li> <li>- The receiving medium was soil.</li> <li>- The MOE indicated, at the time, that environmental impacts were possible.</li> </ul>
E.B. Eddy Forest Products Ltd.	4/9/1990	<ul style="list-style-type: none"> <li>- 10 L of orthodichlorobenzene was spilled due to an operational error.</li> <li>- The receiving medium was soil.</li> <li>- The MOE did not anticipate any environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	8/26/1989	<ul style="list-style-type: none"> <li>- 300 kg of titanium dioxide was spilled to the Ottawa River due to a valve/fitting leak or failure.</li> <li>- The receiving medium was surface water.</li> <li>- It was not specified whether the MOE anticipated any environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	11/22/1990	<ul style="list-style-type: none"> <li>- 5 L of paper dye was spilled to pavement from a barrel due to a valve/fitting leak or failure</li> <li>- The receiving medium was soil.</li> <li>- The MOE did not anticipate any environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	12/3/1992	<ul style="list-style-type: none"> <li>- 900 L of coating was spilled to clarifier due to a pipe/hose leak.</li> <li>- The receiving medium was surface water.</li> <li>- The MOE did not anticipate any environmental impacts at the time.</li> </ul>
Domtar Inc.	10/22/2009	<ul style="list-style-type: none"> <li>- 15 L of raw, unchlorinated sewage was spilled to ground due to equipment failure.</li> <li>- The receiving medium was soil.</li> <li>- The MOE did not anticipate any environmental impacts at the time.</li> </ul>
Domtar Inc.	1/2/2003	<ul style="list-style-type: none"> <li>- 9.1 L of hydraulic oil was spilled to the Ottawa River.</li> <li>- The receiving medium was surface water.</li> <li>- The MOE indicated, at the time, that surface water impacts were possible.</li> </ul>
E.B. Eddy Forest Products Ltd.	6/10/1988	<ul style="list-style-type: none"> <li>- 1330 L of titanium dioxide was spilled to the Ottawa River due to equipment failure.</li> <li>- The receiving medium was surface water.</li> <li>- The MOE did not anticipate any environmental impacts at the time.</li> </ul>

Business Name	Date (m/d/y)	Description
Domtar Inc.	5/30/2003	<ul style="list-style-type: none"> <li>- 3,785 L of diesel fuel was spilled to ground due a leak of an above ground tank.</li> <li>- The receiving medium was surface water.</li> <li>- The MOE did not anticipate any environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	9/30/1989	<ul style="list-style-type: none"> <li>- 135 L of hydraulic oil was spilled to clarifier due to a valve/fitting leak or failure.</li> <li>- The receiving media were soil and surface water.</li> <li>- It was not specified whether the MOE anticipated any environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	5/15/1988	<ul style="list-style-type: none"> <li>- 1.5 tonnes of suspended solids was spilled to the Ottawa River due to equipment failure.</li> <li>- The receiving medium was surface water.</li> <li>- It was not specified whether the MOE anticipated any environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	9/11/1989	<ul style="list-style-type: none"> <li>- 85 L of lube oil was spilled to Ottawa River due to container overflow.</li> <li>- The receiving medium was surface water.</li> <li>- It was not specified whether the MOE anticipated any environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	5/15/1993	<ul style="list-style-type: none"> <li>- 1 L of oil was spilled to the Ottawa River due to windy conditions.</li> <li>- The receiving medium was surface water.</li> <li>- The MOE did not anticipate any environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	11/14/1992	<ul style="list-style-type: none"> <li>- 180 kg of dry starch was spilled to clarifier due to an operational error.</li> <li>- The receiving medium was surface water.</li> <li>- The MOE did not anticipate any environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	9/29/1992	<ul style="list-style-type: none"> <li>- An unknown quantity of a solution with a pH &gt; 11 was discharged to the Ottawa River due to equipment failure.</li> <li>- The receiving medium was surface water.</li> <li>- The MOE indicated, at the time, that environmental impacts were possible.</li> </ul>
E.B. Eddy Forest Products Ltd.	1/17/1994	<ul style="list-style-type: none"> <li>- 450 L of biocide was spilled, 20 L to clarifier, due to valve/fitting leak or failure.</li> <li>- The receiving medium was surface water.</li> <li>- The MOE did not anticipate any environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	7/23/1990	<ul style="list-style-type: none"> <li>- 100 L of hydraulic oil was spilled to Ottawa River due to a valve/fitting leak or failure.</li> <li>- The receiving medium was surface water.</li> <li>- The MOE confirmed environmental impacts at the time.</li> </ul>
E.B. Eddy Forest Products Ltd.	1/18/2002	<ul style="list-style-type: none"> <li>- An unknown quantity of condensate water was spilled to the Ottawa River from a broken pipe.</li> <li>- The receiving medium was surface water.</li> </ul>

Business Name	Date (m/d/y)	Description
		- The MOE did not anticipate any environmental impacts at the time.
E.B. Eddy Forest Products Ltd.	5/20/1993	- 55 L of blue dye was spilled to clarifier due to a valve/fitting leak or failure. - The receiving medium was surface water. - The MOE did not anticipate any environmental impacts at the time.
E.B. Eddy Forest Products Ltd.	7/4/1995	- A waste pipeline leaked to the Ottawa River (unknown quantity). - The receiving medium was surface water. - The MOE indicated, at the time, that environmental impacts were possible.
E.B. Eddy Forest Products Ltd.	4/25/1995	- 4.5 cubic metres of paper effluent was spilled to the Ottawa River due to a pipe/hose leak. - The receiving media were soil and surface water. - The MOE did not anticipate any environmental impacts at the time.

Several of the above-noted spills pose an environmental concern to the phase one property; however, based on the information provided in the spill records it is difficult to pinpoint the exact locations of most of the reported spills.

### 3.2.21 Wastewater Discharger Registration Database (SRDS)

Information under this heading is a combination of the following two (2) programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct discharges of toxic pollutants within nine (9) sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp and Paper; Metal Casting; Iron and Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Four (4) SRDS records were found for the phase one property, while no records were found for other properties within 250 m of the phase one property. The records are summarized as follows:

- From 1990 to 1994, E.B. Eddy Forest Products Ltd. was listed for water intake from the Ottawa River; and,
- In 1995, 1996 and 1997, E.B. Forest Products Ltd. was listed for the discharge of process effluent and once-through cooling water to the Ottawa River.

These records pose a low environmental concern at the phase one property.

### 3.2.22 Water Well Information System

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903.

One (1) WWIS record was found for the phase property, while seven (7) records were found for other properties within 250 m of the phase one property. The well on the phase one property was

advanced to a depth of 6 mbgs. The well record indicates that the overburden material consisted of sand and gravel, and that bedrock was encountered at 6 mbgs.

The remaining wells, advanced within 250 m of the phase one property, were advanced to depths varying from approximately 2.43 mbgs to 138 mbgs.

### 3.2.23 City Directory Reviews

#### 3.2.23.1 Past Uses of the Phase One Property

The current ownership of the phase one property includes: Domtar, E.B. Eddy Forest Products Ltd., Public Works and Government Services Canada (PWGSC), and the Crown. Historic City of Ottawa directories were viewed on microfilm and hardcopy at the City of Ottawa Archives. Directories were viewed from 1889 to 2003. Additionally, ERIS was contracted by DST to provide the City directory for the phase one property.

The current Booth St., crossing the islands from north to south, was formerly named Bridge St. up to approximately 1915. Head St. and Chaudière St. crossed Chaudière Island from east to west. Listings found in directories are summarized in Table 3.2.23.1 – 1.

**Table 3.2.23.1 – 1: Summary of The City of Ottawa Directory Records (phase one property)**

Location	Date	Listing
Bridge St. (east side)	1889 - 1900	Baldwin Foundry, Ottawa Flour and Oatmeal Mill
Bridge St. (west side)		Quain Richard Lumber Yard
Head St. (north side)		Baldwin Blacksmith Shop, Perley and Pattee Lumber Merchants
Head St. (south side)		Perley and Pattee Lumber Merchants, Ottawa Electric Light Company's Works, Baldwin Machine Shop and Planning Mill, Oliver and Sons Furniture Factory, McKay Thomas and Co. Storehouse, Private Residences
Chaudière St. (north side)		J.R. Booth Sawmill, Perley and Pattee Sawmill
Chaudière St. (south side)		Lumber Yards
Bridge St. (east side)		1903
Bridge St. (west side)	Booth Sawmill and Lumber Wagon Yard	
Head St. (north side)	Lumber Piles and Booth Stock Keepers Office	
Head St. (south side)	Lumber Piles, Ottawa Electric Power House and Repair Shop, Booth Pulp Mill, Lumber Piles and Timekeeper's Office.	
Chaudière St. (north side)	Sawdust Burner, J.R. Booth Sawmill, GNW Telephone Company, Booth Pulp Mill, Electric Powerhouse	
Chaudière St. (south side)	Lumber Platforms	
Booth St. (formerly Bridge St. – east side)	1915	
Booth St. (west side)		Booth Sawmill and Paper Mill

Head St. (north side)		Booth Stock Keeper's Office
Head St. (south side)		Ottawa Electric Power House and Repair Shop, Booth Pulp Mill.
Chaudière St.		Booth Sawmills
Booth St. (east side)	1923 - 1933	Booth Pulp Mill
Booth St. (west side)		Booth Sawmill
Head St. (north side)		Booth Mills
Head St. (south side)		Ottawa Electric Power House and Repair Shop, Booth Pulp Mill
Chaudière St.		Booth Sawmills
Booth St. (east side)	1945	Booth Pulp Mill
Booth St. (west side)		Booth Sawmill
Head St.		Booth Mills
Chaudière St.		No longer listed
Booth St. and Head St.	1961 - 1966	E.B. Eddy Company Ottawa Mill
Booth St.	1967 - 1973	E.B. Eddy Company Ottawa Mill, WD La Flamme General Contractors, Upper Ottawa Improvement Company Log Towing
Booth St.	2001 - 2002	Comstock Canada Ltd.
Booth St.	2002 – 2003	Domtar Inc.
6 Booth St.	2010	Domtar Inc.

A review of the city directories revealed indicators of potential environmental risk with respect to the subject property from the following:

- Former industrial buildings;
- Historic and current use of the subject property for the following industrial uses: lumber and paper; foundry, machine shops and furniture making; and,
- The former presence of a sawdust burner.

### 3.3 Physical Setting Sources

Aerial photographs, as well as soil, bedrock geology, and topography maps were reviewed for information pertaining to the physical setting of the phase one study area. Results of the review are presented in the following subsections.

#### 3.3.1 Aerial Photographs

A review of available aerial photographs was conducted at the National Air Photo Library (NAPL) at the Department of Natural Resources in Ottawa, Ontario. Aerial photographs showing the phase one property and neighboring areas were identified and retrieved (refer to Appendix C). Photographs ranging from 1921 to 2013 were examined. Descriptions of representative photographs from approximately each decade are summarized below (flight line and photograph numbers are indicated in parentheses).

1921 (HA67 - 3)

The phase one property appears to be used as an industrial facility related to the lumber industry. Most of the current buildings are visible. Several buildings, which have since been removed, are visible on the phase one property on either side of the bridge. Raised conveyers across Booth Street link buildings on either side. Two (2) smokestacks are visible adjacent to building 507. Piles of lumber cover the current parking lot in the central section of the subject property. A building is visible on the adjacent property leased by Hydro Ottawa, to the east of Building 535. The Chaudière Bridge appears as it is today. Industrial activity is visible on Victoria Island and adjacent land on both sides of the River. A rail yard is visible south of the phase one property, on the Ottawa side of the River. The Chaudière dam is visible west of the phase one property.

1928 (A2 – 8)

The industrial buildings associated with the phase one property appear to be relatively unchanged. A large pile of lumber is visible at the southwest end of Chaudière Island with a raised conveyer system leading to it. A raised conveyer system crosses the entire island. A water tower is visible in the middle of the island.

1945 (A9547 - 11)

The industrial buildings associated with the phase one property appear to be relatively unchanged. A large building formerly located at the west end of Chaudière Island is no longer visible. The surrounding properties remain relatively unchanged. Observations are limited due to the scale of the photograph.

1950 (A12714- 22)

The phase one property and surrounding areas remain relatively unchanged.

1963 (A18235 - 148)

The phase one property and surrounding areas remain relatively unchanged.

1971 (A22559 - 21)

An AST is visible on Chaudière Island, west of Building 511, north of the phase one property boundary on Chaudière Island. The raised conveyer system crossing the island is no longer visible. Only one (1) chimney is visible attached to Building 507. A depression is visible between Buildings 511 and 514 (north of phase one property boundary on Chaudière Island), where several buildings were formerly located. Several buildings between the Board Mill (Buildings 523-534) and Booth Street have been demolished to make room for a parking lot.

1973 (A23191 - 46)

The building directly to the east of Booth Street, and one of the associated links across the street, are no longer visible. Industrial activity on Victoria Island is no longer visible. The train yard on the Ottawa side of the river is no longer visible. Albert Island is not visible on this photograph.

1984 (A26475 - 70)

Numerous cars and trailers are parked in the current parking area in the middle of the Chaudière Island, along with numerous piles of materials. The land west of Building 504 appears to have been extended into the River with fill materials. The building on the Hydro Ottawa Lease (off the phase one property) at the east end of the Island is no longer visible.

2001 (A28467 – 207)

The AST located west of Building 511, north of the phase one property boundary on Chaudière Island, has been removed. The remainder of the phase one property appears as it is today.

2013 (*Google Earth*)

The phase one property and adjacent properties appear as they are today.

A review of the aerial photographs revealed indicators of potential environmental risk with respect to the subject property from the following:

- Historic and current use of the phase one property for industrial purposes related to lumber and paper;
- Visible smoke stacks;
- A visible AST; and,
- The quality of fill materials that may have been imported to Site in the areas of former buildings.

### 3.3.2 Topography, Hydrology, Geology

The topographic map from the Ontario Base Map series was reviewed. The map shows that the portions of the phase one property on Albert Island and the west side of Chaudière Island are relatively flat, at 53 m above mean sea level. The portion of the phase one property on the east side of Chaudière Island slopes towards the east, from an elevation of approximately 50 to 45 m above mean sea level. A topographic map is attached in Appendix D.

Albert Island and the western part of Chaudière Island are close to the water level of the Ottawa River, while parts of Chaudière Island below the dam are up to 5 meters above the water level

with a steep shoreline that is near vertical in places. The Ottawa River surrounds the subject property. The River flows from west to east.

A surficial and bedrock geology map (Geological Survey of Canada Map 2140A) published by National Resources Canada (NRCan) was examined for information regarding the characteristics of the overburden and bedrock at the phase one property and surroundings. The geology map indicates that the bedrock at the phase one property and surrounding area mainly consists of limestone, dolomite, sandstone and shale, relatively flat-lying, mainly occurring as bare, tabular outcrops, and includes areas thinly veneered by unconsolidated sediments up to 1 m thick. The overburden at the phase one property is mainly considered fill material, generally consisting of sand and gravel.

### **3.3.3 Fill Material**

Based on DST's Phase II ESA (2008), fill material, generally consisting of sand and gravel, was noted to be overlying the bedrock at the phase one property. DST observed during August 12, 2014 site reconnaissance that unpaved areas are covered by fill material.

### **3.3.4 Water Bodies and Areas of Natural Significance**

The phase one property is surrounded by the Ottawa River. Relevant information from the Ontario Ministry of Natural Resources (OMNR) was requested regarding species at risk, environmentally sensitive sites, and Areas of Natural and Scientific Interest associated with the phase one study area. A response was not received at the time of issuance of this report.

### **3.3.5 Well Records**

One (1) well record was found for the phase one property, while seven (7) records were found for other properties within 250 m of the phase one property. The records indicate that the well on the phase one property was advanced for investigative purposes, whereas the remaining wells in the phase one study area consisted of two (2) water supply wells and four (4) investigation wells. The record for one (1) of the wells did not indicate the well's purpose.

The record for the well on the phase one property indicates that the overburden material consisted of sand and gravel, and that bedrock was encountered at 6 mbgs.

## **3.4 Site Operating Records**

The phase one property was used for industrial purposes from approximately 1850 to 2006. Industrial activities related to the lumber industry took place at the property until 1905. From 1905 to 2006, the phase one property was predominantly operated as a pulp and paper mill.

DST carried out a review of Domtar records, which included a search for any available environmental and planning development reports. Records provided by Domtar and reviewed included the following:

- Several internal E.B. Eddy Environmental Review Reports from the 1980s and 1990;
- Inventory of Radioactive Materials and an Inventory of CFCs;

- Two (2) Spill Incident Reports;
- Various reports concerning PCB storage and destruction; and,
- Various reports concerning ASTs and USTs.

The 1990 Corporate Environmental Review indicates that all PCB equipment has been removed from use at the Ottawa Mill and stored in the Ministry approved on-site storage location, which was subsequently decommissioned, as discussed in the paragraphs below. The report also indicates the presence of chemical storage plans; spill prevention plans; environmental reporting system; etc.

