Executive Summary

DST Consulting Engineers Inc., a Division of Englobe (DST), was retained by AIM Recycling Ottawa to conduct a Phase One Environmental Site Assessment (ESA) At AIM Recycling Ottawa East, located at 2555 Sheffield Road in Ottawa, Ontario (herein referred to as the “Site” or the “Phase One Property”).

The purpose of a Phase One ESA is to evaluate actual and potential environmental concerns on Site and to assess the potential for the Site to be impacted by the current and/or historical uses of the Site and the surrounding properties. DST has completed this Phase One ESA in accordance with *Ontario Regulation (O. Reg.) 153/04 Records of Site Condition – Part XV.1 of the Act* under the *Ontario Environmental Protection Act, R.S.O. 1990, chapter E.19 (O. Reg. 153/04)*, as amended. DST understands that this Phase One ESA has been completed for the purposes of a City of Ottawa Site Plan application and, therefore, this report was not prepared to support the filing of a Record of Site Condition.

Information regarding the Phase One Study Area (the Site and the area within 250 m of the Site boundaries) was compiled through a records review, Site reconnaissance and interview(s) with persons knowledgeable about the Site. Federal, provincial, municipal, and private agencies and databases were searched during the records review for indicators of potential environmental concerns with regards to the Site and Phase One Study Area. It should be noted that responses from the Ontario Ministry of the Environment, Conservation and Parks (MECP), the Ontario Ministry of Natural Resources and Forestry (MNR), Environment and Climate Change Canada (ECCC), and the City of Ottawa, were not received as of the issuance date of this report. If relevant information which changes the conclusions of the report is received following the issuance of this report, an addendum to this report will be issued by DST.

The Site is rectangular shaped, with a total property area of approximately 41,400 m² (10.2 acres). The Site is developed with the following buildings:

- Main Building: located in the southwest corner of the Site it is a mainly one-story, two-storey on the north end, slab-on-grade structure used as an indoor recycling warehouse and office space;
- Garage Building: located in the northwest corner of the Site is a one-storey, with a second-storey mezzanine level, slab-on-grade structure used as a maintenance garage, mechanical warehouse and office space; and

Scale House: located to the east of the entrance on the west side of the Site is a one-storey slab-on-grade structure used as an office space for the truck scales.

The total footprint areas of the Site buildings are:

- Main Building is approximately 3,506 m² (37,738 ft²)
- Garage Building is approximately 492 m² (5,295 ft²); and
- Scale House is approximately 26 m² (280 ft²).

The Site buildings are currently active and used for industrial purposes.

The Site reconnaissance was conducted on August 19, 2019 and included observations of interior and exterior areas of the Phase One Property and observations of adjoining properties from publicly accessible vantage points.

Based on DST's Site reconnaissance and environmental records review, the following potentially contaminating activities (PCAs) that resulted in areas of potential environmental concern (APECs) on the Site were identified on the Site and within the Phase One Study area.

Areas of Potential Environmental Concern

APEC	Location of APEC on Phase One Property	Potentially Contaminating Activity (PCA)	Location of PCA (on-Site or off-Site)	Contaminants of Potential Environmental Concern	Media Potentially Impacted
APEC 1 Metal Salvage Yard	Entire Phase One Property	49 – Salvage Yard, including automobile wrecking	On Site	- Metals	Soil, Groundwater
APEC 2 Former and Current maintenance garage	Northwest and southwest corners of the Phase One Property	52 – Storage, maintenance, fuelling and repair of equipment, vehicles, and material used to maintain transportation systems	On Site	- PHC F1-F4 - VOCs - PAHs	Soil, Groundwater
APEC 3 Fill material of unknown quality likely present on-Site	Entire Phase One Property	30 – Importation of Fill Material of Unknown Quality	On Site	- Metals - PHC F1-F4 - PAHs	Soil, Groundwater

Based on a review of previous environmental investigations, the following Areas of Environmental Concern were identified:

AEC	Location of AEC on Phase One Property	Area of Environmental Concern	Contaminants of Concern (COCs)	Media Impacted
AEC 1 Soil contamination identified in Golder Phase II ESA	Eastern portion and just east of the Main Building	The fill material sampled from boreholes BH08-2, BH08-4 and BH08-5 were found to contain PHC F2 and F3, zinc and vanadium concentrations greater than the applicable standards at the time.	PHC F1 to F4, metals	Soil
AEC 2 Soil contamination identified in DST Limited Phase II ESA	Northeast corner, central east portion, northwest corner	The fill material sampled from boreholes MW19-6, BH19-7, MW19-9, BH19-10B, BH19-11B, BH19-12, BH19-13, BH19-14, and BH19-15 contained concentrations of one or more of metals and PHC F1 to F3 greater than the O.Reg. 153/04, as amended, Table 3 Standards.	PHC F1 to F3, metals	Soil
AEC 3 Groundwater contamination identified in DST Limited Phase II ESA	Northeast corner and south of the Scale House	Groundwater from monitoring wells MW19-4 and MW19-9 contained concentrations of VOCs greater than the O.Reg. 153/04, as amended, Table 3 Standards.	VOCs	Groundwater

In accordance with O. Reg. 153/04, the APECs identified in the Phase One ESA have been addressed and evaluated by the DST Limited Phase II ESA. Therefore, no further investigation is required at this time.

A project-specific designated substances survey (DSS) is recommended to assess the presence of hazardous materials (lead based, asbestos containing, ODS) that may be disturbed during any renovation or deconstruction activities.

1 Introduction

DST Consulting Engineers Inc., a Division of Englobe (DST), was retained by AIM Recycling Ottawa to conduct a Phase One Environmental Site Assessment (ESA) at AIM Recycling Ottawa East, located at 2555 Sheffield Road in Ottawa, Ontario (herein referred to as the “Site” or the “Phase One Property”). Figure 1 in Appendix A shows the Site location.

The purpose of a Phase One ESA is to evaluate actual and potential environmental concerns on Site and to assess the potential for the Site to be impacted by the current and/or historical uses of the Site and the surrounding properties. DST has completed this Phase One ESA in accordance with *Ontario Regulation (O. Reg.) 153/04 Records of Site Condition – Part XV.1 of the Act* under the *Ontario Environmental Protection Act, R.S.O. 1990, chapter E.19 (O. Reg. 153/04)*, as amended. DST understands that this Phase One ESA has been completed for the purposes of a City of Ottawa Site Plan application and, therefore, this report was not prepared to support the filing of a Record of Site Condition.

The scope of a Phase One ESA does not include sampling and analysis of potentially contaminated media. Information regarding the Phase One Study Area (the Site and an area within 250 m of the Site boundaries) was compiled through a records review, Site reconnaissance and interviews with individuals knowledgeable about the Site. The gathered information was evaluated and compiled in this Phase One ESA report.

1.1 Phase One Property Description

The Site is located at the municipal address of 2555 Sheffield Road in an industrial area of Ottawa, Ontario. The Site is located within an area zoned as IH – Heavy Industrial by the City of Ottawa (Zoning By-law 2008-250 Consolidation, Part 11 – Industrial Zones, Sections 199 to 206, Current to May 22, 2019).

The legal description of the Site found on the geoOttawa website is listed as 2575 Sheffield Road, and contains the propertied located at both 2575 and 2555 Sheffield Road.

Municipal Address	Legal Description
2575 Sheffield Road (Property includes both 2575 and 2555 Sheffield Road)	Plan 783 PT Blk A RP 4R25341, Parts 7 to 10 Property Identification Number (PIN): 042620296

The Site is rectangular-shaped, with a total property area of approximately 41,400 m² (10.2 acres).

The Site is developed with the following buildings:

- Main Building: located in the southwest corner of the Site it is a mainly one-story, two-storey on the north end, slab-on-grade structure used as an indoor recycling warehouse and office space;

- Garage Building: located in the northwest corner of the Site is a one-storey, with a second-storey mezzanine level, slab-on-grade structure used as a maintenance garage, mechanical warehouse and office space; and
- Scale House: located to the east of the entrance on the west side of the Site is a one-storey slab-on-grade structure used as an office space for the truck scales.

The total footprint areas of the Site buildings are:

- Main Building is approximately 3,506 m² (37,738 ft²);
- Garage Building is approximately 492 m² (5,295 ft²); and
- Scale House is approximately 26 m² (280 ft²).

The Site is accessed via an asphalt-paved driveway from Sheffield Road, at the western side of the Site, and from the adjacent property to the south, 2575 Sheffield Road. The eastern third of the Site is gravel-covered, whereas the western two-thirds are concrete covered areas to the east of the buildings and beneath the scrap metal piles, and asphalt covered north of the main building and west of the Garage Building. There is a grassed area along the western property line adjacent to Sheffield Road, and there are trees and tall grass in the ditches along the north, south and east property lines. An asphalt-paved parking area occupies the northwest corner of the Site. Additional details regarding the Site buildings and property features are provided in Section 5.2.1 of this report.

