EXECUTIVE SUMMARY

Assessment

Paterson Group Inc. was retained by 230 Lisgar Street Inc., to conduct a Phase I Environmen tal Site Assessment (ESA) for the properties at 230 and 232 Lisgar Street, in the City of Ottawa, Ontario. The purpose of this Phase I-Environmental Site Assessment (Phase I-ESA) was to research the past and current use of the site and study area to identify any environmental concerns with the potential to have impacted the Phase I Property.

According to the historical research, the Phase I Property was initially developed as early as 1888 with the present-day, 2-storey residential buildings. For the most part, the Phase I Property had been used primarily for residential purposes, with the exception of commercial office use on the ground level at 230 Lisgar Street from 1961 until 2007. Since then, the Phase I Property has been used strictly for residential purposes only. No potentially contaminating activities (PCAs) were identified with the historical use of the Phase I Property.

The historical use of the surrounding properties within the Phase I Study Area generally consisted of residential with some commercial land uses. An off-site PCA, carpet cleaner was listed in 1981/1982 at 309 Cooper Street, approximately 15 m southwest or cross-gradient of the Phase I Property. Based on the style of the building structure, it is unlikely that the business at this property conducted any activities associated with any processes consisting of solvents or harmful chemicals, but rather, listed as a business address/office. As such, this listed business is not considered to represent an area of potential environmental concern (APEC) on the Phase I Property.

The ERIS search and a review of the well records, identified an abandoned UST at 309 Cooper Street, abutting the southern property boundary of 250 Lisgar Street, approximately 20 m west of the Phase I Property. The abandoned UST is considered a PCA, although based on the cross-gradient orientation and the nature of the subsurface soils (silty clay) in the immediate area of the Phase I Property, this PCA is not considered to result in an APEC. No other PCAs were identified with the historical use of the properties within the Phase I Study Area.

Following the historical research, a site visit was conducted to assess the current use of the Phase I Property and properties within the Phase I Study Area. Based on the site visit, the Phase I Property is occupied by the original 1888 buildings that are used solely for residential purpose. No on-site PCAs were identified with the current use of the Phase I Property.

Surrounding land use consisted primarily of residential with some commercial and retail uses. No off-site PCAs were identified with the current use of the Phase I Study Area.

Based on the findings of the assessment, it is our opinion that a Phase II-Environmental Site Assessment is not required for the Phase I Property.

Recommendations

Based on the age of the buildings, potentially asbestos-containing materials (ACMs) and lead-based paints (LBPs) may be present in the building structures. Potential ACMs include hard and decorative plaster walls, ceiling stipple, drywall joint compound, vinyl floor tiles, and interior and exterior parging of the building basements and foundations. If the Phase I Property is to be redeveloped in the future, a DSS must be conducted prior to the demolition of the existing buildings in accordance with Ontario Regulation 490/09, under the Occupational Health and Safety Act.

1.0 INTRODUCTION

At the request of 230 Lisgar Street Inc., Paterson Group (Paterson) Inc. conducted a Phase I Environmental Site Assessment (Phase I ESA) for the properties addressed 230 and 232 Lisgar Street, in the City of Ottawa, Ontario. The purpose of this Phase I ESA was to research the past and current use of the site and study area to identify any environmental concerns with the potential to have impacted the Phase I Property.

Paterson was engaged to conduct this Phase I ESA by Mr. Albert Falsetto. The office of Mr. Albert Falsetto is located at 1245 Walkley Road, Ottawa, Ontario.

This report has been prepared specifically and solely for the above noted project which is described herein. It contains all of our findings and results of the environmental conditions at this site.

This Phase I-ESA report has been prepared by a qualified person, in general accordance with Ontario Regulation (O.Reg.) 153/04, as amended, under the Environmental Protection Act, and CSA Z768-01 (reaffirmed 2022). The conclusions presented herein are based on information gathered from a limited historical review and field inspection program. The findings of the Phase I-ESA are based on a review of readily available geological, historical and regulatory information and a cursory review made at the time of the field assessment. The historical research relies on information supplied by others, such as, local, provincial and federal agencies and was limited within the scope-of-work, time and budget of the project herein.

2.0 PHASE I PROPERTY INFORMATION

Address:	230 and 232 Lisgar Street, Ottawa, Ontario.				
Legal Description:	Part of Lot 47, Plan 12281, as in CR540181, South side of Lisgar Street, in the City of Ottawa.				
Location:	The Phase I Property is located on the south side of Lisgar Street, approximately 40 m west of Metcalfe Street, in the City of Ottawa, Ontario. The Phase I Property is shown on Figure 1 - Key Plan following the body of this report.				
Latitude and Longitude:	45° 25' 4.94" N, 75° 41' 46.01" W.				
Site Description:					
Configuration:	Rectangular				
Site Area:	710 m ² (approximate).				
Zoning:	R5B – Fifth Density Residential Zone.				
Current Use:	The Phase I Property consists of two, 2-storey multi- tenant residential buildings with associated parking on the southern part of the lot.				
Services:	The Phase I Property is located in an area where municipal services are relied upon.				