The Radioactive Source Inventory indicates that the radioactive sources have been removed from the paper machine in Building 502. Radioactive materials remain in storage in Building 511. Building 511 is not part of the phase one property and, thus, the Site reconnaissance did not include this building.

The chlorofluorocarbon (CFC) inventory indicates that the majority of CFCs have been removed from the Ottawa Mill. CFCs remain in cooling and air-conditioning equipment in several buildings, including central air and window air conditioners. Halon was removed from the fire suppression system in the Moore Control Room on July 25, 2006.

One (1) spill incident report describes a spill of ground calcium carbonate from a tank through a crack in the floor of a containment system, to the sewer. Another incident report describes the spillage of 2 gallons of diesel from the fire pump AST in Building 502. Half a gallon escaped to the river, the remainder was contained by the berms around the tank.

Extensive records documenting the PCB storage site in the Board Mill were viewed. A letter from the Ontario MOE, dated July 9, 1990, authorized E.B. Eddy Forest Products to store PCBs in the Board Mill. A report entitled *Final Report for PCB Storage Site #40288A224*, prepared by BOVAR Environmental, April 1996, described the PCB waste disposal work completed from November 1995 to March 1996. A leak of 1 liter of PCB oil occurred during the draining of one (1) of the transformers. The results of swab sampling following spill cleanup showed 20-2100 ppm PCBs in the area of the spill. The MOE indicated that the clean-up was satisfactory. Attached are also certificates of destruction of the PCB wastes, and communications with Environment Canada indicating that all PCBs have been removed from the subject site. A report entitled *Final Report for the Decommissioning of a PCB Storage Facility at the Domtar Facility in Ottawa, Ontario*, prepared by GPEC International Ltd., dated February 15, 2002, documents concrete core sampling in the PCB storage area. Cores collected and analyzed showed no detectable levels of PCBs. Based on this report, the MOE issued a letter dated April 5, 2002, acknowledging that the former PCB waste storage site can be dismantled, sold, or re-used for other purposes. In addition to PCB transformers, 3 EcoPac shipping containers had been stored in the site.

A quote dated March 26, 2001, from PSC By-Products Management Group was viewed for the destruction of a drum of PCB light ballasts. It is not clear whether the work was carried out or not. No records for the destruction of PCB light ballasts were found.

Test reports were found for the five (5) transformers remaining in storage in Building 525 of the Board Mill. The reports include general information on the transformers and analytical results showing that the PCB content of the oil was low, ranging from 6.7 ppm to 30 ppm. In their current status as stored back-up transformers they are not regulated, however if they become obsolete and are no longer needed, then they may be defined “PCB related waste” under Ontario Regulation 362 *Waste Management – PCB's*.

A report entitled *Underground Storage Tanks Removal: E.B. Eddy Forest Products Ltd., Ottawa-Hull Division*, produced by Technitrol Eco Inc., August 12, 1994, documents the removal of the diesel UST formerly located west of Building 511. Soil sampling was performed of the sidewalls and floor of the excavation, and of the excavated materials, and found levels of Total Petroleum Hydrocarbons (TPH) (750 mg/kg) within the guidelines in effect at that time for a Level II site. Photos and a site plan of the excavation and sampling locations were included.

A draft report entitled *Phase 2 Environmental Site Assessment: E.B. Eddy Hull and Ottawa Mills*, produced by Envir-Eau Inc., November 1994, documents an investigation around the former fuel pump and pump island servicing the former diesel UST discussed above. Test pits were excavated around the fuel pump. Visual hydrocarbon contamination was observed in the test pits. The contamination was confirmed with soil vapour analysis. Contaminated soil was excavated from around the pump, and stockpiled on site. The analysis of two (2) sidewall samples showed BTEX and TPH levels below the limit of detection. The report concluded that no further work was required, and the excavation was backfilled. An unknown quantity of excavated contaminated soil was hauled to a landfill.

An invoice was found dated December 1990 for the removal of a 100 Gallon tank, pump, island and associated piping. The tank description and removal date are similar to the description for the tank listed as “Stores Gasoline Tank Bldg. 543” in the E.B. Eddy UST inventory.

An inventory of oil and fuel storage tanks was reviewed. The original inventory was compiled in 1990 and updated in 1994 with hand written notes as to which tanks have been removed. Most of the USTs and ASTs listed were reported to have been removed. The only storage tank listed in the inventory that remains on Site, and is still in use, is a 250 gallon (approximately 1,150 L) diesel AST located in the basement of Building 502 and used to fuel the fire pump in the same building.

A plan was reviewed showing the locations of the former diesel UST, former Bunker C AST and oil truck loading area around Buildings 510; and former day storage tank north of Building 507. These were all reported to have been removed.

Other records viewed but not included in this report include the following: environmental awareness training records, PCB storage training records, MOE PCB storage site inspection reports, environmental reports sent to various regulatory agencies, etc.

A review of the company records revealed indicators of potential environmental concern associated with the following:

- Transformers stored in the Board Mill containing low levels of PCBs;
- A history of minor leaks and spills;
- Chemicals stored throughout the facility;
- CFCs remaining in some equipment; and,
- Past and present USTs and ASTs.

## **4. Interviews**

---

### **4.1 General**

DST conducted interviews on April 7, 2014, with Mr. Paul Rankin, a Domtar employee. Mr. Rankin was selected to be interviewed as he has been associated with the phase one property for nearly 10 years and has good knowledge of past and current activities at the phase one property. Mr. Rankin was interviewed in person at the phase one property.

Mr. Rankin provided DST with the following information:

- The phase one property started operating as a paper mill in 1905;
- Prior to 1905, the phase one property was utilized for industrial activities related to the lumber industry;
- The great fire of 1900 resulted in the destruction of all buildings present at the phase one property at the time;
- Domtar purchased the phase one property in 1998 and continued operation as pulp and paper mill;
- Paper production operation at the phase one property ceased in March 2006. Domtar has since been decommissioning the facility;
- Nearly all equipment related to industrial operations has been removed from all the Site buildings;
- After paper production operations were ceased, Domtar continued using buildings 540 and 541 for administrative purposes, until 2010;
- All fuel/oil ASTs and USTs at the phase one property have been decommissioned, with the exception of a diesel AST located in the basement of building 502 and an allegedly drained hydraulic oil tank in building 503. The diesel AST is used to operate a fire pump located in Building 502;
- Building 534 was historically used for PCB storage;
- Water for domestic use is piped from the City of Ottawa municipal water supply;
- A sanitary sewage collector is located in Building 535;
- Sanitary sewage is pumped from Building 535 to the City of Ottawa sanitary sewage system;
- An effluent clarifier is located in Building 535;
- Water collected from the floor drains and floor trenches in the Site buildings is directed to Building 535. In 2007, Domtar obtained approval to discharge water collected in Building 535 directly to the Ottawa River. Prior to 2007, the water was piped to the clarifier in Building 535 and then pumped to a clarifier in the Domtar facility in Gatineau, QC; and,
- Two (2) oil/water separators were located in Building 502. They are no longer in operation

## **5. Site Reconnaissance**

---

### **5.1 General Requirements**

The findings documented in this section are based on observations made by Salim Eid of DST, who was supervised by Eric Sly and George Thomas, a Qualified Person in Ontario (as per O. Reg. 153/04, as amended). The Site visit took place on April 7, 2014, and lasted for approximately two (2) hours. Conditions at the time of the Site reconnaissance were overcast with a temperature of approximately 5°C. DST staff was accompanied by Mr. Paul Rankin, a Domtar employee for nearly 10 years, during the Site visit. None of the phase one property buildings were operational. Access was granted to Buildings 501 to 509 and Buildings 540 to 543. DST was not granted access to the remaining Site buildings due to safety concerns.

DST completed additional reconnaissance of the Site on August 12, 2014. The reconnaissance was completed by Mr. George Thomas, DST's Senior Principal and Mr. Milan Makusa, a Qualified Person in Ontario (as per O. Reg. 153/04, as amended). Access was granted to Buildings 540 to 543. Conditions at the site were overcast with rain, temperature of approximately 15°C. DST staff was accompanied by Ms. Greer Stanier of Windmill Development Group Ltd.

Photographs from the Site visits are included in Appendix B.

### **5.2 Specific Observations at the Phase One Property**

The phase one property is currently unoccupied and consists of twenty-nine (29) buildings, mostly vacant, with varying dates of construction, ranging between the 1870s and 1950s. The topography of the phase one property gently slopes towards the east. Descriptions of the Site buildings and other observations at the phase one property are provided in the sub-sections below. It should be noted that observations of exterior ground conditions were limited during the Site reconnaissance on April 7, 2014 due to the snow and ice cover, while observations of the interior conditions of Buildings 501 to 509 were limited due to poor lighting, with accumulated water and debris covering portions of the floor surfaces.

During the Site reconnaissance on August 12, 2014 ground conditions were recorded on Chaudière and Albert Island within the Phase I Property area. This site has a long history of various industrial activities and the majority of it was observed to be paved or covered with fill material with sparse vegetation. A few localized trees were noted on the west side of the former Board Mill located on the western end and eastern side of Chaudière Island. There were no evidence of spills or contamination noted on the ground at the Phase I Property.

#### **5.2.1 Description of Structures and Other Improvements**

As noted in Section 5.2, twenty-nine (29) buildings are located on the phase one property. Table 5.2.1 – 1 provides a description of the construction of each of the buildings as well their former use. The majority of machinery was removed from the buildings to which DST was granted access. Nearly all machinery has allegedly also been removed from the remaining buildings.

**Table 5.2.1 – 1: Phase One Property Building Descriptions**

<b>Building Number</b>	<b>Name</b>	<b>Description</b>
501	Stock Preparation	Constructed by 1912. 3 floors including basement. Brick walls covered in siding, wood beams, cement deck. Building formerly used for pulp preparation. Previously contained large tanks where pulp, additives and dyes were mixed.
502	Paper Machines	Constructed by 1912. 2 floors including basement. Brick walls covered in siding, wood beams, cement deck. Basement previously housed bearing lubrication and other equipment that fed paper machines on 1 <sup>st</sup> Floor. Two paper machines, QA/QC laboratory and comfort station used to be present on 1 <sup>st</sup> floor. Process on 1 <sup>st</sup> floor started with wet pulp from Building 501 being sprayed on conveyer belt. Dryers and presses removed moisture. Bulk paper was produced on rolls.
503	Finishing and Machine Shop	Constructed by 1912. 3 floors including basement. Brick walls covered in siding, wood beams, cement deck. Basement previously contained a machine shop. Both the 1 <sup>st</sup> and 2 <sup>nd</sup> floors formerly housed the finishing machines that processed rolls of paper from the paper machines in Building 502.
504	Shipping	Constructed in 1980s. 2 floors including basement. Concrete deck, concrete walls up to ½ of 1 <sup>st</sup> floor, then steel frame covered in fibre cement panels. Basement has a bay door, and was formerly used for paper storage. The 1 <sup>st</sup> floor had a shipping loading dock with dock levellers and several large bay doors for loading trucks. There is a freight elevator in the building.
505	Storage	Constructed by 1956. 3 floors including basement. Brick walls covered in siding, wood beams and cement deck. Building previously contained a lunch room, change room and welding shop in basement. The 1 <sup>st</sup> and 2 <sup>nd</sup> floors were used for storage.
506	Pulp and Broke Storage	Constructed by 1922. 2 floors. Concrete exterior walls, cement block interior and cement deck. Building formerly used for pulp storage and delivery. Pulp bales were delivered to conveyer belts on 1 <sup>st</sup> floor and sent up to 2 <sup>nd</sup> floor of Building 501. First floor had an electrical room and

<b>Building Number</b>	<b>Name</b>	<b>Description</b>
		laboratory. 2 <sup>nd</sup> floor was previously used for storage and had a control room. There is a freight elevator in the building.
507	Additives, Coating Kitchen	Constructed by 1912. 3 floors including basement. Concrete exterior walls, cement block interior and cement deck. Building previously housed large vats of pulp additives. Formerly housed boilers and coal bin. Basement has tunnel formerly used as a coal hopper and for used oil storage.
508	Clay, Size and Alum Plant	Constructed by 1912. 3 floors including basement. Concrete exterior walls, cement block interior and cement deck. Formerly used to store large vats of various pulp additives. 2 <sup>nd</sup> floor used to store defective paper.
508a	Clay Storage	Constructed by 1956. Contains loading bay which was used to deliver various additives. Previously contained 4 large 500+ gallon additive tanks now empty. 2 <sup>nd</sup> floor was used for defective paper storage.
509	Compressors, Instrument Shop	Constructed by 1956. 2 floors including basement. Ground floor housed a mechanical shop that has been decommissioned.
523 to 534	Board Mill (Boarded up, No access)	Building constructed by 1912. Up to 3 floors above ground and 2 basement levels, some parts of the building have fewer floors. Building has not been used for paper production since 1979. Used for hazardous waste and PCB storage in the 1980s and 1990s. 5 backup transformers are stored in Building 523.
535	Groundwood Mill (No access)	Building constructed by 1912. Brick with concrete foundation. 1 level aboveground with 2 basements. Ground floor was used for storage and had a former kitchen/lounge area. Basement houses effluent clarifier that is pumped to the Domtar facility in Gatineau, and a sanitary sewage tank that is pumped to Ottawa municipal sewers. Floor of sub-basement is unfinished gravel.
540	Administrative Building	Constructed by 1878. 2 floors above ground with basement. Brick building. Housed administrative offices. Building has not been in use since 2010.

Building Number	Name	Description
541	Administrative Building/Storage	Constructed by 1901. 2 floors above ground with no basement. Brick building. Housed administrative offices on second floor and storage bays on ground floor. Storage included drums of lubricants, oils, diesel and machine parts. Building has not been used since 2010.
542	Stores	Building built by 1901. 3 floors with partial basement. Brick walls, concrete deck and wooden beams. Entire building was previously used for parts storage. A freight elevator serviced the building.
543	Stores	Constructed by 1901, west part of building built prior to 1898. 3 floors with partial basement. Brick walls, concrete deck, and wooden beams. Entire building was previously used for chemical and parts storage.
565	Guardhouse	Constructed in 1970s to 1980s. Single level with 2 small rooms, one for guards and one for visitor sign-in.

Table 5.2.1 – 2 provides a description of the construction and former use of each of the remaining buildings of the former Domtar paper mill, located immediately north and west of the phase one property.

**Table 5.2.1 – 2: Building Descriptions – North and West Adjacent Properties**

Building Number	Name	Description
510	No. 2 Power House	Constructed around 1912. Basement with partial 1 <sup>st</sup> floor. 2 hydroelectric turbines and transformers are in the basement. A control room and various controls are on the 1 <sup>st</sup> floor.
511	Research Laboratory	Constructed by 1912. 2 floors with basement. Building was used for quality assurance / quality control (QA/QC), research and environmental labs.
513	Box Shop (Condemned, no access)	Building was constructed by 1898. Exterior walls are limestone. The roof has caved in. The building has been fenced off for safety reasons.
514	No. 3 Power House	Building was constructed by 1898. 3 floors including basement. Exterior walls are limestone. Floor is concrete. Beams are wood and steel. The

Building Number	Name	Description
		building houses a turbine in the basement; lunch room, shop and transformers on 1 <sup>st</sup> floor; and parts storage on the 2 <sup>nd</sup> floor.
558	Chaudière Water Power Inc. Office, Storage, Generator and Boiler	3 small portable buildings used by Chaudière Water Power Inc. Steel shipping container houses boiler to thaw equipment on dam; constructed around 2003. Portable housing offices and shower constructed around 1960s. Portable housing diesel generator and diesel AST constructed around 1995.

### 5.2.2 Description of Below-Ground Structures

No below-ground structures were observed on the phase one property.

### 5.2.3 Details of Tanks

Two (2) ASTs were observed on the phase one property. One (1) steel AST with a capacity of approximately 1,150 L is located in the basement of Building 502 and is used to store diesel for operating a fire pump located in the same building. The date of construction of the tank is unknown. The tank is situated in a concrete wall containment and appears to be in good condition. No staining was observed in the vicinity of the tank.

One (1) steel AST is located in the basement of Building 503. The tank was used to store lubricant oil and is now drained and no longer in use. The tank appeared to be in good condition and was situated on a concrete pad. Due to poor lighting and accumulated water and debris on the floor surface near the tank, observations of any staining around the tank were limited; however, in DST's Phase I ESA in 2008, it was noted that a large amount of oil was observed in the containment.

Table 5.2.3 – 1 provides a list of ASTs and USTs that were previously present at the phase one property. Table 5.2.3 – 2 provides a list of ASTs that were or are still present on the adjacent property. Notes regarding the condition and use of the tanks were summarized from DST's Phase I ESA in 2008.

