#### Attention: Mr. Mike Giampa Senior Engineer, Infrastructure Applications

Dear Mr. Giampa:

#### Reference: 555, 591, 595, and 603 March Road Revised Transportation Impact Assessment Novatech File No. 122125

We are pleased to submit the following revised Transportation Impact Assessment (TIA) on behalf of March & Main Developments Inc. and 591-595 March Road Developments Inc., in support of a Zoning By-Law Amendment application at 555-603 March Road, for your review and signoff. The structure and format of this report is in accordance with the City of Ottawa's *Transportation Impact Assessment Guidelines* (June 2017).

The original TIA was submitted in November 2022. This revised TIA addresses City comments related to this Zoning By-Law Amendment application.

If you have any questions or comments regarding this report, please feel free to contact Brad Byvelds, or the undersigned.

Yours truly,

NOVATECH

Joshua Audia, P.Eng. Project Engineer | Transportation

# **TIA Plan Reports**

On 14 June 2017, the Council of the City of Ottawa adopted new Transportation Impact Assessment (TIA) Guidelines. In adopting the guidelines, Council established a requirement for those preparing and delivering transportation impact assessments and reports to sign a letter of certification.

Individuals submitting TIA reports will be responsible for all aspects of development-related transportation assessment and reporting, and undertaking such work, in accordance and compliance with the City of Ottawa's Official Plan, the Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines.

By submitting the attached TIA report (and any associated documents) and signing this document, the individual acknowledges that s/he meets the four criteria listed below.

#### CERTIFICATION

- 1. I have reviewed and have a sound understanding of the objectives, needs and requirements of the City of Ottawa's Official Plan, Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines;
- 2. I have a sound knowledge of industry standard practice with respect to the preparation of transportation impact assessment reports, including multi modal level of service review;
- 3. I have substantial experience (more than 5 years) in undertaking and delivering transportation impact studies (analysis, reporting and geometric design) with strong background knowledge in transportation planning, engineering or traffic operations; and
- I am either a licensed<sup>1</sup> or registered<sup>2</sup> professional in good standing, whose field of expertise [check √ appropriate field(s)] is either transportation engineering or transportation planning □.

<sup>1,2</sup> License of registration body that oversees the profession is required to have a code of conduct and ethics guidelines that will ensure appropriate conduct and representation for transportation planning and/or transportation engineering works.

#### EXECUTIVE SUMMARY

This Transportation Impact Assessment (TIA) has been prepared on behalf of March & Main Developments Inc. and 591-595 March Road Developments Inc., in support of a Zoning By-Law Amendment application for the property located at 555, 591, 595, and 603 March Road ('Subject Site'). The Subject Site is approximately 13.6 acres in size, and currently includes a one-storey commercial use (recreational athletic facility) at 555 March Road, a one-storey retail plaza at 591 March Road, a vacant parcel at 595 March Road, and a two-storey office building at 603 March Road. The Subject Site is currently served by three right-in/right-out (RIRO) driveways to March Road and a full-movement driveway to Terry Fox Drive, which serve the separate parcels. Only the parcels at 555 and 591 March Road share access. The Subject Site is surrounded by the following:

- Terry Fox Drive, followed by low-rise single-detached residences to the north,
- Commercial/office uses to the south,
- March Road, followed by the 'Nokia' office use to the east, and
- Hines Road and commercial/office uses to the west.

March & Main is proposing a redevelopment of the Subject Site with eight residential and mixeduse buildings between six and 30 storeys, and two office buildings with seven or eight storeys. Ground-floor retail is proposed in select buildings. March & Main have prepared a concept plan in support of the Zoning By-Law Amendment application, to illustrate the potential redevelopment of the Subject Site in conformity with the policies in the new City of Ottawa Official Plan (particularly for the 'Activity Centre' outlined in Section 6.6.3.2 – Kanata North Economic District). In total, the proposed development will have the potential to include approximately 2,100 dwellings, 154,178 ft<sup>2</sup> gross floor area (GFA) of office space, and 31,482 ft<sup>2</sup> GFA of retail space. Access to the proposed development will be provided via new connections to March Road, Terry Fox Drive, and Hines Road. The development will be developed in phases through subsequent applications for Site Plan Approval and/or Draft Plan of Subdivision. It is anticipated to be fully completed by 2037.

The current zoning for the properties is a mixture of 'General Industrial' IG6 and 'Business Park Industrial Zone' IP6[1149] and IP6[1084]. The proposed residential uses are not permitted in these zones and therefore, a Zoning By-Law Amendment is required to permit them. Pursuant to the City of Ottawa's Official Plan (2021, Council Adopted), the Subject Site is located within the 'Kanata North Economic District,' 'Evolving Neighbourhood' overlay, and is designated as 'Corridor – Mainstreet' (March Road) and 'Corridor – Minor' (Terry Fox Drive) on Schedule B5.

The Council-adopted Official Plan includes proposed policies that will permit a higher density of development and greater degree of mixed uses, including residential within new 'activity centres' that are generally located within 600m of two planned transit stations in the Kanata North Economic District. The goal of the activity centres is to create a place to live, work, learn, play, and provide access to daily needs without the use of a car. The Subject Site is in the activity centre based around a planned transit station at the intersection of March Road/Terry Fox Drive, as part of a future Bus Rapid Transit (BRT) project.

The study area for this report includes the boundary roadways March Road, Terry Fox Drive, and Hines Road, as well as March Road/Morgan's Grant Way/Shirley's Brook Drive, March Road/Terry Fox Drive, March Road/Solandt Road, Terry Fox Drive/Flamborough Way/Innovation Drive, and Innovation Drive/Hines Road.

The selected time periods for the analysis are the weekday AM and PM peak hours, as they represent the 'worst case' combination of site generated traffic and adjacent street traffic. Analysis has been completed for the ultimate buildout year 2037.

#### Forecasting

• The proposed development as a whole is estimated to generate 1,232 person trips during the AM peak hour (including 611 external vehicle trips) and 1,382 person trips during the PM peak hour (including 662 external vehicle trips).

#### Transportation Demand Management

 While the final list of TDM measures to be implemented by the proposed development will be confirmed at the Site Plan Control application stage, the proponent has agreed to consider a suite of TDM measures for non-residential and residential developments at this time.

#### <u>Transit</u>

- The proposed development is anticipated to generate the following number of external transit trips:
  - o 287 transit trips during the AM peak hour (124 trips in, 163 trips out);
  - o 279 transit trips during the PM peak hour (136 trips in, 143 trips out).
- The proposed development is not anticipated to necessitate more frequent service for OC Routes 63, 64, 110, and 166.

#### Intersection MMLOS

- The results of the intersection MMLOS analysis can be summarized as follows:
  - No study area intersections meet the target pedestrian level of service (PLOS);
  - No study area intersections meet the target bicycle level of service (BLOS);
  - No study area intersections along March Road meet the target transit level of service (TLOS);
  - All study area intersections meet the target truck level of service (TkLOS), except for Terry Fox Drive/Flamborough Way/Innovation Drive.
- There is limited opportunity in improving the PLOS at any approach without reducing the number of travel lanes, restricting turning movements, or removing right turn channels. There is also limited opportunity in improving the delay score at any intersection to the target PLOS.
- The north, south, and east approaches of March Road/Morgan's Grant Way/Shirley's Brook Drive do not meet the target BLOS. The target BLOS can be achieved at the east approach by reducing the operating speed to 40 km/h (which is the current speed limit on Shirley's Brook Drive). For left turns from the north and south approaches, the implementation of twostage left-turn bike boxes at all approaches would not require a right turns on red (RTOR) restriction. This would require the stop bars at all approaches to be shifted away from the intersection. These measures are identified for the City's consideration.

- All approaches of March Road/Terry Fox Drive do not meet the target BLOS. Given that all right turn movements are channelized at this intersection, the implementation of two-stage left turn-bike boxes at all approaches would not require a RTOR restriction. This would require the stop bars at all approaches to be shifted away from the intersection. This is identified for the City's consideration. The target BLOS can be met by shortening the right turn lanes to 50m or shorter. Given the high traffic volumes at this intersection, this is not recommended.
- The east and west approaches of March Road/Solandt Road does not meet the target BLOS. Two-stage left-turn bike boxes have recently been implemented for northbound and southbound cyclists. Implementing this improvement for eastbound and westbound cyclists as well is identified for the City's consideration. For cyclists interacting with right turning vehicles, the right turn lanes at the north and west approaches are greater than 50m, and the bike lane shifts to the left of the right turn lane at the south approach. The target BLOS can be met by shortening the right turn lanes to 50m or shorter. Given the high traffic volumes at this intersection, this is not recommended.
- All approaches of Terry Fox Drive/Flamborough Way/Innovation Drive do not meet the target BLOS. The target BLOS requires the implementation of two-stage left-turn bike boxes on all approaches, which would require RTOR restrictions. This is identified for the City's consideration. For cyclists interacting with right turning vehicles, the right turn lanes at the east and west approaches are greater than 50m. The target BLOS can be met by shortening the right turn lanes to 50m or shorter. Given the magnitude of right-turning traffic volumes at this intersection, this is not recommended.
- The City's RTTP Affordable Network includes at-grade median bus rapid transit (BRT) on March Road south of Solandt Road, and transit signal priority and queue jump lanes north of Solandt Road. These initial measures are anticipated to improve the delays for transit vehicles to the target TLOS or better. Future conversion to median BRT along the entire March Road corridor is anticipated to further improve the delays for buses travelling along March Road.
- While the effective corner radii of each corner at Terry Fox Drive/Flamborough Way/ Innovation Drive is greater than 15m, the target TkLOS can only be achieved by providing multiple receiving lanes. Since Flamborough Way and Innovation Drive are not classified as truck routes, no recommendations are identified.
- The proposed signalized intersection at March Road/Nokia Access/Site Access is anticipated to be a fully protected intersection, with the following lane configuration:
  - Northbound approach (March Road): one left turn lane, two through lanes, and one right turn lane;
  - Southbound approach (March Road): one left turn lane, two through lanes, and one shared through/right turn lane;
  - Eastbound approach (Site Access): one left turn lane and one shared through/right turn lane;
  - Westbound approach (Nokia Access): one left turn lane and one shared through/right turn lane.

 It is anticipated that the new signalized intersection will achieve a PLOS F, BLOS A, and TLOS E. All MMLOS scores will be confirmed as functional designs of the intersection are developed.

#### Existing Traffic Operations

 All study area intersections operate at an acceptable level of service during the AM and PM peak hours.

#### Background Traffic Operations

- Critical movements at the study area intersections generally operate at an acceptable level
  of service, with the exception of the westbound left turn movement at March Road/Solandt
  Road during the PM peak hour. Per the functional design of the March Road BRT, one of
  the westbound left turn lanes will be removed. It is anticipated that this is the primary driver
  for the failing vehicular level of service of this movement, and therefore it is recommended
  that the dual westbound left turn lanes are maintained at this intersection.
- To achieve the target vehicular level of service (Auto LOS) E at March Road/Solandt Road, a reduction of approximately 110 southbound through/right turning vehicles is required during the AM peak hour, and a reduction of approximately 45 northbound through/right turning vehicles are required during the PM peak hour.

#### Total Traffic Operations

- Northbound through queues at March Road/Terry Fox Drive and southbound through queues at March Road/Nokia Access/Site Access do not extend into the opposite intersection. Based on the maximum northbound left turn queues at March Road/Terry Fox Drive, the existing northbound left turn storage length could be reduced to accommodate a longer southbound left turn lane at March Road/Nokia Access/Site Access. A functional design and Roadway Modification Approval (RMA) submission for this modification will be provided as part of a subsequent Site Plan Control application.
- It is anticipated that an auxiliary westbound left turn lane will be required at the proposed access to Terry Fox Drive. A review of the most relevant left turn lane storage graphs included in the Ministry of Transportation of Ontario (MTO)'s *Design Supplement to the Transportation Association of Canada (TAC)'s Geometric Design Guide for Canadian Roads* has been conducted to determine that a storage length of 30m is required. A functional design and RMA submission for this modification will be provided as part of a subsequent Site Plan Control application.
- Based on the foregoing, the proposed development is recommended from a transportation perspective.

#### 1.0 SCREENING

#### 1.1 Introduction

This Transportation Impact Assessment (TIA) has been prepared on behalf of March & Main Developments Inc. and 591-595 March Road Developments Inc., in support of a Zoning By-Law Amendment application for the property located at 555, 591, 595, and 603 March Road ('Subject Site'). The Subject Site is approximately 13.6 acres in size, and currently includes a one-storey commercial use (recreational athletic facility) at 555 March Road, a one-storey retail plaza at 591 March Road, a vacant parcel at 595 March Road, and a two-storey office building at 603 March Road. The Subject Site is currently served by three right-in/right-out (RIRO) driveways to March Road and a full-movement driveway to Terry Fox Drive, which serve the separate parcels. Only the parcels at 555 and 591 March Road share access. The Subject Site is surrounded by the following:

- Terry Fox Drive, followed by low-rise single-detached residences to the north,
- Commercial/office uses to the south,
- March Road, followed by the 'Nokia' office use to the east, and
- Hines Road and commercial/office uses to the west.

An aerial of the vicinity around the Subject Site is provided in Figure 1.

#### 1.2 Proposed Development

March & Main is proposing a redevelopment of the Subject Site with eight residential and mixeduse buildings between six and 30 storeys, and two office buildings with seven or eight storeys. Ground-floor retail is proposed in select buildings. March & Main have prepared a concept plan in support of the Zoning By-Law Amendment application, to illustrate the potential redevelopment of the Subject Site in conformity with the policies in the new City of Ottawa Official Plan (particularly for the 'Activity Centre' outlined in Section 6.6.3.2 – Kanata North Economic District). In total, the proposed development will have the potential to include approximately 2,100 dwellings, 154,178 ft<sup>2</sup> gross floor area (GFA) of office space, and 31,482 ft<sup>2</sup> GFA of retail space. Access to the proposed development will be provided via new connections to March Road, Terry Fox Drive, and Hines Road. The development will be developed in phases through subsequent applications for Site Plan Approval and/or Draft Plan of Subdivision. It is anticipated to be fully completed by 2037. A copy of the concept plan is included in **Appendix A**.

The current zoning for the properties is a mixture of 'General Industrial' IG6 and 'Business Park Industrial Zone' IP6[1149] and IP6[1084]. The proposed residential uses are not permitted in these zones and therefore, a Zoning By-Law Amendment is required to permit them. Pursuant to the City of Ottawa's Official Plan (2021, Council Adopted), the Subject Site is located within the 'Kanata North Economic District,' 'Evolving Neighbourhood' overlay, and is designated as 'Corridor – Mainstreet' (March Road) and 'Corridor – Minor' (Terry Fox Drive) on Schedule B5.

The Council-adopted Official Plan includes proposed policies that will permit a higher density of development and greater degree of mixed uses, including residential within new 'activity centres' that are generally located within 600m of two planned transit stations in the Kanata North Economic District. The goal of the activity centres is to create a place to live, work, learn, play, and provide access to daily needs without the use of a car. The Subject Site is in the activity centre based around a planned transit station at the intersection of March Road/Terry Fox Drive, as part of a future Bus Rapid Transit (BRT) project.

#### Figure 1: View of the Subject Site

#### 1.3 Screening Form

The City's *2017 TIA Guidelines* identify three triggers for completing a TIA report, including trip generation, location, and safety. The criteria for each trigger are outlined in the City's TIA Screening Form, which is included in **Appendix B**. The trigger results are as follows:

- Trip Generation Trigger The development is anticipated to generate over 60 peak hour person trips; further assessment is **required** based on this trigger.
- Location Triggers The development proposes new connections to a designated Rapid Transit or Transit Priority (RTTP) corridor or Spine Cycling Route; further assessment is **required** based on this trigger.
- Safety Triggers The development meets multiple safety triggers; further assessment is **required** based on this trigger.

#### 2.0 SCOPING

#### 2.1 Existing Conditions

#### 2.1.1 Roadways

All roadways within the study area fall under the jurisdiction of the City of Ottawa.

March Road is an arterial roadway that, for the purposes of this report, is considered to run on a north-south alignment within the study area, running between Dunrobin Road and Highway 417. West of Dunrobin Road, the roadway runs on an east-west alignment until Appleton Sideroad in the Town of Mississippi Mills, where it continues as Ottawa Street. South of Highway 417, the roadway continues on a north-south alignment as Eagleson Road. Within the study area, March Road has a four-lane divided urban cross-section, sidewalks on both sides of the roadway, on-street bike lanes, and a posted speed limit of 80 km/h. March Road is classified as a truck route, allowing full loads. Street parking is not permitted. The Official Plan reserves a 44.5m right-of-way (ROW) for March Road.

The West Transitway Connection – Highway 417/Eagleson Road to North of Maxwell Bridge Road Environmental Project Report (EPR), prepared by Delcan in October 2013, identifies that further ROW widening within the vicinity of the intersection of March Road/Terry Fox Drive may be required. Per the approved functional design within the EPR, the ROW protection for March Road widens to approximately 51.5m along the Subject Site's frontage. A widening along some of the Subject Site's frontage may be required as part of a subsequent Draft Plan of Subdivision and/or Site Plan Control application.

Terry Fox Drive travels between Eagleson Road and Herzberg Road, and is classified as an arterial roadway west of March Road and major collector roadway east of March Road. Within the study area, Terry Fox Drive generally runs on an east-west alignment, has on-street bike lanes and a multi-use pathway west of the Subject Site, and a posted speed limit of 50 or 60 km/h. Terry Fox Drive generally has a four-lane divided rural cross-section west of March Road, transitioning to an urban cross-section within 50m of March Road, and a two-lane divided urban cross-section with a grass median east of March Road. Sidewalks or pathways are provided on the north side of Terry Fox Drive west of Flamborough Way, on the south side of Terry Fox Drive between Acklam Terrace and east of McKinley Drive, and on both sides of Terry Fox Drive between Acklam Terrace and McKinley Drive. West of March Road, Terry Fox Drive is classified as a truck route, allowing full loads. Between March Road and Herzberg Road, Terry Fox Drive is not classified as a truck route. Street parking is not permitted. The Official Plan reserves a 44.5m ROW for Terry Fox Drive, and it appears that a widening will not be required as part of a subsequent Draft Plan of Subdivision and/or Site Plan Control application.

Morgan's Grant Way is a collector roadway that generally runs on an east-west alignment within the study area, running between Flamborough Way and March Road. East of March Road, the roadway continues as Shirley's Brook Drive. Within the study area, Morgan's Grant Way has a twolane undivided urban cross-section, sidewalk on the south side of the roadway, and a posted speed limit of 40 km/h. Morgan's Grant Way is not classified as a truck route. Street parking is not permitted on either side of the roadway for the 60m immediately west of March Road, and is not permitted on the north side of the roadway for an additional 50m. Shirley's Brook Drive is a collector roadway that generally runs on an east-west alignment within the study area, running between March Road and Helmsdale Drive. The roadway intersects with Helmsdale Drive in two locations, as it forms a loop east of Helmsdale Drive. West of March Road, the roadway continues as Morgan's Grant Way. Within the study area, Shirley's Brook Drive has a two-lane undivided urban cross-section, sidewalk on the south side of the roadway, and a posted speed limit of 40 km/h. Shirley's Brook Drive is not classified as a truck route. Street parking is permitted.

Solandt Road is a collector roadway that generally runs on an east-west alignment, starting at Hines Road and terminating approximately 450m east of Legget Drive. Within the study area, Solandt Road has a two-lane urban cross-section and an unposted regulatory speed limit of 50 km/h. Sidewalks are provided along the north side for the entire distance of Solandt Road, as well as the south side between March Road and Legget Drive. Solandt Road is not classified as a truck route. Street parking is permitted.

Flamborough Way is a collector roadway that generally runs on a north-south alignment, running between Halton Terrace and Terry Fox Drive. South of Terry Fox Drive, the roadway continues as Innovation Drive. Flamborough Way has a two-lane undivided urban cross-section, sidewalks on both sides of the roadway, and a posted speed limit of 40 km/h. Flamborough Way is not classified as a truck route. Street parking is permitted.