3.0 SCOPE OF INVESTIGATION

The scope of work for this Phase I – Environmental Site Assessment was as follows:

- Determine the historical activities on the Phase I Property and study area by conducting a review of readily available records, reports, photographs, plans, mapping, databases and regulatory agencies;
- Investigate the existing conditions present at the Phase I Property and study area by conducting site reconnaissance;
- Conduct interviews with persons knowledgeable of current and historic operations on the Phase I Property, and if warranted, neighbouring properties;
- Present the results of our findings in a comprehensive report in general accordance with the requirements of Ontario Regulation 269/11 amending O.Reg. 153/04 made under the Environmental Protection Act and in compliance with the requirements of CSA Z768-01 (reaffirmed 2022);
- Provide a preliminary environmental site evaluation based on our findings;
- Provide preliminary remediation recommendations and further investigative work if contamination is suspected or encountered.

4.0 **RECORDS REVIEW**

4.1 General

Phase I-ESA Study Area Determination

A radius of approximately 250 m was determined to be appropriate as a Phase I Study Area for this assignment. Properties outside the 250 m radius are not considered to pose any risk to the Phase I Property, based on their significant distance from the subject land.

First Developed Use Determination

Based on the 1888 Fire Insurance Plan (FIP), the Phase I Property was occupied by the present-day 2-storey residential buildings. For the purpose of this assessment, the first developed use of the Phase I Property is considered to be residential in 1888.

Fire Insurance Plans

The 1888, 1901,1928 and 1956 Fire Insurance Plans (FIPs) were reviewed as part of the assessment. The 1888, 1901, 1928 and 1956 FIP depicts the Phase I Property as being occupied by two, 2-storey residential buildings, while the surrounding properties within the Phase I Study Area are densely occupied by residential dwellings and buildings with some commercial land use. No potentially contaminating activities (PCAs) were identified during the review of the FIPs.

City of Ottawa Street Directories

City directories were reviewed in approximately ten (10) year intervals from 1890 to 2011.

The Phase I Property, addressed 230 and 232 Lisgar Street, was first listed under private individuals in 1890, and is considered to have been used for residential purposes.

From 1890 to 1960, 230 Lisgar Street was listed under various private individuals. From 1961 to 2011, the property was listed as a mixed-use property that included commercial offices under different entities and private individuals until 2011. From 1890 to 2011, 232 Lisgar Street was listed under various private individuals for the sole purpose of residential use. The directories did not identify any historical PCAs on the Phase I Property.

The surrounding properties within the Phase I Study Area generally consisted of residential with some commercial land uses.

An off-site PCA, carpet cleaner, was listed in 1981/1982 at 309 Cooper Street, approximately 15 m southwest or cross-gradient of the Phase I Property. Based on the style of the building, or lack thereof, it is unlikely that the listed business at this property conducted activities associated with any processes consisting of solvents or harmful chemicals, but rather just a business address or office. This historical listing is not considered to represent an area of potential environmental concern (APEC) on the Phase I Property. No other historical PCAs were identified during the review of the city directories.

Previous Engineering Reports

A geotechnical investigation was recently completed on the Phase I Property by Paterson in October of 2022.

Three (3) boreholes were placed across the subject land and drilled to a maximum depth of 11.4 m below the existing ground surface (mbgs). The subsurface profile consisted of a pavement structure, overlying fill material (silty sand with gravel and some crushed stones and silty clay), followed by silty clay, and underlain by glacial till. Practical refusal to augering was encountered at depths of 13.62 to 15.85 mbgs, in which, bedrock was inferred. No deleterious material or signs of contamination was noted during the field program.

4.2 Environmental Source Information

Environment Canada

A search of the National Pollutant Release Inventory (NPRI) was conducted electronically on October 28, 2022. The Phase I Property is not listed in the NPRI database. There are no properties registered in the NPRI database within the study area.

Ten (10) NPRI records were identified on properties within the Phase I Study Area. These records were identifed as air pollution emitters at 160 Elgin Street and 220 Laurier Street. Based on the type of pollutants and/or receiving media (air), these records are considered non-issues in the context of this assessment.

PCB Inventory

A search of provincial PCB waste storage sites was conducted. Three (3) PCB storage sites were identified within the Phase I Study Area. Two (2) records were identified at 255 Metcalfe Street, approximately 140 m southeast of the Phase I Property.

The records listed the property as having one drum (800 kg) of ballasts with high level PCBs (>1000 ppm) in 2003 and 2004.

The remaining record pertained to the Bell Canada Building at 160 Elgin Street, approximately 180 m northeast of the Phase I Property. The record listed the property as a PCB storage site of an unknown quantity in 1992. Based on the separation distances and orientations with respect to the Phase I Property, these registered PBC storage sites or off-site PCAs are not considered to represent APECs on the Phase I Property.