**Table 5.2.3 – 1: List of Known Liquid Fuel/Oil Removed Historical Tanks on the Phase One Property**

Location	AST/ UST	Interior/ Exterior	Contents	Date of Construction	Capacity	Spill containment	Notes
Building 502 Basement	AST	Interior	Thermoil	≈ 1990	≈ 1,000 L	Concrete berm	Steel tank. Oily deposits in containment. Was part of hot oil system for paper machines.
	AST	Interior	Kerosene	≈ 1980s	2 tanks ≈ 1,000 L each	Concrete berm	Two tanks. Kerosene used for oily parts washing.
Building 508 Ground floor	AST	Interior	Hydraulic oil	Unknown	≈ 1,000 L	Concrete berm	Oil in containment.
Building 532 Basement	AST	Interior	unknown	Unknown	3 tanks ≈ 500 – 2000 L each	Concrete berm	Three tanks. Unable to closely inspect tank due to safety concerns. Domtar was unaware of contents of tanks.
East of Building 542	UST	Exterior	Gasoline	Unknown	Unknown	Unknown	None available
West of Building 435	UST	Exterior	Gasoline	Unknown	≈ 4,500 L	Unknown	None available
North of Building 507	AST	Exterior	Service oil	Unknown	≈ 45,500 L	Unknown	None available

**Table 5.2.3 – 2: List of Known Liquid Fuel/Oil Tanks on Adjacent Property**

Location	AST/ UST	Interior/ Exterior	Contents	Date of Construction	Capacity	Spill containment	Notes
South of Building 558	AST	Exterior	Stove oil	2003	2,364 L	Concrete pad	Double walled construction. No evidence of spills. Fuels emergency boiler that produces steam for thawing of dam.
Building 558	AST	Interior	Diesel	2001	1,110 L	Concrete pad	Single walled construction. Diesel for generator

Based on DST's Phase I ESA in 2008, two (2) hydraulic lubricating oil ASTs were reportedly located in Building 510 and one (1) hydraulic lubricating oil AST was reportedly located in Building 514.

#### **5.2.4 Potable and Non-Potable Water Sources**

DST was informed by Mr. Paul Rankin that the phase on property is serviced by the City of Ottawa's municipal water supply.

#### **5.2.5 Underground Utilities and Service Corridors**

During the Site inspection, indicators of underground and aboveground utilities were observed at many locations throughout the property, including the presence of storm sewer catch basins, pole-mounted lighting fixtures, fire lines telephone cables, sanitary sewers, water lines and steam lines.

#### **5.2.6 Features of Structures and Buildings**

##### **5.2.6.1 Entry and Exit Points**

Buildings 501 to 509 are accessible through the main entrances of Buildings 508a and 509. Access into each building can be gained by one (1) or two (2) entry doors.

##### **5.2.6.2 Heating Systems**

The buildings on the phase one property are currently heated by steam produced at the Domtar facility in Gatineau. Boilers formerly housed in Building 507 heated the facility prior to the 1990s. The boilers were fueled with Bunker C Fuel Oil from a large AST formerly located adjacent to Building 511. Prior to using Bunker C Fuel Oil, the boilers were fueled by coal.

##### **5.2.6.3 Cooling Systems**

Buildings 540 and 541 are serviced by rooftop air conditioning units. The remaining phase one property buildings are equipped with exhaust fans.

##### **5.2.6.4 Drains, Pits and Sumps**

The basements of the paper mill and board mill buildings are all equipped with floor drains and floor trenches. The floor drains and trenches currently collect infiltration water and direct it to Building 535. The water is then discharged to the Ottawa River.

There are currently three (3) operational sumps at the phase one property. These sumps are located in the basements of Buildings 508, 540 and 541, respectively, and collect infiltration water which is then directed to Building 535.

##### **5.2.6.5 Unidentified Substances**

DST did not note any unidentified substances in any of the Site buildings during the Site inspection.

#### **5.2.6.6 Stains or Corrosion**

Minor surficial stains were observed on the asphalt in the parking lot or in Buildings 540 to 543. As noted in Section 5.2, observations of the exterior ground conditions were limited due to the snow and ice cover.

Minor areas of corrosion were noted on some of the floor surface of the former paper mill buildings. It should be noted, however, that observations of the interior conditions of the former paper mill buildings (Buildings 501 to 509) were limited due to poor lighting and amounts of debris and water on the floor surfaces.

#### **5.2.7 Wells**

Due to the snow and ice cover during the Site visit, DST could not observe any wells on the phase one property.

#### **5.2.8 Sewage Works**

Sanitary sewage at the phase one property is pumped from each building to a central sanitary sewage collector located in Building 535, and then pumped to the City of Ottawa sanitary sewage system.

#### **5.2.9 Ground Surface**

The majority of the phase one property consists of gravel and paved surfaces with some landscaped areas.

#### **5.2.10 Railway Lines or Spurs**

No railway lines or spurs were observed on the phase one property or in the surrounding area during the Site visit.

#### **5.2.11 Stained Soil and Floor Surfaces**

DST's inspection of the condition of the soils on the phase one property was limited during the Site reconnaissance due to the snow and ice cover. Additionally, any staining on floor surfaces in the paper mill buildings could not be observed due to poor lighting and accumulated water and debris on the floor surfaces. No staining was observed on the floor surfaces of Buildings 540 to 543.

The following briefly summarizes the areas of staining noted on exterior and interior ground surfaces during DST's Site visit in 2006:

- Several oil stains were visible in the loading dock area, west of Building 504. These stains probably originated from the hydraulic systems of trucks using the dock and are typical of loading docks;
- Typical minor drips and spills were observed throughout the paved parking areas;
- The basement of Building 502 had several areas with evidence of leaks and spills of oils and lubricants, both contained and uncontained;

- The area identified as the oiler shack in the basement of Building 502 had a very oily floor. The oiler shack in the basement of Building 502 was used to store 45 gallon drums of oil for the paper machinery;
- Buildings 508 and 501 had several dark stains that appeared to be dyes and inks. A spill of resin was visible in the 2<sup>nd</sup> floor of Building 501;
- Oily deposits were visible in areas around machinery in the Board Mill in the basement of Building 532; and
- Minor spills were evident in the chemical storage area on the ground floor of Building 543.

#### 5.2.12 Stressed Vegetation

The unpaved areas at the Site are covered mostly by fill material with sparse vegetation. No evidence of stressed vegetation was noted on the ground at the Phase I Property.

#### 5.2.13 Fill and Debris

Based on DST's Phase II ESA (2008), fill material, generally consisting of sand and gravel, was noted to be overlying the bedrock at the phase one property.

#### 5.2.14 Potentially Contaminating Activity

No potentially contaminating activities were identified during the Site visit.

#### 5.2.15 Unidentified Substances

DST did not note any unidentified substances during the Site visit.

#### 5.2.16 Enhanced Investigation Property

Due to former industrial activities and processes at the phase one property, the property is considered an enhanced investigation property, as per O. Reg. 153/04 (as amended).

##### 5.2.16.1 Operations at Phase one Property

The phase one property was utilized for industrial purposes from approximately 1850 to 2006. Industrial activities related to the lumber industry took place at the property until 1905. From 1905 to 2006, the phase one property was predominantly operated as a pulp and paper mill. No industrial operations have taken place at the phase one property since March 2006.

##### 5.2.16.2 Hazardous Materials

No hazardous materials are currently stored or used at the phase one property. Based on information obtained during the records review and interview, the board mill (Building 523 to 534) was formerly used as a PCB and hazardous waste storage site. Wastes formerly stored there included oils, rags, absorbents, organics and corrosives.

### **5.2.16.3 Products Manufactured at Phase One Property**

No manufacturing processes currently take place at the phase one property. The phase one property was formerly mainly used to manufacture paper products.

### **5.2.16.4 By-Products and Wastes**

No by-products and wastes are currently generated at the phase one property. Refer to Table 3.2.7 - 1 for a list of by-products and wastes formerly generated at the phase one property.

### **5.2.16.5 Raw Materials Handling and Storage**

No raw materials are currently handled or stored at the phase one property. Based on information collected during the records review, coal was formerly stored in Building 507. Fire plans also show that a former coal hopper was located in the same building. Coal was formerly used to fuel the boilers in Building 507.

### **5.2.16.6 Drums, Totes and Bins**

DST did not observe any drums, totes or bins at the phase one property during the Site visit.

### **5.2.16.7 Oil/Water Separators**

There are currently no operational oil/water separators at the phase one property. According to Mr. Paul Rankin, there were two (2) former oil/water separators in Building 502. One (1) was associated with the diesel fire pump system and the other was associated with a paper machine lubrication system.

### **5.2.16.8 Vehicle and Equipment Maintenance**

There are currently no vehicle or equipment maintenance areas at the phase one property. All equipment has been removed from the phase one property as part of the decommissioning of the facility.

### **5.2.16.9 Historic Spills**

Refer to Table 3.2.14 - 1 for a list of all historic spills at the phase one property, as recorded in the Ontario Spill database.

### **5.2.16.10 Liquid Discharge Points**

The basements of the paper mill and board mill buildings are all equipped with floor drains and floor trenches. The floor drains and trenches currently collect infiltration water and direct it to Building 535. The water is then discharged to the Ottawa River.

### **5.2.16.11 Processing and Manufacturing**

There are currently no processing or manufacturing activities at the phase one property. Refer to Table 5.2.1 - 1 for a list of former operations and utilized equipment in each of the buildings on the phase one property.

#### 5.2.16.12 Hydraulic Lift Equipment

There is currently no hydraulic lift equipment used at the phase one property. As noted in Table 5.2.1 - 1, Buildings 504, 506 and 542 formerly contained freight elevators; however, Mr. Paul Rankin indicated that they were not hydraulic elevators.

### 5.3 Written Description of Investigation

As part of the Phase I ESA, DST conducted a Site reconnaissance on April 7, 2014. The phase one property is located at 3, 4 and 6 Booth Street, in Ottawa, Ontario. The study limits included Albert Island in its entirety and Chaudière Island, excluding an area extending from the northern to the northwestern portion of the island, the Hydro Lease at the east end of the island, and the Booth Street right-of-way. The phase one property is developed with twenty-nine (29) buildings and is currently unoccupied. The property was formerly predominantly used as a pulp and paper production facility. Industrial operations at the property were ceased in March 2006.

The phase one property is bounded by the following:

North - The Ottawa River and Buildings 510 to 514 of the former Domtar pulp and paper mill;

East - The Hydro Lease property and the Ottawa River;

South - Chaudière Island: Buchanan Channel. Albert Island: Bronson Channel and Ottawa Electric Channel (Ottawa River); and,

West - Building 558 of the former Domtar pulp and paper mill and the Ottawa River.

Potentially contaminating activities (PCAs) and areas of environmental concern (APECs) identified at the phase one property based on the records review, interview, and Site reconnaissance are described in Section 6.

## 6. Review and Evaluation of Information

### 6.1 Current and Past Uses

The current and past uses of the phase one property are summarized in Table 6.1 – 1.

**Table 6.1 – 1: Current and Past Uses of Phase One Property**

Year	Property Use
1850 - 1905	Flour and oatmeal mill, lumber yard, residential
1905 - 2006	Pulp and paper mill, board mill
2006 - present	Not in use

### 6.2 Potentially Contaminating Activity on the Phase one property

Table 6.2 - 1 below summarizes the PCAs identified on the Phase one property based on the records review, interviews and Site reconnaissance. The PCAs are numbered in accordance with O. Reg. 153/04 (as amended), Schedule D, Table 2.

**Table 6.2 – 1: Potential Contaminating Activities (PCAs)**

Potentially Contaminating Activity No.	Potentially Contaminating Activity	Details	Location of PCA
PCA 1	Acid and Alkali Storage	Fire Insurance Plans of the phase one property from 1912 show three (3) former acid storage tanks and a sulphite storage area on the east side of Chaudière Island.	East side of Chaudière Island, immediately west of the board mill and in Building 533
PCA 18	Electricity Generation	Building 507 was formerly used for coal storage. The coal was used to fuel boilers located in Building 507.	Building 507
		Two (2) hydroelectric turbines are housed in the basement of Building 510 for electricity generation	Building 510 basement
PCA 28	Gasoline and Associated Products Storage in Fixed Tanks	This includes all current and former fuel/oil ASTs and USTs on the phase one property and adjacent properties	Various interior and exterior locations across the phase one property and adjacent properties (refer to Figure 5 in Appendix A)

Potentially Contaminating Activity No.	Potentially Contaminating Activity	Details	Location of PCA
PCA 30	Importation of Fill Material of Unknown Quality	Based on DST's Phase II ESA (2008), fill material was noted to be overlying bedrock throughout the majority of the phase one property	Entire phase one property
PCA 39	Paints Bulk Storage	Fire Insurance Plans of the phase one property from 1901 and 1912 indicate that a former paint shop was located in Building 543.	Eastern portion of Building 543.
PCA 45	Pulp, Paper and Paperboard Manufacturing and Processing	The phase one property was operated as a pulp and paper mill from approximately 1905 to 2006.	Paper Mill (Buildings 501 to 509)
PCA 55	Transformer Use (including PCB storage)	Five (5) transformers are currently stored in Building 523. The Board Mill was used for PCB storage in the 1980s and 1990s.	Board Mill (Buildings 523 to 534)
		Two (2) transformers are located in the basement of Building 510	Building 510 basement
PCA 58	Waste Disposal (thermal treatment)	Fire Insurance Plans of the phase one property show a former waste burner located south of Building 510.	Immediately south of Building 510

- The two (2) hydroelectric turbines housed in the basement of Building 510, and associated with PCA 18 (electricity generation), do not present a potential environmental concern to the phase one property due to the method of electricity generation (water) and the fact that they are located approximately 40 m north of the phase one property boundary;
- The diesel AST located in the basement of Building 502, associated with PCA 28 (gasoline and associated products storage in fixed tanks), does not present a potential environmental concern to the phase one property due to the good condition of the tank and the fact that no staining was observed beneath the tank during the Site reconnaissance;
- The former hydraulic oil AST located on the ground floor of Building 508, associated with PCA 28 (gasoline and associated products storage in fixed tanks), does not present a

potential environmental concern to the phase one property despite oil being observed within its concrete containment structure during DST’s Site visit in 2006 (as noted in Table 5.2.3 – 1). This former AST was located on the ground floor of Building 508 and no visual evidence (staining) was noted in the basement area located beneath the AST. Thus, any impacts to soil and/or groundwater due to potential leaks are unexpected;

- The two (2) hydraulic lubricating oil ASTs reportedly located in Building 510 (as noted in Section 5.2.3), associated with PCA 28 (gasoline and associated products storage in fixed tanks), do not present a potential environmental concern to the phase one property since they are located approximately 40 m north of the phase one property boundary;
- The hydraulic lubricating oil AST reportedly located in Building 514 (as noted in Section 5.2.3), associated with PCA 28 (gasoline and associated products storage in fixed tanks), does not present a potential environmental concern to the phase one property since it is located approximately 85 m northwest of the phase one property boundary;
- The two (2) ASTs located south of Building 558 and inside Building 558, respectively, associated with PCA 28 (gasoline and associated products storage in fixed tanks), do not present a potential environmental concern to the phase one property since they are located approximately 65 m west of the phase one property boundary and are separated from the phase one property by the Ottawa River; and,
- The two (2) transformers located in the basement of Building 510, associated with PCA 55 (transformer use), do not present a potential environmental concern to the phase one property due to the fact that they are located approximately 40 north of the phase one property boundary.

### 6.3 Areas of Potential Environmental Concern on the Phase One Property

Several APECs were identified on the phase one property, as summarized in Table 6.3 - 1. APECs are identified on Figure 6 in Appendix A.

**Table 6.3 – 1: Areas of Potential Environmental Concern (APECs)**

APEC No.	Potential Source of Contamination	Contaminants of Potential Concern (COPCs)
APEC 1	Former acid storage tanks located on the east side of Chaudière Island, immediately west of the Board Mill (PCA 1)	Metals, inorganics
APEC 2	Former sulphite storage in Building 533 (PCA 1)	Metals, inorganics
APEC 3	Former coal storage in Building 507 used to fuel boilers in the same building (PCA 18)	PAHs
APEC 4	Former Bunker C fuel oil AST located west of Building 511 (PCA 28)	PHC F1 – F4, PAHs

APEC No.	Potential Source of Contamination	Contaminants of Potential Concern (COPCs)
APEC 5	Former gasoline UST (approximately 4,500 L in capacity) located west of Building 543 (PCA 28)	PHC F1 – F4, BTEX
APEC 6	Suspected former gasoline UST located east of Building 542 (PCA 28)	PHC F1 – F4, BTEX
APEC 7	Former fuel oil AST (approximately 45,500 L in capacity) located immediately north of Building 507 (PCA 28)	PHC F1 – F4, BTEX
APEC 8	Three (3) ASTs of unknown contents in the basement of Building 532 (PCA 28)	PHC F1 – F4, VOCs, PAHs, metals, inorganics
APEC 9 (ASTs and oiler shack within Building 502)	Former thermoil AST (approximately 1,000 L in capacity) located in the basement of Building 502 (PCA 28)	PHC F1 – F4, PAHs, VOCs
	Two (2) former kerosene ASTs (each approximately 1,000 L in capacity) located in the basements of Building 502 (PCA 28)	PHC F1 – F4, VOCs, PAHs
	Lubricant oil AST (approximately 1,000 L in capacity) located in the basement of Building 502	PHC F1 – F4, BTEX
	Former oiler shack located in the basement of Building 502 (PCA 28)	PHC F1 – F4, BTEX
APEC 10	Former diesel UST located west of Building 511 (PCA 28)	PHC F1 – F4, BTEX
APEC 11	Fill of unknown quality throughout the majority of the phase one property (PCA 30)	Metals, PAHs
APEC 12	Former paint shop located in eastern portion of Building 543 (PCA 39)	VOCs
APEC 13	Former pulp and paper manufacturing and processes in the Paper Mill buildings (PCA 45)	Metals, inorganics, dioxins and furans
APEC 14	Transformer use and PCB storage in the Board Mill buildings (PCA 55)	PCBs
APEC 15	Former waste burner located south of Building 510 (PCA 58)	PAHs, metals
APEC 16	The great fire of 1900 which burnt down most of the buildings on the phase one property at the time	PAHs, metals

**Notes:**

BTEX – Benzene, Toluene, Ethylbenzene, Xylenes  
 PHCs – Petroleum Hydrocarbons Fractions (F1-F4)  
 PAHs – Polycyclic Aromatic Hydrocarbons  
 VOCs – Volatile Organic Compounds

#### **6.4 Phase One Conceptual Site Model**

A phase one conceptual site model (CSM) is included as Figures 5 and 6, in Appendix A. The potentially contaminating activities and areas of environmental concern on the phase one property, as identified in Sections 6.2 and 6.3, are illustrated on the figures.