Innovation Drive is a curvilinear collector roadway, running between Terry Fox Drive and Hines Road. North of Terry Fox Drive, the roadway continues as Flamborough Way. Innovation Drive has a two-lane cross-section that is divided in the vicinity of Terry Fox Drive and undivided elsewhere. sidewalks or pathways on both sides of the roadway, and an unposted speed limit of 50 km/h. Innovation Drive is not classified as a truck route. Street parking is generally permitted.

Hines Road is a collector roadway that generally runs on a north-south alignment between Solandt Road and approximately 320m north of Innovation Drive. The roadway then turns 90-degrees and becomes an east-west roadway for approximately 140m to the west. Within the study area, Hines Road has a two-lane undivided cross-section, no sidewalks, and an unposted speed limit of 50 km/h. Hines Road is not classified as a truck route. Street parking is permitted.

The roadway network of the greater area surrounding the Subject Site is illustrated in **Figure 2**.

#### 2.1.2 Driveways

A review of the existing adjacent driveways along the boundary roads are provided as follows:

#### March Road, east side

• One driveway to an office use at 600 March Road

#### **Terry Fox Drive, north side**

No driveways within 200m of Subject Site

#### Hines Road, east side

50, 70, 84, and 88 Hines Road

#### March Road, west side

• One driveway to an office use at 525 March Road

#### Terry Fox Drive, south side

No driveways within 200m of Subject Site

#### Hines Road, west side

• Six driveways to commercial/office uses at • Five driveways to commercial/office uses at 93-99 Hines Road, 1000 Innovation Drive, and 385 Terry Fox Drive

Figure 2: Roadway Network

Source: GeoOttawa

#### 2.1.3 Intersections

# March Road/Morgan's Grant Way/

#### Shirley's Brook Drive

- Signalized four-legged intersection
- North/South Approaches (March Road): one left turn lane, three through lanes, one bike lane, and one channelized right turn lane
- East Approach (Shirley's Brook Drive): one left turn lane, one through lane, and one channelized right turn lane
- West Approach (Morgan's Grant Way): one shared left turn/through lane and one channelized right turn lane
- Standard crosswalks on all approaches

# March Road/Terry Fox Drive

- Signalized four-legged intersection
- North Approach (March Road): one left turn lane, three through lanes, one bike lane, and one channelized right turn lane
- South Approach (March Road): two left turn lanes, three through lanes, one bike lane, and one channelized right turn lane
- East/West Approaches (Terry Fox Drive): two left turn lanes, two through lanes, one bike lane, and one channelized right turn lane
- Standard crosswalks on all approaches

# March Road/Solandt Road

- Signalized four-legged intersection
- North/South Approaches (March Road): one left turn lane, two through lanes, one bike lane, and one channelized right turn lane
- East Approach (Solandt Road): two left turn lanes, and one shared through/ channelized right turn lane
- West Approach (Solandt Road): one left turn lane, one through lane, and one channelized right turn lane
- Standard crosswalks on all approaches
- Two-stage, left-turn bike boxes for northbound and southbound cyclists

#### <u>Terry Fox Drive/Flamborough Way/</u> <u>Innovation Drive</u>

- Signalized four-legged intersection
- North Approach (Flamborough Way): one left turn lane and one shared through/right turn lane
- South Approach (Innovation Drive): one left turn lane and one shared through/right turn lane
- East/West Approaches (Terry Fox Drive): one left turn lane, one through lane, one bike lane, and one right turn lane
- Standard crosswalks on all approaches

## Innovation Drive/Hines Road

- Unsignalized four-legged intersection
- Stop-controlled on Innovation Drive and access to 70 Hines Road (Royal Canadian Legion)
- Multiple accesses across from west approach
- North Approach (Hines Road): one shared left turn/through/right turn lane
- South Approach (Hines Road): one shared left turn/through/right turn lane
- East Approach (access to 70 Hines Road): one shared left turn/through/right turn lane
- West Approach (Innovation Drive): one shared left turn/through/right turn lane
- Standard crosswalks on west approach (not shown in aerial)

# 2.1.4 Pedestrian and Cycling Facilities

As described in Section 2.1.1, sidewalks are provided on both sides of March Road, and on one or both sides of Terry Fox Drive, Morgan's Grant Way, Shirley's Brook Drive, Solandt Road, Flamborough Way, Innovation Drive, and Hines Road. Asphalt pathways with widths of 3.0m are provided on the south side of Terry Fox Drive west of the Subject Site, and on the outside of Innovation Drive.

In the City of Ottawa's primary cycling network, the Spine Routes within the study area include March Road and Terry Fox Drive, which is also designated as a Crosstown Bikeway west of March Road. The Local Routes within the study area include Shirley's Brook Drive west of Helmsdale Drive, Solandt Road west of Legget Drive, Flamborough Way south of Klondike Road, and the entire lengths of Morgan's Grant Way, Innovation Drive, and Hines Road. Bike lanes are provided along March Road and Terry Fox Drive within the study area.

The pedestrian and cycling network of the greater area surrounding the Subject Site is illustrated in **Figure 3**.

# 2.1.5 Transit

The locations of OC Transpo bus stops in the vicinity of the Subject Site are described in **Table 1**, and are shown in **Figure 4**. A summary of the various routes which serve the study area is included in **Table 2**. Detailed route information and an excerpt from the OC Transpo System Map are included in **Appendix C**.

Figure 3: Pedestrian and Cycling Network

# Table 1: OC Transpo Transit Stops

Stop	Location	<b>Routes Serviced</b>
#1174	East side of Hines Road, south of Innovation Drive	64, 166
#1175	West side of Hines Road, south of Innovation Drive	64, 166
#1176	North side of Innovation Drive, west of Hines Road	64, 166
#1177	South side of Innovation Drive, west of Hines Road	64, 166
#1515	North side of Terry Fox Drive, east of Legget Drive	66, 166
#1536	East side of Innovation Drive, south of Terry Fox Drive	63, 165, 166
#1819	West side of Flamborough Way, south of Allenby Road	63, 64, 165
#1820	East side of March Road, between Terry Fox Drive and Solandt Road	63
#1821	North side of Shirley's Brook Drive, west of Inverary Drive	63, 165
#3057	Innovation Station, between Terry Fox Drive and	63, 64, 110,
(A/B)	Goulbourn Forced Road	165, 166
#4875	North side of Terry Fox Drive, west of March Road	63, 110
#4972	West side of Legget Drive, south of Terry Fox Drive	63, 66, 110, 166
#6149	East side of Legget Drive, south of Terry Fox Drive	63, 66, 110, 166
#6152	North side of Morgan's Grant Way, west of March Road	63, 165

Stop	Location	<b>Routes Serviced</b>
#6155	South side of Terry Fox Drive, west of March Road	63, 110
#6159	South side of Terry Fox Drive, east of Legget Drive	66, 166
#6578	West side of Innovation Drive, south of Terry Fox Drive	63, 165, 166
#7994	West side of March Road, between Terry Fox Drive and Solandt Road	63
#7999	East side of Flamborough Way, south of Allenby Road	63, 64

# Figure 4: OC Transpo Bus Stop Locations

Route	From ↔ To	Frequency
63	Innovation / Briarbrook ↔ Tunney's Pasture / Gatineau	15- to 30-minute headways, seven days per week; all day service
64	Innovation / Morgan's Grant ↔ Tunney's Pasture	15- to 30-minute headways, Monday to Friday; all day service
66	Kanata ↔ Tunney's Pasture / Gatineau	15- to 30-minute headways, Monday to Friday; peak period service
110	Innovation ↔ Fallowfield	30-minute headways, Monday to Friday; no late evening service
165	Innovation ↔ Terry Fox	60-minute headways, Monday to Friday; selected time periods
166	Innovation ↔ Eagleson	Single bus per peak period, Monday to Friday; limited service

#### Table 2: OC Transpo Route Information

#### 2.1.6 Area Traffic Management

There are no Area Traffic Management (ATM) studies within the study area that have been completed or are currently in progress. The following traffic calming measures have been implemented within the study area:

- Morgan's Grant Way: '40 KM/HR MAX' line painting and painted edge lines;
- Shirley's Brook Drive: '40 KM/HR MAX' line painting, centreline flex posts, and painted edge lines;
- Solandt Road: painted edge lines (west of March Road);
- Flamborough Way: '40 KM/HR MAX' line painting and centreline flex posts;
- Innovation Drive: 'SLOW' line painting.

#### 2.1.7 Existing Traffic Volumes

Weekday traffic counts coordinated by Novatech were used to determine the existing pedestrian, cyclist, and vehicular traffic volumes at the study area intersections. These counts were completed on the following dates.

٠	March Road/Morgan's Grant Way/Shirley's Brook Drive	August 4, 2022
٠	March Road/Terry Fox Drive	August 4, 2022
٠	March Road/Solandt Road	August 4, 2022
٠	Terry Fox Drive/Flamborough Way/Innovation Drive	August 9, 2022
٠	Innovation Drive/Hines Road	August 10, 2022

It is acknowledged that City traffic counts were conducted at the study area intersections between 2016 and 2018. City staff have concurred that these counts no longer reflect commuter patterns, with the increased prevalence of 'work from home' and 'hybrid work' arrangements arising from the COVID-19 pandemic, particularly among technology-based companies. Comparing pre-pandemic and post-pandemic data within the study area, traffic volumes are generally significantly lower in post-pandemic conditions.

Along the frontages to the Subject Site, the boundary streets March Road, Terry Fox Drive, and Hines Road approximately have the following average annual daily traffic (AADT) volumes, in vehicles per day (vpd):

- March Road: 21,580 vpd;
- Terry Fox Drive: 10,060 vpd;
- Hines Road: 950 vpd.

All traffic count data previously discussed are included in **Appendix D**. Traffic volumes within the study area are shown in **Figure 5**.

# 2.1.8 Collision Records

Historical collision data from the last five years was obtained from the City's Public Works and Service Department for the study area intersections and midblock segments. Copies of the collision summary reports are included in **Appendix E**.

The collision data has been evaluated to determine if there are any identifiable collision patterns, which are defined in the *2017 TIA Guidelines* as 'more than six collisions in five years' for any one movement. The number of collisions at each intersection from January 1, 2016 to December 31, 2020 is summarized in **Table 3**.

Intersection/							
Street Segment	Approach	Angle	Rear End	Sideswipe	Turning Movement	SMV <sup>(1)</sup> / Other	Total
March Road/Morgan's Grant Way/Shirley's Brook Drive	-	4	12	4	17	1	38
March Road/ Terry Fox Drive	1	2	28	7	2	7	47
March Road/ Solandt Road	-	1	21	1	20	1	44
Terry Fox Drive/Flamborough Way/Innovation Drive	-	4	11	1	3	1	20
Innovation Drive/ Hines Road	-	-	1	-	-	-	1
March Road btwn Morgan's Grant Way and Terry Fox Drive	-	-	2	2	-	2	6
March Road btwn Terry Fox Drive and Solandt Road	-	1	7	2	-	6	16
Terry Fox Drive btwn March Road and Innovation Drive	-	-	3	-	1	1	5
Innovation Drive btwn Terry Fox Drive and Hines Road	-	3	-	-	-	2	5
Hines Road north of Innovation Drive	-	-	-	-	-	1	1

#### Table 3: Reported Collisions

1. SMV = Single Motor Vehicle

### March Road/Morgan's Grant Way/Shirley's Brook Drive

A total of 38 collisions were reported at this intersection over the last five years, of which there were four angle impacts, 12 rear-end impacts, four sideswipe impacts, 17 turning movement impacts, and one single vehicle/other impact. Eleven of the collisions caused injuries, but none caused fatalities. Eleven of the 38 collisions occurred in poor driving conditions. No collisions involved cyclists or pedestrians.

Of the 12 rear-end impacts, four involved northbound vehicles (one left turn incident and three through incidents), two involved southbound vehicles (two through incidents), two involved eastbound vehicles (one through incident and one right turn incident), and four involved westbound vehicles (two through incidents and two right turn incidents).

Of the 17 turning movement impacts, six involved left turns from the northbound approach, one involved a U-turn from the northbound approach, and ten involved left turns from the southbound approach. Turning movement impacts from the southbound approach exceeds the threshold to be considered a collision pattern.

Fully protected left turn phasing for the northbound and southbound left turn movements at March Road/Morgan's Grant Way/Shirley's Brook Drive have recently been implemented. This is anticipated to reduce the frequency of these collisions.

#### March Road/Terry Fox Drive

A total of 47 collisions were reported at this intersection over the last five years, of which there was one approaching impact, two angle impacts, 28 rear-end impacts, seven sideswipe impacts, two turning movement impacts, and seven single vehicle/other impacts. Ten of the collisions caused injuries, but none caused fatalities. Twenty-four of the 47 collisions occurred in poor driving conditions. No collisions involved cyclists or pedestrians.

Of the 28 rear-end impacts, 16 occurred at the northbound approach (including one left turn incident, 14 through incidents, and one right turn incident), seven occurred at the southbound approach (six through incidents and one right turn incident), three occurred at the eastbound approach (one through incident and two right turn incidents), and two occurred at the westbound approach (one through incident and one right turn incident). Through rear-end impacts at the northbound approach exceeds the threshold to be considered a collision pattern. High traffic volumes on March Road, as well as a posted speed limit of 80 km/h, may have been factors in these collisions. There does not appear to be any apparent geometric factors that would make rear-end impacts more likely at this intersection.

Of the seven sideswipe impacts, three occurred at the northbound approach, two occurred at the eastbound approach, and two occurred at the westbound approach.

Of the seven single vehicle/other impacts, two occurred at the northbound approach, two occurred at the southbound approach, two occurred at the eastbound approach, and one occurred at the westbound approach.

#### March Road/Solandt Road

A total of 44 collisions were reported at this intersection over the last five years, of which there was one angle impact, 21 rear-end impacts, one sideswipe impact, 20 turning movement impacts, and one single vehicle/other impact. Six collisions resulted in injuries, but none caused fatalities. Twenty of the 44 collisions occurred in poor driving conditions. None of the collisions involved pedestrians or cyclists.

Of the 21 rear-end impacts, six occurred at the northbound approach (one left turn incident, four through incidents, and one right turn incident), eight occurred at the southbound approach (six through incidents and two right turn incidents), four occurred at the eastbound approach (two through incidents and two right turn incidents), and three occurred at the westbound approach (one through incident and one right turn incidents). Similar to the discussion of the previous intersection, high traffic volumes and operating speeds on March Road may have been factors in these collisions.

Of the 20 turning movement impacts, ten involved a left turning vehicle at the northbound approach, four involved a left turning vehicle at the southbound approach, four involved a U-turning vehicle at the southbound approach, one involved a U-turning vehicle at the eastbound approach, and one involved a left turning vehicle at the westbound approach. Turning movement impacts at the northbound approach exceed the threshold to be considered a collision pattern.

Six of the ten northbound impacts occurred in poor driving conditions, suggesting that environmental conditions may have been a factor in these collisions. Other likely factors include the posted 80 km/h speed limit on March Road, and the significant left turn/opposing through volumes on March Road during the peak hours, which may result in drivers misjudging gaps in traffic or taking more risks when attempting a left turn.

#### Terry Fox Drive/Flamborough Way/Innovation Drive

A total of 20 collisions were reported at this intersection over the last five years, of which there was four angle impacts, 11 rear-end impacts, one sideswipe impact, three turning movement impacts, and one single vehicle/other impact. Six collisions resulted in injuries, but none caused fatalities. Ten of the 20 collisions occurred in poor driving conditions. One collision involved a pedestrian, and none involved cyclists.

Of the 11 rear-end impacts, three occurred at the southbound approach (three through incidents), two occurred at the eastbound approach (two through incidents), and six occurred at the westbound approach (one left turn incident and five through incidents).

#### Innovation Drive/Hines Road

One collision was reported at this intersection over the last five years, which was a rear-end impact at the eastbound approach. This collision did not result in injury, and did not involve any pedestrians or cyclists.

#### March Road between Morgan's Grant Way/Shirley's Brook Drive and Terry Fox Drive

A total of six collisions were reported along this segment over the last five years, of which there were two rear-end impacts, two sideswipe impacts, and two single vehicle/other impacts. Two collisions resulted in injuries, but none caused fatalities. All six collisions occurred in poor driving conditions. None of the collisions involved pedestrians or cyclists.

#### March Road between Terry Fox Drive and Solandt Road

A total of 16 collisions were reported along this segment over the last five years, of which there was one angle impact, seven rear-end impacts, two sideswipe impacts, and six single vehicle/other impacts. Six collisions resulted in injuries, but none caused fatalities. Nine of the 16 collisions occurred in poor driving conditions. None of the collisions involved pedestrians or cyclists.

Of the seven rear-end impacts, five involved northbound vehicles and two involved southbound vehicles. Of the six single vehicle/other impacts, one involved a northbound vehicle and five involved a southbound vehicle.

#### Terry Fox Drive between March Road and Innovation Drive

A total of five collisions were reported along this segment over the last five years, of which there were three rear-end impacts, one turning movement impact, and one single vehicle/other impact. One collision resulted in injuries, but none caused fatalities. Two of the five collisions occurred in poor driving conditions. None of the collisions involved pedestrians or cyclists.

#### Innovation Drive between Terry Fox Drive and Hines Road

A total of five collisions were reported along this segment over the last five years, of which there were three angle impacts and two single vehicle/other impacts. One collision resulted in injuries, but none caused fatalities. One of the five collisions occurred in poor driving conditions. None of the collisions involved pedestrians or cyclists.

#### Hines Road north of Innovation Drive

One collision was reported along this segment over the last five years, which was a single vehicle/ other impact involving a southbound vehicle. This collision did not result in injury, and did not involve any pedestrians or cyclists.

#### 2.2 Planned Conditions

#### 2.2.1 Planned Transportation Projects

The City's *2013 Transportation Master Plan (TMP)* does not identify any upcoming roadway projects within the study area in its 2031 Affordable Road Network.

The City's *2013 TMP* identifies transit improvements in its 2031 Affordable Network and 2031 Network Concept. In the Network Concept, at-grade bus rapid transit (BRT) will be provided on March Road between Highway 417 and the urban boundary. In the Affordable Network, at-grade BRT will be provided on March Road between Highway 417 and Solandt Road, and transit priority measures such as transit priority signals and queue jump lanes will be provided on March Road between Solandt Road and the urban boundary, which will allow for future conversion to BRT.

An excerpt of the Affordable Network and Network Concept maps from the City's *2013 TMP* are shown in **Figure 6** and **Figure 7**.

The City's *2013 Cycling Plan* identifies multiple Phase 2 (2020-2025) cycling infrastructure projects within the vicinity of the Kanata Research Park. Bike lanes will be implemented on Flamborough Way, Innovation Drive, Hines Road, Solandt Road, and Legget Drive, to improve connectivity between the residential and employment areas in northern Kanata. These projects are retained on the Active Transportation Project List in the City's Draft *2023 Transportation Master Plan*.

The City's *2013 Pedestrian Plan* does not identify any pedestrian infrastructure projects within the vicinity of the Kanata Research Park.

### 2.2.2 Other Area Developments

In proximity of the proposed development, there are multiple other residential and mixed-use developments are under construction, approved, or in the approval process. Other developments in the area include the following.

#### 359 Terry Fox Drive and 525 Legget Drive

A TIA was prepared by Novatech in January 2022, in support of a development including a single 30-storey building with 253 apartment dwellings and a 3,877 ft<sup>2</sup> rooftop restaurant. The TIA identified a buildout year of 2024.

#### 570-600 March Road

A TIA was prepared by Stantec in July 2022, in support of a development including 1,900 residential dwellings, 46,000 m<sup>2</sup> of office space, and 11,350 m<sup>2</sup> of retail space. The TIA identified a buildout year of 2032.

#### 706-714 March Road

A TIA was prepared by CGH in December 2020, in support of a development including a 4,165 m<sup>2</sup> GFA supermarket, 350 m<sup>2</sup> GFA fast-food restaurant with drive-through, and 1,500 m<sup>2</sup> GFA of multiunit commercial space. The TIA identified a buildout year of 2023.

Figure 6: Excerpt of the 2031 Affordable RTTP Network

Source: City of Ottawa 2013 TMP

Figure 7: Excerpt of the 2031 RTTP Network Concept

#### 788 March Road

A TIA and three subsequent addenda were prepared by Parsons (originally submitted in August 2018, with the addenda submitted in October 2018, December 2018, and March 2020), in support of a development including 92 apartment dwellings. The TIA identified a buildout year of 2023.