Ontario Ministry of Environment, Conservation and Parks (MECP) Instruments

A request was submitted to the MECP Freedom of Information (FOI) office for information with respect to certificates of approval, permits to take water, certificates of property use or any other similar MECP issued instruments for the site. Based on the response received from the MECP, no records were located regarding the Phase I Property. A copy of the MECP FOI response is appended to this report, in Appendix 2.

MECP Submissions

A request was submitted to the MECP FOI office for information with respect to reports related to environmental conditions for the properties. Based on the response received from the MECP, no records were located regarding the Phase I Property. A copy of the MECP FOI response is appended to this report.

MECP Incident Reports

A request was submitted to the MECP FOI office for information with respect to records concerning environmental incidents, orders, offences, spills, discharges of contaminants or inspections maintained by the MECP for the site or adjacent properties. Based on the response received from the MECP, no records were located regarding the Phase I Property. A copy of the MECP FOI response is appended to this report.

MECP Waste Management Records

A request was submitted to the MECP FOI office for information with respect to waste management records. Based on the response received from the MECP, no records were located regarding the Phase I Property. A copy of the MECP FOI response is appended to this report.

MECP Coal Gasification Plant Inventory

The Ontario Ministry of Environment document titled "Municipal Coal Gasification Plant Site Inventory, 1991" was reviewed to reference the locations of former plants with respect to the site. No Municipal Coal Gasification Plant Sites are located within the Phase I Study Area.

MECP Waste Disposal Site Inventory

The Ontario Ministry of Environment document titled "Waste Disposal Site Inventory in Ontario, 1991" was reviewed as part of the historical research. This document includes all recorded active and closed waste disposal sites, industrial manufactured gas plants and coal tar distillation plants in the Province of Ontario. No former waste disposal sites were identified within the Phase I Study Area.

MECP Brownfields Environmental Site Registry

A search of the MECP Brownfields Environmental Site Registry (ESR) was conducted as part of this assessment for the properties within the Phase I Study Area. No Records of Site Condition (RSCs) were filed for the Phase I Property. One RSC was filed for 300 Cooper Street, approximately 190 m west of the Phase I Property. Based on the information provided by the ESR as well as information contained in our files, 35 m³ of impacted soil was removed off-site. No groundwater remediation was required. Based on this information as well as the separation distance, this RSC property is not considered to pose any risk to the Phase I Property.

Areas of Natural Significance

An online search was conducted on the Ontario Ministry of Natural Resources and Forestry (MNRF) website for Areas of Natural Significance and Interest (ANSI). Based on the search, no ANSIs, natural heritage systems, conservation or provincially significant areas were identified within the Phase I Study Area.

Technical Standards and Safety Authority (TSSA)

The TSSA, Fuels Safety Branch in Toronto was contacted electronically on November 2, 2022, to inquire about current and former underground storage tanks, spills and incidents for the site and neighbouring properties. No records are listed in the TSSA registry for the Phase I Property or the neighbouring lands. A copy of the TSSA correspondence is included in Appendix 2.

City of Ottawa Historical Land Use Inventory (HLUI) Database

A Historical Land Use Inventory (HLUI) search request was submitted to the City of Ottawa for information regarding the Phase I Property and properties within a 250 m study area. At the time of issuing this report, a response had not been received from the City. The client will be contacted should any pertinent information be received. A copy of the request form is appended to this letter report.

Environmental Risk Information Services (ERIS) Report

An ERIS (Environmental Risk Information Service) Search Report was obtained for the Phase I Property and properties within the Phase I Study Area.

According to the ERIS report, there were no records identified for the Phase I Property, with the exception of ERIS historical searches conducted. Based on the ERIS search, there were no PCAs were identified on the Phase I Property.

Based on the ERIS search, several TSSA related records and numerous Ontario Waste Generators were identified on properties within the Phase I Study Area. The majority of these records were located significantly far enough or cross gradient from the subject land that they were not considered to pose any risk to the Phase I Property, although there was a record of an abandoned UST at 309 Cooper Street, approximately 20 m cross gradient from the Phase I Property. No other pertinent information was provided in the report regarding the UST.

Based on the cross-gradient orientation with respect to the Phase I Property and the nature of the subsurface soils, the abandoned UST is not considered to represent an APEC on the Phase I Property. A copy of the ERIS report is included in Appendix 2.

4.3 **Physical Setting Sources**

Aerial Photographs

Historical air photos from the National Air Photo Library were reviewed in approximate ten (10) year intervals. The review period dates back to the first available air photos for the site. Based on the review, the following observations have been made:

1928 The Phase I Property appears to be developed at this time with two (2) residential dwellings. The surrounding lands appear densely occupied by residential dwellings and apartment buildings.

- 1958 No significant changes are apparent on the Phase I Property or properties within the Phase I Study Area.
- 1965 The Phase I Property and surrounding lands appear unchanged from the previous image.
- 1976 The Phase I Property and surrounding lands to the east, west and south appear unchanged at this time. Lands further to the north appear to have been redeveloped with the present-day commercial office building.
- 1991 No significant changes are apparent on the Phase I Property or properties within the Phase I Study Area.
- 2005 The Phase I Property and surrounding lands appear unchanged from the previous image.
- 2011 The Phase I Property and surrounding lands to the north, east, west and south appear unchanged at this time, with the exception of a former parking lot situated on the northeast corner of the Metcalfe and Nepean Street intersection, which now appears to be under construction.
- 2021 The Phase I Property and the surrounding lands appear unchanged from the previous image, with the exception that the property that was formerly under construction, is now occupied by a residential high-rise building.