It should be noted that underground utilities at the phase one property could have an effect on potential contamination distribution and transport.

## **7. Conclusions**

---

### **7.1 Requirement for Phase II ESA**

Based on the findings of this Phase I ESA, several areas of potential environmental concern were identified within the phase one property. An intrusive soil and groundwater quality investigation in the form of a Phase II ESA is required in these areas of potential environmental concern.

### **7.2 Signature**

DST confirms that the carrying out of the Phase I ESA has been supervised and approved by Milan Makusa, P. Geo., a Qualified Person as defined by O.Reg. 153/04 (as amended), and further confirms the findings and conclusions of this report.

We trust that the above meets your present requirements; should you have any questions or concerns regarding this report, please feel free to contact the undersigned at your convenience.

Sincerely,

For **DST CONSULTING ENGINEERS INC.**,

Salim Eid, B.A.Sc.  
Engineering Trainee

Milan Makusa, P. Geo. (QP)  
Senior Technical Advisor

## Appendix: Database Descriptions

Ecolog Environmental Risk Information Services Ltd can search the following databases. The extent of Historical information varies with each database and current information is determined by what is publicly available to Ecolog ERIS at the time of update. **Note:** Databases denoted with " \* " indicates that the database will no longer be updated. See the individual database description for more information.

**Abandoned Aggregate Inventory:** Sept 2002\* Provincial [AAGR](#)  
The MAAP Program maintains a database of all abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.\*

**Aggregate Inventory:** Up to Aug 2012 Provincial [AGR](#)  
The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

**Agriculture - Certificates of Approval:** 1980-Sept 2006 Provincial [AGRI](#)  
This database is directly linked to the Pig Farming database and contains historical and current information regarding the status of not only pig farms, but all other livestock farming as well. It explains the nature of the request for the certificate of approval (enlargement of manure pit, pig raising farm installation, etc.) and reveals whether the farm is still presently in use or not.

**Abandoned Mine Information System:** 1800-Feb 2013 Provincial [AMIS](#)  
The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

**Anderson's Waste Disposal Sites:** 1930-Mar 2007 Private [ANDR](#)  
The Anderson database uses historical documentation to locate and characterize the likely positions of former waste disposal sites in Quebec. For most sites, more comprehensive information is available, to which EcoLog ERIS can arrange rapid access at an additional cost. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources.

**Anderson's Waste Disposal Sites:** 1860s-Present Private [ANDR](#)  
The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

**Anderson's Waste Disposal Sites:** 1930-Mar 2007 Private [ANDR](#)

The Anderson database uses historical documentation to locate and characterize the likely positions of former waste disposal sites in Quebec. For most sites, more comprehensive information is available, to which EcoLog ERIS can arrange rapid access at an additional cost. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources.

**Anderson's Waste Disposal Sites:** 1860s-Present Private [ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

**Automobile Wrecking & Supplies:** 2001-Jun 2010 Private [AUWR](#)

This database provides an inventory of all known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

**Authorized Waste Disposal Sites:** Up to Sept 2010 Provincial [AWDS](#)

This database was obtained from the Quebec Ministère du Développement durable, de l'Environnement et des Parcs (MDDEP) and identifies a list of authorized Waste Disposal Sites in-use in the province of Quebec. These landfill sites contain non-hazardous materials.'

**Borehole:** 1875-Aug 2011 Provincial [BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

**Certificates of Authorization:** 1995-June 2012 Provincial [CA](#)

The Certificates of Authorization database was collected from the Québec Ministère du Développement durable, de l'Environnement et des Parcs and contains such information as the issue and expiry date of the approval, to whom it was granted, the reason for the request and the location in which it took place. Certificates are issued for road, rail, and plant construction/expansion, landfill expansions, hazardous materials recovery and waste water treatment to name a few. Please note that actual address locations are not provided for all records but can be obtained from the Ministry on a case-by-case basis.

**Certificates of Approval:** 1985-Oct 30, 2011\* Provincial [CA](#)

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

**Certificates of Authorization:** 1995-June 2012 Provincial [CA](#)  
The Certificates of Authorization database was collected from the Québec Ministère du Développement durable, de l'Environnement et des Parcs and contains such information as the issue and expiry date of the approval, to whom it was granted, the reason for the request and the location in which it took place. Certificates are issued for road, rail, and plant construction/expansion, landfill expansions, hazardous materials recovery and waste water treatment to name a few. Please note that actual address locations are not provided for all records but can be obtained from the Ministry on a case-by-case basis.

**Certificates of Approval:** 1985-Oct 30, 2011\* Provincial [CA](#)  
This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

**Commercial Fuel Oil Tanks:** 1948-Apr 2013 Provincial [CFOT](#)  
Since May 2002, Ontario developed a new act where it became mandatory for fuel oil tanks to be registered with Technical Standards & Safety Authority (TSSA). This data would include all commercial underground fuel oil tanks in Ontario with fields such as location, registration number, tank material, age of tank and tank size.

**Chemical Register:** 1999-Jun 2010 Private [CHEM](#)  
This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

**Chemical Register:** 1992, 1999-Jun 2010 Private [CHEM](#)  
This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

**Chemical Register:** 1999-Jun 2010 Private [CHEM](#)  
This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

**Chemical Register:** 1992, 1999-Jun 2010 Private [CHEM](#)  
This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

**Inventory of Coal Gasification Plants and Coal Tar Sites:** Apr 1987 and Nov 1988\* Provincial [COAL](#)  
This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.\*

**Convictions:** 1995-Jun 2012 Provincial [CONV](#)  
Individuals or companies convicted of committing an offense under Quebec environmental laws and/or regulations, within the province of Quebec, are included in the Convictions database. This database was obtained from the Quebec Ministère du Développement durable, de l'Environnement et des Parcs (MDDEP) and holds such key information as: company/individual name, type of infringement, offence date, conviction date, city, total fines, and the environmental law or regulation against which the offense was committed.

**Compliance and Convictions:** 1989-2013 Provincial [CONV](#)  
This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

**Convictions:** 1995-Jun 2012 Provincial [CONV](#)  
Individuals or companies convicted of committing an offense under Quebec environmental laws and/or regulations, within the province of Quebec, are included in the Convictions database. This database was obtained from the Quebec Ministère du Développement durable, de l'Environnement et des Parcs (MDDEP) and holds such key information as: company/individual name, type of infringement, offence date, conviction date, city, total fines, and the environmental law or regulation against which the offense was committed.

**Compliance and Convictions:** 1989-2013 Provincial [CONV](#)  
This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

**Certificates of Property Use:** 1994-Feb 2014 Provincial [CPU](#)  
This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

**Contaminated Site Inventory:** 1984-Feb 2012 Provincial [CS](#)  
The Quebec Ministère du Développement durable, de l'Environnement et des Parcs (MDDEP) holds an up-to-date database on its contaminated sites. The database contains information regarding the location of the contaminated site and its land use (industrial, commercial, residential, agricultural, etc.), the types of contaminants found on the site and whether it is presently in use or not. In addition, it also contains information on sites that have gone through some sort of rehabilitation (clean up). This is a dynamic database that is subject to periodic up-dates.

**Drill Hole Database:** 1886-Jun 2013 Provincial [DRL](#)  
The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

**Environmental Activity and Sector Registry:** Oct 31 2011-Feb 2014 Provincial [EASR](#)  
On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

**Environmental Registry:**

1994-Feb 2014

Provincial

[EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

**Environmental Compliance Approval:**

Oct 31, 2011-Feb 2014

Provincial

[ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For CofA's prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

**Environmental Effects Monitoring:**

1992-2007\*

Federal

[EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

**ERIS Historical Searches:**

1999-Mar 2013

Private

[EHS](#)

EcoLog ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

**Environmental Issues Inventory System:**

1992-2001\*

Federal

[EIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

**List of TSSA Expired Facilities:**

Current to May 2013

Provincial

[EXP](#)

This is a list of all expired facilities that fall under the TSSA (TSSA Act & Safety Regulations), including the six regulations that exist under the Fuels Safety Division. It will include facilities such as private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc. These tanks have been removed and automatically fall under the expired facilities inventory held by TSSA.

**Federal Convictions:**

1988-Jun 2007\*

Federal

[FCON](#)

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

**Contaminated Sites on Federal Land:**

June 2000-Jan 2014

Federal

[FCS](#)

The Federal Contaminated Sites Inventory includes information on all known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government.

**Fisheries & Oceans Fuel Tanks:**

1964-Sept 2003

Federal

[FOFT](#)

Fisheries & Oceans Canada maintains an inventory of all aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

**Fuel Storage Tank:**

2010-May 2013

Provincial

[FST](#)

The Technical Standards & Safety Authority (TSSA), under the Technical Standards & Safety Act of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

**Fuel Storage Tank - Historic:**

Pre-Jan 2010\*

Provincial

[FSTH](#)

The Technical Standards & Safety Authority (TSSA), under the Technical Standards & Safety Act of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

**Ontario Regulation 347 Waste Generators Summary:**

1986-Jul 2013

Provincial

[GEN](#)

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

**TSSA Historic Incidents:**

2006-June 2009

Provincial

[HINC](#)

This database will cover all incidences recorded by TSSA with their older system, before they moved to their new management system. TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. The TSSA works to protect the public, the environment and property from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from pipelines, diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

**Inventory of Soil & Industrial Waste Disposal Sites**  
**(formerly known as GERLED):**

1984-Feb 2012

Provincial

[HWDS](#)

In 1983, the Quebec Ministère du Développement durable, de l'Environnement et des Parcs (MDDEP) created GERLED (le Groupe d'étude et de restauration des lieux d'élimination de déchets dangereux) with the intention of creating an inventory list of hazardous waste disposal sites located within the territory of Québec. A list of these sites was published in 1984. As a result, the GERLED program was created whereby the Québec government could determine the level of contamination of each site, the potential health and environmental risks each site posed and implement any necessary corrective measures. The sites listed in the inventory were classified according to three categories of potential risk ' classes 1, 1R; 2, 2R; and 3, 3R with 1 being of highest potential health and public risk and 3 being of least. A fourth class, class D (declassified), refers to sites that have gone through rehabilitation and, as a result, are no longer considered as posing any kind of direct or indirect contamination risk to their surrounding environment and/or population. The GERLED name has since been replaced by the name "Inventory of soil and industrial waste disposal sites".

**Hazardous Waste Management Permits:**

Up to Jul 2012

Provincial

[HWM](#)

Section 70.9 from the Quebec Environmental Quality Act defines the criteria that would require a permit issued by the Minister for the purpose of managing hazardous waste materials. According to the act, there are five types of permits and any person who generates, receives, or uses hazardous waste materials is required to have such a permit. This database contains company name, address, permit type held, nature of the permit, and both the effective and expiry dates of permits.

**Indian & Northern Affairs Fuel Tanks:**

1950-Aug 2003\*

Federal

[IAFT](#)

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of all aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

**TSSA Incidents:**

June 2009-Apr 2013

Provincial

[INC](#)

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Includes incidents from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

**Landfill Inventory Management Ontario:**

2012

Provincial

[LIMO](#)

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the ministry compiles new and updated information. The inventory will include small and large landfills. Additionally, each year the ministry will request operators of the larger landfills complete a landfill data collection form that will be used to update LIMO and will include the following information from the previous operating year. This will include additional information such as estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills will include information such as site owner, site location and certificate of approval # and status.

**Canadian Mine Locations:**

1998-2009

Private

[MINE](#)

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

**Mineral Occurrences:**

1846-Apr 2013

Provincial

[MNR](#)

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the planimetric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

**National Analysis of Trends in Emergencies System (NATES):**

1974-1994\*

Federal

[NATE](#)

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

**Non-Compliance Reports:**

1994-2012

Provincial

[NCPL](#)

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

**National Defence & Canadian Forces Fuel Tanks:**

Up to May 2001\*

Federal

[NDFT](#)

The Department of National Defence and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

**National Defence & Canadian Forces Spills:**

Mar 1999-Aug 2010

Federal

[NDSP](#)

The Department of National Defence and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

**National Defence & Canadian Forces Waste Disposal Sites:**

2001-Apr 2007\*

Federal

[NDWD](#)

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

**National Energy Board Wells:**

1920-Feb 2003\*

Federal

[NEBW](#)

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

<b><u>National Environmental Emergencies System (NEES):</u></b>	1974-2003*	Federal	<a href="#">NEES</a>
In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for all previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.			
<b><u>National PCB Inventory:</u></b>	1988-2008*	Federal	<a href="#">NPCB</a>
Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. All federal out-of-service PCB containing equipment and all PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.			
<b><u>National Pollutant Release Inventory:</u></b>	1993-2011	Federal	<a href="#">NPRI</a>
Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.			
<b><u>Oil and Gas Wells:</u></b>	1988-2013	Private	<a href="#">OGW</a>
The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at <a href="http://www.nickles.com">www.nickles.com</a> .			
<b><u>Ontario Oil and Gas Wells:</u></b>	1800-2013	Provincial	<a href="#">OOGW</a>
In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, well cap date, licence no., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.			
<b><u>Inventory of PCB Storage Sites:</u></b>	1987-Oct 2004	Provincial	<a href="#">OPCB</a>
The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.			
<b><u>Orders:</u></b>	1994-Feb 2014	Provincial	<a href="#">ORD</a>
This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.			

**Canadian Pulp and Paper:** 1999, 2002, 2004, 2005, Private [PAP](#)  
2009

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

**Parks Canada Fuel Storage Tanks:** 1920-Jan 2005\* Federal [PCFT](#)

Canadian Heritage maintains an inventory of all known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

**Petroleum Equipment Usage Permits:** Up to Jan 2012 Provincial [PEP](#)

The Petroleum Equipment Usage Permits database is a regularly updated database once maintained by the Québec Ministry of Natural Resources and now maintained by Régie du Bâtiment Québec. Such information as: corporate name of license holder, address, license issue and expiration date, as well as, authorized capacity (litres) and authorized tank numbers for each site are all provided.

**Pesticide Register:** 1988-Aug 2013 Provincial [PES](#)

The pesticides database is a list of all pesticide vendors in the province of Quebec of either wholesale or retail distribution. A permit is required for the sale of pesticides at the wholesale level for sale of pesticides between classes 1 to 5. A permit for retail sale is required for the sale of pesticides between classes 1 to 4 or class 4 solely. The Quebec classification system is directly related to the federal classification system in that, classes 1 and 2 refer to the federal definition of restricted pesticide use, class 3 refers to the commercial, agricultural or industrial use of pesticides and classes 4 and 5 to the domestic use of pesticides.

**Pesticide Register:** 1988-Jun 2013 Provincial [PES](#)

The Ontario Ministry of Environment maintains a database of all manufacturers and vendors of registered pesticides.

**Pesticide Register:** 1988-Aug 2013 Provincial [PES](#)

The pesticides database is a list of all pesticide vendors in the province of Quebec of either wholesale or retail distribution. A permit is required for the sale of pesticides at the wholesale level for sale of pesticides between classes 1 to 5. A permit for retail sale is required for the sale of pesticides between classes 1 to 4 or class 4 solely. The Quebec classification system is directly related to the federal classification system in that, classes 1 and 2 refer to the federal definition of restricted pesticide use, class 3 refers to the commercial, agricultural or industrial use of pesticides and classes 4 and 5 to the domestic use of pesticides.

**Pesticide Register:** 1988-Jun 2013 Provincial [PES](#)

The Ontario Ministry of Environment maintains a database of all manufacturers and vendors of registered pesticides.

**TSSA Pipeline Incidents:** June 2009-Mar 2012 Provincial [PINC](#)

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. This database will include spills, strike and leaks from recorded by the TSSA.