The overall topography of the Site is relatively flat and is situated at an elevation of approximately 64 metres above sea level (masl) according to geoOttawa, an online mapping database provided by the City of Ottawa.

Select Site photographs are included in Appendix B.

The Site is surrounded by the following properties:

Direction	Surrounding Property Activities
North	2505 Sheffield Road – Roofmart roofing supply yard
East	Alexandra Rail Corridor, followed by Green's Creek and a forested area.
South	2575 Sheffield Road – Industrial property owned by AIM Recycling used for de-pollution of vehicles, leased to Colautti Construction Limited, J. Connelly Rental, and Coffrages Synergy Formwork.
West	2510, 2574, 2540 Sheffield Road, 2191 Bantree Street, – Bakery (Boulangeries Weston Limited), TD Insurance Auto Centre, and Novatech DKI restoration specialists.

1.2 Contact Information

The Site is owned by AIM Recycling (the Client). The contact information for the property owner's/Client's representative is as follows:

Name	Jeffrey Dupelle	Dan Dupelle
Title	Site Manager	Manager Health & Safety/ Environment
Telephone	613-228-9380 x 4851	613-228-9380 x 4854
Email	jdupelle@aim-recycling.com	ddupelle@aim-recycling.com
Business Address	2555 Sheffield Road, Ottawa, Ontario K1B 3V6	

2 Scope of Work

The scope of work for the Phase One ESA is summarized in the following sub-sections. DST has performed this Phase One ESA in general accordance with O. Reg. 153/04, as amended.

2.1 Records Review

A records review was completed that involved collecting data from federal, provincial, and municipal databases, aerial photographs, geological maps, etc., in order to determine the presence or absence of actual and/or potential contaminants at the Site and surrounding areas.

2.2 Site Visit

A Site visit was conducted to inspect the Site and surrounding properties. The Client arranged for access to the Site, as required. Surrounding properties were assessed from publicly accessible locations.

2.3 Interviews

DST personnel conducted an interview with persons knowledgeable of the Site. The interview was designed to confirm, or augment information gathered during the records review and/or Site visit regarding past or present land uses or events that may affect the environmental condition of the Site. The Site interview was completed with the Client contacts on Site, Mr. Jeffrey Dupelle and Mr. Dan Dupelle, during the Phase One Site reconnaissance on August 19, 2019. Mr. Jeffrey Dupelle and Mr. Dan Dupelle have been associated with the Site for approximately 32 years and 21 years, respectively.

2.4 Data Evaluation and Reporting

The data collected during the records review, the Site visit and interview was compiled and collated by DST. The information has been presented in a logical manner that clearly defines actual and potential environmental issues that may affect the environmental condition at the Site. A summary of the potentially contaminating activities (PCAs) that have occurred on the Site or within the Phase One Study Area, are included in Section 6.2. Any areas of potential environmental concern (APECs) caused by these PCAs that may affect the Site have been identified in Section 6.3.

3 Records Review

3.1 General

Information related to the Site were received and/or requested from numerous sources, as detailed in this section. The agencies contacted, information requested, and responses received are summarized in the following sub-sections.

3.1.1 Phase One Study Area Determination

The Phase One Study Area encompasses the Site, as well as properties wholly and partly located within 250 m of the established Site boundaries, as shown on Figure 2 in Appendix A. There are no nearby land uses that would require the extension of the Phase One Study Area beyond a 250 m radius.

3.1.2 First Developed Use Determination

Based on the available city directories, aerial photographs and interview information, the first developed use of the Site for industrial purposes was in/around 1965. The Site appeared to be developed with the main part of the Main Site Building in the 1976 aerial photograph. Prior to that time, the Site appeared to have the original portion of the Main Site Building, and the railway line visible along the southern portion of the Site.

3.1.3 Fire Insurance Plans

DST requested a search of Fire Insurance Plans (FIPs) for the Site area through Opta Information Intelligence (Opta). No records were found.

A copy of the Opta search results is provided in Appendix D.