No PCAs were identified on the Phase I Property or on properties within the Phase I Study Area during the historical aerial image review. Copies of selected aerial photographs are included in Appendix 1.

Topographic Maps

Topographic maps were obtained from Natural Resources Canada – The Atlas of Canada website and from the City of Ottawa website. Based on the topographic map, the Phase I Property is situated at approximately 72 masl. Regionally, the topographic maps indicate a downward slope in a northwesterly direction. An illustration of the referenced topographic map is presented on Figure 2 – Topographic Map, appended to this report.

Physiographic Maps

A Physiographic Map was reviewed from the Natural Resources Canada – The Atlas of Canada website. According to this physiographic map, the site is located in the St. Lawrence Lowlands. According to the mapping description provided:

"The lowlands are plain-like areas that were all affected by the Pleistocene glaciations and are therefore covered by surficial deposits and other features associated with the ice sheets." The Phase I Property is located in the Central St. Lawrence Lowland, which is generally less than 150 m above sea level.

Geological Maps

The Geological Survey of Canada website on the Urban Geology of the National Capital Area was consulted as part of this assessment. Based on the information, bedrock in the area of the site consisted of limestone interbedded with shale, of the Billings Formation. The overburden across the site consisted of glaciomarine, which comprised of silt and clay deposits with a drift thickness on the order of 10 to 15m across the Phase I Property.

Water Well Records

A search of the MECP's web site for all drilled well records within 250 m of the Phase I Property was conducted on November 3, 2022. The search returned nine (9) well records within the Phase I Study Area, one of which was an abandoned well record, while the remaining were monitoring well records.

No well records were identified on the Phase I Property.

One abandoned well record was identified at 261 Somerset Street West, approximately 85 m south of the Phase I Property. No pertinent information regarding the environmental condition of the property was provided in this record.

One monitoring well record was identifed at 250 Lisgar Street, approximately 20 m west of the Phase I Property. Based on the well record, a former abandoned UST was identified on the southern portion of the property. It is suspected that this UST was associated with the abutting residential apartment building to the south, at 309 Cooper Street, and reported in the ERIS search as the abandoned UST. As previously discussed, the abandoned UST is considered a PCA, although based on the cross-gradient orientation as well as the nature of the subsurface soils in the immediate area with respect to the Phase I Property, this PCA is not considered to result in an APEC.

A total of five (5) monitoring well records were identified at 170 and 180 Metcalfe Street, approximately 100 m and 50 m north, respectively, of the Phase I Property. No pertinent information regarding the environmental condition of the two (2) properties were provided in these records. Based on the down- gradient orientation with respect to the Phase I Property, these monitoring wells are not considered pose a potential environmental concern.

Two (2) monitoring well records were identified at 331 and 335 Cooper Street, approximately 60 m and 120m west, respectively, of the Phase I Property. No pertinent information regarding the environmental condition of the two (2) properties were provided in these records; however, based on the cross- gradient orientation with respect to the Phase I Property, these monitoring wells are not considered pose a potential environmental concern. Copies of the well records are provided in Appendix 2.

Water Bodies and Areas of Natural Significance and Interest (ANSIs)

There are no natural water bodies or ANSIs within the Phase I Study Area.

5.0 INTERVIEWS

Property Owner

Mr. Albert Falsetto, the current landowner of the Phase I Property was interviewed via email. Mr. Falsetto has owned the subject land since the mid-2013. At the time of acquisition, the Phase I Property was used for residential purposes only. Mr. Falsetto is not aware of any former or current issues on the Phase I Property or the neighbouring properties that could be considered as potential environmental concerns.

It should be noted that the information provided by the interviewee was considered appropriate, in that, it collaborated with the historical land use information regarding the Phase I Property. Any other pertinent information obtained during the interview has been included in the relevant sections of this report.

6.0 SITE RECONNAISSANCE

6.1 General Requirements

The site assessment was conducted on November 7, 2022, by Ms. Mandy Witteman from the Environmental Department of Paterson Group. Access to the Phase I Property was provided by the current landowner. In addition to the site, the uses of neighbouring properties within the Phase I study area were also assessed at the time of the site visit.

6.2 Specific Observations at Phase I Property

Buildings and Structures

230 Lisgar Street is occupied by a 2-storey, multi-tenant residence with a basement level. The present-day residence was constructed circa 1888 with a

limestone foundation with large areas covered in exterior parging. The exterior façade of the building is finished in brick with a sloped shingle style roof.

232 Lisgar Street is occupied by a 2-storey, multi-tenant residence with a basement level. The present-day residence was constructed circa 1888 with a limestone foundation with large areas covered in exterior parging. The exterior façade of the building is finished in brick, while the rear extension is finished in a mixed aggregate stucco and vinyl siding with a sloped shingle style roof.