**Private and Retail Fuel Storage Tanks:** 1989-1996\* Provincial [PRT](#)

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

**Permit to Take Water:** 1994-Feb 2014 Provincial [PTTW](#)  
This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

**Quebec Oil and Gas Wells:** 1860-1999\* Provincial [QOGW](#)  
The Quebec Oil and Gas Wells database was collected from the Quebec Ministry of Natural Resources and is a comprehensive database that includes information such as well id number, well name, operator, location, depth and status, as well as, drill date and drill type. Oil and gas well locations were plotted geographically using x and y coordinates. Please note that this database will not be updated, information on wells drilled after 1999 can be found in the Oil and Gas Wells (OGW) database under the 'Private Source Database' section.

**Ontario Regulation 347 Waste Receivers Summary:** 1986-2012 Provincial [REC](#)  
Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

**Record of Site Condition:** 1997-Sept 2001, Oct 2004-Feb 2014 Provincial [RSC](#)  
The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up. RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

**Retail Fuel Storage Tanks:** 1999-Jun 2010 Private [RST](#)  
This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

**Scott's Manufacturing Directory:** 1992-Mar 2011 Private [SCT](#)  
Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

**Ontario Spills:** 1988-Jun 2013 Provincial [SPL](#)  
This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

**Wastewater Discharger Registration Database:** 1990-2011 Provincial [SRDS](#)  
Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

<b><u>Anderson's Storage Tanks:</u></b>	1915-1953*	Private	<a href="#">TANK</a>
The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.			
<b><u>Transport Canada Fuel Storage Tanks:</u></b>	1970-Mar 2007	Federal	<a href="#">TCFT</a>
With the provinces of BC, MB, NB, NF, ON, PE, and QC; Transport Canada currently owns and operates 90 fuel storage tanks. Our inventory provides information on the site name, location, tank age, capacity and fuel type.			
<b><u>TSSA Variances for Abandonment of Underground Storage Tanks:</u></b>	Current to Jun 2013	Provincial	<a href="#">VAR</a>
The TSSA, Under the Liquid Fuels Handling Code and the Fuel Oil Code, all underground storage tanks must be removed within two years of disuse. If removal of a tank is not feasible, you may apply to seek a variance from this code requirement. This is a list of all variances granted for abandoned tanks.			
<b><u>Waste Disposal Sites - MOE CA Inventory:</u></b>	1970-Feb 2014	Provincial	<a href="#">WDS</a>
The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.			
<b><u>Waste Disposal Sites - MOE 1991 Historical Approval Inventory:</u></b>	Up to Oct 1990*	Provincial	<a href="#">WDSH</a>
In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.			
<b><u>Water Treatment Plants:</u></b>	1980-Sept 2006	Provincial	<a href="#">WTP</a>
This database includes records for water treatment plants considered in service as of August 2001 and including records from as early as 1980. For each plant, the type of treatment (e.g. Aerated Lagoon [EA], Septic Tank [FS]) is available as is the plant's average turnover, average load, and the number of people it services.			
<b><u>Hydrogeological Information System:</u></b>	1978-Aug 2013	Provincial	<a href="#">WWIS</a>
This database, is officially known as the "Quebec Hydrogeological Information System" and is collected from the Québec Ministère du Développement durable, Environnement et Parcs. The database holds over 142,000 records on water wells and boreholes and information such as well year, well depth, date pumped, project description, stratigraphy, type of material, static level, diameter, flow and drilling method are reported to name a few. Well locations were plotted geographically using x and y coordinates.			
<b><u>Water Well Information System:</u></b>	1955-May 2013	Provincial	<a href="#">WWIS</a>
This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.			

**Hydrogeological Information System:**

1978-Aug 2013

Provincial

[WWIS](#)

This database, is officially known as the "Quebec Hydrogeological Information System" and is collected from the Québec Ministère du Développement durable, Environnement et Parcs. The database holds over 142,000 records on water wells and boreholes and information such as well year, well depth, date pumped, project description, stratigraphy, type of material, static level, diameter, flow and drilling method are reported to name a few. Well locations were plotted geographically using x and y coordinates.

**Water Well Information System:**

1955-May 2013

Provincial

[WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries". All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and were included as reference.

# ERIS

HEAT - Electric in sawmilling room in No 18  
 Light - Electric, generated 2<sup>nd</sup> floor of No 33  
 (Arc Lamps, double globes)

**PROTECTION, MILL YARD**

Water works - Private water system  
 Power - Hydro Electric  
 FIRE PRESSURE - 100 to 100 lbs.  
 PUMPS - Four Rotary Fire Pumps, Capacity 600 gals.  
 per min. each, in Nos 32. One similar in No 20 & one 800  
 gals. capacity in No 32

HOSE - 3,600 feet of 2 1/2" Hose distributed as follows  
 1000' on two Hose Reels (of 500' each) in No 32  
 100' attached to hydrant outside of No 33  
 350' Pumps in No 20  
 250' Hydrant near No 18  
 250' at Hose Tower, No 12  
 650' of 1 1/2" Rubber Hose opposite Spiller Mill No 15  
 700' of 2 1/2" attached to stand pipes in Nos 10 & 110

SPRINKLERS - Perforated Sprinkler Pipes in sawmilling  
 in Saw, Spiller, Lathe, Timber Mills, etc. Sprinklers  
 in No 17, Nos 6, 8, 14, 16, 18, 20, 22, 24, 26, 28, 108, 109, 110  
 Barrels Pails distributed

FIRE ALARM BOXES - TWO

WATCHMAN - Day & night watchman, constantly  
 going over bast of Saw Mill, Nos 17 & 18 and all  
 Bldgs. Night & Sunday Watchman, 1 Clock, 14 Stations  
 visited every 1/2 hour. Watchmen carry Safety Sperrin  
 oil lanterns, no open lights

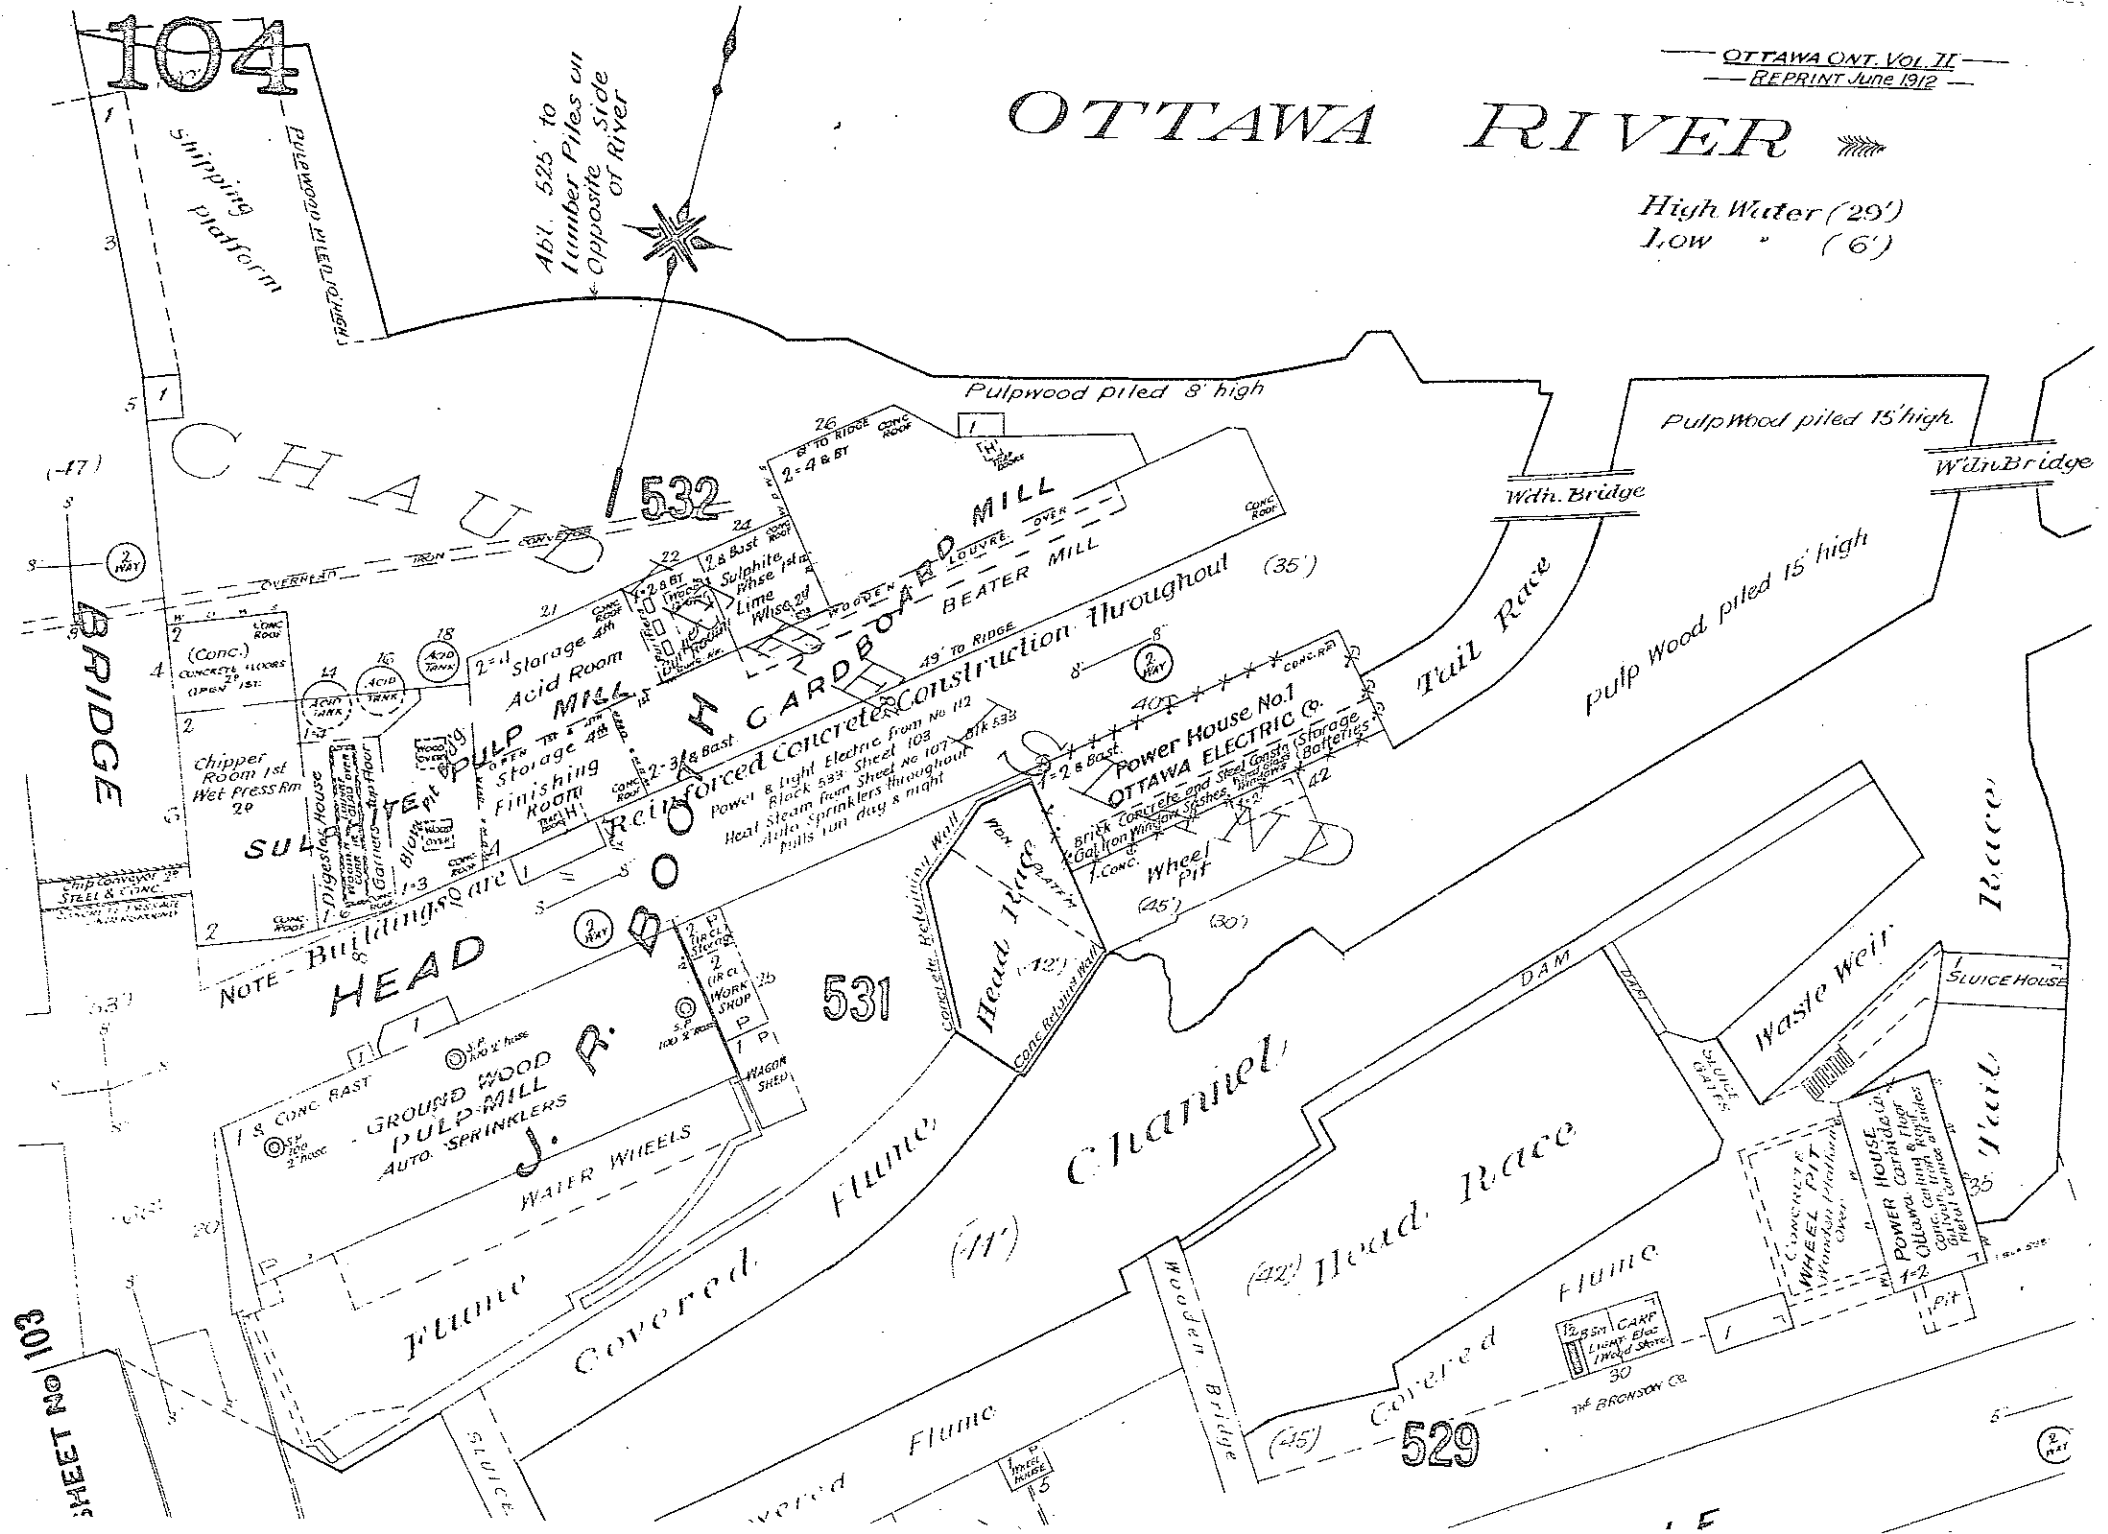

**PROTECTION ALBERT ISLAND**

Night & Sunday Watchman clock &  
 Stations, 600' of 2 1/2" Cotton Hose on Hose Reel

## 1.0 INTRODUCTION

Technitrol-Eco Inc. was mandated by Mr. James Collings, P.Eng. of E.B. Eddy Forest Products Ltd., to seek quotations for, and oversee the removal of four (4) underground storage tanks (USTs), one (1) above ground tank (AST) and one (1) septic tank at the E.B. Eddy facility in Hull, Quebec and one (1) UST at the facility in Ottawa, Ontario. The locations of the sites are presented in Figure 1 of the following page.

Technitrol-Eco Inc. was responsible to ensure that all of the tank removal procedures were performed according to present day regulations, and that the sites comply with current soil contamination levels as stipulated in the Ministries of the Environment (Quebec and Ontario) guideline documents.

### 3.0 RESULTS

#### 3.1 *Ottawa Mill - Yard diesel tank*

The results of the analysis performed on the soil samples collected from the sidewalls and bottom of the excavation, as well as from the excavated material, indicate that all hydrocarbon concentrations are within the guidelines for a Level II site. As a consequence, no additional work is required at this location.

## EXECUTIVE SUMMARY

Envir-Eau Inc. was retained by E.B. Eddy Forest Products Ltd. to realize a phase 2 environmental site assessment following the results of the removal of 4 UST's conducted in early 1994. In the present environmental investigation, excavation work was completed with appropriate soil sampling and backfilling and with appropriate installation of monitoring wells and sampling of groundwater. The 4 underground storage tank (UST) areas targeted were: the yard diesel tank at the Ottawa mill and at the Hull mill around the garage (building 83), the gasoline tank, the diesel tank and the waste oil tank.