#### 910 March Road

A TIA was prepared by CGH in January 2021, in support of a development including a 1,835 m<sup>2</sup> hardware store, a 234 m<sup>2</sup> restaurant with drive-through, a 191 m<sup>2</sup> coffee shop with drive-through, a 416 m<sup>2</sup> retail store, and a 249 m<sup>2</sup> gas bar. The TIA identified a buildout year of 2022.

#### 1104 Halton Terrace

A TIA was prepared by Novatech in October 2021, in support of a development including a fourstorey building with 86 apartment dwellings. The TIA identified a buildout year of 2024.

#### 2700 Solandt Road and 415 Legget Drive

A TIA was prepared by WSP in March 2022, in support of a development application to convert an existing two-storey office building into a warehouse and construct two new warehouses. In total, the development will result in approximately 32,930 m<sup>2</sup> of new warehouse space. The TIA identified a buildout year of 2023.

#### 2707 Solandt Road

A TIA was prepared by Novatech in January 2020, in support of a development that includes an eight-storey, 198,615 ft<sup>2</sup> office building. The TIA identified a buildout year of 2021.

#### 3026 Solandt Road

A TIA was prepared by CIMA+ in March 2020, in support of a development that includes a fivestorey, 100,000 ft<sup>2</sup> office building. The TIA identified a buildout year of 2021.

#### Kanata North Urban Expansion Area (KNUEA)

The *KNUEA TMP* was prepared by Novatech in June 2016, and estimated that the development of the Kanata North lands has the potential to consist of 960 single-detached homes, 950 street townhomes, 1,040 multi-unit residential dwellings, 400,000 ft<sup>2</sup> GFA of commercial space, three elementary schools, one high school, and a 500-space park and ride. The TMP identified a buildout year of 2026.

#### 2.3 Study Area and Time Periods

The study area for this report includes the boundary roadways March Road, Terry Fox Drive, and Hines Road, as well as the following intersections:

- March Road/Morgan's Grant Way/Shirley's Brook Drive;
- March Road/Terry Fox Drive;
- March Road/Solandt Road;
- Terry Fox Drive/Flamborough Way/Innovation Drive;
- Innovation Drive/Hines Road.

The selected time periods for the analysis are the weekday AM and PM peak hours, as they represent the 'worst case' combination of site generated traffic and adjacent street traffic. Analysis will be completed for the ultimate buildout year 2037. Due to the extended buildout period, a five-year horizon will not be completed. A further review of traffic operations will be provided as each phase proceeds to the Site Plan Control application stage.

#### 2.4 Exemptions Review

This module reviews possible exemptions from the final Transportation Impact Assessment, as outlined in the *2017 TIA Guidelines*. The applicable exemptions for this site are shown in **Table 4**.

Module	Element	Exemption Criteria	Status
<b>Design Review</b>	Component	-	
4.1	<i>4.1.2</i> Circulation and Access	<ul> <li>Only required for site plans</li> </ul>	Exempt
Development Design	<i>4.1.3</i> New Street Networks	<ul> <li>Only required for plans of subdivision</li> </ul>	Exempt
4.2	<i>4.2.1</i> Parking Supply	<ul> <li>Only required for site plans</li> </ul>	Exempt
Parking	<i>4.2.2</i> Spillover Parking	<ul> <li>Only required for site plans where parking supply is 15% below unconstrained demand</li> </ul>	Exempt
<b>Network Impact</b>	Component		
<b>4.5</b> Transportation Demand Management	All elements	<ul> <li>Not required for non-residential site plans expected to have fewer than 60 employees and/or students on location at any given time</li> </ul>	Not Exempt
<b>4.6</b> Neighbourhood Traffic Management	<i>4.6.1</i> Adjacent Neighbourhoods	<ul> <li>Only required when the development relies on local or collector streets for access and total volumes exceed ATM capacity thresholds</li> </ul>	Not Exempt
<b>4.8</b> Network Concept	All elements	<ul> <li>Only required when proposed development generates more than 200 person-trips during the peak hour in excess of the equivalent volume permitted by the established zoning</li> </ul>	Exempt

**Table 4: TIA Exemptions** 

As this TIA is in support of a Zoning By-Law Amendment application, the Design Review components (Modules 4.1 to 4.4) have been omitted from the analysis. Based on the foregoing, the following modules will be included in the TIA report:

### Network Impact Component

- Module 4.5: Transportation Demand Management
- Module 4.6: Neighbourhood Traffic Management
- Module 4.7: Transit
- Module 4.9: Intersection Design

#### 3.0 FORECASTING

#### 3.1 Development-Generated Travel Demand

#### 3.1.1 Trip Generation

#### Existing Trip Generation

The area of the existing buildings at 555, 591, and 603 March Road have been estimated using aerial photography. The existing one-storey athletic facility is estimated to include 18,500 ft<sup>2</sup> of gym space, the existing two-storey office building is estimated to include 78,400 ft<sup>2</sup> GFA of office space, and the existing one-storey retail plaza is estimated to include 15,400 ft<sup>2</sup> GFA of retail space.

The number of trips generated by the existing uses has been estimated using the trip generation rates outlined in the *ITE Trip Generation Manual*, 11<sup>th</sup> Edition, corresponding to the Health/Fitness Club (code 492), General Office Building (code 710), or Strip Retail Plaza (code 822) land uses. Trips estimated using the *ITE Trip Generation Manual* have been converted to person trips using an adjustment factor of 1.28, consistent with the City's 2017 TIA Guidelines. To reflect the prevalence of 'work from home' or 'hybrid work' arrangements, the estimated vehicular volumes that are currently generated by the existing offices has been reduced by 40%. This assumption is based on the comparison of pre-pandemic and post-pandemic traffic counts on Solandt Road and Terry Fox Drive, which shows that 2022 volumes on these roadways have decreased by approximately 35% to 50%.

The estimated number of person trips generated by the existing land uses are shown in **Table 5**.

Land Use	ITE Code	GFA	AM Peak Hour (pph <sup>(1)</sup> )			PM Peak Hour (pph)		
		GIA	IN	OUT	тот	IN	OUT	тот
Health/Fitness Club	492	18,500 ft <sup>2</sup>	16	15	31	47	35	82
General Office Bldg	710	78,400 ft <sup>2</sup>	154	20	174	29	145	174
40% reduction		-61	-8	-69	-11	-58	-69	
Strip Retail Plaza	822	15,400 ft <sup>2</sup>	29	20	49	68	68	136
Total			138	47	185	133	190	323

#### Table 5: Existing Development – Peak Hour Trip Generation

1. pph: Person Trips per Hour

From the previous table, the existing development is estimated to generate approximately 254 person trips during the AM peak hour and 323 person trips during the PM peak hour.

The *TRANS Trip Generation Manual Summary Report*, prepared in October 2020 by WSP, includes data to estimate the mode shares for employment trip generators and commercial trip generators, based on the district. The *TRANS Trip Generation Manual* identifies the Subject Site as being located within the Kanata/Stittsville district. The employment mode shares were only surveyed during the AM peak hour, as employees are assumed to use the same mode to arrive at and depart from work. All trips to/from the athletic facility are assumed to originate or terminate at other sites within Kanata/Stittsville. Therefore, the athletic facility mode shares have been estimated using the 'Within District' mode shares outlined in the *2011 TRANS O-D Survey Report*, for the Kanata/Stittsville district.

The surveyed peak hour mode shares for the existing land uses are summarized in Table 6.

Mode	Trips With	in District	Emplo	yment	Commercial		
Widde	AM	РМ	AM	PM	AM	РМ	
Auto Driver	45%	57%	84%	-	81%	73%	
Auto Passenger	17%	23%	4%	-	12%	22%	
Transit	4%	2%	8%	-	5%	1%	
Cyclist	1%	1%	1%	-	0%	0%	
Pedestrian	19%	12%	3%	-	2%	4%	
Other	15%	6%	-	-	-	-	

#### Table 6: Surveyed Kanata/Stittsville Mode Shares – Existing Uses

For the purposes of this review, the employment mode shares have been applied directly to the trips generated by the existing office building. The commercial mode shares during the PM peak hour have been applied directly to the trips generated by the existing retail uses. The mode shares of the existing athletic facility are assumed to generally follow the surveyed mode shares within the Kanata/Stittsville district (i.e. 55% auto driver, 20% auto passenger, 5% transit, 5% cyclist, and 15% pedestrian). The estimated number of trips generated by the existing uses, broken down by mode share, are included in **Table 7**.

Travel Mode Mode Share			Α	M Peak Ho	ur	PM Peak Hour				
	AM	PM	IN	OUT	ТОТ	IN	OUT	тот		
Fitness	s Perso	n Trips	16	15	31	47	35	82		
Auto Driver	55	5%	8	8	16	26	19	45		
Auto Passenger	20	)%	3	3	6	10	7	17		
Transit	5	%	1	1	2	2	2	4		
Cyclist	5	%	1	1	2	2	2	4		
Pedestrian	15	5%	3	2	5	7	5	12		
Office	e Perso	n Trips	93	12	105	18	87	105		
Auto Driver	84	1%	78	10	88	15	73	88		
Auto Passenger	4	%	4	1	5	1	3	4		
Transit	8	%	7	1	8	2	7	9

#### Table 7: Existing Development – Peak Hour Trips by Mode Share

From the previous table, the existing development is anticipated to generate 144 vehicle trips during the AM peak hour and 233 vehicle trips during the PM peak hour.

The retail land uses is anticipated to generate two types of external peak hour trips: primary and pass-by trips. Primary trips are made for the specific purpose of visiting the site, while pass-by trips are made as intermediate stops on the way to another destination. Peak hour pass-by trips for the existing retail plaza are estimated to account for approximately 40% of all trips, based on the average rate identified in the *ITE Trip Generation Manual*.

The primary and pass-by trips generated by the existing retail plaza are summarized in Table 8.

Trip Type	ΑΜ Ρε	ak Hour (	vph <sup>(1)</sup> )	PM Peak Hour (vph)			
пр туре	IN	OUT	тот	IN	OUT	ТОТ	
Existing Strip Retail Trips	24	16	40	50	50	100	
Adjustment for Pass-by Trips (40%)	-8	-8	-16	-20	-20	-40	
Primary Trips (60%)	16	8	24	30	30	60	

#### Table 8: Existing Strip Retail – Primary and Pass-by Trips

1. vph: Vehicle Trips per Hour

It has been assumed that no existing trips generated by the Subject Site are internally captured, based on the general layout of the existing athletic facility, retail plaza, and office building. This assumption allows for a more conservative analysis.

#### Proposed Trip Generation

The proposed development is assumed to include 2,100 high-rise dwellings, 154,178 ft<sup>2</sup> GFA of office space, and 31,482 ft<sup>2</sup> GFA of retail space.

The *TRANS Trip Generation Manual Summary Report* includes data to estimate the mode shares for residential trip generators in the Kanata/Stittsville district, in addition to the employment and commercial trip generators described previously. The surveyed mode shares for the proposed land uses are included in **Table 9**.

Mode	Resid	lential	Emplo	yment	Commercial					
INIOUE	AM	PM	AM	PM	AM	PM				
Auto Driver	42%	55%	84%	-	81%	73%				
Auto Passenger	26%	19%	4%	-	12%	22%				
Transit	28%	21%	8%	-	5%	1%				
Cyclist	0%	0%	1%	-	0%	0%				
Pedestrian	4%	5%	3%	-	2%	4%				

#### Table 9: Surveyed Kanata/Stittsville Mode Shares – Proposed Uses

The assumed residential mode shares for the proposed residences have been developed by taking the average of the surveyed mode shares for residences in the Kanata/Stittsville district. Since the 2031 Affordable Transit Network will only include bus rapid transit along March Road between Solandt Road and Highway 417, and the surveyed transit share is already notably high at 21% to 28% during the peak hours, the transit share for the proposed residential development has not been increased. The assumed employment mode shares for the proposed offices have been adjusted by increasing the transit share to 20% from 8% and decreasing the driver share accordingly from 84% to 72%, to account for planned bus rapid transit to Solandt Road. The assumed commercial mode shares for the proposed retail uses have been adjusted by considering the PM peak hour only, increasing the transit share to 10% from 1%, and decreasing the driver share accordingly from 73% to 64%. This can be summarized as follows.

# **Residential Mode Shares**

- Auto Driver: 49%
- Auto Passenger: 22%
- Transit: 25%
- Cyclist: 0%
- Pedestrian: 4%

# Employment Mode Shares

- Auto Driver: 72%
- Auto Passenger: 4%
- Transit: 20%
- Cyclist: 1%
- Pedestrian: 3%

# **Commercial Mode Shares**

- Auto Driver: 64%
- Auto Passenger: 22%
- Transit: 10%
- Cyclist: 0%
- Pedestrian: 4%

# Proposed Residential Trip Generation

The *TRANS Trip Generation Manual Summary Report*, prepared in October 2020 by WSP, includes data to estimate the trip generation for residential uses, divided into single-family detached housing, low-rise multifamily housing (one or two storeys), and high-rise multifamily housing (three or more storeys). For the High-Rise Multifamily Housing land use, the process of converting the trip generation estimates from peak period to peak hour is shown in the following tables. The estimated number of person trips generated by the proposed dwellings for the AM and PM peak periods are shown in **Table 10**. A breakdown of these trips by mode share is shown in **Table 11**.

# Table 10: Proposed Residential – Peak Period Trip Generation

Land Use	TRANS Data Units		AM Pea	ak Period	(ppp <sup>(1)</sup> )	PM Peak Period (ppp)		
Land Use	Rate	Units	IN	OUT	тот	IN	OUT	тот
High-Rise Multifamily Housing	AM: 0.80 PM: 0.90	2,100	521	1,159	1,680	1,096	794	1,890

1. ppp: Person Trips per Peak Period

# Table 11: Proposed Residential – Peak Period Trips by Mode Share

10010 11. 1 10000		I bait i								
Travel Mode	Mode Share	A	I Peak Peri	od	PM Peak Period					
	woue share	IN	OUT	ТОТ	IN	OUT	ТОТ			
Residential Trips		521	1,159	1,680	1,096	794	1,890			
Auto Driver	49%	255	568	823	537	389	926			
Auto Passenger	22%	115	255	370	241	175	416

Cyclist	0%	-	-	-	-	-	-			
Pedestrian	4%	21	46	67	44	32	76			

Table 4 of the *TRANS Trip Generation Manual* includes adjustment factors to convert the estimated number of trips generated for each mode from peak period to peak hour. A breakdown of the peak hour trips by mode is shown in **Table 12**.

# Table 12: Proposed Residential – Peak Hour Trips by Mode Share

14010 12.110000										
Travel Mode	Adj. F	actor	Α	AM Peak Hour			PM Peak Hour			
	AM	PM	IN	OUT	тот	IN	OUT	тот		
Auto Driver	0.48	0.44	123	273	396	236	171	407		
Auto Passenger	0.48	0.44	55	122	177	106	76	182		
Transit	0.55	0.47	71	160	231	129	94	223		
Cyclist	0.58	0.48	-	-	-	-	-	-		
Pedestrian	0.58	0.52	12	27	39	23	17	40		
Peak Hour Person Trips			261	582	843	494	358	852		

From the previous table, the proposed residential dwellings are estimated to generate 843 person trips during the AM peak hour (including 396 vehicle trips) and 852 person trips during the PM peak hour (including 407 vehicle trips).

## Proposed Office and Retail Trip Generation

The number of trips generated by the proposed office and retail uses has been estimated using the trip generation rates outlined in the *ITE Trip Generation Manual*, 11<sup>th</sup> Edition, corresponding to the General Office Building (code 710) or Strip Retail Plaza (code 822) land uses. A 40% reduction has not been applied to the estimated number of office-generated trips, as this maintains a conservative analysis. The estimated number of person trips generated by the proposed office and retail uses are shown in **Table 13**, and are broken down by mode share in **Table 14**.

Table 10. 1 Toposed Office/Retail - 1 cak floar trip Generation												
Land Use	ITE Code	GFA		eak Hour	(pph)	PM Peak Hour (pph)						
			IN	OUT	тот	IN	OUT	тот				
General Office Bldg	710	154,178 ft <sup>2</sup>	274	37	311	52	253	305				
Strip Retail Plaza	822	31,482 ft <sup>2</sup>	47	31	78	113	112	225				
	321	68	389	165	365	530						

#### Table 13: Proposed Office/Retail – Peak Hour Trip Generation

#### Table 14: Proposed Office/Retail – Peak Hour Trips by Mode Share

	Transit		11	71	23	62	85	
	Cyclist		1	3	1	2	3	
	Pedestrian	10	2	12	6	12	19	

From the previous table, the proposed office and retail uses are estimated to generate 389 person trips during the AM peak hour (including 274 vehicle trips) and 530 person trips during the PM peak hour (including 363 vehicle trips).

The proposed development as a whole is estimated to generate 1,232 person trips during the AM peak hour (including 670 vehicle trips) and 1,382 person trips during the PM peak hour (including 770 vehicle trips). A detailed breakdown of the estimated trip generation by mode share is included in **Table 15**.

Travel Mode		AM Peak Hou	r	PM Peak Hour				
	IN	OUT	тот	IN	OUT	тот		
Total Person Trips	582	650	1,232	659	723	1,382		
Auto Driver	350	320	670	345	425	770		
Auto Passenger	77	129	206	132	111	243		
Transit	131	171	302	152	156	308		
Cyclist	2	1	3	1	2	3		
Pedestrian	22	29	51	29	29	58		

#### Table 15: Proposed Development – Total Peak Hour Trips

Subtracting the existing site-generated volumes shown in **Table 7** from the proposed site-generated volumes shown in **Table 15**, the proposed development is estimated to generate a net additional 1,047 person trips (including 536 vehicle trips) during the AM peak hour, and a net additional 1,059 person trips (including 537 vehicle trips) during the PM peak hour.

#### Pass-by and Internally Captured Trips

Some trips are anticipated to be internally captured within the Subject Site, as people may both live and work within the Subject Site, and some resident/employee trips may involve travelling between home, work, and the proposed retail areas on-site. Additionally, the proposed retail uses are anticipated to generate both primary and pass-by trips. The results of adjusting for internally captured trips and pass-by trips is included below. Per the example included in the *TRANS Trip Generation Manual*, internally captured trips between the proposed land uses have been estimated using the methodology outlined in the *ITE Trip Generation Handbook* and the *NCHRP Report 684 Estimator* spreadsheet tool (developed by the Texas A&M Transportation Institute in 2010). The completed spreadsheets are included in **Appendix F**, and include internal trip adjustments for the driver, transit, and non-motorized modes.

A summary of the internally captured and external trips generated by the proposed development are included in **Table 16**.

	Table 16: Proposed Development – Internally Captured Trips											
Trip Type						-						
		IN	OUT	тот	IN	OUT	тот					
	Vehicle	123	273	396	236	171	407

· · · · ·	Non-Auto	12	26	38	21	16	37					
	Vehicle	197	27	224	37	182	219					
Office Trips	Transit	55	7	62	11	51	62					
	Non-Auto	10	2	12	3	10	13					
	Vehicle	-13	-8	-21	-12	-11	-23					
Internal Adjustment	Transit	-4	-2	-6	-4	-3	-7					
-	Non-Auto	-	-1	-1	-2	-	-2					
	Vehicle	184	19	203	25	171	196					
External Trips	Transit	51	5	56	7	48	55					
	Non-Auto	10	1	11	1	10	11					

#### Table 16: Proposed Development – Internally Captured Trips

	Trip Type		M Peak Ho	ur	PM Peak Hour			
		IN	OUT	тот	IN	OUT	тот	
	Vehicle	30	20	50	72	72	144	
Retail Trips	Transit	5	4	9	12	11	23	
-	Non-Auto	2	1	3	4	4	8	
	Vehicle	-14	-11	-25	-17	-27	-44	
Internal Adjustment	Transit	-2	-2	-4	-3	-3	-6	
	Non-Auto	-1	-	-1	-	-1	-1	
	Vehicle	16	9	25	55	45	100	
External Trips	Transit	3	2	5	9	8	17	
	Non-Auto	1	1	2	4	3	7	

Peak hour pass-by trips for the proposed retail areas are estimated to account for approximately 40% of all trips, matching the assumption for the existing strip retail uses. The primary and pass-by trips generated by the proposed retail uses are summarized in **Table 17**.