3.1.4 Chain of Title

AIM Recycling Ottawa provided DST with the Chain of Title for the Site of the property address of 2555 Sheffield Road. A summary of pertinent information within the records is provided below. Based on a copy of an ownership search, completed in the Golder Phase I ESA and the Chain of Title provided by the Client:

- The National Capital Commission owned the Site until 1964 when Glabak Company Limited purchased the Site in December 1964 and February 1965;
- Baker Brothers Iron & Metal Co. Limited purchased the Site in October 1965; and
- Baker Brothers Iron & Metal (1970) Limited purchased the Site in June 1970 and April 1971, with a name change to Bakermat Inc. in December 1983.
- American Iron & Metal Compan Inc. / American Iron & Metal LP purchased the Site in 2013 and is the current owner.

A copy of the title search is included in Appendix D.

Based on the above information, the first developed use of the Site for industrial purposes was 1965. The earliest construction of the Main Site Building is visible in the 1965 aerial photograph,

which also shows the former railway spur along the southern portion of the Site. The northern two thirds of the Site appear as farmland in the 1965 aerial photograph but developed as a scrap metal yard in the 1976 aerial photograph.

3.1.5 Environmental Reports

Three previous environmental reports were available to DST for review:

- *Phase I Environmental Site Assessment, 2555 Sheffield Road, Ottawa, Ontario.* Prepared by Golder Associates Ltd. (Golder), dated October 1997 (hereinafter referred to as the “Golder Phase I ESA”).
- *Phase II Environmental Site Assessment, 2555 Sheffield Road, Ottawa, Ontario.* Prepared by Golder, dated April 2008 (hereinafter referred to as the “Golder Phase II ESA”).
- *Limited Phase II Environmental Site Assessment, 2555 Sheffield Road, Ottawa, Ontario.* Prepared by DST, dated April 2019 (hereinafter referred to as the “DST Phase II ESA report”).

Golder Phase I ESA

The Phase I ESA was completed in support of the construction of a two-storey office structure with basement onto the existing building located at the west side of the Site, and to address environmental-related issues brought forth by the City of Ottawa in response to a Site Plan Application for the aforementioned construction.

Based on the findings of the Phase I ESA, Golder reported the following:

The Site was used as a scrap metal processing, shredding and warehousing facility from 1964 to 1997 with a potential for heavy metal soil contamination in the yard areas east of the Main Site Building. Although, the area for the proposed construction was not used for historical handling of metal materials. Also associated with the scrap metal facility activities, there is the potential for pockets of petroleum hydrocarbon contamination in areas east of the building. Again, the area for the proposed construction was not identified to have been used for storage or use of petroleum hydrocarbons. It was reported that all underground storage tanks were removed from the Site in the early 1990s and did not have remnant petroleum hydrocarbon contamination upon removal. The report concluded that there were no identified issues of potential environmental concern in the area of proposed construction. Due to the installation of a new transmission drainage facility in the summer of 1997 and stormwater management practices (sloped concrete pads to divert surface water for recovery), there was a low potential for surface water run-off from the Site to adversely impact the City of Ottawa storm sewer along the southern property line. Upgrading the oil-water separator was recommended.

Golder Phase II ESA

As part of the Golder Phase II ESA, five boreholes were advanced at the Site, of which four were installed with a single monitoring well and one was completed with a multi-level groundwater monitoring well. The stratigraphy encountered during the Phase II ESA was as follows:

- Fill material consisting of debris and crushed stone ranging in depth from 0.8 to 1.4 m below ground surface (bgs);
- Weathered crust layer of silty clay, below the fill layer, ranging in depth from 1.0 to 2.9 m bgs; and
- Silty clay, clayey silt and sandy silt were present at greater depths.

The fill material in one borehole, BH08-4, had a strong petroleum hydrocarbon odour and hydrocarbon staining was observed. A hydrocarbon fuel odour and staining were observed in BH08-5 between 1.2 and 2.4 m bgs.

Groundwater levels at the Site ranged from approximately 1.14 to 3.18 m bgs, and the groundwater flow direction was determined to be to the east, towards Ramsey (Green's) Creek. A groundwater level of 0.42 m bgs was measured in the shallow depth monitoring well at BH08-4A. However, this was interpreted as a perched groundwater in the fill above the native silty clay soil.

Soil samples were collected and submitted for laboratory analysis of petroleum hydrocarbons fractions 1 to 4 (PHCs F1-F4) and volatile organic compounds (VOCs) and metals. Groundwater samples were collected from the five installed monitoring wells and submitted for laboratory analysis of PHCs F1-F4, VOCs and metals.