The soil and groundwater investigation results are as follow:

- 1) The soil excavations were completed in accordance with the MEF and the MOEE requirements and no further work is necessary;
- 2) Groundwater chemical results show that groundwater investigation is completed at the yard diesel tank in Ottawa and the waste oil tank in Hull.
- 3) Results at the garage gasoline tank and diesel tank areas in Hull show that groundwater was impacted, but no active remediation is necessary at this time. However, groundwater monitoring is required for the next year (quarterly basis) before establishing the final remedial options;
- 4) Excavated material was managed as follow: one truck load of cement was hauled to Construction Deschênes Ltd. in Gatineau for reprocessing,      m<sup>3</sup> of soil of MEF BC level was hauled to an authorized MEF landfill site (BFI, Lachenaie) and      m<sup>3</sup> of soil of MEF C level was hauled to a BFI landfill site in Michigan.

---

## 2. SITE DESCRIPTION

In this section, the 4 investigation areas are presented in terms of their location and the work previously done by Technitrol-Eco. This description gives the setting for Envir-Eau's work on this environmental assessment.

The yard diesel tank site in Ottawa (Figure 1) is located between building 511 and a truck scale, south of the "300,000 gal oil storage tank" and about 65 metres south of the Ottawa River. A diesel UST was removed by a previous consultant, but the pump and pump island area was not verified for soil contamination as requested by MOEE.

At the Hull mill, the 3 other areas of interest are located around the garage in building 83 (Figure 2). This building is located on a plateau, south of which the terrain slopes towards the Ottawa River and west towards Eddy street in Hull.

The garage gasoline tank area is located a few meters from the northwest corner of the garage. The tank was previously removed and the excavation backfilled. An unidentified product was suspected here as well.

The garage diesel tank excavation is located northeast of the garage and immediately against the wall of the latter. The pierced tank was previously removed and the excavation backfilled with BC MEF level soil. An unidentified product was also suspected at this location.

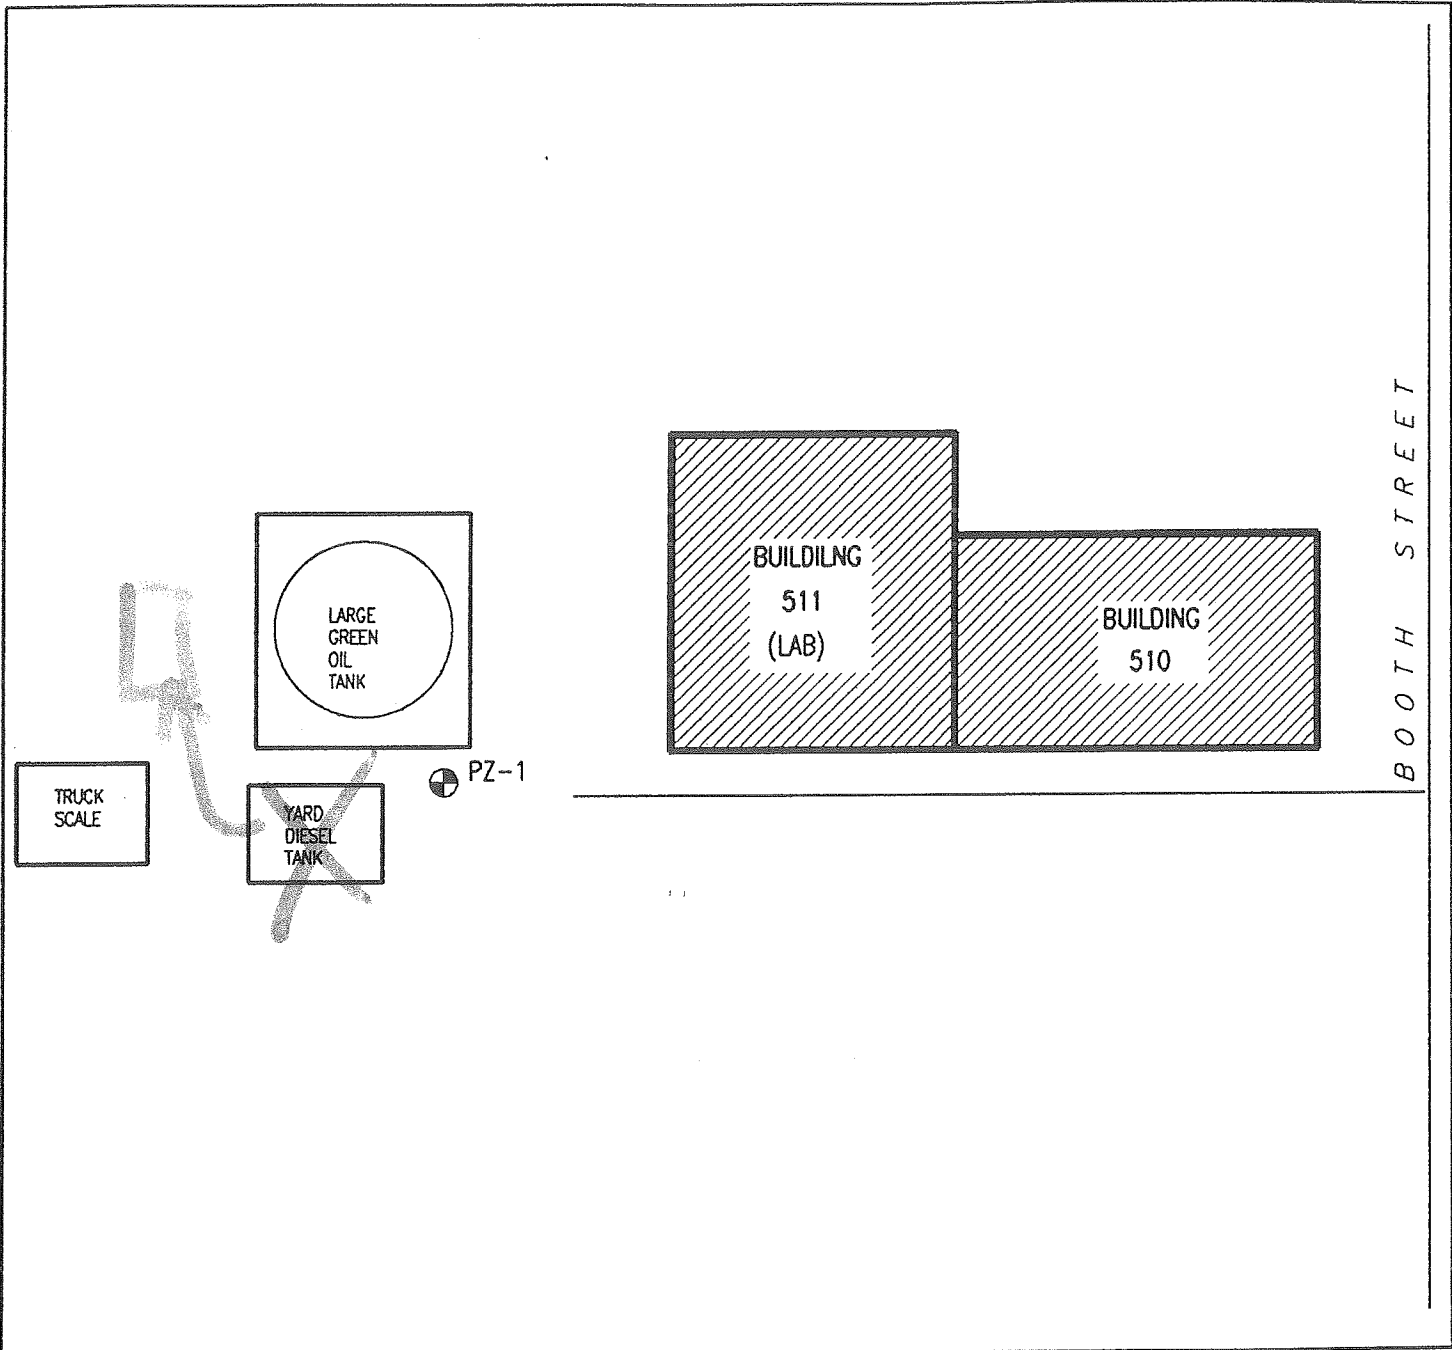

About 10 meters south from the building is the waste oil tank area. The excavation was left open after removal of the tank, and the presence of the unidentified product suspected elsewhere around the building was also questioned here.

## 3. GEOLOGY

The soil exposed during the excavations at the site consisted of 1.2 to 3.8 metres of filling material composed mainly of sand and gravel. This filling material overlies a limestone bedrock.

## MONITORING WELL LOCATION MAP

E.B. EDDY - OTTAWA MILL

**ENVIR-EAU INC.**  
160 BOUL DE L'HÔPITAL GATINEAU, QUÉ J8T 8J1

---

For groundwater at industrial sites, there are no criteria established at present in Ontario. Drinking water quality objectives are available for a limited number of VOC's and PAH's; however, these objectives are intended for potable water supplies and are not considered relevant for the clean-up of aquifers not used at present and not likely to be used in future as drinking water sources. As it is current practice in Ontario, the Alberta MUST guidelines were used for the Ottawa site.

#### **4.3 FIELD VAPOURS SURVEY**

The site inspection during the excavation involved visual observation of the condition of the soil and water exposed during the excavation. The inspection also involved collection of soil samples for field surveys with a photoionisation analyzer to measure the concentrations of vapour hydrocarbons in the subsurface. The samples were collected from fresh excavation surfaces, placed in wide mouth jars and immediately sealed with a cap lined with aluminum foil. Enough soil was placed in the jar to fill approximately half the jar. The samples were set aside for approximately five minutes to allow product vapours to accumulate in the headspace. A portable photoionisation analyzer (HNU 10.2 Model PI 101) was used to measure the concentration of hydrocarbon vapours that had accumulated in the headspace of the sample jars. The vapour concentrations were measured and recorded in parts per million (ppm).

#### **4.4 SOIL EXCAVATION AND MANAGEMENT**

Soil excavations were realized between September 6 and 9, 1994. Staff from Envir-Eau inc. provided field supervision and monitoring during the excavation work. As the excavating proceeded, the removal of soil in any one direction was terminated when the vapour readings from the soil sample were lower than 100 ppmv or that geological or physical constraints of importance were encountered.

E.B. Eddy took responsibility to arrange for soil disposition.

##### **4.4.1 Yard diesel tank, Ottawa**

For the pump and pump island area at the yard diesel tank at the Ottawa mill, trenches were excavated to characterize the soil. Visual observation of hydrocarbon contaminated soil, strong smell and measured vapour concentration on soil samples suggested further excavation. Soil was thus removed to a depth of 1.8 meter from ground surface where a main in use water pipe (0.2 meter in diameter) was encountered resting on solid rock. In order to verify if contamination would have proceeded in the filling material along this water pipe, a test pit were done about 2

---

meters downgradient (east) of the excavation. This test pit was completed at the same depth on a manhole. The dimension of the western excavation were 4 x 5 x 1.8 meters, where limestone started at about 0.7 meter from ground surface. The eastern excavation was 4 x 2 x 1.8 meters. Photo 1 in Appendix B shows the two excavations with liquid accumulation at the bottom of the first one, covering the water pipe.

Soil removed during the excavation was stockpiled on polyethylene sheets and covered immediately north of building 509 as requested by E.B. Eddy personnel. Approximately 50 m<sup>3</sup> of soil and asphalt were excavated and stockpiled. One truck load of cement slabs was hauled to Construction Deschênes Ltée in Gatineau, since this material was clean and it is handled differently than soil. A reception coupon is presented in Appendix C.

#### 4.4.2 Garage gasoline tank

The garage gasoline tank excavation was completed by the previous consultant and needed no further work except for groundwater verification.

#### 4.4.3 Garage diesel tank

The final dimension of this excavation was 6 x 6 x 4.75 meters. There were 3 meters of filling material (sand, gravel with rock, brick and metal pieces) sitting on limestone of which the first nearly 2 meters were fractured and loose and could thus be removed. The original excavation was extended to the north since dark, wet soil could be seen from a depth of about 2.7 meters to the bottom on all 4 faces. Photo 2 shows the vertical stratigraphy. Liquid coming out of the soil on all 4 faces showed evidences of petroleum hydrocarbon contamination (Photo 3). Both soil and liquid had a smell of petroleum products. The excavation was later backfilled with clean sand and compacted around a drain installed for monitoring as well as recuperation (the design is presented in Appendix D) as shown on Photo 4.

Three piles of excavated soil (Photo 5) were stockpiled in front of the building behind the trailer parking lot as indicated by E.B. Eddy personnel. Soil removed during the excavation was stockpiled on polyethylene sheets and covered. Approximately 50 m<sup>3</sup> of soil and asphalt were excavated and stockpiled.

### 5.3.3 Garage diesel tank, Hull

The final limits of the excavation (for the filling material) met the BC criterion for mineral oil and grease. The remaining vertical faces below the filling material as well as the bottom of the excavation, were in solid rock; for this reason, they could not be excavated nor sampled. However, there were visual evidences of contamination in the bedrock.

Geological (solid rock) and physical (pylons) constraints at this location prevented further excavation, so the hole was backfilled with clean compacted sand with a drain for recuperation and monitoring of product/groundwater accumulating in the excavation.

The resulting 3 piles of soil showed mineral oil and grease concentrations at BC and above C level.

### 5.3.4 Garage waste oil tank, Hull

The garage waste oil tank location was found excavated to solid rock with a wet sludge accumulating at the bottom. Mineral oil and grease analysis of this sludge showed BC MEF level; field vapour measurement was below 100 ppm (75 ppm). Since no more rock could be removed because in place, the excavation was backfilled with material originally excavated at this same site. Prior to backfilling, the material was analyzed for volatile organic compounds (VOC's) which resulted in lower than the method detection limit concentrations for all parameters (S29 in Appendix F).

## 5.4 GROUNDWATER

Groundwater chemical results in sampled monitoring wells are summarized in Table 2.

### 5.4.1 Yard diesel tank, Ottawa

Groundwater at PZ-1 showed concentrations of BTEX below the method detection limits, that is lower than level I and TPH of 48 ppm, that is level I-II in the Alberta MUST guidelines. The chromatographic peak pattern (Appendix F) produced with the TPH identification corresponded to middle distillates similar to a diesel or fuel oil. The chemical results and the TPH identification thus correspond to the nature of the potential contaminant, that is diesel.

## **5. FIELD OBSERVATIONS AND RESULTS**

In this section, the geological and physical hydrogeologic field observations are presented as well as the soil and groundwater chemical results. The certificates of analysis are presented in Appendix F.

### **5.1 GEOLOGY**

At the Ottawa and the Hull mills, the geology consists of 1 to nearly 4 meters of filling material (sand and gravel) overlying limestone bedrock. The limestone can be fractured in the few meters from its surface.

### **5.2 PHYSICAL HYDROGEOLOGY**

The Ottawa River separates the 2 mills and flows from west to east. Groundwater levels measured in monitoring wells at the Hull mill, show the groundwater main flow direction in the limestone aquifer toward the south to the Ottawa River (Figure 2).

### **5.3 SOIL**

A summary of the sample locations and the chemical results of the final excavation and the related stockpiles is presented in Table 1.

#### **5.3.1 Yard diesel tank, Ottawa**

During the excavation, a strong smell of petroleum hydrocarbons was omnipresent and the soil showed apparent contamination. However, soil samples from the 2 final excavations at this location showed concentrations in BTEX and TPH below the method detection limit (Table 1A). These results allowed backfilling without further excavation. The 2 piles of soil excavated had mineral oil and grease concentrations in the BC and above C MEF levels.

#### **5.3.2 Garage gasoline tank, Hull**

Soil was not analyzed at this location since the soil environmental assessment of the excavation was already completed.

---

## 6. CONCLUSION

On the basis of our site observations and test results, the following conclusions can be drawn:

### 6.1 GEOLOGY AND PHYSICAL HYDROGEOLOGY

At the areas investigated, the geology consists mainly of 1 to 4 meters of sand and gravel filling material overlying a limestone bedrock. On the Hull side, groundwater flow direction in the limestone aquifer is southward, towards the Ottawa River.

### 6.2 YARD DIESEL TANK, OTTAWA

The results of chemical analyses conducted on soil samples from the final limits of the 2 excavations indicated that the limits are below the MOEE level I criteria for BTEX. Groundwater analysis indicated below Alberta MUST I criteria for BTEX and level I-II for TPH. The soil remediation and the groundwater investigation thus meet the MOEE requirements for an industrial site and no further work is needed.

### 6.3 GARAGE GASOLINE TANK, HULL

Soil was not analyzed at this location for the soil environmental assessment of the excavation was complete. Product identification indicated that only gasoline is found at this location. The groundwater sample analyses for BTE indicated a maximum of MEF BC level and above B criterion for Xylenes. Because the MEF expects to present a C criterion for Xylenes in 1995 and the concentration found is relatively high, it is recommended to monitor the groundwater at this location for the following year.