#### Table 17: Proposed Retail – Primary and Pass-by Trips

Trip Type	AM P	eak Hour	(vph)	PM Peak Hour (vph)			
пр туре	IN	OUT	тот	IN	OUT	тот	
Retail External Vehicle Trips	16	9	25	55	45	100	
Adjustment for Pass-by Trips (40%)	-5	-5	-10	-20	-20	-40	
Primary Trips (60%)	11	4	15	35	25	60	

## 3.1.2 Trip Distribution

The assumed distribution of trips generated by the proposed residential and existing/proposed office uses have been estimated by considering the typical commuter patterns (based on AM peak outbound volumes and PM peak inbound volumes for residential trips, and vice versa for office trips) and logical trip routing. Additional trips have been distributed to/from the north for the proposed offices, to account for the extensive KNUEA developments north of the study area. As a result, the assumed trip distribution for the residential and office uses is summarized as follows:

#### Proposed Residential

- 20% to/from the north via March Road;
- 45% to/from the south via March Road;
- 10% to/from the east via Terry Fox Drive;
- 10% to/from the east via Solandt Road;
- 10% to/from the west via Terry Fox Drive;
- 5% to/from the west via Innovation Drive.

#### Proposed Office

- 35% to/from the north via March Road;
- 5% to/from the north via Flamborough Way;
- 35% to/from the south via March Road;
- 5% to/from the east via Terry Fox Drive;
- 5% to/from the east via Shirley's Brook Drive;
- 10% to/from the west via Terry Fox Drive;
- 5% to/from the west via Morgan's Grant Way.

#### Existing Office

- 25% to/from the north via March Road;
- 5% to/from the north via Flamborough Way;
- 40% to/from the south via March Road;
- 5% to/from the east via Terry Fox Drive;
- 5% to/from the east via Shirley's Brook Drive;
- 15% to/from the west via Terry Fox Drive;
- 5% to/from the west via Morgan's Grant Way.

The assumed distribution of trips generated by the existing athletic facility and existing/proposed retail uses have been estimated based on the two-way midday peak hour volumes, as these uses are anticipated to have a more regional draw. As a result, the assumed trip distribution for the athletic facility and retail uses can be summarized as follows:

## Existing or Proposed Retail and Existing Athletic Facility

- 25% to/from the north via March Road;
- 5% to/from the north via Flamborough Way;
- 30% to/from the south via March Road;
- 5% to/from the east via Terry Fox Drive;
- 5% to/from the east via Shirley's Brook Drive;
- 5% to/from the east via Solandt Road;
- 10% to/from the west via Terry Fox Drive;
- 5% to/from the west via Morgan's Grant Way;
- 10% to/from the west via Innovation Drive.

All pass-by trips for the existing or proposed retail uses are assumed to occur on March Road, as it carries the majority of traffic volumes throughout the study area and acts as the primary arterial roadway through northern Kanata.

# 3.1.3 Trip Assignment

#### Existing Land Uses

The existing office building are accessed via one full-movement access to Terry Fox Drive and one RIRO access to March Road. The assumed trip assignment for the office use is summarized in **Table 18**.

Origin/Destination	March Road Access	Terry Fox Drive Access
to the north via March Road	-	100%
from the north via March Road	100%	-
to the south via March Road	100%	-
from the south via March Road	-	100%
to/from the north via Flamborough Way	-	100%
to/from the east via Terry Fox Drive	-	100%
to/from the west via Terry Fox Drive	-	100%

## Table 18: Existing Office – Trip Assignment

The existing retail plaza and athletic facility are accessed via the same two RIRO accesses to March Road. Based on the layout of these sites, all retail trips have been assigned to the northerly access (including all pass-by trips), and all athletic facility trips have been assigned to the southerly access. Based on the existing U-turn volumes at March Road/Terry Fox Drive and March Road/Solandt Road, it has been conservatively assumed that no trips travelling to/from the Subject Site perform a U-turn, and use other roadways within the Kanata Research Park. For example, inbound trips originating from the south via March Road or east via Solandt Road are assumed to travel on Legget Drive to Terry Fox Drive, and outbound trips destined to the north via Flamborough Way or west via Terry Fox Drive are assumed to travel on Solandt Road, Hines Road, and Innovation Drive.

# Proposed Land Uses

The Subject Site is anticipated to include a full-movement access to March Road opposite the proposed signalized access to the Nokia development at 570-600 March Road (discussed further in Section 3.2.1), and full-movement accesses to Terry Fox Drive and Hines Road. In accordance with the previous section, all pass-by trips have been assigned to the proposed March Road access. All primary trips have been assigned to the proposed accesses as shown in **Table 19**.

Origin/Destination	March Road Access	Terry Fox Drive Access	Hines Road Access
to/from the north via March Road	50%	50%	-
to/from the north via Flamborough Way	-	100%	-
to/from the south via March Road	100%	-	-
to/from the east via Terry Fox Drive	-	100%	-
to/from the east via Shirley's Brook Drive	50%	50%	-
to/from the east via Solandt Road	100%	-	-
to/from the west via Terry Fox Drive	-	100%	-
to/from the west via Morgan's Grant Way	50%	50%	-
to/from the west via Innovation Drive	-	-	100%

# Table 19: Proposed Development – Trip Assignment

# 3.2 Background Traffic

# 3.2.1 Other Area Developments

As first discussed in Section 2.2.2, there are multiple development applications for sites in proximity of the proposed development that are under construction, approved, or in the approval process. Traffic generated by these developments have been accounted for as background traffic. Relevant excerpts for the transportation studies in support of each development listed below are included in **Appendix G**.

# 359 Terry Fox Drive and 525 Legget Drive

The proposed development includes 253 apartment dwellings and 3,877 ft<sup>2</sup> GFA of restaurant space, and the associated TIA identified a buildout year of 2024. Therefore, volumes generated by this development have been added to the 2037 background volumes.

# 570-600 March Road

The proposed redevelopment of the Nokia campus includes 1,900 residential dwellings, 46,000 m<sup>2</sup> of office space, and 11,350 m<sup>2</sup> of retail space. The TIA identified a buildout year of 2032. Therefore, the net additional volumes generated by this development have been added to the 2037 background volumes. To reflect the prevalence of 'work from home' or 'hybrid work' arrangements, the estimated vehicular volumes that are currently generated by the existing offices has been reduced by 40%. This assumption is based on the comparison of pre-pandemic and post-pandemic traffic counts on Solandt Road and Terry Fox Drive, which shows that 2022 volumes on these roadways have decreased by approximately 35% to 50%.

The development includes a signalized, full-movement access to March Road. While the exact location of this signalized access has not been determined, it has been assumed that this signal will be located at the southern limit of the Subject Site, so that both the Nokia redevelopment and this proposed development can use this signal.

#### 706-714 March Road

The proposed development includes a 4,165 m<sup>2</sup> GFA supermarket, 350 m<sup>2</sup> GFA fast-food restaurant with drive-through, and 1,500 m<sup>2</sup> GFA of multi-unit commercial space. The associated TIA identified a buildout year of 2023. Therefore, volumes generated by this development have been added to the 2037 background volumes.

#### 788 March Road

The proposed development includes 92 apartment dwellings, and the associated TIA identified a buildout year of 2023. Therefore, volumes generated by this development have been added to the 2037 background volumes.

#### 910 March Road

The proposed development includes a 1,835 m<sup>2</sup> hardware store, a 234 m<sup>2</sup> restaurant with drivethrough, a 191 m<sup>2</sup> coffee shop with drive-through, a 416 m<sup>2</sup> retail store, and a 249 m<sup>2</sup> gas bar. The associated TIA identified a buildout year of 2022. Therefore, volumes generated by this development have been added to the 2037 background volumes.

#### 1104 Halton Terrace

The proposed development includes 86 apartment dwellings. As this did not meet the trip generation trigger, the TIA did not include a distribution of development-generated traffic to its study area. Therefore, volumes generated by this development have not been added to the 2037 background volumes.

#### 2700 Solandt Road and 415 Legget Drive

The proposed development includes approximately 32,930 m<sup>2</sup> of new warehouse space. The associated TIA identified a buildout year of 2022. Therefore, volumes generated by this development have been added to the 2037 background volumes.

#### 2707 Solandt Road

The proposed development includes an eight-storey, 198,615 ft<sup>2</sup> office building. While the associated TIA identified a buildout year of 2021, this development has not been built out. Therefore, volumes generated by this development have been added to the 2037 background volumes.

#### 3026 Solandt Road

The proposed development includes a five-storey, 100,000 ft<sup>2</sup> office building. While the associated TIA identified a buildout year of 2021, this development has not been built out. Therefore, volumes generated by this development have been added to the 2037 background volumes.

#### Kanata North Urban Expansion Area (KNUEA)

The KNUEA TMP was prepared by Novatech in June 2016, and estimated that the development of the Kanata North lands has the potential to consist of 960 single-detached homes, 950 street townhomes, 1,040 multi-unit residential dwellings, 400,000 ft<sup>2</sup> GFA of commercial space, three elementary schools, one high school, and a 500-space park and ride. The TMP originally identified a buildout year of 2026. Therefore, volumes generated by this development have been added to the 2037 background volumes.

# 3.2.2 General Background Growth Rate

A review of the City's *Strategic Long-Range Model* (comparing snapshots of 2011 and 2031 AM peak hour volumes) and *2013 TMP* has been conducted. The snapshots are included in **Appendix H**. A review of the long-range snapshots estimate negligible growth in traffic volumes on March Road, and the magnitude of traffic volumes modelled on Terry Fox Drive and Innovation Drive are generally not large enough to estimate a consistent growth rate. Since background volumes from all of the other area developments listed above have been added to the study area volumes, an annual background growth rate has not been applied.

# 3.2.3 March Road BRT Corridor

The assumed existing transit modal shares within the study area follow the modal shares outlined in the Existing Conditions report of the *KNUEA TMP*. The TMP included a Transportation Area of Interest (TAI) screenline located immediately south of Terry Fox Drive between Second Line Road and March Valley Road, where person trips for vehicle and non-auto modes were estimated using observed traffic, transit rider, cyclist, and pedestrian volumes. Passenger volumes were estimated using a private vehicle occupancy of 1.2. This analysis was performed because the KNUEA is located at the boundary between the Kanata/Stittsville and Rural West regions as shown in the *2011 TRANS O-D Survey Report*.

The results of this exercise indicated that, at the TAI screenline, the existing transit share is 7% and 5% in the weekday AM and PM peak hours, respectively. Existing mode shares at the TAI screenline were not found to be reflective of the mode shares presented for the Kanata/Stittsville district, since the rapid transit stations within Kanata/Stittsville are centralized along Highway 417, which is approximately 4.5km south of the screenline. Conversely, the existing shares are more aligned with those presented for the Rural West district. As the TAI screenline was located immediately south of Terry Fox Drive, and is therefore located within the study area, the existing transit shares of 7% in the AM peak hour and 5% in the PM peak hour have been assumed for this study.

Exhibit 2.13 of the City's *2013 TMP* identifies a transit share target of 21% within the Kanata/ Stittsville district by 2031. Within the study area, it is anticipated that the 21% transit share target will be achieved through the implementation of the planned RTTP projects on March Road, as described in Section 2.2.1. Consistent with the *KNUEA TMP*, a reduction in the background vehicular volumes has been made in the buildout year 2037, to reflect the 21% transit share target and the planned implementation of transit priority measures on March Road.

A functional design of median BRT lanes on March Road was included as part of the *West Transitway* Connection EPR, prepared by Delcan in October 2013. The relevant pages of the functional design are included in **Appendix I**.

# 3.2.4 Diverted/Cut-Through Traffic

It is assumed that the proposed development will create the potential for diverted or cut-through traffic, using the proposed signalized intersection to March Road. A proportion of background volumes on the following routes have been re-routed through the subject site for the 2037 total traffic scenario:

- 50% of the northbound and southbound through volumes at Hines Road/Innovation Drive have been re-routed to travel through the Subject Site rather than on Hines Road;
- 10% of the northbound right turn, southbound left turn, eastbound through, westbound left turn, westbound through, and westbound right turn volumes at March Road/Solandt Road have been re-routed to perform those movements at March Road/Nokia Access/Site Access instead.

#### 3.3 Volume Figures

The figures below present the following traffic conditions:

- Existing site-generated traffic volumes are shown in Figure 8;
- Proposed site-generated traffic volumes are shown in Figure 9;
- Net site-generated traffic volumes are shown in Figure 10;
- Other area development-generated traffic volumes in 2037 are shown in Figure 11;
- Background traffic volumes in 2037 are shown in Figure 12;
- Diverted traffic volumes in 2037 are shown in Figure 13;
- Total traffic volumes in 2037 are shown in Figure 14.

#### 3.4 Demand Rationalization

A review of the existing and background intersection operations has been conducted to determine where traffic volumes exceed capacity within the study area. The intersection parameters used in the analysis are consistent with the *2017 TIA Guidelines* (Saturated Flow Rate: 1,800 vphpl, Peak Hour Factor: 0.9 in existing conditions and 1.0 in future conditions). Per Exhibit 22 of the *Multi-Modal Level of Service (MMLOS) Guidelines*, the target vehicular level of service (Auto LOS) at all study area intersections is an Auto LOS D in existing conditions. This equates to a vehicle-to-capacity (v/c) ratio of 0.90 at signalized intersections, and a maximum delay of 35 seconds at unsignalized intersections. In future conditions, the *MMLOS Guidelines* identify a target Auto LOS E for March Road/Solandt Road and March Road/Nokia Access, as the 2031 Affordable Network identifies a future transit station within 600m of these intersections. Signal timing plans have been obtained from the City, and are included in **Appendix J**.

# Figure 11: Other Area Development-Generated Volumes

# Figure 13: 2037 Diverted Volumes

# Figure 14: 2037 Total Volumes

# 3.4.1 Existing Traffic Conditions

Intersection capacity analysis has been conducted for the existing traffic conditions. The results of the analysis are summarized in **Table 20** for the weekday AM and PM peak hours. Detailed reports are included in **Appendix K**.

		Critic	al Move	ements	Intersection			
Intersection	Period	Max v/c or Delay	LOS	Mvmt	v/c	Delay	LOS	
March Road/Morgan's Grant	AM	0.60	Α	WBL	0.28	14 sec	А

Hines Road <sup>(2)</sup>	PM	9 sec	Α	EB		-		

## Table 20: Existing Traffic Operations

1. Signalized intersection

2. Unsignalized intersection

From the previous table, all study area intersections operate at an acceptable level of service during the AM and PM peak hours.

# 3.4.2 2037 Background Traffic Conditions

Intersection capacity analysis has been conducted for the 2037 background traffic conditions. A reduction in the background vehicular volumes has been applied to reflect a higher transit modal share as a result of rapid transit and transit priority measures that will be implemented on March Road. Within the study area and the City's Affordable Network, median bus lanes are anticipated on March Road at Solandt Road, and transit priority measures are anticipated on March Road north of Solandt Road. Therefore, the intersection geometry at March Road/Solandt Road and the signal timings at March Road/Morgan's Grant Way/Shirley's Brook Drive, March Road/Terry Fox Drive, and March Road/Solandt Road have been adjusted to reflect these measures. Other parameters have also been adjusted, consistent with the transportation assessments conducted by Delcan as part of the *West Transitway Connection* EPR. It should be noted that the transportation assessments evaluated the transitway alternatives based on person travel time rather than vehicular level of service.

Adjustments to the March Road/Morgan's Grant Way/Shirley's Brook Drive and March Road/Terry Fox Drive intersections are summarized as follows:

- Reduction of speed limit on March Road from 80 km/h to 60 km/h;
- Amber plus all-red timings adjusted to reflect increased clearance requirements and changes in the speed limit on March Road;
- Cycle length maintained at 130 seconds, but with splits and offsets optimized.

Adjustments to the March Road/Solandt Road intersection are summarized as follows:

- Adjustments to all right turn curb radii and turn lane lengths as required;
- Removal of the existing northbound right turn lane, southbound right turn lane, and one of the westbound left turn lanes;
- Addition of one auxiliary westbound right turn lane;
- Reduction of speed limit on March Road from 80 km/h to 60 km/h;
- Minimum pedestrian crossing times for eastbound/westbound pedestrians consistent with a two-stage crossing;
- Northbound/southbound left turn phases adjusted to become fully protected;
- Eastbound left turn phase adjusted to become permitted (no fully protected phase);
- Westbound left turn phase adjusted to become permitted during AM peak hour and protected plus permitted during PM peak hour (no fully protected phase);
- Amber plus all-red timings adjusted to reflect increased clearance requirements and changes in the speed limit on March Road;
- Cycle length maintained at 130 seconds, but with splits and offsets optimized.

A screenshot of the geometric changes to March Road/Solandt Road is included in Figure 15.

## Figure 15: Planned Modifications to March Road/Solandt Road

Analysis of the 2037 background volumes also includes the future signalized intersection at 570-600 March Road (referred to as March Road/Nokia Access). As the intersection is approximately located where three southbound lanes on March Road reduce to two, the location of this reduction has been shifted further south for the purposes of the Synchro analysis. This assumption is carried forward for the total traffic analysis as well (i.e. the southbound approach of this intersection will include one left turn lane into the Nokia development, two through lanes, and one shared through/ right turn lane into the Subject Site).

The results of the analysis are summarized in **Table 21** and **Table 22** for the weekday AM and PM peak hours. Detailed reports are included in **Appendix L**.

		Critic	al Move	ements		ntersectio	n		
Intersection	Period	Max v/c or Delay	LOS	Mvmt	v/c	Delay	LOS

1: Indicates the storage length for auxiliary lanes or the spacing to the nearest upstream intersection/access for through lanes

2. Storage requirements for SBL and WBL movements to be confirmed as part of future Site Plan Control applications

#: Volume for the 95<sup>th</sup> percentile cycle exceeds capacity

m: Queue is metered by an upstream signal

~: Approach is above capacity

From the previous tables, critical movements at the study area intersections generally operate at an acceptable level of service, with the exception of the westbound left turn movement at March Road/Solandt Road during the PM peak hour. Per the functional design of the March Road BRT, one of the westbound left turn lanes will be removed. It is anticipated that this is the primary driver for the failing vehicular level of service of this movement.

Analysis of an alternate scenario has been conducted, where dual westbound left turn lanes at March Road/Solandt Road are maintained, with a fully protected left turn phase. Detailed Synchro reports of this scenario are included in **Appendix L**. A comparison of the northbound through/right turn, southbound through/right turn, and westbound left turn movements in both scenarios is provided below:

- AM Peak Hour
  - Northbound through/right turn: v/c downgrades from 0.76 to 0.85 (Auto LOS D);
  - Southbound through/right turn: v/c downgrades from 1.00 to 1.07 (Auto LOS F);
  - Westbound left turn: v/c downgrades from 0.53 to 0.68 (Auto LOS B).
- PM Peak Hour
  - Northbound through/right turn: v/c downgrades from 0.91 to 1.03 (Auto LOS F);
  - Southbound through/right turn: v/c downgrades from 0.76 to 0.87 (Auto LOS D);
  - Westbound left turn: v/c improves from 1.65 to 0.97 (Auto LOS E).

Given the level of improvement for the westbound left turn movement during the PM peak hour, it is recommended that the dual westbound left turns remain at March Road/Solandt Road after the median BRT is implemented. Therefore, this recommendation has been carried forward to the 2037 total traffic analysis.

The movements that are operating at an Auto LOS F above would require the following volume reductions to achieve the target Auto LOS E:

- AM Peak Hour
  - Southbound through/right turn (v/c: 1.07): approximately 110 vehicles required.
- PM Peak Hour
  - Northbound through/right turn (v/c: 1.03): approximately 45 vehicles required.

Detailed Synchro reports with these reductions applied is also included in Appendix L.

#### 4.0 ANALYSIS

#### 4.1 Transportation Demand Management

#### 4.1.1 Context for TDM

The exact number of proposed residential dwellings and GFAs for the proposed office and retail uses will be determined as part of subsequent Site Plan Control application(s). For the purposes of this TIA, the unit statistics outlined in the concept plan have been considered, which can be described as follows:

- 2,100 residential dwellings, which will include a mix of studio, one-bedroom, two-bedroom, and three-bedroom units;
- 154,178 ft<sup>2</sup> GFA of office space;
- 31,482 ft<sup>2</sup> GFA of retail space.