Site Features

Both residential buildings are situated on the north side of the site fronting Lisgar Street, while the south side exists as vehicular parking associated with the residences. Driveways to access the parking lots are situated on the east side of the buildings.

The ground surface of the lot, fronting Lisgar Street, is partially asphaltic paved concrete with some interlocking bricks, while the rear of the property is completely asphaltic concrete. Site drainage consists of sheetflow to catchbasins located along Lisgar Street.

The site topography is relatively flat and at the grade of the neighbouring properties to the east, west and south, while slightly above the grade of Lisgar Street. The regional topography appears to slope down in a northwesterly direction.

Waste produced on-site consists of solid, non-hazardous domestic waste and recyclables and is stored on the eastern sides of the buildings. No potential environmental concerns were noted regarding waste management on-site.

No signs of staining, spills or stagnating water were noted at the time of the site visit. No signs of an underground storage tank (UST), exterior above ground storage tank (AST) or unidentified substances were observed. No potential environmental concerns were noted on the Phase I Property at the time of the site visit.

Subsurface Services and Utilities

The Phase I Property is situated in an area where municipal services are relied upon. Underground utilities on-site include water and sanitary sewers that enter and exit the Phase I Property from Lisgar Street.

Interior Assessments

A general assessment of the residential buildings is as follows:

- □ The floors were finished with a combination of ceramic, laminate flooring, vinyl floor tiles, hardwood, carpet, and poured concrete (basements).
- □ The walls and ceilings consisted of hard and decorative plaster, dry wall, and limestone underlying parging (basements), and ceiling stipple.
- □ Lighting throughout the buildings was provided by incandescent and fluorescent fixtures.

Both residential buildings are heated by natural gas fired boilers and baseboard heaters used as a secondary heat source in the foyers of the buildings. No signs of a former AST were noted in the basement of 230 Lisgar Street, however, an above ground copper line with an open end was noted in the basement of 232 Lisgar Street along the eastern side wall of the residence.

No sump pits were noted at the time of the site visit. Dry floor drains were noted in the basements of the buildings at the time of the site visit. No hazardous chemicals, fuels or paints were noted on-site at the time of the site visit. No concerns were noted with the interior of the subject buildings at the time of the site visit.

Asbestos-Containing Building Materials and Lead-Based Paints

Based on the age of the buildings and former upgrades and/or repairs, potentially asbestos containing materials (ACMs) and lead-based paints (LBPs) may potentially be present within and/or on the buildings. Potential ACMs included hard and decorative plaster, ceiling stipple, dry-wall joint compound, interior and exterior parging, and vinyl floor tiles.

Neighbouring Properties

An inspection of the neighbouring properties was conducted from publicly accessible roadways at the time of the site inspection. Land use adjacent to the Phase I Property was as follows:

- North Lisgar Street, followed by a residential apartment building and chiropractor office;
- □ South Residences, followed by Cooper Street;
- East Residential apartment building, followed by Metcalfe Street; and,
- □ West Residential dwelling, followed by a small office building.

No off-site PCAs were identified with the present use of the neighbouring properties. The surrounding land use within the study area are shown on Drawing PE5905-2 – Surrounding Land Use Plan.

7.0 REVIEW AND EVALUATION OF INFORMATION

7.1 Land Use History

The Phase I Property was first developed for residential purposes circa 1888. The Phase I Property has been, for the most part, used for residential purpose with some commercial office use on the ground level at 230 Lisgar Street until 2007. Since then, the Phase I Property has been used strictly for residential purposes only.

Potentially Contaminating Activities and Areas of Potential Environmental Concern

Based on the historical and current use of the Phase I Property and properties within the Phase I Study Area, there are no PCAs that are considered to represent APECs on the Phase I Property.

Contaminants of Potential Concern

No APECs were identified on the Phase I Property and as such, there are no contaminants of potential concern (CPCs) on and/or beneath the Phase I Property.

7.2 Conceptual Site Model

Geological and Hydrogeological Setting

Based on information from the Geological Survey of Canada mapping, drift thickness in the area of the Phase I Property is on the order of 10 to 15 m across the site. The overburden consisted of glaciomarine deposits of silt and clay, while bedrock in the area consisted of limestone interbedded with shale of the Billings Formation.

Subsurface Services and Utilities

The Phase I Property is situated in an area where municipal services are relied upon. Underground utilities on-site include water and sanitary sewers that enter and exit the Phase I Property from Lisgar Street.

Existing Buildings and Structures

230 Lisgar Street is occupied by a 2-storey, multi-tenant residence with a basement level. The present-day residence was constructed circa 1888 with a limestone foundation with large areas covered in exterior parging. The exterior façade of the building is finished in brick with a sloped shingle style roof.