### 6.4 GARAGE DIESEL TANK, HULL

The final limits of the excavation met the BC criterion for mineral oil and grease. The remaining vertical faces below the filling material as well as the bottom of the excavation, were in solid rock and for this reason, they could not be excavated nor sampled. Visual evidences of contamination in the bedrock were observed. The excavation was backfilled with clean compacted sand with a drain for recuperation and monitoring of product/groundwater accumulating in the excavation.

Dear Salim Eid:

RE: ***Freedom of Information and Protection of Privacy Act Request***  
**Our File # A-2014-02079, Your Reference OE-OT-018031**

The Ministry is in receipt of your request made pursuant to the *Freedom of Information and Protection of Privacy Act* and has received your payment in the amount of \$5.00 (non-refundable application fee), along with your \$30.00 deposit.

**The search is being conducted on the following: 6 Booth Street, Ottawa. If there is any discrepancy please contact us immediately.**

You may expect a reply or additional communication as your request is processed. For your information, the Ministry charges for search and preparation time and photocopying.

If you have any questions regarding this matter, please contact Ayesha Kapadia at 416-212-8912.

Yours truly,

A handwritten signature in black ink, appearing to read "Heidi Ritscher".

Heidi Ritscher  
FOI Manager

## Letter of Authorization for Governmental Authorities

The undersigned hereby authorizes DST Consulting Engineers Inc. to have access and make a copy of all documents and information contained in the files of the entities listed in Schedule A with respect to the undersigned and/ or to the activities of the undersigned that take place from the following immovable properties (the "Property"):

### Description of Property

An immovable situated in the City of Ottawa, Province of Ontario, presently known and designated as being composed of the following lots:

#### Firstly

Parcel Water Lot-17, Section Ottawa River A; Part of the Bed of the Ottawa River lying in front of Lot 40, Concession A, Broken Front, formerly in the Township of Nepean, City of Ottawa, being also parts of Water Lot Location CL4467, designated as Parts 4 and 36 on Reference Plan 4R-26534.

PIN 04097-0214(LT)

#### Secondly

Lots 12, 13, 14, 15, 16, and 17, Plan 10, except part of Lot 18 as in Instrument CR259644 on the south side of Head Street; Part of Head Street, lying west of Booth Street as in Instrument No. CR416955; Lots 1, 2, 3, 4, 5, and 6, Plan 10, north side of Head Street; Lots 22, 23 and 24 and Part of Lots 19, 20 and 21, Plan 10, south side of Chaudière Street; Part of Lot 40, Concession A, Ottawa Front, shown as Union Square on Plan 10, as in Instrument CR259644, designated as parts 7 and 37 on Reference Plan 4R-26534, save and except Parts 10, 11 and 13 on Reference Plan 4R-26574, in the City of Ottawa.

PIN 04097-0216(LT)

\*City of Ottawa is currently in the process of transferring Part 1 on Plan 5R-5826 to Domtar which when transferred will form part of this PIN or be otherwise included in the Fee Simple Lands.

#### Thirdly

Part of Albert Island, Plan 10, as in Instrument No. NS120593; Lots 1, 2, 3, 4 and 5, Plan 10, Albert Island, City of Ottawa.

PIN 04097-0090(LT)

#### Fourthly

Parcel Water Lot-17, Section Ottawa River A, Part of the Bed of the Ottawa River lying in front of Lot 40, Concession A, Broken Front, Ottawa River, formerly in the Township of Nepean, City of Ottawa, being also part of Water Lot CL4467, designated as Part 3 on Reference Plan 4R-5277.

PIN 04097-0087(LT)

Fifthly

Part of Lot 40, Concession A, Ottawa Front, shown as Union Square, Plan 10 as in Instrument No. CR259644 (Secondly); Lots 7, 8, 9, 10, 11, north side of Head Street, Plan 10; Part of Chaudiere Street, Plan 10, lying east of Booth Street as closed by By-Law registered as Instrument No. CR410131, as in Instrument No. CR416955; Part of Head Street, Plan 10, lying east of Booth Street, closed by By-law registered as Instrument No. CR410131, as in Instrument No. CR416955, except part of Lot 9 and Lots 10, 11, north side of Head Street, Plan 10, designated as Part 9 on Reference Plan 5R-8158, City of Ottawa.

PIN 04280-0138(LT)

Sixthly

Parcel Water Lot-17, Section Ottawa River A, Part of the Bed of the Ottawa River in front of Lot 40, Concession A, Broken Front, City of Ottawa, designated as Part 4 on Reference Plan 4R-5277.

PIN 04280-0040(LT)

Seventhly

Parcel Water Lot-17, Section Ottawa River A; Part of the Bed of the Ottawa River in front of Lot 40, Concession A, Broken Front, City of Ottawa, designated as Part 5 on Reference Plan 4R-5277.

PIN 04280-0041(LT)

Eighthly

Parcel Water Lot-17, Section Ottawa River A, Part of the Bed of the Ottawa River in front of Lot 40, Concession A, Broken Front, City of Ottawa, designated as Part 9 on Reference Plan 4R-5277.

PIN 04280-0042(LT)

Ninthly

Part of Booth Street, Plan 10, as in Instrument No. CR259644, City of Ottawa.

PIN 04280-0067(LT)

Part of Chaudière Island, Plan 10, lying west of Chaudière Street and Head Street, lying south of Lots 12, 13 and 14 on the south side of Head Street, Plan 10, City of Ottawa.

Part of PIN 04097-0212(LT)

Lots H, I and J, Plan 10, south side of Head Street, City of Ottawa.

PIN 04280-0144(LT)

Firstly

Part of Lot 40, Concession A, Ottawa Front, designated as Part 7 on Plan 4R-10322 (shown as Bridge Reserve, Plan 10), City of Ottawa.

PIN 04280-0007(LT)

Secondly

Part of Lot 9, Lots 10 and 11, Plan 10, designated as Part 9 on Plan 5R-8158, City of Ottawa.

PIN 04280-0139(LT)

Thirdly

Parcel Water Lot 12, Section of Ottawa River A; Part of the bed of the Ottawa River adjacent to Chaudiere Island and Alberta Island in front of Lot 40, Concession A Broken Front, designated as Parts 6, 7 and 8 on Plan 4R-5277, City of Ottawa.

PIN 04280-0043(LT)

Fourthly

Unpatented land designated as Parts 1 and 3 on Plan 4R-24620.

Fifthly

Part of Chaudière Island, Plan 10, lying west of Chaudière Street and Head Street, lying south of Lots 15, 16, 17 and 18 on the south side of Head Street, Plan 10, City of Ottawa.

Part of PIN 04097-0212(LT), and,

Water Lot Parcel 12; being Part of the Bed of the Ottawa River lying in front of Lot 40, Concession A, Broken Front, formerly in the Township of Nepean, now in the City of Ottawa, designated as Parts 19 and 35 on Reference Plan 4R- 26534.

Part of PIN 04097-0089(LT)

Bearing the civic address 3, 4 and 6 Booth Street in the City of Ottawa, in the Province of Ontario.

The present authorization shall be an authorization solely for the purposes referred above and shall not constitute an authorization for any inspection with respect to the Property by the above-mentioned authorities.

Signed this 9 day of April, 2014.

**From:** Salim Eid

**SUBJECT:** Request for Information – Phase I Environmental Site Assessment (ESA)  
3,4 and 6 Booth Street, Ottawa, Ontario

**DST File No.:** OE-OT-018031

DST Consulting Engineers Inc. (DST) has been retained to conduct a Phase I Environmental Site Assessment (ESA) of the following property:

**Municipal Address:** The subject property is located at 3,4 and 6 Booth Street, Ottawa, Ontario.

As a part of the Phase I ESA, we request the following with respect to the above-noted properties:

- reports relating to environmental concerns;
- records of non-compliance or regulatory concerns;
- dumping infractions, spills, or discharges to the environment (such as fuels or chemicals);
- violations of sewer use or any environmental by-laws;
- historic landfill or dumpsites on or in proximity to the subject property;
- existing surface or underground easements;
- presence of groundwater recharge sites; and,
- any other disclosure of information relating to environmental issues.

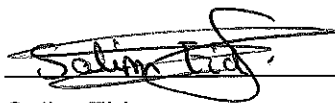

By copy of this letter, the owner of the property authorizes the release of the above-requested information with respect to the subject property to DST.

Your prompt response to this request would be greatly appreciated. Please fax a copy of any available information to (613) 748-1356 and mail the originals to the above-note address.

Should you have any questions, please do not hesitate in contacting Salim Eid at DST.

Yours truly,

**For DST Consulting Engineers Inc.**

- 3) Purchaser's/Owner's/Legal Consent

**DISCLAIMER**  
**For use with HLUI Database**

CITY OF OTTAWA ("the City") is the owner of the HISTORICAL LAND USE INVENTORY ("HLUI"), a database of information on the type and location of land uses within the geographic area of Ottawa, which had or have the potential to cause contamination in soil, groundwater or surface water.

*The City, in providing information from the HLUI, to DST Consulting Engineers Inc. ("the Requester") does so only under the following conditions and understanding:*

1. This is a free service offered by the City.
2. The information which is contained in the HLUI has been compiled from publicly available records and other sources of information. The HLUI may contain erroneous information given that such records and sources of information may be flawed. Changes in municipal addresses over time may have introduced error in such records and sources of information. The City is not responsible for any errors or omissions in the HLUI and reserves the right to change and update the HLUI without further notice. The City does not, however, make any commitment to update the HLUI. Accordingly, all information from the HLUI is provided on an "as is" basis with no representation or warranty by the City with respect to the information's accuracy or exhaustiveness in responding to the request.
3. City staff will perform a search of the HLUI based on the information given by the Requester. City staff will make every effort to be accurate, however, the City does not provide an assurance, guarantee, warranty, representation (express or implied), as to the availability, accuracy, completeness or currency of information which will be provided to the Requester. The HLUI in no way confirms the presence or absence of contamination or pollution of any kind. The information provided by the City to the Requester is provided on the assumption that it will not be relied upon by any person whatsoever. The City denies all liability to any such persons attempting to rely on any information provided from the HLUI database.
4. The City, its employees, servants, agents, boards, officials or contractors take no responsibility for any actions, claims, losses, liability, judgments, demands, expenses, costs, damages or harm suffered by any person whatsoever including negligence in compiling or disseminating information in the HLUI.
5. Copyright is reserved to the City.
6. Any use of the information provided from the HLUI which a third party makes, or any reliance on or decisions to be based on it, are the responsibilities of such third parties. The City, its employees, servants, agents, boards, officials or contractors accept no responsibility for any damages, if any, suffered by a third party as a result of decisions made as a result of an information search of the HLUI.
7. Any use of this service by the Requestor indicates an acknowledgement, acceptance and limits of this disclaimer.
8. All information collected under this request and all records provided in response to this request are subject to the provisions of the *Municipal Freedom of Information and Protection of Privacy Act*, R.S.O. 1990, c. M.56, as amended.

Dear Mr. Eid,

**Re: Information Request  
3, 4 and 6 Booth Street, Ottawa, Ontario (“Subject Properties”)**

**Internal Department Circulation**

The Planning and Growth Management Department has the following information in response to your request for information regarding the Subject Properties:

- The Disposals and Environmental Remediation Unit notes that the subject properties are within 500m of two former landfills; Ur-44 – Unnamed site near Broad Street on Lebreton Flats, and Ur-06 – Nepean Bay. The City of Ottawa has no information on the current environmental conditions of either site as both former landfills are under private ownership.

**Search of Historical Land Use Inventory**

**This acknowledges receipt of the signed Disclaimer regarding your request for information from the City’s Historical Land Use Inventory (HLUI 2005) database for the Subject Properties.**

A search of the HLUI database revealed the following information:

- There are 10 activities associated with the Subject Properties: Activity Number 12380, 2251, 3486, 4696, 7167, 13964, 2251, 2268, 8847, 11401

*Shaping our future together  
Ensemble, formons notre avenir*

City of Ottawa

Ottawa (Ontario) K1P 1J1  
Tél.: (613) 580-2424 ext. 14743  
Télé.: (613) 560-6006  
www.ottawa.ca

The HLUI database was also searched for activity associated with properties located within 50m of the Subject Properties. The search revealed the following:

- There are 16 activities associated with properties located within 50m of the Subject Properties: Activity Number 10037, 10211, 10751, 10764, 11496, 11798, 13356, 14581, 2473, 4382, 4696, 6906, 7287, 9442, 9884 and 4791.

Please note that Activity Numbers 12380, 2251, 3486, 4696, 7167, 4689, 8847, 10037, 10211, 11496, 11798, 13356, 14581, 2473, 4382 and 7287 have a PIN Certainty of "2". This identifier acknowledges that there is some uncertainty about the exact location of the land use activity and that the activity may or may not have been located on the Subject Property or on certain properties within 50m of the Subject Property. All database entries with a PIN Certainty of "2" require independent verification as to their precise location.

A site map has been included to show the location of the Subject Properties as well as the location of all the activities noted above, including the HLUI database's location of the Activity Numbers with a PIN Certainty of "2".

Additional information may be obtained by contacting:

### **Ontario's Environmental Registry**

The Environmental Registry found at <http://www.ebr.gov.on.ca/ERS-WEB-External/> contains "public notices" about environmental matters being proposed by all government ministries covered by the Environmental Bill of Rights. The public notices may contain information about proposed new laws, regulations, policies and programs or about proposals to change or eliminate existing ones. By using key words i.e. name of proponent/owner and the address one can ascertain if there is any information on the proponent and address under the following categories: Ministry, keywords, notice types, Notice Status, Acts, Instruments and published date (all years).

### **The Ontario Land Registry Office**

Registration of real property is recorded in the Ontario Land Registry Office through the Land Titles Act or the Registry Act. Documents relating to title and other agreements that may affect your property are available to the public for a fee. It is recommended that a property search at the Land Registry Office be included in any investigation as to the historic use of your property. The City of Ottawa cannot comment on any documents to which it is not a party.

Court House  
161 Elgin Street 4th Floor  
Ottawa ON K2P 2K1  
Tel: (613) 239-1230  
Fax: (613) 239-1422

**Please note, as per the HLUI Disclaimer, that the information contained in the HLUI database has been compiled from publicly available records and other sources of information. The HLUI may contain erroneous information given that the records used as**

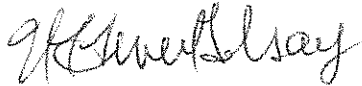

sources of information may be flawed. For instance, changes in municipal addresses over time may introduce error. Accordingly, all information from the HLUI database is provided on an "as is" basis with no representation or warranty by the City with respect to the information's accuracy or exhaustiveness in responding to the request.

Furthermore, the HLUI database and the results of this search in no way confirm the presence or absence of contamination or pollution of any kind. This information is provided on the assumption that it will not be relied upon by any person for any purpose whatsoever. The City of Ottawa denies all liability to any persons attempting to rely on any information provided from the HLUI database.

Please note that in responding to your request, the City of Ottawa does not guarantee or comment on the environmental condition of the Subject Properties. You may wish to contact the Ontario Ministry of Environment for additional information.

If you have any further questions or comments, please contact Alejandra Garavito at 613-580-2424 ext. 14743 or [HLUI@ottawa.ca](mailto:HLUI@ottawa.ca)

Sincerely,

*DW*

Overview

# Access to Information Request Form

Protected when completed

For official use only

## Access to Information Act

### Step 1

Determine which federal government institution is most likely to have the information you are seeking. Decide whether you wish to submit an informal request for the information or a formal request under the Access to Information Act. If you wish to make an informal request, contact the appropriate institution. The address can likely be found in Info Source publications which are available across Canada, generally in major public and academic libraries, constituency offices of federal Members of Parliament and most federal government public enquiry and service offices.

### Step 2

To apply for information under the Access to Information Act, complete this form or a written request mentioning the Act. Describe the information being sought and provide any relevant details necessary to help the institution find it. If you require assistance, refer to Info Source (Sources of Federal Government Information) for a description of program records held by the institution or contact its Access to Information Coordinator.

### Step 3

Forward the access request to the Coordinator of the institution holding the information. The address is listed in the "Introduction" to Info Source. Enclose a \$5.00 money-order or cheque payable to the Receiver General of Canada. Depending upon the type or amount of information being sought, you may be asked to authorize further charges.

### Step 4

When you receive an answer to your request, review the information to determine whether you wish to make a further request under the Act. You also have the right to complain to the Access to Information Commissioner should you believe that you have been denied any of your rights under the Act.

Federal Government Institution  
Environment Canada

### Provide details regarding the information being sought

Environmental Concerns (General correspondence, occurrence reports, abatement), Orders, Tanks (ASTs/USTs), Spills, Investigations/Prosecutions (with owner/tenant information), and Waste Generator number/classes. Certificates of Approval including; Air- emissions, Water, Sewage, Waste Water - industrial discharge, Waste Systems, and Pesticide licenses.