# 4.1.2 Need and Opportunity

The Subject Site is located within the 'Kanata North Economic District,' 'Evolving Neighbourhood' overlay, and is designated as 'Corridor – Mainstreet' (March Road) and 'Corridor – Minor' (Terry Fox Drive) on Schedule B5 of the City of Ottawa's Official Plan (2021, Council Adopted). The implemented zoning for the properties are either 'General Industrial' IG6 and 'Business Park Industrial Zone' IP6[1149] and IP6[1084]. As first discussed in Section 3.1.1, the assumed mode shares for the proposed development are generally consistent with the surveyed residential, employment, and commercial mode shares of the Kanata/Stittsville district (as outlined in the *TRANS Trip Generation Manual*), with increased transit shares for the proposed office and retail uses.

The purpose of the proposed development is to become an 'activity centre,' designed for residents or employees to live, work, learn, play, and access daily needs without a car. Therefore, it is anticipated that the assumed driver share target will not be exceeded. Additionally, bus rapid transit along March Road is identified as a future improvement for commuters and residents of Kanata North.

## 4.1.3 TDM Program

A review of the City's *TDM Measures Checklist* has been conducted by the proponent (included in **Appendix M**). While the final list of TDM measures to be implemented by the proposed development will be confirmed at the Site Plan Control application stage, the proponent has agreed to consider the following measures at this time:

#### Non-Residential

- 1.1.1 Designate an internal coordinator, or contract with an external coordinator;
- 2.1.1 Display local area maps with walking/cycling access routes and key destinations at major entrances;
- 3.1.1 Display relevant transit schedules and route maps at entrances;
- 3.1.2 Provide online links to OC Transpo and STO information;
- 4.1.1 Provide a dedicated ridematching portal at OttawaRideMatch.com;
- 5.1.1 Contract with provider to install on-site bikeshare station for use by commuters and visitors;
- 5.2.1 Contact with provider to install on-site carshare vehicles and promote their use by tenants;
- 6.1.1 Charge for long-term parking (daily, weekly, monthly);
- 6.1.3 Charge for short-term parking (hourly);
- 7.1.1 Provide a multimodal travel option information package to new/relocating employees and students;
- 8.2.1 Encourage flex work hours;
- 8.3.1 Provide local business travel options that minimize the need for employees to bring a personal car to work;
- 8.5.1 Provide on-site amenities/services to minimize mid-day or mid-commute errands.

#### <u>Residential</u>

- 1.1.1 Designate an internal coordinator, or contract with an external coordinator;
- 2.1.1 Display local area maps with walking/cycling access routes and key destinations at major entrances;
- 3.1.1 Display relevant transit schedules and route maps at entrances;
- 4.1.1 Contract with provider to install on-site bikeshare station;
- 4.2.1 Contract with provider to install on-site carshare vehicles and promote their use by residents;
- 5.1.1 Unbundle parking cost from purchase price;
- 5.1.2 Unbundle parking cost from monthly rent;
- 6.1.1 Provide a multimodal travel option information package to new residents.

#### 4.2 Neighbourhood Traffic Management

The *2017 TIA Guidelines* identify two-way peak hour traffic volume thresholds for considering a Neighbourhood Traffic Management (NTM) plan should be developed, when the site relies on local or collector roadways for access. The NTM two-way volume thresholds are as follows:

- 120 vph for local roadways;
- 300 vph for collector roadways;
- 600 vph for major collector roadways.

While March Road and Terry Fox Drive are arterial roadways, the proposed development will also include an access to Hines Road (i.e. a collector roadway). Based on the two-way NTM thresholds for collector roadways and the 2037 total traffic peak hour volumes on Hines Road, peak hour traffic on Hines Road is not anticipated to exceed the City's NTM threshold.

#### 4.3 Transit

Based on the trip generation estimates presented in Section 3.1.1 and **Table 16**, the proposed development is anticipated to generate the following number of external transit trips:

- 287 transit trips during the AM peak hour (124 trips in, 163 trips out);
- 279 transit trips during the PM peak hour (136 trips in, 143 trips out).

Per discussions with City staff, all site-generated transit trips are anticipated to arrive or depart the study area via OC Routes 63, 64, 110, or 166, and all trips will utilize stops at Innovation Drive/Hines Road (stops #1174, #1175, #1176, and #1177), March Road/Terry Fox Drive (stops #4875 and #6155), and at 501 March Road (stop #7994).

Since nearly all site-generated transit trips are anticipated to be generated by the residential component of the development, the assumed transit trip distribution is similar to the residential distribution outlined in Section 3.1.2. The assumed distribution of transit trips to/from the proposed development can be summarized as follows:

- 25% to/from the north/west (i.e. Kanata North or Innovation) via OC Routes 63 and 64;
- 75% to/from the south/east (i.e. City of Ottawa) via OC Routes 63, 64, 110, and 166.

Transit utilization data from the Spring 2022 period (April 24 to June 25) has been obtained from OC Transpo, and is included in **Appendix C**. Average peak period (6:00am to 9:00am and 3:00pm to 6:00pm) boarding, alighting, and bus load at departure information was obtained for the stops previously listed in this section.

Existing and projected boarding and alighting information is summarized in **Table 23**. Any zero (0) values in the table indicate a measured average boarding and alighting value of zero, rather than an absence of data. Any dash (-) values in the table indicate that the route does not serve the stop in a given time period. Peak period boarding and alighting data have been converted to peak hour boardings and alightings, using factors of 0.55 for the AM peak hour and 0.47 for the PM peak hour (per the *TRANS Trip Generation Manual*).

# Table 23: Transit Utilization

1. tph: transit trips per hour

A discussion of the site-generated impacts to OC Routes 63, 64, 110, and 166 during the weekday peak hours is included below.

# Route 63 (eastbound, to Tunney's Pasture / Gatineau)

At stops #6155 and #7994, the proposed development is projected to generate an additional 20 AM boarding trips, seven AM alighting trips, 14 PM boarding trips, and eight PM alighting trips per stop. As route 63 runs on approximately 15-minute headways during the peak hours, this equates to approximately five AM boardings, two AM alightings, four PM boardings, and two PM alightings per bus at both stops.

The existing average bus loads at departure are five riders in the AM peak and three riders in the PM peak. Accounting for the above trips at both stops, the average bus loads when departing stop #7994 are anticipated to increase from five riders to 15 riders during the AM peak hour, and from three riders to 11 riders during the PM peak hour.

#### Route 63 (westbound, to Innovation / Briarbrook)

At stops #1820 and #4875, the proposed development is projected to generate an additional ten AM boarding trips, 13 AM alighting trips, nine PM boarding trips, and 17 PM alighting trips per stop. As route 63 runs on approximately 15-minute headways during the peak hours, this equates to approximately three AM boardings, four AM alightings, three PM boardings, and five PM alightings per bus at both stops.

The existing average bus loads at departure are one rider in the AM peak and six riders in the PM peak. Accounting for the above trips, the average bus loads when departing stop #4875 are anticipated to increase from one rider to six riders during the AM peak hour, and from six riders to 11 riders during the PM peak hour.

#### Route 64 (eastbound, to Tunney's Pasture)

At stop #1175, the proposed development is projected to generate an additional 41 AM boarding trips and 29 PM boarding trips. At stop #1177, the proposed development is projected to generate an additional 16 AM alighting trips and 17 PM alighting trips. As route 64 runs on approximately 15minute headways during the peak hours, this equates to approximately 11 AM boardings, four AM alightings, eight PM boardings, and five PM alightings per bus at these stops.

The existing average bus loads at departure are five riders in the AM peak at both stops, two riders in the PM peak at stop #1177, and four riders in the PM peak at stop #1175. Accounting for the above trips, the average bus loads when departing stop #1175 are anticipated to increase from five riders to 16 riders during the AM peak hour, and from four riders to 12 riders during the PM peak hour. The average bus loads when arriving at stop #1177 are anticipated to increase from five riders to nine riders during the AM peak hour, and from two riders to seven riders during the PM peak hour.

#### Route 64 (westbound, to Innovation / Morgan's Grant)

At stop #1176, the proposed development is projected to generate an additional 21 AM boarding trips and 18 PM boarding trips. At stop #1174, the proposed development is projected to generate an additional 25 AM alighting trips and 34 PM alighting trips. As route 64 runs on approximately 15minute headways during the peak hours, this equates to approximately five AM boardings, seven AM alightings, five PM boardings, and nine PM alightings per bus at these stops. The existing average bus loads at departure are two riders in the AM peak at both stops, six riders in the PM peak at stop #1176, and seven riders in the PM peak at stop #1174. Accounting for the above trips, the average bus loads when departing stop #1176 are anticipated to increase from two riders to seven riders during the AM peak hour, and from six riders to 11 riders during the PM peak hour. The average bus loads when arriving at stop #1174 are anticipated to increase from two riders to nine riders during the AM peak hour, and from seven riders to 17 riders during the PM peak hour.

#### Route 110 (northbound, to Innovation)

The proposed development is not projected to generate any trips for this route and direction, as the route terminates at Innovation Station (i.e. within one kilometre of the Subject Site).

#### Route 110 (southbound, to Fallowfield)

At stop #6155, the proposed development is projected to generate an additional 41 AM boarding trips, 25 AM alighting trips, 29 PM boarding trips, and 34 PM alighting trips. As route 110 runs on approximately 30-minute headways during the peak hours, this equates to approximately 21 AM boardings, 13 AM alightings, 15 PM boardings, and 17 PM alightings per bus.

The existing average bus load at departure is one rider during both the AM and PM peaks. Accounting for the above trips, the average bus loads when departing stop #6155 are anticipated to increase from one rider to 22 riders during the AM peak hour, and from one rider to 16 riders during the PM peak hour.

#### Route 166 (northbound, to Innovation)

At stop #1174, the proposed development is projected to generate an additional 19 AM alighting trips. Route 166 runs once during the AM peak hour, in the northbound direction only.

The existing average bus load at departure is one rider during the AM peak. Accounting for the above trips, the average bus load when arriving at stop #1174 is anticipated to increase from one rider to 20 riders during the AM peak hour.

#### Route 166 (southbound, to Eagleson)

At stop #1175, the proposed development is projected to generate an additional 21 PM boarding trips. Route 166 runs once during the PM peak hour, in the southbound direction only.

The existing average bus load at departure is one rider during the PM peak. Accounting for the above trips, the average bus load when departing stop #1175 is anticipated to increase from one rider to 22 riders during the PM peak hour.

Based on the above, the proposed development is not anticipated to necessitate more frequent service for OC Routes 63, 64, 110, and 166.

As discussed in Section 2.2.1, the Affordable RTTP Network identifies at-grade BRT on March Road between Highway 417 and Solandt Road, along with transit priority signals and/or queue jump lanes on March Road between Solandt Road and the urban boundary. A future rapid transit station at Solandt Road will be located within 600m walking distance of the proposed development. These improvements to the transit service in the area is anticipated to increase the transit share of those travelling to/from the proposed development.

# 4.4 Network Concept

The current zoning of the Subject Site permits a total GFA of approximately 1,415,000 ft<sup>2</sup>. From a traffic generation perspective, the 'worst case' would be constructing an office of this size. Based on the General Office Building land use rates included in the *ITE Trip Generation Manual*, 11<sup>th</sup> *Edition*, this would result in approximately 2,093 person trips during the AM peak hour and 1,917 person trips during the PM peak hour.

Per the *2017 TIA Guidelines*, the Network Concept module is only required when a proposed development generates more than 200 person trips during the peak hour in excess of the equivalent volume permitted by the established zoning. Since the proposed development will not generate more than the maximum development permitted by the established zoning, this module is exempt.

## 4.5 Intersection Design

## 4.5.1 Existing Intersection MMLOS Review

This section provides a review of the signalized study area intersections using complete streets principles. All intersections within the study area have been evaluated for PLOS, BLOS, TLOS, and TkLOS. Since the *MMLOS Guidelines* refer to the land use designations outlined in the City's previously adopted Official Plan, those designations have been considered for the purposes of this review.

The MMLOS targets associated with the 'General Urban Area' designation have been used to evaluate March Road/Morgan's Grant Way/Shirley's Brook Drive, and the targets associated with the 'Employment Area' designation have been used to evaluated March Road/Solandt Road. Since March Road/Terry Fox Drive and Terry Fox Drive/Flamborough Way/Innovation Drive are located in both land use designations, whichever target is stricter has been used in evaluation of these intersections. The full intersection MMLOS analysis is included in **Appendix N**. A summary of the results is shown in **Table 24**.

Intersection	PLOS		BLOS		TLOS		TkLOS	
Intersection	Actual	Target	Actual	Target	Actual	Target	Actual	Target
March Road/ Morgan's Grant Way/Shirley's Brook Drive	F	С	F	В	F	D	С	D
March Road/ Terry Fox Drive	F	С	F	В	F	D	А	В
March Road/ Solandt Road	F	С	F	С	F	В	А	В
Terry Fox Drive/ Flamborough Way/Innovation Drive	F	С	F	В	F	-	С	В

#### Table 24: Intersection MMLOS Summary

The results of the intersection MMLOS analysis can be summarized as follows:

- No study area intersections meet the target PLOS;
- No study area intersections meet the target BLOS;
- No study area intersections along March Road meet the target TLOS;
- All study area intersections meet the target TkLOS, except for Terry Fox Drive/Flamborough Way/Innovation Drive.

# March Road/Morgan's Grant Way/Shirley's Brook Drive

This intersection does not meet the target PLOS C, BLOS B, or TLOS D.

All approaches have a divided cross-section with a width equivalent to ten lanes crossed or more (assuming a lane width equals 3.5m, per the *MMLOS Guidelines*). There is limited opportunity in improving the PLOS at each approach without reducing the number of travel lanes or restricting turning movements. No approaches meet the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks (greater than 400,000 vehicle/pedestrian conflicts over an eight-hour period). There is limited opportunity in improving the delay score for pedestrians without incurring major delays for vehicles.

The north, south, and east approaches do not meet the target BLOS based on left turn characteristics. Per Exhibit 12 of the *MMLOS Guidelines*, the target BLOS can be achieved at the east approach by reducing the operating speed to 40 km/h (which is the current speed limit on Shirley's Brook Drive). For left turns from the north and south approaches, cyclists are required to cross multiple lanes of traffic, on a roadway with a posted speed limit of 80 km/h. Given that all right turn movements are channelized at this intersection, the implementation of two-stage left-turn bike boxes at all approaches would not require a right turns on red (RTOR) restriction. This would require the stop bars at all approaches to be shifted away from the intersection. These measures are identified for the City's consideration.

The east approach does not meet the target TLOS. As Shirley's Brook Drive is not designated as a transit priority route, no modifications are not recommended for the east approach.

#### March Road/Terry Fox Drive

This intersection does not meet the target PLOS C, BLOS B, or TLOS D.

All approaches have a divided cross-section with a width equivalent to ten lanes crossed or more. There is limited opportunity in improving the PLOS at each approach without reducing the number of travel lanes or restricting turning movements. The north and south approaches meet the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks. There is limited opportunity in improving the delay score for pedestrians without incurring major delays for vehicles.

All approaches do not meet the target BLOS, based on both left and right turn characteristics. Given that all right turn movements are channelized at this intersection, the implementation of two-stage left turn-bike boxes at all approaches would not require a RTOR restriction. This would require the stop bars at all approaches to be shifted away from the intersection. This is identified for the City's consideration. Exhibit 12 of the *MMLOS Guidelines* identifies that the target BLOS can be met by shortening the right turn lanes to 50m or shorter. Given the high traffic volumes at this intersection, this is not recommended.

The east and west approaches do not have a target TLOS, but the approach delays of approximately 35 to 45 seconds during the peak hours are noted. The City's RTTP Affordable Network includes transit priority signals and queue jump lanes on March Road north of Solandt Road, and would be expected to improve the delays for northbound/southbound transit vehicles. Future conversion to median BRT is anticipated to further improve the delays for buses travelling along March Road.

#### March Road/Solandt Road

This intersection does not meet the target PLOS C, BLOS C, or TLOS B.

All approaches have a divided cross-section with a width equivalent to ten lanes crossed or more. There is limited opportunity in improving the PLOS at each approach without reducing the number of travel lanes or restricting turning movements. No approaches meet the City's vehicle/pedestrian conflict threshold for zebra-striped crosswalks. There is limited opportunity in improving the delay score for pedestrians without incurring major delays for vehicles.

The east approach does not meet the target BLOS based on left turn characteristics, and the west approach does not meet the target BLOS based on both left and right turn characteristics. For left turning cyclists on all approaches, they are required to cross at least one lane of traffic on roads with an operating speed of 50 km/h or greater. Two-stage left-turn bike boxes have recently been implemented for northbound and southbound cyclists. Implementing this improvement for eastbound and westbound cyclists as well is identified for the City's consideration.

For cyclists interacting with right turning vehicles, the right turn lanes at the north and west approaches are greater than 50m, and the bike lane shifts to the left of the right turn lane at the south approach. Exhibit 12 of the *MMLOS Guidelines* identifies that the target BLOS can be met by shortening the right turn lanes to 50m or shorter. Given the high traffic volumes at this intersection, this is not recommended.

The north and south approaches do not meet the target TLOS. The east and west approaches do not have a target TLOS, however delays are significant. The City's RTTP Affordable Network includes at-grade median BRT on March Road south of Solandt Road, and transit signal priority and queue jump lanes north of Solandt Road. These initial measures are anticipated to improve the delays for transit vehicles to the target TLOS or better. Future conversion to median BRT along the entire March Road corridor is anticipated to further improve the delays for buses travelling along March Road.

#### Terry Fox Drive/Flamborough Way/Innovation Drive

This intersection does not meet the target PLOS C, BLOS B, or TkLOS B.

All approaches have a divided cross-section with a width equivalent to five to eight lanes crossed. There is limited opportunity in improving the PLOS at each approach without reducing the number of travel lanes or restricting turning movements. The west approach meets the City's vehicle/ pedestrian conflict threshold for zebra-striped crosswalks. There is limited opportunity in improving the delay score for pedestrians without incurring major delays for vehicles.

All approaches do not meet the target BLOS based on left turn characteristics, and additionally, the east and west approaches do not meet the target BLOS based on right turn characteristics. For left turning cyclists on all approaches, they are required to cross one lane of traffic on roads with an operating speed of 50 or 60 km/h. Exhibit 12 of the *MMLOS Guidelines* identifies that the target BLOS requires the implementation of two-stage left-turn bike boxes on all approaches, which would require RTOR restrictions. This is identified for the City's consideration.

For cyclists interacting with right turning vehicles, the right turn lanes at the east and west approaches are greater than 50m. Exhibit 12 of the *MMLOS Guidelines* identifies that the target BLOS can be met by shortening the right turn lanes to 50m or shorter. Given the magnitude of right-turning traffic volumes at this intersection, this is not recommended.

All approaches do not meet the target TkLOS. While the effective corner radii of each corner is greater than 15m (i.e. the best possible, per Exhibit 21 of the *MMLOS Guidelines*), the target TkLOS can only be achieved by providing multiple receiving lanes. Since Flamborough Way and Innovation Drive are not classified as truck routes, no recommendations are identified.

#### 4.5.2 Preliminary Intersection Review of Proposed March Road Access

The proposed signalized intersection at March Road/Nokia Access/Site Access will have the following lane configuration for each approach:

- Northbound Approach (March Road): one left turn lane, two through lanes, and one right turn lane;
- Southbound Approach (March Road): one left turn lane, two through lanes, and one shared through/right turn lane;
- Eastbound Approach (Site Access): one left turn lane and one shared through/right turn lane;
   Weathound Approach (Nekia Access);
- Westbound Approach (Nokia Access): one left turn lane and one shared through/right turn lane.

This intersection will undergo a detailed MMLOS review as part of a future Site Plan Control application, when functional designs of the intersection are developed. At this stage, it is proposed that the new intersection will be a fully protected intersection, constructed to City of Ottawa standards. As a fully-protected intersection, the new intersection is anticipated to achieve the following multi-modal levels of service:

- PLOS F, due to the crossing distance for pedestrians along March Road;
- BLOS A, as each approach will accommodate left and right turns for cyclists outside of the roadway platform;
- TLOS E, as the north and south approaches are anticipated to operate with approximately 15 to 40 seconds of delay during the peak hours;
- The TkLOS will be confirmed when the functional designs are developed. Turning movements will be completed at all approaches to ensure the largest design vehicles can navigate the intersection safely.