232 Lisgar Street is occupied by a 2-storey, multi-tenant residence with a basement level. The present-day residence was constructed circa 1888 with a limestone foundation with large areas covered in exterior parging. The exterior façade of the building is finished in brick, while the rear extension is finished in a mixed aggregate stucco and vinyl siding with a sloped shingle style roof.

Drinking Water Wells

The Phase I Property is situated in a municipally serviced area and as such, potable water wells are not expected to present on the Phase I Property or on properties within the Phase I Study Area.

Water Bodies and Areas of Natural Significance and Interest (ANSIs)

There are no natural water bodies or ANSIs within the Phase I Study Area.

Neighbouring Land Use

Neighbouring land use in the Phase I Study Area consists primarily of residential with some commercial offices and retailers. Land use is shown on Drawing PE5905-2 – Surrounding Land Use Plan.

Potentially Contaminating Activities and Areas of Potential Environmental Concern

As per Section 7.1 of this report, there are no PCAs that are considered to represent APECs on the Phase I Property.

Contaminants of Potential Concern

As per Section 7.1, there are no contaminants of potential concern (CPCs) on and/or beneath the Phase I Property.

Assessment of Uncertainty and/or Absence of Information

The information available for review as part of the preparation of the Phase I-ESA is considered to be sufficient to conclude that there are no PCAs that have resulted in APECs on the Phase I Property.

A variety of independent sources were consulted as part of this assessment, and as such, the conclusions of this report are not affected by uncertainty which may be present with respect to the individual sources.

8.0 CONCLUSIONS

8.1 Assessment

Paterson Group Inc. was retained by 230 Lisgar Street Inc., to conduct a Phase I Environmental Site Assessment (ESA) for the properties at 230 and 232 Lisgar Street, in the City of Ottawa, Ontario. The purpose of this Phase I-Environmental Site Assessment (Phase I-ESA) was to research the past and current use of the site and study area to identify any environmental concerns with the potential to have impacted the Phase I Property.

According to the historical research, the Phase I Property was initially developed as early as 1888 with the present-day, 2-storey residential buildings. For the most part, the Phase I Property had been used primarily for residential purposes, with the exception of commercial office use on the ground level at 230 Lisgar Street from 1961 until 2007. Since then, the Phase I Property has been used strictly for residential purposes only. No potentially contaminating activities (PCAs) were identified with the historical use of the Phase I Property.

The historical use of the surrounding properties within the Phase I Study Area generally consisted of residential with some commercial land uses. An off-site PCA, carpet cleaner was listed in 1981/1982 at 309 Cooper Street, approximately 15 m southwest or cross-gradient of the Phase I Property. Based on the style of the building structure, it is unlikely that the business at this property conducted any activities associated with any processes consisting of solvents or harmful chemicals, but rather, listed as a business address/office. As such, this listed business is not considered to represent an area of potential environmental concern (APEC) on the Phase I Property.

The ERIS search and a review of the well records, identified an abandoned UST at 309 Cooper Street, abutting the southern property boundary of 250 Lisgar Street, approximately 20 m west of the Phase I Property. The abandoned UST is considered a PCA, although based on the cross-gradient orientation and the nature of the subsurface soils (silty clay) in the immediate area of the Phase I Property, this PCA is not considered to result in an APEC. No other PCAs were identified with the historical use of the properties within the Phase I Study Area.

Following the historical research, a site visit was conducted to assess the current use of the Phase I Property and properties within the Phase I Study Area. Based on the site visit, the Phase I Property is occupied by the original 1888 buildings that are used solely for residential purpose. No on-site PCAs were identified with the current use of the Phase I Property.

Surrounding land use consisted primarily of residential with some commercial and retail uses. No off-site PCAs were identified with the current use of the Phase I Study Area.

Based on the findings of the assessment, it is our opinion that a Phase II-Environmental Site Assessment is not required for the Phase I Property.

8.2 **Recommendations**

Based on the age of the buildings, potentially asbestos-containing materials (ACMs) and lead-based paints (LBPs) may be present in the building structures. Potential ACMs include hard and decorative plaster walls, ceiling stipple, drywall joint compound, vinyl floor tiles, and interior and exterior parging of the building basements and foundations. If the Phase I Property is to be redeveloped in the future, a DSS must be conducted prior to the demolition of the existing buildings in accordance with Ontario Regulation 490/09, under the Occupational Health and Safety Act.

9.0 STATEMENT OF LIMITATIONS

This Phase I - Environmental Site Assessment report has been prepared by a qualified person, in general accordance with O.Reg. 153/04 as amended by O.Reg. 269/11, and meets the requirements of CSA Z768-01, reaffirmed 2022. The conclusions presented herein are based on information gathered from a limited historical review and field inspection program. The findings of the Phase I - ESA are based on a review of readily available geological, historical and regulatory information and a cursory review made at the time of the field assessment. The historical research relies on information supplied by others, such as, local, provincial and federal agencies and was limited within the scope-of-work, time and budget of the project herein.

Should any conditions be encountered at the Phase I Property and/or historical information that differ from our findings, we request that we be notified immediately in order to allow for a reassessment.