The property in question is located at 3, 4 and 6 Booth Street, Ottawa, ON

### Method of access preferred

Receive copies of originals

Examine originals in government offices

### Name of applicant

Mr. Salim Eid  
DST Consulting Engineers Inc.  
203 - 2150 Thurston Drive  
Ottawa, Ontario  
K1G 5T9

Dear Mr. Eid,

This letter is in response to your request under the *Access to Information Act* for:

**“Owner: DOMTAR INC.**

**Address: 3, 4 and 6 Booth Street, Ottawa, ON**

**Environmental Concerns (General correspondence, occurrence reports, abatement), Orders, Tanks (ASTs/USTs), Spills, Investigations / Prosecutions (with owner / tenant information), and Waste Generator number / classes, Certificates of Approval including: Air-emissions, Water, Sewage, Waste Water - industrial discharge, Waste Systems, and Pesticide licenses.**

**Authorized by: {Razvan L. Theodoru}”**

After a thorough search, no records were found concerning this request.

Please be advised that you are entitled to file a complaint with the Information Commissioner of Canada concerning the processing of your request within sixty days of the receipt of this notice. In the event you decide to avail yourself of this right, your notice of complaint should be addressed to:

Information Commissioner of Canada  
30 Victoria Street  
Gatineau, Québec K1A 1H3

If you have any questions regarding this request, please do not hesitate to contact Travis Lamothe at 819-953-9390.

Yours sincerely,

*for* Nancy Hamzawi

Suite 203  
OTTAWA ON K1B 3W8

Dear Sir:

**Re: 6 Booth Street, Ottawa, Ontario**

This is with reference to your request and fee of \$50.00 + GST, for information on the above location.

Enclosed are computerised screen prints showing a cancelled private fuel outlet and a propane refill centre along with equipment details showing underground fuel storage tank details. Copies of the inspection reports are also attached.

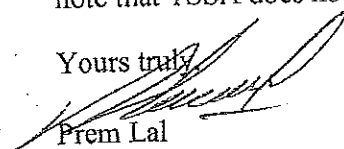

After a search of our files, TSSA has no record of any further outstanding instructions, incident reports, fuel oil spills, or contamination records respecting the above-mentioned property.

This is all the information the Fuels Safety Division has at this time regarding the above address.

*It should be noted that the Fuels Safety Division did not register private fuel underground/aboveground storage tanks prior to January of 1990 or furnace oil tanks prior to May 1, 2002. Also note that the Fuels Safety Division does not register waste oil tanks in apartments, office buildings, residences etc. or ABOVEGROUND gas or diesel tanks.*

Although TSSA believes the information provided pursuant to your request is accurate, please note that TSSA does not warrant this information in any way whatsoever.

Yours truly,

  
Prem Lal

Hi Salim:

Thank you for your inquiry.

I have searched the below noted address (addresses) and I have located the following record:

6 Booth Street, Ottawa has record of 1 expired underground tank

For a more detailed report including underground fuel storage tank details and copies of all inspection reports, please submit your request in writing to Public Information Services via e-mail ([publicinformationervices@tssa.org](mailto:publicinformationervices@tssa.org)) or through mail along with a fee of \$56.50 (including HST) per location. The fee is payable with credit card (Visa or MasterCard) or with a cheque made payable to TSSA.

Thank you and have a great day!

Prem

Hello,

I was wondering if the TSSA had any records regarding underground or above ground storage tanks for the following properties in Ottawa, Ontario:

- 3 Booth Street
- 4 Booth Street
- 5 Booth Street
- 6 Booth Street

Thanks,

Hello,

Could you please provide DST Consulting Engineers Inc. with a record search regarding areas of natural significance, areas of scientific interest , or species at risk for the following properties: 3 Booth Street, 4 Booth Street, 5 Booth Street, and 6 Booth Street in Ottawa, Ontario.

Thank you,

**Natural Heritage Values**

The Ministry of Natural Resources (MNR) Kemptville District has carried out a preliminary review of the area in order to identify any potential natural resource and natural heritage values.

Natural heritage features and values contribute to the province's rich biodiversity and provide habitat for a variety of species. The following Natural Heritage values were identified:

- ANSI, Earth Science, VICTORIA ISLAND (Provincial)
- Lake, Lac Deschênes
- Spawning Area, Walleye Spawning Area

Municipal Official Plans contain additional information related to natural heritage features. Please see the local municipal Official Plan for more information such as specific policies and direction pertaining to activities which may impact natural heritage features. For planning advice or Official Plan interpretation, please contact the local municipality.

Where natural values and natural hazards exist (e.g., floodplains), there may be additional approvals and permitting required from the local Conservation Authority. The MNR strongly recommends contacting the local Conservation Authority for further information and approvals.

Please see the MNR Kemptville Information Guide (2012) for contact information pertaining to Conservation Authorities located within the Kemptville District area.

For additional information and online mapping tools, please see the Natural Heritage Information Centre (NHIC), where additional data and files can be downloaded in both list and digital format. In addition sensitive species information can be requested and accessed through the NHIC at [NHICrequests@ontario.ca](mailto:NHICrequests@ontario.ca).

**Water**

Where the site is adjacent to or contains a watercourses or waterbodies, additional considerations apply. If any in-water works are to occur, there are timing restriction periods for which work in water can take place (see below). Appropriate measures should be taken to minimize and mitigate impact on water quality and fish habitat, including:

- including the installation of sediment and erosion control measures;
- avoiding removal alteration or covering of substrates used for fish spawning, feeding, over-wintering or nursery areas; and
- debris control measures should be put in place to manage falling debris (e.g. spalling).

A work permit from the MNR may be required pending further details regarding the proposed works. No encroachment on the bed or banks of the waterbody (e.g. abutments, embankments, etc.) is permitted until MNR approval and clearance has been issued. In order for MNR staff to determine when a work permit is required, additional information can include:

- Detailed drawings (existing and proposed)
- Location mapping
- Registered Plan survey
- Site photographs
- Public Lands Act Forms - application forms, ownership form and landowner notification form.

The MNR does not have any water quality or quantity data available. We recommend that the Ministry of the Environment be contacted for such data along with the local Conservation Authority. For further information regarding fish habitat and protocols, please refer to the following interagency, document, *Fish Habitat Referral Protocol for Ontario* at: <http://www.mnr.gov.ca/264110.pdf>

**Timing restriction periods in MNR Kemptville District\*:**

- Warmwater → March 15 – June 30  
→ March 15 – July 15 for St. Lawrence River & Ottawa River
- Coldwater → October 1 – May 31
- Mixed lakes → October 1 – June 30 (Big Rideau & Charleston)

*\* Please note: Additional timing restrictions may apply as it relates to Endangered and Threatened Species, including works in both water and wetland areas.*

	FISH SPECIES	TIMING WINDOW
Spring:	Walleye	March 15 to May 31
	Northern Pike	March 15 to May 31

Lake Sturgeon	May 1 to June 30
Muskellunge	March 15 to May 31
Largemouth/Smallmouth Bass	May 1 to July 15
Rainbow Trout	March 15 to June 15
Other/Unknown Spring Spawning Species	March 15 to July 15

<i>Fall:</i>	FISH SPECIES	TIMING WINDOW
	Lake Trout	October 1 to May 31
	Brook Trout	October 1 to May 31
	Pacific Salmon	September 15 to May 31
	Lake Whitefish	October 15 to May 31
	Lake Herring	October 15 to May 31
	Other/Unknown Fall Spawning Species	October 1 to May 31

Additional approvals and permits may be required for the proposed works as it relates to the Fisheries Act. Please contact your local Conservation Authority and the Department of Fisheries and Oceans to determine requirements and next steps. Where the Fisheries Act is triggered and habitat compensation, mitigation measures or best management practices are being considered; as the MNR is charged with the management of Provincial fish populations, the MNR requests ongoing involvement in such discussions in order to ensure population conservation. Furthermore, local Conservation Authorities may also have additional approvals for works in and adjacent to water and wetland features. Finally, Transport Canada's Navigable Waters Protection Division may require review and approval of the proposed project. Please contact these local agencies directly for more information.

Timing restrictions apply from October 16 – March 15 to protect at-risk hibernating turtles. If the proposed works are to occur during this time, the MNR recommends fencing off the site in early fall to prevent turtle from hibernating there. Caution should also be taken during the turtle nesting season in June and early July as turtles use embankments and other terrestrial site for nesting. During the active season (April 1 – October 30) the MNR recommends a thorough sweep of the area before works begin to encourage any turtles using the site to move away.

Where drainage works are proposed within wetland areas, the MNR is concerned is the impacts to the hydrology and ecology of the wetland, which may have impacts on species and their habitats. For example, changing water levels as a result of drainage works may impact turtles or affecting nesting birds, of which these species may be protected under legislation such as the Endangered Species Act or the Fish and Wildlife Conservation Act. Therefore a consideration for direct and indirect impacts to species and their habitats is imperative.

Where drainage works occur within the originally approved drainage footprint, as per the Drainage Act, there are no Public Land's Act requirements from the MNR. However, other MNR legislation may apply including, but not limited to the Endangered Species Act, 2007

MNR is streamlining and automating its approvals processes for natural resource-related activities. Some activities that may otherwise contravene the ESA may be eligible to proceed without a permit from MNR provided that regulatory conditions are met for the ongoing protection of species at risk

and their habitats. To proceed under the regulation with ongoing maintenance and improvement of drainage infrastructure that would adversely affect endangered or threatened species or their habitat, a person must register with the Ministry of Natural Resources and follow the rules in regulation.

For more information please check out the following link <http://www.ontario.ca/environment-and-energy/ditch-and-drainage-work-and-endangered-or-threatened-species>

### Species at Risk

With the new Endangered Species Act (ESA, 2007) in effect, it is important to understand which species and habitats exist in the area and the implications of the legislation. A review of the Natural Heritage Information Centre (NHIC) and internal records and aerial photograph interpretation indicate that there is a potential for the following Threatened (THR) and/or Endangered (END) species on the site or in proximity to it:

- American Eel (END)
- Lake Sturgeon (THR)
- Pale-bellied Frost Lichen (END)
- Barn Swallow (THR)
- Blanding's Turtle (THR)
- Butternut (END)
- Chimney Swift (THR)

All Endangered and Threatened species receive individual protection under section 9 of the ESA and receive general habitat protection under Section 10 of the ESA, 2007. Thus any potential works should consider disturbance of possible important habitat (e.g. nesting sites). Please note that as of June 30, 2013 general habitat protection applies to all Threatened and Endangered species. The habitat of these listed species is protected from damage and destruction and certain activities may require authorization(s) under the ESA. Please keep this date in mind when planning any species and habitat surveys

Species receiving General Habitat protection:

- American Eel (END)
- Barn Swallow (THR)
- Blanding's Turtle (THR)
- Butternut (END)
- Chimney Swift (THR)
- Lake Sturgeon (THR)
- Pale-bellied Frost Lichen (END)

If the proposed activity is known to have an impact on the species mentioned above or any other SAR, an authorization under the Endangered Species Act, 2007 (ESA) may be required. It is recommended that MNR Kemptonville be contacted prior to any activities being carried out to discuss potential survey and mitigation measures to avoid contravention of the ESA.

Habitat has been identified within the project area that appears suitable for one or more species listed by SARO as Special Concern (SC). In Addition, one or more Special Concern species has been documented to occur either on the site or nearby. Species listed as Special Concern are not

protected under the ESA, 2007. However, please note that some of these species may be protected under the Fish and Wildlife Conservation Act. Species of Special Concern for consideration:

- Milksnake (SC)
- Peregrine Falcon (SC)
- Snapping Turtle (SC)
- Northern Map Turtle (SC)

If any of these or any other species at risk are discovered throughout the course of the work, and/or should any species at risk or their habitat be potentially impacted by on site activities, MNR should be contacted immediately and operations be modified to avoid any negative impacts to species at risk or their habitat until further direction is provided by MNR.

Please note that information regarding species at risk is based on documented occurrences only and does not include an interpretation of potential habitat within or in proximity to the site in question. Although this data represents the MNR's best current available information, it is important to note that a lack of information for a site does not mean that additional features and values are not present. i.e.: Species at Risk (SAR) or their habitat could still be present at the location or in the immediate area. It is the responsibility of the proponent to ensure that species at risk are not killed, harmed, or harassed; or their habitat is not damaged or destroyed through the activities carried out on the site. The MNR continues to strongly encourage ecological site assessments to determine the potential for SAR habitat and occurrences. When a SAR or potential habitat for a SAR does occur on a site, it is recommended that the proponent contact the MNR for technical advice and to discuss what activities can occur without contravention of the Act. If an activity is proposed that will contravene the ESA (such as Section 9 or 10), the proponent must contact the MNR to discuss the potential for a permit (Section 17). For specific questions regarding the Endangered Species Act (2007) or SAR, please contact a district Species at Risk Biologist at [sar.kemptville@ontario.ca](mailto:sar.kemptville@ontario.ca). For more information regarding the ESA (2007), please see attached ESA Information Sheet.

As of July 1, 2013, the approvals processes for a number of activities that have the potential to impact SAR or their habitat were changed in an effort to streamline approvals processes while continuing to protect and sustainably manage Ontario's natural resources. For those activities that require registration with the Ministry, businesses and individuals will be able to do so through a new online system. The online system will also include information to help guide individuals and businesses through the new processes. For further information on which activities are authorized through this new online registration process and how to apply, please refer to the following website: [http://www.mnr.gov.on.ca/en/About/2ColumnSubPage/STDPROD\\_104342.html](http://www.mnr.gov.on.ca/en/About/2ColumnSubPage/STDPROD_104342.html). General inquiries may be directed towards Kemptville District MNR, while questions and comments involving the new online forms can be directed to the Registry Approvals Service Centre (RASC) at 1-855-613-4256 or [mnr.rasc@ontario.ca](mailto:mnr.rasc@ontario.ca).

Please note: The advice in this letter may become invalid if:

- The Committee on the Status of Species at Risk in Ontario (COSSARO) re-assesses the status of the above-named species OR adds a species to the SARO List such that the section 9 and/or 10 protection provisions apply to those species.

- Additional occurrences of species are discovered.
- Habitat protection comes into force for one of the above-mentioned species through the creation of a habitat regulation (see general habitat protection above).

This letter is valid until: Wed. May 13, 2015

Sincerely,

A handwritten signature in cursive script that reads "Kerry Reed".

Kerry Reed  
SAR Biologist

### **Qualifications of Assessor(s)**

### **Qualifications of Assessors**

**Salim Eid, B.A.Sc.**, is an Engineering Trainee with DST. He has been involved in studies in the geotechnical and environmental industry, including Phase I, II and III ESAs. Mr. Eid has supervised the advancement of boreholes and installation of groundwater monitoring wells for several investigations. He has collected soil and groundwater samples, performed sample logging, determined potential environmental areas of concern on subject sites, organized data, interpreted maps, and conducted background research and literature reviews. He has been the lead author on various environmental reports, including ESAs, Specifications, and Remediation Reports.

**Milan Makusa, P. Geo. QP<sub>ESA</sub>**, has over 30 years of experience in hydrogeology and environmental consultation. He is a registered Professional Geoscientist in the Province of Ontario, a Qualified Person for the completion of Phase I and II ESAs, and MTO RAQS Registered Person for the specialty Contaminant/Waste Management. Mr. Makusa has more than 20 years of experience completing and supervising environmental projects including Phase I – II Environmental Site Assessments, contaminated site investigations, remediation and monitoring, underground and aboveground storage tank removals, regional groundwater monitoring programs, environmental baseline studies, hydrogeological investigations for industrial and municipal waste disposal sites, landfill closure plans, and Environmental Impact Assessment reports for waste disposal facilities.

# **APPENDIX H**

## **Limitations of Report**

## **Limitations of Report**

DST Consulting Engineers Inc. (DST) has prepared this report for the exclusive use of Windmill Development Group Ltd (the “Client”). The information, conclusions and recommendations given herein are specific for this project and this Client only, for the scope of work described herein. DST will not be responsible for the use of this report by any third party, or reliance on or any decision to be made based on it without the prior written consent of DST. DST accepts no responsibility for damages, if any, suffered by any third party as a result of decisions or actions based on this report.

This report presents an overview of issues of potential environmental concern, reflecting DST’s best judgment using information reasonably available at the time of DST’s Site reconnaissance. The assessment was partly based on information from various sources of which the accuracy has not been verified, and because observations made during the Site reconnaissance may have been limited by existing conditions, this report does not guarantee that the subject property is free of hazardous or potentially hazardous material or conditions, or that latent or undiscovered conditions will not become evident in the future. DST has prepared this report using information understood to be factual and correct and shall not be responsible for conditions arising from information or facts that were concealed or not fully disclosed to DST at the time of the Site reconnaissance and assessment.

The conclusions regarding environmental conditions, which are presented in this report, are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground. This report therefore cannot warrant that all conditions on or off the subject property have been identified within this assessment.

Since onsite and surrounding activities are beyond DST’s control, and can change at any time after the completion of this assessment, the observations, findings, and opinions can be considered valid only as of the date provided on this report.

Conclusions and recommendations contained in this assessment were developed in accordance with currently accepted engineering standards and practices. Standards, guidelines and practices related to environmental investigations may change over time. Those which were applied at the time of this investigation may be obsolete or unacceptable at a later date.