Isolated transit priority measures on March Road at this new intersection (such as queue jump lanes) can be considered when functional designs of the intersection are developed. Isolated measures like queue jump lanes could mitigate the delay for northbound and southbound transit vehicles, and would be consistent with the City's Affordable RTTP Network, which identifies isolated transit priority measures on March Road north of Solandt Road.

# 4.5.3 2037 Total Intersection Operations

Intersection capacity analysis has been conducted for the 2037 total traffic conditions. As identified in Section 3.4.2, it is assumed that dual westbound left turn lanes are maintained at the March Road/Solandt Road intersection following implementation of the BRT. The results of the analysis are summarized in **Table 25** and **Table 26** for the weekday AM and PM peak hours. Detailed reports are included in **Appendix O**.

#### Table 25: 2037 Total Traffic Operations

1: Indicates the storage length for auxiliary lanes or the spacing to the nearest upstream intersection/access for through lanes

2. Storage requirements for SBL and WBL movements to be confirmed as part of future Site Plan Control applications

#: Volume for the 95<sup>th</sup> percentile cycle exceeds capacity m: Queue is metered by an upstream signal

m: Queue is metered by an upstrea

~: Approach is above capacity

From the previous tables, critical movements at the study area intersections generally operate at an acceptable level of service, with the exception of the southbound through/right turn movement at March Road/Solandt Road during the AM peak hour and the northbound through/right turn movement at March Road/Solandt Road during the PM peak hour.

Northbound through queues at March Road/Terry Fox Drive and southbound through queues at March Road/Nokia Access/Site Access do not extend into the opposite intersection. Based on the maximum northbound left turn queues at March Road/Terry Fox Drive, the existing northbound left turn storage length could be reduced to accommodate a longer southbound left turn lane at March

Road/Nokia Access/Site Access. A functional design and Roadway Modification Approval (RMA) submission for this modification will be provided as part of a subsequent Site Plan Control application.

Based on the projected 2037 total traffic volumes, it is anticipated that an auxiliary westbound left turn lane will be required at the proposed access to Terry Fox Drive. A review of the most relevant left turn lane storage graphs included in the Ministry of Transportation of Ontario (MTO)'s Design Supplement to the Transportation Association of Canada (TAC)'s Geometric Design Guide for Canadian Roads has been conducted to determine the storage length required. In this scenario, the most relevant graphs are Exhibit 9A-10 and 9A-11, which are used for roadways with a design speed of 70km/h. During the AM peak hour, the westbound left-turning volume is approximately 15% of the total advancing volume (corresponding to Exhibit 9A-11). During the PM peak hour, the westbound left-turning volume is approximately 10% of the total advancing volume (corresponding to Exhibit 9A-10). In both exhibits, a storage length of 30m is required. These exhibits are included in Appendix P. It is anticipated that the required auxiliary westbound left turn lane at the Terry Fox access can be accommodated without impacting the eastbound left turn storage at March Road/Terry Fox Drive, by widening of the existing median on Terry Fox Drive and shifting the alignment of the westbound lanes on Terry Fox Drive in front of the subject site. A functional design and RMA submission for this modification will be provided as part of a subsequent Site Plan Control application.

# 5.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the foregoing, the conclusions and recommendations of this TIA can be summarized as follows:

#### Forecasting

• The proposed development as a whole is estimated to generate 1,232 person trips during the AM peak hour (including 611 external vehicle trips) and 1,382 person trips during the PM peak hour (including 662 external vehicle trips).

#### Transportation Demand Management

 While the final list of TDM measures to be implemented by the proposed development will be confirmed at the Site Plan Control application stage, the proponent has agreed to consider a suite of TDM measures for non-residential and residential developments at this time.

#### <u>Transit</u>

- The proposed development is anticipated to generate the following number of external transit trips:
  - o 287 transit trips during the AM peak hour (124 trips in, 163 trips out);
  - o 279 transit trips during the PM peak hour (136 trips in, 143 trips out).
- The proposed development is not anticipated to necessitate more frequent service for OC Routes 63, 64, 110, and 166.

#### Intersection MMLOS

- The results of the intersection MMLOS analysis can be summarized as follows:
  - No study area intersections meet the target pedestrian level of service (PLOS);
  - No study area intersections meet the target bicycle level of service (BLOS);
  - No study area intersections along March Road meet the target transit level of service (TLOS);
  - All study area intersections meet the target truck level of service (TkLOS), except for Terry Fox Drive/Flamborough Way/Innovation Drive.
- There is limited opportunity in improving the PLOS at any approach without reducing the number of travel lanes, restricting turning movements, or removing right turn channels. There is also limited opportunity in improving the delay score at any intersection to the target PLOS.
- The north, south, and east approaches of March Road/Morgan's Grant Way/Shirley's Brook Drive do not meet the target BLOS. The target BLOS can be achieved at the east approach by reducing the operating speed to 40 km/h (which is the current speed limit on Shirley's Brook Drive). For left turns from the north and south approaches, the implementation of twostage left-turn bike boxes at all approaches would not require a right turns on red (RTOR) restriction. This would require the stop bars at all approaches to be shifted away from the intersection. These measures are identified for the City's consideration.
- All approaches of March Road/Terry Fox Drive do not meet the target BLOS. Given that all
  right turn movements are channelized at this intersection, the implementation of two-stage
  left turn-bike boxes at all approaches would not require a RTOR restriction. This would
  require the stop bars at all approaches to be shifted away from the intersection. This is
  identified for the City's consideration. The target BLOS can be met by shortening the right
  turn lanes to 50m or shorter. Given the high traffic volumes at this intersection, this is not
  recommended.
- The east and west approaches of March Road/Solandt Road does not meet the target BLOS. Two-stage left-turn bike boxes have recently been implemented for northbound and southbound cyclists. Implementing this improvement for eastbound and westbound cyclists as well is identified for the City's consideration. For cyclists interacting with right turning vehicles, the right turn lanes at the north and west approaches are greater than 50m, and the bike lane shifts to the left of the right turn lane at the south approach. The target BLOS can be met by shortening the right turn lanes to 50m or shorter. Given the high traffic volumes at this intersection, this is not recommended.
- All approaches of Terry Fox Drive/Flamborough Way/Innovation Drive do not meet the target BLOS. The target BLOS requires the implementation of two-stage left-turn bike boxes on all approaches, which would require RTOR restrictions. This is identified for the City's consideration. For cyclists interacting with right turning vehicles, the right turn lanes at the east and west approaches are greater than 50m. The target BLOS can be met by shortening the right turn lanes to 50m or shorter. Given the magnitude of right-turning traffic volumes at this intersection, this is not recommended.

- The City's RTTP Affordable Network includes at-grade median bus rapid transit (BRT) on March Road south of Solandt Road, and transit signal priority and queue jump lanes north of Solandt Road. These initial measures are anticipated to improve the delays for transit vehicles to the target TLOS or better. Future conversion to median BRT along the entire March Road corridor is anticipated to further improve the delays for buses travelling along March Road.
- While the effective corner radii of each corner at Terry Fox Drive/Flamborough Way/ Innovation Drive is greater than 15m, the target TkLOS can only be achieved by providing multiple receiving lanes. Since Flamborough Way and Innovation Drive are not classified as truck routes, no recommendations are identified.
- The proposed signalized intersection at March Road/Nokia Access/Site Access is anticipated to be a fully protected intersection, with the following lane configuration:
  - Northbound approach (March Road): one left turn lane, two through lanes, and one right turn lane;
  - Southbound approach (March Road):
     one left turn lane, two through lanes, and one shared through/right turn lane;
  - Eastbound approach (Site Access): one left turn lane and one shared through/right turn lane;
  - Westbound approach (Nokia Access): one left turn lane and one shared through/right turn lane.
- It is anticipated that the new signalized intersection will achieve a PLOS F, BLOS A, and TLOS E. All MMLOS scores will be confirmed as functional designs of the intersection are developed.

# Existing Traffic Operations

• All study area intersections operate at an acceptable level of service during the AM and PM peak hours.

# Background Traffic Operations

- Critical movements at the study area intersections generally operate at an acceptable level
  of service, with the exception of the westbound left turn movement at March Road/Solandt
  Road during the PM peak hour. Per the functional design of the March Road BRT, one of
  the westbound left turn lanes will be removed. It is anticipated that this is the primary driver
  for the failing vehicular level of service of this movement, and therefore it is recommended
  that the dual westbound left turn lanes are maintained at this intersection.
- To achieve the target vehicular level of service (Auto LOS) E at March Road/Solandt Road, a reduction of approximately 110 southbound through/right turning vehicles is required during the AM peak hour, and a reduction of approximately 45 northbound through/right turning vehicles are required during the PM peak hour.

#### Total Traffic Operations

- Northbound through queues at March Road/Terry Fox Drive and southbound through queues at March Road/Nokia Access/Site Access do not extend into the opposite intersection. Based on the maximum northbound left turn queues at March Road/Terry Fox Drive, the existing northbound left turn storage length could be reduced to accommodate a longer southbound left turn lane at March Road/Nokia Access/Site Access. A functional design and Roadway Modification Approval (RMA) submission for this modification will be provided as part of a subsequent Site Plan Control application.
- It is anticipated that an auxiliary westbound left turn lane will be required at the proposed access to Terry Fox Drive. A review of the most relevant left turn lane storage graphs included in the Ministry of Transportation of Ontario (MTO)'s *Design Supplement to the Transportation Association of Canada (TAC)'s Geometric Design Guide for Canadian Roads* has been conducted to determine that a storage length of 30m is required. A functional design and RMA submission for this modification will be provided as part of a subsequent Site Plan Control application.

Based on the foregoing, the proposed development is recommended from a transportation perspective.

Concept Plan

# **Concept Plan**

# **APPENDIX B**

**TIA Screening Form** 

# City of Ottawa 2017 TIA Guidelines Screening Form

# **1. Description of Proposed Development**

Municipal Address	555, 591, 595, and 603 March Road	
Description of Location	Approx. 13.6 acres in area, located at the southwest corner of March Road/Terry Fox Drive	
Land Use Classification	Residential, office, and retail	
Development Size (units)	2,100 dwellings	
Development Size (m <sup>2</sup> )	Approx. 154,178 ft <sup>2</sup> (14,324 m <sup>2</sup> ) GFA of office space; Approx. 31,482 ft <sup>2</sup> (2,925 m <sup>2</sup> ) GFA of commercial space	
Number of Accesses and Locations	One access proposed to each of March Road, Terry Fox Drive, and Hines Road	
Phase of Development	4	
Buildout Year	2037	

If available, please attach a sketch of the development or site plan to this form.

#### 2. Trip Generation Trigger

Considering the Development's Land Use type and Size (as filled out in the previous section), please refer to the Trip Generation Trigger checks below.

Land Use Type	Minimum Development Size		
Single-family homes	40 units		
Townhomes or apartments	90 units		
Office	3,500 m <sup>2</sup>		
Industrial	5,000 m <sup>2</sup>		
Fast-food restaurant or coffee shop	100 m <sup>2</sup>		
Destination retail	1,000 m <sup>2</sup>		
Gas station or convenience market	75 m <sup>2</sup>		

\* If the development has a land use type other than what is presented in the table above, estimates of person-trip generation may be made based on average trip generation characteristics represented in the current edition of the Institute of Transportation Engineers (ITE) Trip Generation Manual.

#### If the proposed development size is greater than the sizes identified above, <u>the Trip Generation</u> <u>Trigger is satisfied.</u>

### **3. Location Triggers**

	Yes	No
Does the development propose a new driveway to a boundary street that is designated as part of the City's Transit Priority, Rapid Transit or Spine Bicycle Networks?	$\checkmark$	
Is the development in a Design Priority Area (DPA) or Transit-oriented Development (TOD) zone?*		$\checkmark$

\*DPA and TOD are identified in the City of Ottawa Official Plan (DPA in Section 2.5.1 and Schedules A and B; TOD in Annex 6). See Chapter 4 for a list of City of Ottawa Planning and Engineering documents that support the completion of TIA).

#### If any of the above questions were answered with 'Yes,' the Location Trigger is satisfied.

#### 4. Safety Triggers

	Yes	No
Are posted speed limits on a boundary street are 80 km/hr or greater?	$\checkmark$	
Are there any horizontal/vertical curvatures on a boundary street limiting sight lines at a proposed driveway?		$\checkmark$
Is the proposed driveway within the area of influence of an adjacent traffic signal or roundabout (i.e. within 300 m of intersection in rural conditions, or within 150 m of intersection in urban/suburban conditions)?	$\checkmark$	
Is the proposed driveway within auxiliary lanes of an intersection?	$\checkmark$	
Does the proposed driveway make use of an existing median break that serves an existing site?	$\checkmark$	
Is there is a documented history of traffic operations or safety concerns on the boundary streets within 500 m of the development?		$\checkmark$
Does the development include a drive-thru facility?		$\checkmark$

If any of the above questions were answered with 'Yes,' the Safety Trigger is satisfied.

#### 5. Summary

	Yes	No
Does the development satisfy the Trip Generation Trigger?	$\checkmark$	
Does the development satisfy the Location Trigger?	$\checkmark$	
Does the development satisfy the Safety Trigger?	$\checkmark$	

If none of the triggers are satisfied, <u>the TIA Study is complete</u>. If one or more of the triggers is satisfied, <u>the TIA Study must continue into the next stage</u> (Screening and Scoping).

Limited service / Service limité

From: Rathwell, Graham <graham.rathwell@ottawa.ca> Sent: Tuesday, September 13, 2022 8:34 AM To: Joshua Audia <j.audia@novatech-eng.com> Subject: RE: Transit Data Request - March/Terry Fox area

Hi again Josh,

My apologies again for the delay, the requested data is provided in the table below. This list of stops should be a sufficient representative sample, covering those closest to the site in question and all of the routes/directions available within a short walk distance.

Data is provided for the Spring 2022 schedule period which ran from April 24 to June 25. System wide, conventional bus ridership for this period was at 51% of the ridership for same period in 2019, pre-pandemic. A reminder that zero (0) values indicate a measured average value of zero rather than an absence of data, based on available APC data. Dashes (-) indicate that the route does not serve the stop in question in the given time period. In this case this applies only to Route 166, which is a special limited peak-direction service.

#### Comments:

OC Transpo and Para Transpo buses, together with a few school buses, comprise 10.19% of the heavy vehicle traffic. The bicycle totals include 2 E-Scooters (stand-up type). The pedestrian crossing totals include 1 with accessibility issues using an electric wheelchair.

#### Notes:

1. Includes all vehicle types except bicycles, electric bicycles, and electric scooters.

2. When expansion and AADT factors are applied, the results will differ slightly due to rounding.

#### Comments:

OC Transpo and Para Transpo buses, together with a few school buses, comprise 18.11% of the heavy vehicle traffic. The bicycle totals include 1 E-Scooter (Vespa style). There was one serious conflict between a N/B left-turning & a S/B straight vehicle at 0916h.

#### Notes:

1. Includes all vehicle types except bicycles, electric bicycles, and electric scooters.

2. When expansion and AADT factors are applied, the results will differ slightly due to rounding.

#### Comments:

OC Transpo buses, together with a few school buses, comprise 55.36% of the heavy vehicle traffic.

### Notes:

1. Includes all vehicle types except bicycles, electric bicycles, and electric scooters.

2. When expansion and AADT factors are applied, the results will differ slightly due to rounding.

## **APPENDIX G**

Other Area Developments

### 1.0 SCREENING

### 1.1 Introduction

This Transportation Impact Assessment (TIA) has been prepared for a proposed development at 359 Terry Fox Drive and 525 Legget Drive on behalf of Wesley Clover International (Brookstreet Hotel), in support of Zoning By-Law Amendment and Site Plan Control applications. The Subject Site is a redevelopment of portions of 359 Terry Fox Drive and 525 Legget Drive (Brookstreet Hotel). A new parcel will be created through a severance process that will consist of the existing easterly access to 359 Terry Fox Drive and a portion of the area of 525 Legget Drive between an existing parking garage and the stormwater pond to the east.

The existing uses at 359 Terry Fox Drive include light industrial and office uses, and the existing uses at 525 Legget Drive include the Brookstreet Hotel, and accessory small commercial and office uses. Based on the location of the existing driveways, the subject site could be accessed via a driveway to 525 Legget Drive, two driveways to 555 Legget Drive, and two driveways to 359 Terry Fox Drive. The easterly access to 359 Terry Fox Drive, which will become part of the proposed parcel, is proposed to be the primary access to the development.

The subject site is surrounded by the following:

- Office uses, followed by Terry Fox Drive to the north,
- The Marshes Golf Club, followed by office uses and Solandt Road to the south,
- The Marshes Golf Club, followed by office uses and Terry Fox Drive to the east, and
- Legget Drive, followed by office uses and March Road to the west.

An aerial of the vicinity around the subject site is provided in **Figure 1**. A copy of the site plan is included in **Appendix A**.

### 1.2 Proposed Development

The subject site is designated as 'Urban Employment Area' on Schedule B of the City of Ottawa's Official Plan. The implemented zoning for the property is 'Business Park Industrial Zone (Kanata North Business Park)' (IP6). The subject site is not within any Community Design Plan or Secondary Plan areas. A Zoning By-Law Amendment is required to permit the proposed use. The draft City of Ottawa Official Plan includes proposed policies that will permit a higher density of development and greater degree of mixed uses, including residential within new 'activity centres' that are generally located within 600 metres of planned transit stations. The goal of the activity centres is to create a place to live, work, learn and play and provide access daily needs without a car. The City of Ottawa Official Plan includes a transit station at the intersection of March Road and Terry Fox as part of the future Bus Rapid Transit.

The proposed development consists of a single 30-storey high-rise residential building with 253 rental dwellings and approximately 3,877 ft<sup>2</sup> gross floor area (GFA) of rooftop restaurant space. The proposed development will provide a unique residential rental accommodation within the Kanata North Economic District, a technology park which employs over 20,000 people. The rental units will offer apartments within short walking or cycling distance of major employers, and will act as the catalyst for one of the City's proposed activity centres within the district. The residential tower will also be directly connected to the Brookstreet Hotel and will provide a unique experience for residents, as tenants will have access to amenities such as restaurants, fitness facilities, a spa, and recreational facilities.

## Figure 1: View of the Subject Site

- Other area development-generated traffic volumes in 2029 are shown in Figure 12;
- Background traffic volumes in 2024 are shown in Figure 13;
- Background traffic volumes in 2029 are shown in Figure 14;
- Total traffic volumes in 2024 are shown in Figure 15;
- Total traffic volumes in 2029 are shown in Figure 16.

### Figure 8: Proposed Site-Generated Volumes

## 1.0 SCREENING

## 1.1 SUMMARY OF DEVELOPMENT

Municipal Address	600 March Road
Description of Location	Southeast quadrant of the March Road at Terry Fox Drive intersection
Land Use Classification	Mixed-Use Development (Residential High-Rise, Retail, Office)
Development Size (units)	Residential units = 1,900
Development Size (m <sup>2</sup> )	Office/Lab: 46,000 m <sup>2</sup> Retail: 11,350 m <sup>2</sup>
Number of Accesses and Locations	Four (4) accesses from March Road, One (1) access from Terry Fox Drive, Three (3) accesses from Legget Drive.
Phase of Development	Nokia Campus: 2026 Residential: 1 tower (250 units/year) after 2026
Buildout Year	2032 (10 year build out)

If available, please attach a sketch of the development or site plan to this form.

## 1.2 TRIP GENERATION TRIGGER

Considering the Development's Land Use type and Size (as filled out in the previous section), please refer to the Trip Generation Trigger checks below.

Land Use Type	Minimum Development Size	Triggered
Single-family homes	40 units	×
Townhomes or apartments	90 units	$\checkmark$
Office	3,500 m²	$\checkmark$
Industrial	5,000 m²	×
Fast-food restaurant or coffee shop	100 m <sup>2</sup>	×
Destination retail	1,000 m <sup>2</sup>	$\checkmark$
Gas station or convenience market	75 m²	×

\* If the development has a land use type other than what is presented in the table above, estimates of person-trip generation may be made based on average trip generation characteristics represented in the current edition of the Institute of Transportation Engineers (ITE) Trip Generation Manual.