This report was prepared for the sole use of 230 Lisgar Street Inc., and permission and no tification from 230 Lisgar Street Inc., and Paterson Group will be required to release this report to any other party.

Dear Mandy Witteman:

RE: MECP FOI A-2022-07669, Your Reference PE5605 – Decision Letter

This letter is in response to your request made pursuant to the Freedom of Information and Protection of Privacy Act (the Act) relating to 230 and 232 Lisgar Street, Ottawa.

After a thorough search through the files of the ministry's Ottawa District Office, Environmental Investigations and Enforcement Branch (EIEB), and Safe Drinking Water Branch (SDW) no records were located responsive to your request. **This file is now closed.**

You may request a review of my decision within 30 days from the date of this letter by contacting the Information and Privacy Commissioner/Ontario at http://www.ipc.on.ca. Please note there may be a fee associated with submitting the appeal.

If you have any questions, please contact Tolani Abraham at Tolani.Abraham2@ontario.ca.

Yours truly,

ORIGINAL SIGNED BY

Ryan Gunn Manager (A), Access and Privacy Office

Follow Up Flag:	Follow up
Flag Status:	Flagged

Please refrain from sending documents to head office. The Public Information (PI) team works remotely, mailing in applications will lengthen the overall processing time.

NO RECORD FOUND IN CURRENT DATABASE

Hello Mandy,

Thank you for your request for confirmation of public information. TSSA has performed a preliminary search of TSSA's current database.

• We confirm that there are no records in our current database of any fuel storage tanks at the subject address(es).

This is not a confirmation that there are no records in the archives. For a further search in our archives, please submit an application for release of public information (PI Form) through TSSA's new Service Prepayment Portal. The associated fee must be paid via credit card (Visa or MasterCard) through a secure site.

Please follow the steps below to access the new application(s) and Service Prepayment Portal:

- 1. Click <u>Release of Public Information TSSA</u> TSSA and click "need a copy of a document";
- 2. Select the appropriate application, download it and complete it in full; and
- 3. Proceed to page 3 of the application and click the link TSSA Service Prepayment Portal under payment options (the link will take you the secure site to pay for the release via credit card).

Accessing the Service Prepayment Portal:

- 1. Select new or existing customer (*if you are an existing customer, you will need your account # & postal code to access your account);
- 2. Select the program area: AD (Amusement Devices), BPV (Boilers and Pressure Vessels), ED (Elevating Devices), FS (Fuels Services), OE (Operating Engineers) or SKI (Ski Lifts) and click continue;
- 3. Enter the application form number (obtained from bottom left corner of application form) and click continue;
 - a. When selecting the application form number from the drop-down menu, please make sure you select the application that begins with "PI" (i.e. PI-FS, PI-BPV etc.);
- 4. Complete the primary contact information section;
- 5. Complete the fees section;
- 6. Upload your completed application; and
- 7. Upload supporting documents (if required) and click continue.

Once all steps have been successfully completed, you will receive your receipt via email.

Questions? Please contact TSSA's Public Information Release team at publicinformationservices@tssa.org.

Although TSSA believes the information provided pursuant to your request is accurate, please note that TSSA does not warrant this information in any way whatsoever.

Kind Regards,

Mariah

Good Morning,

Could you please complete a search of your records for underground/aboveground storage tanks, historical spills or other incidents/infractions for the following addresses in Ottawa, ON:

Lisgar Street, 230, 232, 234, 196 Cooper Street: 295, 297, 309, 315, Metcalfe Street: 200, 214

Thank you

Kind regards,

Mandy (she/her)

MANDY WITTEMAN, M.A.Sc., P.Eng.

Description:	\$15,000 Water Re with a Pr of giving Court he subdivisi water tak Group In	onstruction Limited, Paterson Group Inc. and Robert Passmore have been fined \$5,000 each, totalling lus a victim fine surcharge, after pleading guilty on January 15, 2009 to violations under the Ontario sources Act. Taggart Construction Limited and Paterson Group Inc. were convicted of failing to comply vincial Officer Order by taking more than 50,000 litres of water per day, and Mr. Passmore was convicted alse or misleading information to the ministry. The parties were given six months to pay the fine. The rd that Taggart Construction Limited was contracted by a developer to install municipal services at a n in Ottawa which required dewatering activities. After being issued a Provincial Officer Order to restrict ng activities to below 50,000 litres per day until a permit had been obtained, Taggart Mater Paterson . to submit an application for the permit. Taggart then pumped over 50,000 litres of water pased on n provided by Paterson Group employee, Mr. Passmore, that the go ahead to pump had been given

when a permit had yet to be issued. In an interview with ministry investigators, Mr. Passmore denied giving Taggart verbal approval to pump in excess of 50,000 litres per day. Taggart Construction Limited, Paterson Group Inc. and Mr. Passmore were charged following an investigation by the Ministry of the Environment's Investigations and

erisinfo.com | Environmental Risk Information Services

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. Note: Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.