If the proposed development size is greater than the sizes identified above, <u>the Trip Generation Trigger is</u> <u>satisfied.</u>

Figure 1 - Site Location

				In	Out	Total	In	Out	Total
		Auto Driver	48%	694	94	788	107	523	631
		Auto Passenger	23%	209	28	238	32	158	190
710	General Office Building	Transit	25%	10	1	11	1	7	9
	Building	Cycling	0%	0	0	0	0	0	0
		Walking	5%	38	5	43	6	29	35

Comparing the vehicle trips associated with the existing Nokia campus, as outlined in **Table 9** above, to the existing traffic volumes along Legget Drive, it is clear that the volumes outlined in **Table 9** are an overestimation of the actual volumes the existing Nokia campus is generating. As the main entrances to the existing Nokia campus are on Legget Drive, the vehicle trips outlined in **Table 9** above are not realistic and thus were decreased to more accurately match the existing volumes along Legget Drive. This reduction was done in conjunction with assessing the existing volumes on Legget Drive along with the surrounding land uses. **Table 10** below outlines the existing Nokia volumes after the reductions were applied, which are more in line with the turning movement counts collected in the area.

#### Table 10 – Adjusted Existing Trips

LUC	Land Use	Trip Conversion		Week	day AM Pe	eak Hour	Weekday PM Peak Hour		
				In	Out	Total	In	Out	Total
710	General Office Building	Reduction	30%	486	66	552	75	366	442

## 3.1.2 Future Trip Generation and Mode Shares

The *Institute of Transportation (ITE) Trip Generation Manual (11<sup>th</sup> Edition)* was used to forecast the auto trip generation for the retail and office land uses and the *Trans Trip Generation Study* was used to forecast the auto trip generation for the residential land use. Land use codes 222 – Multi-Unit High Rise Building, 821 – Shopping Plaza, and 710 – General Office Building were thought to be the most representative of the proposed land uses.

Table 11 outlines the assumed land uses and the trip generation rates for each land use.

#### Table 11 – Future Land Uses and Trip Generation Rates

LUC	Land Use	Units/Employees/ Weekday AM Peak Hour Weekday				ay PM Pea	y PM Peak Hour		
LUC	Lanu Use	GFA (1000's SF)	In	Out	Total	In	Out	Total	
222	Multi - Unit (High-Rise)	1900 Units	31%	69%	0.80	58%	42%	0.90	
710	General Office Building	2400	88%	12%	0.42	17%	83%	0.32	
821	Shopping Plaza	122 GFA	62%	38%	1.73	48%	52%	5.19	

It is noted that as per direction from Nokia, the office land use is anticipated to generate an additional 25 inbound and 25 outbound delivery trips during each of the AM and PM peak hours. Of the net 25 deliveries, 3 are anticipated to be tractor trailers (entering the site from Legget Drive), and 22 are anticipated to be box trucks / vans (entering the site from March Road). The delivery trips are not included in the trip generation tables and were accounted for as part of the total office land use trips shown in **Figure 12**.

 Table 12 outlines development-generated person trips for each land use.

LUC	Land Use	Trip Conversion	Weekd	ay AM Pea	k Hour				
LUC			In	Out	Total	In	Out	Total	
		Person Trips (Peak Period	471	1049	1520	992	718	1710	
222	Multi - Unit (High-Rise)	Person Trips (Peak Hour) 0.50 for AM & 0.40 for PM	236	525	761	436	316	752	
		Auto Trips	880	120	1000	131	641	772	
710	General Office	Person Trip Factor 1.28							
		Person Trips	1126	154	1280	168	820	988	
		Auto Trips	131	80	211	304	330	634	
821	Shopping Plaza	Person Trip Factor	1.28						
		Person Trips	168	102	270	389	422	812	
Т	otal Development	Total Person Trips	1530	781	2311	993	1558	2552	

#### Table 12 – Future Person Trips Generated by Land Use

To reflect local travel characteristics, the person trips were assigned to the four primary modal shares (i.e., auto, passenger, transit, and active moves). As per the City of Ottawa's TMP, the March Road Bus Rapid Transit (BRT) is scheduled to be implemented by 2031, between Solandt Road and Highway 417. The subject development is planned to be built and occupied by 2032. The office portion of the subject development is anticipated to be within 400m of the planned BRT station at Solandt Road. Per direction from the City of Ottawa, the March Road BRT, north of Solandt Road, is scheduled to occur beyond the horizons of this subject study (i.e., post 2037). The residential / retail portion of the subject development (north half) are not anticipated to be within 400m of a rapid transit station during the study horizons. As such, the modal shares for the northern and southern portions of the subject development will differ as a direct result of the implementation plan of the March Road BRT.

#### **Residential Trips – Mode Shares**

Section 4.2 (Table 8) of the *TRANS Trip Generation Summary Report* was utilized to determine the residential mode share for high rise multi-family housing for the Kanata / Stittsville district. The average mode shares for the district include a 49% auto mode share and a 25% transit mode share. As the existing transit mode share is notably high for the general area, it is not anticipated to see increase as a result of the planned March Road BRT (between Highway 417 and Solandt Road) as the distance between the transit station and the residential component of the proposed development is anticipated to be greater than 400m.

#### Office Trips – Mode Shares

Section 6.2 (Table 12) of the *TRANS Trip Generation Summary Report* was utilized to determine the employment generator mode share by district. The report exclusively cites AM mode shares, however, it is expected that the PM mode shares would be identical as the commute from employment generators during the PM peak hour is very unlikely to differ from the commute to employment generators during the AM peak hour. For the Kanata / Stittsville district, the aforementioned report cites an 8% transit mode share and an 84% auto mode share.

#### **Commercial Trips – Mode Shares**

Section 6.3 (Table 13) of the *TRANS Trip Generation Summary Report* was utilized to determine the commercial generator mode share for the Kanata / Stittsville district. The report exclusively cites that the sample size for shopping trips during the AM peak tends to be low. As such, more emphasis was placed on the mode shares during the PM peak period to better represent the activity in the district. During the PM peak, the mode shares for the district include a 73%

## 600 March Road Transportation Impact Assessment Forecasting

July 18, 2022

auto mode share and a 1% transit mode share. To account for the enhanced overall transit service as a result of the planned March Road BRT (between Highway 417 and Solandt Road), the transit mode share for the commercial land use was increased from 1% to 10% (a 9% net increase) while subsequently reducing the 73% auto mode share by 9% for a total of 64%.

Table 13 outlines the modal shares that were used for the proposed development.

LUC	Land Use	Trip Convers	Week	day AM Pe	ak Hour	Weekday PM Peak Hour			
			In	Out	Total	In	Out	Total

		Walking		50	30	78	38	55	94

Table 13 – Future Trip Generation by Travel Mode

#### 3.1.3 Internal Capture and Pass-By

When predicting trips that are associated with different land use types the interaction between those land use types must be accounted for by applying the principals of internal capture adjustments. Internal capture trips are trips which are shared between two or more uses on the same site. A portion of the generated trips for each individual land use is therefore drawn from the adjacent land uses. Internal capture adjustments were made to account for vehicles that visit more than one land use within the subject development. Since these trips are contained within the subject site, accounting for each trip separately on the roadway network would result in "double-counting". For this reason, land uses that may have associated internal capture trips between one another ultimately had their net new trips adjusted consistent with typical industry standards. In the subject development, the land uses that are subject to internal capture reductions are the retail and office land uses.

In addition, a portion of the auto trips generated by the proposed retail land uses will be 'pass-by' in nature. Pass-by trips are considered intermediate stops between an origin and a destination. They are site trips that are drawn from existing traffic volumes on the road network that are "passing-by" the site. While the total number of trips generated by a given development remains the same, the turning movements at study area intersections and site accesses require

## 600 March Road Transportation Impact Assessment Forecasting

July 18, 2022

adjustments to reflect pass-by traffic. The rate of pass-by traffic is based on the specific land use which was obtained from the *ITE Trip Generation Manual*. A pass-by rate of 34% was used for the retail land use.

 Table 14 outlines the pass-by, internal capture, and net new trips anticipated for the proposed development.

LUC Land Use Trip Conversion				We	ekday A Hou		Weekday PM Peak Hour

Net New Auto Trips			110 6	394	1500	479	938	1418		

Table 14 – Future Pass-By and Internal Capture Trips

## 3.1.4 Trip Distribution

The distribution of traffic to / from the proposed development was developed using the relative traffic flows and volumes at the study area inlets / outlets. To account for the significant Kanata North Urban Expansion Area (KNUEA) development north of the study area (anticipated to be fully built by the 2032 horizon year and is projected to add 800 vehicles to / from the north during the peak hours), the 2032 future background horizon volumes were utilized for this exercise.

Overall, for the office land use, the following trip distribution is anticipated:

- 35% to / from the North (via March Road)
- 50% to / from the South (via March Road)
- 15% to / from the West (via Terry Fox Drive)
- Note: Terry Fox Road (E) and Legget Drive (S) are anticipated to carry negligible development traffic due to the limited connectivity to the adjacent transportation network. Traffic to / from the south of the proposed development is projected to be predominantly on March Road due to the higher speeds and superior connectivity to Highway 417 and the district to the south.

Figure 15 - Site Generated Traffic Volumes - All Land Uses & Pass-by Trips

## 1 Screening

This study has been prepared according to the City of Ottawa's 2017 Transportation Impact Assessment (TIA) Guidelines. Accordingly, a Step 1 Screening Form has been prepared and is included as Appendix A, along with the Certification Form for TIA Study PM. As shown in the Screening Form, a TIA is required including the Design Review Component and the Network Impact Component.

## 2 Existing and Planned Conditions

## 2.1 Proposed Development

The subject property, located at 706, 710, and 714 March Road, is currently zoned as General Mixed Use [GM] and Local Commercial [LC] and is currently undeveloped.

The proposed development consists of a 4,165 square metre supermarket, a 350 square-metre fast-food restaurant with a drive-through, and a large multi-unit commercial space that is 1,500 square metres. A total of 225 parking stalls are shown on the site plan.

Access to the site will be accommodated via March Road (190 metres north of Terry Fox Drive), McKinley Drive (235 and 210 metres north of Terry Fox Drive), and Shirley's Brook Drive (100 metres east of March Road). As March road is divided by a median, this access would be restricted to a right in / right out only. The McKinley Drive access 235 metres north of Terry Fox Drive is anticipated to be a full movement access and will serve customers as well as small and medium trucks. Large heavy vehicles serving the supermarket loading docks will also exist the site via this access. The McKinley Drive Access 210 metres north of Terry Fox Drive will be a left-in only access and allow large trucks serving the supermarket to enter the site. The Shirley's Brook Drive access will be east of the end of the left turn lane that is provided for the intersection with March Road, therefore, a full movement access can be considered at this access. For the purposes of this TIA the projected full build-out and occupancy horizon is 2023, and the plus five-year horizon is 2028. Figure 1 illustrates the Study Area Context. Figure 2 illustrates the proposed concept plan.

Source: http://maps.ottawa.ca/geoOttawa/ Accessed: August 20, 2020

To assign the pass-by trips to the accesses, a ratio of southbound trips as a portion of all traffic on March Road, and northbound trips as a portion of all traffic on March Road was developed. It was determined that 75% of the total traffic is southbound and 25% is northbound in the 2023 AM peak period and 30% of the total traffic is southbound and 70% is northbound in both the 2023 PM and 2023 Saturday peak periods. It was also determined that 75% of the total traffic is southbound and 25% is northbound in the 2023 PM and 2023 Saturday peak periods. It was also determined that 75% of the total traffic is southbound and 25% is northbound in the 2028 AM peak period and 30% of the total traffic is southbound and 70% is northbound in both the 2028 PM and 2028 Saturday peak periods. Using these percentages, the traffic volumes have been logically distributed to the access points. Figure 21 illustrates the site pass-by trip volumes.

Figure 22 illustrates the combined impact of the net new site trip generation and pass-by trips.

Figure 20: New Site Generation Auto Volumes

#### Subject: 788 March Road

Transportation Impact Assessment Study (October 2018) - Addendum 3

## **1.** Introduction

#### **1.1. Context**

Recent changes have been made to the original Site Plan (dated July 07, 2018) for this residential project that impact the proposed development's peak hour traffic generation, and result in a different site configuration with respect to access location. This Addendum 3 represents an update to the original TIA and subsequent Addendum 1 to 2 with regard to these two items. The site is now anticipated to be developed in a single phase, and the updated Site Plan can be found in Appendix A.

## 2. Changes to Trip Generation

Site generated traffic is directly related to the number of proposed residential units. There is a proposed decrease in the number of units relative to the original study, and therefore the anticipated trips generated by the site is also expected to decrease. The following sections summarize the expected changes to the trip generation.

#### 2.1. Trip Generation – Previous Study (2018)

The values shown in Table 1 below, were taken from the previous Site Plan for the Phase 2 (2023) horizon full buildout horizon where 196 residential units were proposed.

Travel Mode	AM Mode	AM	Peak (persons/	′h)	PM Peak (persons/h)			
i lavei Moue	Share	In	Out	Total	In	Out	Total	
Auto Driver	50%	20	49	69	41	28	69	
Auto Passenger	10%	3	11	14	8	6	14	
Transit	25%	7	20	27	16	12	28	
Non-motorized	15%	8	20	28	15	12	27	
Total People Trips	100%	38	100	138	80	58	138	
Total 'New' High-Rise Condominium (2023) Auto Trips		20	49	69	41	28	69	

#### Table 1: Site Person Trip Generation Using OD-Survey Mode Share – Previous Study

The total two-way anticipated site generated person trips are 138 for the AM and PM peak hours, and the total two-way vehicle generated trips are 69 trips for the AM and PM peak hours.

#### 2.2. Trip Generation – 2020 Updated Site Plan

Using the updated Site Plan with the total of 92 proposed residential units and applying the same modal shares and directional splits, the new anticipated person trips are shown in Table 2 below.

## **DELIVERING A BETTER WORLD**

Travel Mode	AM Mode	AM Peak (persons/h) Pl				M Peak (persons/h)		
Traver would	Share	In	In Out Total		In	Out	Total	
Auto Driver	50%	9	23	32	19	13	32	
Auto Passenger	10%	1	5	6	4	3	7	
Transit	25%	4	13	17	9	7	16	
Non-motorized	15%	3	7	10	5	5	10	
Total People Trips	100%	17	48	65	37	28	65	
Total 'New' High-Rise Condominium (2023) Auto Trips		9	23	32	19	13	32	

Table 2: Site Person Trip Generation Using OD-Survey Mode Share - Updated

The total two-way anticipated site generated person trips are 65 for the AM and PM peak hours, and the total two-way vehicle generated trips are 32 trips for the AM and PM peak hours. Figure 1, below shows the updated vehicle volumes assigned to the local roadways within the study area.

#### Figure 1: Updated Total Site Generated Vehicle Trips

#### 2.3. Difference in Forecasted Trips

To understand the difference between the previous Site Plan and the updated Site Plan with regard to trip generation, the forecasted volumes from the original TIA were compared to those associated with the updated Site Plan. Table 3 summarizes the difference (Table 2 - Table 1 values).

## 1 Screening

This study has been prepared according to the City of Ottawa's 2017 Transportation Impact Assessment (TIA) Guidelines. Accordingly, a Step 1 Screening Form has been prepared and is included as Appendix A, along with the Certification Form for TIA Study PM. As shown in the Screening Form, a TIA is required including the Design Review Component and the Network Impact Component.

As a result of the review process, additional comments and analysis have been produced for the City of Ottawa in the form of comment-response documents. The first round of responses to the City's comments have been included in Appendix B and the second round of responses to the City's comments have been included in Appendix C as supplements to the TIA.

Additionally, as the plan has evolved, the building areas have shifted slightly, however these changes are considered minor and have not been reflected in the analysis. Ambiguity surrounding the use of what is shown as Retail B in the most recent plan submitted with this report has required a conservative analysis approach to be adopted. It has been indicated that Retail B may in fact take the form of a restaurant. A previous version of the plan identified the building in question as a restaurant (Restaurant 2) instead of a retail building and as a result, the analysis sections of this TIA have considered this building to be a restaurant in order to produce a conservative analysis. The previous version of the plan is shown in Appendix D which shows the statistics used for Restaurant 2.

## 2 Existing and Planned Conditions

## 2.1 Proposed Development

The subject property, located at 910 March Road, is currently zoned as Rural [Ru] and Development Reserve [DR] and is undeveloped.

The proposed development consists of a 1,835 square metre hardware store, a 234 square metre restaurant with a drive through, a 416 square metre retail store, and a 249 square metre gas bar attached to a 191 square metre Tim Hortons with a drive-through. A total of 164 vehicle parking stalls and 16 bicycle parking spaces will be provided. The site is proposed to have two accesses. Both accesses are located along March Road; the first (Site Access #1) is a full-movement access located approximately 215 metres north of Maxwell Bridge Road, measured from intersection centreline to intersection centreline. Based on professional experience and the development design, signalization of this access is anticipated, however it will be confirmed within this report. The second (Site Access #2) is a right-in / right-out access located approximately 150 metres north of Maxwell Bridge Road, measured intersection centreline to intersection centreline. The anticipated full build-out and occupancy horizon is 2022. Figure 1 illustrates the Study Area Context. Figure 2 illustrates the proposed concept plan.

## 1.0 INTRODUCTION

This TIA has been prepared in support of Site Plan Control and Zoning By-Law Amendment applications for the property located at 1104 Halton Terrace. The site is currently vacant and is surrounded by the following:

- Old Carp Road, followed by vacant land to the north;
- Halton Terrace, followed by a stormwater management pond to the east;
- Halton Terrace, followed by existing low-density residential development to the south; and
- Low-density residential development to the west.

A view of the subject site is provided in Figure 1.

### Figure 1: View of the Subject Site

## 2.0 PROPOSED DEVELOPMENT

The proposed development is designated as 'General Urban Area' in Schedule B of the City of Ottawa's Official Plan. The implemented zoning for 1104 Halton Terrace is 'Residential Third Density' (R3).

The proposed development will feature 86 apartment dwellings. Five single detached dwellings with frontage on Halton Terrace are proposed at the southern limits of the site but are not part of the subject application. The proposed development will be accessed by two new driveways along Halton Terrace and Old Carp Road. The access along Halton Terrace will serve a surface parking lot containing 53 parking spaces. The access along Old Carp Road will serve an underground parking lot containing 68 parking spaces. The proposed development is expected to be constructed in a single phase, with full occupancy in 2024.

A copy of the proposed Site Plan is included in **Appendix A**.

### 3.0 SCREENING

### 3.1 Screening Form

The City's 2017 TIA Guidelines identify three triggers for completing a TIA report, including trip generation, location, and safety. The criteria for each trigger are outlined in the City's TIA Screening Form. The trigger results are as follows:

- Trip Generation Trigger The development is not anticipated to generate over 60 peak hour person trips; further assessment is not required based on this trigger.
- Location Triggers The development is not located within a Design Priority Area or Transit-Oriented Development zone, and does not propose a new driveway to a boundary street designated as part of the City's Rapid Transit, Transit Priority, or Spine Cycling networks; further assessment is not required based on this trigger.
- Safety Triggers The horizontal curvature of Halton Terrace may limit sightlines at the proposed access to Halton Terrace; further assessment is required based on this trigger.

A copy of the TIA Screening Form is included in **Appendix B**.

### 4.0 SCOPING

### 4.1 Existing Conditions

#### 4.1.1 Roadways

All roadways within the study area fall under the jurisdiction of the City of Ottawa.

March Road is an arterial roadway that generally runs on a north-south alignment within the study area, running between Dunrobin Road and Highway 417. West of Dunrobin Road, the roadway runs on an east-west alignment until Appleton Sideroad in Almonte, where it continues as Ottawa Street. South of Highway 417, the roadway continues on a north-south alignment as Eagleson Road. Within

10010 4.1 100000									
Travel Mode	Mode Share	AN	I Peak Peri	iod	PM Peak Period				
	moue Share	IN	OUT	тот	IN	OUT	ТОТ		
Peak Period Person Trips		21	48	69	45	32	77		
Auto Driver	50%	11	24	35	23	16	39		
Auto Passenger	20%	4	10	14	9	6	15		
Transit	25%	5	12	17	11	8	19		
Cyclist	0%	0	0	0	0	0	0		
Pedestrian	5%	1	2	3	2	2	4		

### Table 4: Proposed Residential – Peak Period Person Trips by Mode Share

Table 4 of the *TRANS Trip Generation Manual* includes adjustment factors to convert the estimated number of trips generated for each mode from peak period to peak hour. A breakdown of the peak hour person trips by mode is shown in the following table.

Table 5: Proposed	l Residential –	Peak Hour Person Trips b	y Mode Share

Travel Mode	Adj. F	actor	A	M Peak Ho	ur	PM Peak Hour		
	AM	PM	IN	OUT	ТОТ	IN	OUT	ТОТ
Auto Driver	0.48	0.44	5	12	17	10	7	17
Auto Passenger	0.48	0.44	2	5	7	4	3	7
Transit	0.55	0.47	3	6	9	5	4	9
Cyclist	0.58	0.48	0	0	0	0	0	0
Pedestrian	0.58	0.52	1	1	2	1	1	2
Peak Hour Person Trips			11	24	35	20	15	35

From the previous table, the development is estimated to generate 35 person trips (including 17 vehicle trips) during the AM and PM peak hours.

### 5.2 Background Traffic

### 5.2.1 Other Area Developments

The City of Ottawa Development Application Search Tool identifies the following other area developments in proximity of the subject site. Relevant excerpts from other area development traffic reports are included in **Appendix F**.

### 706-714 March Road

Development of a 4,165 m<sup>2</sup> GFA supermarket, 350 m<sup>2</sup> GFA fast-food restaurant with drive-through, and 1,500 m<sup>2</sup> GFA of multi-unit commercial space. The TIA identified a buildout year of 2023. Traffic generated by this development has been added to the 2024 background traffic volumes.

### 788 March Road

Development of a 92 apartment dwellings. The TIA identified a buildout year of 2023. Traffic generated by this development has been added to the 2024 background traffic volumes.

### 910 March Road

Development of a 1,835 m<sup>2</sup> hardware store, a 234 m<sup>2</sup> restaurant with drive-through, a 191 m<sup>2</sup> coffee shop with drive-through, a 416 m<sup>2</sup> retail store, and a 249 m<sup>2</sup> gas bar. The TIA identified a buildout year of 2022. Traffic generated by this development has been added to the 2024 background traffic volumes.

# 2 SCOPING

## 2.1 SCREENING FORM

The completed Screening Form is provided in Appendix B.

## 2.2 DESCRIPTION OF PROPOSED DEVELOPMENT

This Transportation Impact Assessment (TIA) has been prepared in support of the Site Plan Control Application for the proposed development at 415 Legget Drive and 2700 Solandt Road. The site is currently occupied by a two-storey general office building (9,600 m<sup>2</sup>) with a large parking lot. The site area is 72,860 m<sup>2</sup> and is located at the northeast corner of the Legget Drive and Solandt Road intersection.

The redevelopment of the site is split into two (2) phases. Phase 1 includes the change of use from existing office and building to 2-storey warehousing occupancy. A partial removal of the second storey is proposed which will reduce the overall GFA of the building to approximately 14,350 m<sup>2</sup>.

The proposed development of Phase 2 will include the construction of two warehouse buildings. Proposed building 'A' and Proposed Building 'B' (combined GFA of 18,580 m<sup>2</sup>) will be constructed within the existing parking lot.

The property contains two access points along Legget Drive, and a third along Solandt Road about 150 m north of the intersection of Legget Drive and Solandt Road. All existing site accesses will remain as the access/egress points to the proposed development.

The property is currently zoned as a Business Park Industrial Zone Subzone 6 (IP-6). **Figure 2-1** illustrates the Study Area Context. The development information, as stated in the draft site plan attached as **Appendix C**, states that 152 surface level parking spaces will be provided.

The new warehouse buildings will be built with an estimated date of completion in 2022 and full occupancy in mid 2023.

Figure 2-1. Area Context Plan

## 1.0 INTRODUCTION

This Transportation Impact Assessment has been prepared in support of Site Plan Control and Zoning By-Law Amendment applications for the property located at 2707 Solandt Road. The site is currently vacant.

The subject site is surrounded by the following:

- The Marshes Golf Club to the north and east;
- Solandt Road, followed by offices to the south;
- Offices, followed by Legget Drive to the west.

A view of the subject site is provided in **Figure 1**.

## 2.0 PROPOSED DEVELOPMENT

The proposed development will include an 8-storey, 198,615 ft<sup>2</sup> office building at 2707 Solandt Road, and will connect to the existing parking lot located at 2505 Solandt Road. As the parking lot at 2505 Solandt Road was previously approved in 2009 (SP D07-12-06-007), the Site Plan and re-zoning applications relate to the 2707 Solandt Road property only. A total of 587 parking spaces will be provided on the two sites combined. Access to the proposed development will be provided via two existing driveways to the parking lot at 2505 Solandt Road and two new driveways to 2707 Solandt Road. It is anticipated that the proposed development may be constructed in a single phase, with full occupancy in 2021.

The proposed development is designated as 'Urban Employment Area' in Schedule B of the City of Ottawa's Official Plan. The implemented zoning for the subject site is 'Business Park Industrial Zone (Kanata North Business Park)' (IP6). The proposed development is permitted under the implemented zoning, however a Zoning By-Law Amendment is required to seek relief of the current height limit of 22m.

A copy of the concept plan is included in **Appendix A**.

### 3.0 SCREENING

The City's 2017 TIA Guidelines identify three triggers for completing a TIA report, including trip generation, location, and safety. The criteria for each trigger are outlined in the City's TIA Screening Form. A copy of the TIA Screening Form is included in **Appendix B**. The trigger results are as follows:

- Trip Generation Trigger The development is anticipated to generate over 60 peak hour person trips; further assessment is required based on this trigger.
- Location Triggers The development is not located within a Design Priority Area or Transit-Oriented Development zone, and does not propose a new driveway to a boundary street designated as part of the City's Rapid Transit, Transit Priority, or Spine Cycling networks; further assessment is not required based on this trigger.
- Safety Triggers No safety triggers outlined in the TIA Screening Form are met; further assessment is not required based on this trigger.

Figure 1: View of the Subject Site

#### Figure 6: Site-Generated Traffic

## 1. Step 1 – Screening Form

With respect to the City of Ottawa's 2017 Transportation Impact Assessment (TIA) Guidelines, the proposed development (described below in Section 2.1) triggered the trip generation and the safety criteria outlined in the City's TIA Step 1 – Screening form. However, based on the location of the proposed development, the location trigger was not met. As only one of three triggers are required, a formal TIA (i.e. completed Steps 1-5) must accompany the subject development application.

## 2. Step 2 – Scoping

#### 2.1 Description of Proposed Development

Based on the information provided, it is our understanding that the proponent is proposing a new office building located at 3026 Solandt Road, which is located on a vacant parcel of land that was previously occupied by a similar land use in 2014 (i.e. an office building existed on the subject parcel of land and has since been demolished). The new office building being proposed includes approximately 100,000 ft<sup>2</sup> of total floor area, accompanied by approximately 350 new parking spaces. The proposed development will be built in a single phase with an anticipated buildout year in 2021.

The latest Site Plan shows two direct vehicle driveway connections to Solandt Road, with inter-site connectivity between adjacent land uses to two other driveway connections (i.e. there will be a shared driveway connection to Legget Drive and March Road). All these driveways currently exist and are proposed to be maintained, with the exception of the west driveway connection to Solandt Road is proposed to be relocated towards the east and will function as one-way inbound only. It should be noted that the driveway connections to Solandt Road are currently barricaded.

In the event that inter-site connectivity between adjacent land uses is severed, it has been assumed that all sitegenerated traffic for the subject development will be assigned to the driveway connections to Solandt Road only. This is considered to be a conservative assumption as the available shared driveway connections to Legget Drive and March Road can provide additional capacity.

The local context of the subject site is provided as **Figure 1** and the proposed Concept Plan is provided as **Figure 2**.

Intersection Signal Delay: 3	7.5			Ir	tersection	LOS: D						
Intersection Capacity Utiliza				IC	CU Level o	f Service F						

Intersection Capacity Utilization 91.3% Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.
 Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

# **APPENDIX M**

Transportation Demand Management

# **TDM Measures Checklist:**

Residential Developments (multi-family, condominium or subdivision)

Legend
--------

The measure is generally feasible and effective, and in most cases would benefit the development and its users

**BETTER** The measure could maximize support for users of sustainable modes, and optimize development performance

The measure is one of the most dependably effective tools to encourage the use of sustainable modes

	TDM	measures: Residential developments	Check if proposed & add descriptions				
	1.	TDM PROGRAM MANAGEMENT					
	1.1	Program coordinator					
BASIC ★	1.1.1	Designate an internal coordinator, or contract with an external coordinator					
	1.2	Travel surveys					
BETTER	1.2.1	Conduct periodic surveys to identify travel-related behaviours, attitudes, challenges and solutions, and to track progress					
	2.	WALKING AND CYCLING					
	2.1	Information on walking/cycling routes & des	tinations				
BASIC	2.1.1	Display local area maps with walking/cycling access routes and key destinations at major entrances (multi-family, condominium)					
	2.2	Bicycle skills training					
BETTER	2.2.1	Offer on-site cycling courses for residents, or subsidize off-site courses					

	TDM	measures: Residential developments	Check if proposed & add descriptions
	3.	TRANSIT	
	3.1	Transit information	
BASIC	3.1.1	Display relevant transit schedules and route maps at entrances (multi-family, condominium)	$\checkmark$
BETTER	3.1.2	Provide real-time arrival information display at entrances (multi-family, condominium)	
	3.2	Transit fare incentives	
BASIC ★	3.2.1	Offer PRESTO cards preloaded with one monthly transit pass on residence purchase/move-in, to encourage residents to use transit	
BETTER	3.2.2	Offer at least one year of free monthly transit passes on residence purchase/move-in	
	3.3	Enhanced public transit service	
BETTER ★	3.3.1	Contract with OC Transpo to provide early transit services until regular services are warranted by occupancy levels <i>(subdivision)</i>	
	3.4	Private transit service	
BETTER	3.4.1	Provide shuttle service for seniors homes or lifestyle communities (e.g. scheduled mall or supermarket runs)	
	4.	<b>CARSHARING &amp; BIKESHARING</b>	
	4.1	Bikeshare stations & memberships	
BETTER	4.1.1	Contract with provider to install on-site bikeshare station ( <i>multi-family</i> )	$\checkmark$
BETTER	4.1.2	Provide residents with bikeshare memberships, either free or subsidized (multi-family)	
	4.2	Carshare vehicles & memberships	
BETTER	4.2.1	Contract with provider to install on-site carshare vehicles and promote their use by residents	
BETTER	4.2.2	Provide residents with carshare memberships, either free or subsidized	
	5.	PARKING	
	5.1	Priced parking	
BASIC ★	5.1.1	Unbundle parking cost from purchase price (condominium)	
BASIC 🛨	5.1.2	Unbundle parking cost from monthly rent (multi-family)	

Version 1.0 (30 June 2017)

	TDM	measures: Residential developments	Check if proposed & add descriptions
	6.	TDM MARKETING & COMMUNICATIONS	
	6.1	Multimodal travel information	
BASIC ★	6.1.1	Provide a multimodal travel option information package to new residents	
	6.2	Personalized trip planning	
BETTER ★	6.2.1	Offer personalized trip planning to new residents	

# **TDM Measures Checklist:**

Non-Residential Developments (office, institutional, retail or industrial)

## Legend

C The measure is generally feasible and effective, and in most cases would benefit the development and its users

BETTER The measure could maximize support for users of sustainable modes, and optimize development performance

The measure is one of the most dependably effective tools to encourage the use of sustainable modes

	TDM	measures: Non-residential developments	Check if proposed & add descriptions
	1.	TDM PROGRAM MANAGEMENT	
	1.1	Program coordinator	
BASIC	★ 1.1.1	Designate an internal coordinator, or contract with an external coordinator	
	1.2	Travel surveys	
BETTER	1.2.1	Conduct periodic surveys to identify travel-related behaviours, attitudes, challenges and solutions, and to track progress	
	2.	WALKING AND CYCLING	
	2.1	Information on walking/cycling routes & destin	ations
BASIC	2.1.1	Display local area maps with walking/cycling access routes and key destinations at major entrances	
	2.2	Bicycle skills training	
		Commuter travel	
BETTER	2.2.1	Offer on-site cycling courses for commuters, or subsidize off-site courses	
	2.3	Valet bike parking	
		Visitor travel	
BETTER	2.3.1	Offer secure valet bike parking during public events when demand exceeds fixed supply (e.g. for festivals, concerts, games)	

# **TDM Measures Checklist**

Version 1.0 (30 June 2017)

	TDM	measures: Non-residential developments	Check if proposed & add descriptions
	3.	TRANSIT	
	3.1	Transit information	
BASIC	3.1.1	Display relevant transit schedules and route maps at entrances	
BASIC	3.1.2	Provide online links to OC Transpo and STO information	
BETTER	3.1.3	Provide real-time arrival information display at entrances	
	3.2	Transit fare incentives	
		Commuter travel	
BETTER	3.2.1	Offer preloaded PRESTO cards to encourage commuters to use transit	
BETTER	★ 3.2.2	Subsidize or reimburse monthly transit pass purchases by employees	
		Visitor travel	
BETTER	3.2.3	Arrange inclusion of same-day transit fare in price of tickets (e.g. for festivals, concerts, games)	
	3.3	Enhanced public transit service	
		Commuter travel	
BETTER	3.3.1	Contract with OC Transpo to provide enhanced transit services (e.g. for shift changes, weekends)	
		Visitor travel	
BETTER	3.3.2	Contract with OC Transpo to provide enhanced transit services (e.g. for festivals, concerts, games)	
	3.4	Private transit service	
		Commuter travel	
BETTER	3.4.1	Provide shuttle service when OC Transpo cannot offer sufficient quality or capacity to serve demand (e.g. for shift changes, weekends)	
		Visitor travel	
BETTER	3.4.2	Provide shuttle service when OC Transpo cannot offer sufficient quality or capacity to serve demand (e.g. for festivals, concerts, games)	

	TDM	measures: Non-residential developments	Check if proposed & add descriptions
	4.	RIDESHARING	
	4.1	Ridematching service	
		Commuter travel	
BASIC ★	4.1.1	Provide a dedicated ridematching portal at OttawaRideMatch.com	
	4.2	Carpool parking price incentives	
		Commuter travel	
BETTER	4.2.1	Provide discounts on parking costs for registered carpools	
	4.3	Vanpool service	
		Commuter travel	
BETTER	4.3.1	Provide a vanpooling service for long-distance commuters	
	5.	CARSHARING & BIKESHARING	
	5.1	Bikeshare stations & memberships	
BETTER	5.1.1	Contract with provider to install on-site bikeshare station for use by commuters and visitors	
		Commuter travel	1
BETTER	5.1.2	Provide employees with bikeshare memberships for local business travel	
	5.2	Carshare vehicles & memberships	
		Commuter travel	
BETTER	5.2.1	Contract with provider to install on-site carshare vehicles and promote their use by tenants	
BETTER	5.2.2	Provide employees with carshare memberships for local business travel	
	6.	PARKING	
	6.1	Priced parking	
		Commuter travel	
BASIC ★	6.1.1	Charge for long-term parking (daily, weekly, monthly)	
BASIC	6.1.2	Unbundle parking cost from lease rates at multi-tenant sites	
		Visitor travel	
BETTER	6.1.3	Charge for short-term parking (hourly)	

# **TDM Measures Checklist**

Version 1.0 (30 June 2017)

	TDM	measures: Non-residential developments	Check if proposed & add descriptions
	7.	TDM MARKETING & COMMUNICATIONS	
	7.1	Multimodal travel information	
		Commuter travel	
BASIC ★	7.1.1	Provide a multimodal travel option information package to new/relocating employees and students	
BETTER ★	710	Visitor travel Include multimodal travel option information in	
BETTER ★	1.1.2	invitations or advertising that attract visitors or customers (e.g. for festivals, concerts, games)	
	7.2	Personalized trip planning	
		Commuter travel	
BETTER ★	7.2.1	Offer personalized trip planning to new/relocating employees	
	7.3	Promotions	
		Commuter travel	
BETTER	7.3.1	Deliver promotions and incentives to maintain awareness, build understanding, and encourage trial of sustainable modes	
	8.	OTHER INCENTIVES & AMENITIES	
	8.1	Emergency ride home	
		Commuter travel	
BETTER ★	8.1.1	Provide emergency ride home service to non-driving commuters	
	8.2	Alternative work arrangements	
		Commuter travel	
BASIC ★	8.2.1	Encourage flexible work hours	
BETTER	8.2.2	Encourage compressed workweeks	
BETTER ★	8.2.3	Encourage telework	
	8.3	Local business travel options	
		Commuter travel	
BASIC ★	8.3.1	Provide local business travel options that minimize the need for employees to bring a personal car to work	
	8.4	Commuter incentives	
		Commuter travel	1
BETTER	8.4.1	Offer employees a taxable, mode-neutral commuting allowance	
	8.5	On-site amenities	
		Commuter travel	
BETTER	8.5.1	Provide on-site amenities/services to minimize mid-day or mid-commute errands	

# **APPENDIX N**

MMLOS Analysis

#### Intersection MMLOS Analysis

The following is a review of the MMLOS of the signalized intersections within the study area, using complete streets principles. The MMLOS targets associated with the 'General Urban Area' designation have been used to evaluate March Road/Morgan's Grant Way/Shirley's Brook Drive, and the targets associated with the 'Employment Area' designation have been used to evaluated March Road/Solandt Road. Since March Road/Terry Fox Drive and Terry Fox Drive/Flamborough Way/Innovation Drive is located in both land use designations, whichever target is stricter has been used in evaluation of this intersection.

Exhibit 5 of the Addendum to the MMLOS Guidelines has been used to evaluate the existing PLOS at the intersections listed above. Exhibit 22 of the MMLOS Guidelines suggests a target PLOS C for all roadways within the General Urban or Employment Areas. The results of the intersection PLOS analysis are summarized in **Table 1** through **Table 4**.

Exhibit 12 of the *MMLOS Guidelines* has been used to evaluate the existing BLOS at the intersections listed above. Exhibit 22 of the *MMLOS Guidelines* suggests a target BLOS B for Local Routes in the General Urban Area (Morgan's Grant Way and Shirley's Brook Drive), and a target BLOS C for Spine Routes in the General Urban and Employment Areas (March Road and Terry Fox Drive) and Local Routes in the Employment Area (Solandt Road and Legget Drive). The results of the intersection BLOS analysis are summarized in **Table 5**.

Exhibit 16 of the *MMLOS Guidelines* has been used to evaluate the existing TLOS at the intersections listed above. Exhibit 22 of the *MMLOS Guidelines* identifies a target TLOS B for Rapid Transit Corridors (March Road south of Solandt Road), a target TLOS D for Transit Priority Corridors with Isolated Measures (March Road north of Solandt Road), and does not identify a target TLOS for roadways without a Rapid Transit or Transit Priority designation (Terry Fox Drive, Morgan's Grant Way/Shirley's Brook Drive, Solandt Road, Legget Drive). The TLOS has been evaluated for every approach that is currently used by transit. The results of the intersection TLOS analysis are summarized in **Table 6**.

Exhibit 21 of the *MMLOS Guidelines* has been used to evaluate the existing TkLOS at the intersections listed above. Exhibit 22 of the *MMLOS Guidelines* identifies a target TkLOS B for arterial truck routes in the Employment Area (March Road south of Terry Fox Drive, Terry Fox Drive west of March Road), and a target TkLOS D for arterial truck routes in the General Urban Area (March Road north of Terry Fox Drive) and collector roadways without a truck route designation in the Employment Area (Terry Fox Drive east of March Road, Legget Drive, and Solandt Road). No target is identified for collector roadways without a truck route designation in the General Urban Area (Morgan's Grant Way, Shirley's Brook Drive). The results of the intersection TkLOS analysis are summarized in **Table 7**.