Abandoned Aggregate Inventory: AAGR The MAAP Program maintains a database of abandoned pits and guarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.* Government Publication Date: Sept 2002*

Provincial Aggregate Inventory: AGR The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage. Government Publication Date: Up to Nov 2021

Abandoned Mine Information System: AMIS The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Mar 2022

Anderson's Waste Disposal Sites:

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks:

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated. Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

Government Publication Date: 1999-May 31, 2022 Borehole: BORE

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Dry Cleaning Facilities:

Commercial Fuel Oil Tanks:

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information. Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or

Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA).

tetrachloroethylene to the environment from dry cleaning facilities.

distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.). Government Publication Date: 1999-Jan 31, 2020

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Chemical Register:

Government Publication Date: 1999-May 31, 2022

Compressed Natural Gas Stations: Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -Sep 2022

Inventory of Coal Gasification Plants and Coal Tar Sites:

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.* Government Publication Date: Apr 1987 and Nov 1988*

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law. Government Publication Date: 1989-Jun 2022

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994 - Sep 30, 2022

activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database. Government Publication Date: Oct 2011- Sep 30, 2022

Environmental Registry:

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases. Government Publication Date: 1994 - Sep 30, 2022

files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the

activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose

Provincial Environmental Compliance Approval: **FCA** On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011- Sep 30, 2022

Environmental Effects Monitoring:

ERIS Historical Searches:

370

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data. Government Publication Date: 1992-2007*

EHS ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Jul 31, 2022

Environmental Issues Inventory System:

erisinfo.com | Environmental Risk Information Services

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed. Government Publication Date: 1992-2001*

Federal Identification Registry for Storage Tank Systems (FIRSTS):

Emergency Management Historical Event:

Environmental Penalty Annual Report: This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors

covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2021

List of Expired Fuels Safety Facilities:

Government Publication Date: Apr 30, 2022

outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground. Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Contaminated Sites on Federal Land:

Federal Convictions:

FCON Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty. Government Publication Date: 1988-Jun 2007*

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Sep 2022

Fisheries & Oceans Fuel Tanks:

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank

Fuel Storage Tank: FST List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Fuel Storage Tank - Historic:

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Apr 30, 2022

Government Publication Date: 2013-Dec 2019

Greenhouse Gas Emissions from Large Facilities:

TSSA Historic Incidents:

dioxide equivalents (kt CO2 eq).

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here. Government Publication Date: 2006-June 2009*

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon

Indian & Northern Affairs Fuel Tanks:

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation. Government Publication Date: 1950-Aug 2003*

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Fuel Oil Spills and Leaks:

Landfill Inventory Management Ontario:

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Mar 21, 2022

Canadian Mine Locations:

372

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database. MINE

Mineral Occurrences:

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Feb 2022

National Analysis of Trends in Emergencies System (NATES):

significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released. Government Publication Date: 1974-1994*

Non-Compliance Reports: NCPL The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of

Government Publication Date: Dec 31, 2020

National Defense & Canadian Forces Fuel Tanks:

DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database. Government Publication Date: Up to May 2001*

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on

National Defense & Canadian Forces Spills:

under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered. Government Publication Date: Mar 1999-Apr 2018

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status. Government Publication Date: 2001-Apr 2007*

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal

National Environmental Emergencies System (NEES):

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances. Government Publication Date: 1993-May 2017

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All

PRT The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include PTTW's on the registry such as OWRA s. 34 - Permit to take water. Government Publication Date: 1994 - Sep 30, 2022

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data. Government Publication Date: 1986-1990, 1992-2019

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

<u>Map Key:</u> The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

<u>Unplottables:</u> These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

APPENDIX 3

QUALIFICATIONS OF ASSESSORS

patersongroup solution oriented engineering

Mandy Witteman, M.A.Sc., P.Eng. Intermediate Environmental Engineer

Mandy joined Paterson Group in June 2018 as part of the Environmental Department. Mandy received her Bachelor of Engineering from Carleton University in 2008, specializing in Environmental Engineering. Following graduation, Mandy gained experience in the private sector conducting Phase II ESAs and reporting GHG emission inventories. In 2009, Mandy began her post-graduate degree in a Master of Applied Science, specializing in applied unsaturated soil mechanics with applications to geomechanical designs of subsurface tailing structures. Mandy has published in the Canadian Geotechnical Journal, as well as the International Conference Geo/Paste Proceedings in 2010 and 2011. Following post-graduate, Mandy joined the Tailings Group at Thurber Engineering Ltd. in Calgary, where she applied knowledge gained from her post-graduate research in designing and developing bench scale and pilot programs that were implemented by oil sand operators in Fort McMurray. Additionally, Mandy also worked as a OA/OC engineer on a slurry wall construction at a Potash Mine. Her scope of work included daily in-situ testing of the construction materials used for QA/QC purposes, as well as managing and supervising daily construction activities. Since joining Paterson Group in 2018, Mandy has worked on numerous residential and commercial developments, predominantly within the National Capital Region. Her scope of work consists of managing and conducting Phase I and II ESAs, reporting and managing subsurface programs, and liaising with subcontractors, clients and consultants.