Soil and groundwater sample results were compared to the then-applicable Ontario Ministry of the Environment, Conservation and Parks (MECP) Table 3 standards (2004) for Industrial/Commercial/Community Property Use and coarse-grained soils.

Petroleum hydrocarbon impacted soil, both fill and native soil, was identified near the oil/water separator and the motor building/shredder with PHC F2 and F3 concentrations greater than the then-applicable Table 3 standards. Metal impacted fill was identified near the oil/water separator with concentration of vanadium and zinc greater than the then-applicable Table 3 standards.

No evidence of petroleum hydrocarbon odours or sheen was noted during groundwater sampling. Low VOC concentrations, less than the then-applicable Table 3 standards, were detected and concentrations of BTEX and PHC F1-F4 were detected in groundwater samples BH08-4 and BH08-5 but less than the then-applicable Table 3 standards.

DST Limited Phase II ESA

As part of the DST Limited Phase II ESA, 15 boreholes were advanced at the Site, of which three were completed as groundwater monitoring wells. The stratigraphy encountered during the Limited Phase II ESA was fill material underlain by a native silty clay and till to the extent of the advanced boreholes. Bedrock was encountered between 9.0 and 10.2 m bgs.

Visual and olfactory evidence of petroleum hydrocarbons was noted in the fill layer during the advancement of boreholes MW19-4, MW19-6, BH19-7, BH19-8, MW19-9, BH19-10B, BH19-11B, BH19-12 and BH19-13. No sheen, free-phase liquid petroleum hydrocarbons or odours were observed during the groundwater sampling.

Groundwater levels at the Site ranged from approximately 2.3 to 3.6 m bgs.

Soil samples were collected from each borehole and submitted for laboratory analysis of PHCs F1-F4, VOCs and metals. Groundwater samples were collected from the three installed monitoring wells and submitted for laboratory analysis of PHCs F1-F4, VOCs, PAHs and metals.

Soil and groundwater sample results were compared to the applicable MECP (2011) Table 3 standards for Industrial/Commercial/Community Property Use and coarse-grained soils. Soil analytical results were also compared to the MECP (2011) Table 1 standards for Residential/Parkland/Institutional/Industrial/Commercial/Community Property Use.

Nine soil samples (collected from boreholes MW19-6, BH19-7, MW19-9, BH19-10B, BH19-11B, BH19-12, BH19-13, BH19-14, and BH19-15) exceeded the applicable Table 3 standards for PHC F1-F4 and/or metals. The analytical results were also compared to the Table 1 SCS for management of excess soils. Thirteen soil samples (collected from BH19-2, BH19-3, MW19-4, MW19-6, BH19-7, BH19-8, MW19-9, BH19-10B, BH19-11B, BH19-12, BH19-13, BH19-14, and BH19-15) exceeded the applicable Table 1 standards for a combination of PHC F1-F4, metals, and/or VOCs.

No evidence of petroleum hydrocarbon odours or sheen was noted during groundwater sampling. The analytical results for two groundwater samples (MW19-4 and MW19-9) indicated exceedances of the Table 3 SCS for one or more VOCs, benzo(a) pyrene, barium and copper.

It was recommended that fill soils in the vicinity of the nine boreholes which exhibited exceedances above Table 3 standards be removed from Site as part of the upcoming construction and be disposed of at a licensed waste disposal facility.

The fill soils encountered in all boreholes, except boreholes BH19-2 and BH19-5, were found to exceed Table 1 standards for one or more of the analyzed parameters. It was noted that soils which exceed Table 1 yet meet Table 3 standards may be re-used on Site. If soils in the vicinity of these boreholes become excess and need to be removed from Site, then they will need to be disposed of at a licensed waste disposal facility.

A waste classification sample was submitted for laboratory analysis. The results classified the soil as non-hazardous solid waste.

A Soil Management Plan was recommended to be completed at the beginning of construction to outline the handling of excess soils generated during the Site development.

It was reported that an estimate of approximately 3,750 m³ of excess soil, based on anticipated excavation depths and building footprints provided by the client, with Table 3 exceedances would require off-Site disposal during the development of the new garage building, the new parking area, and the two new truck scales. The construction of the new warehouse building, with Table 1 SCS exceedances, would require approximately 11,150 m³ of soil disposed off-site.

Delineation of the soil exceedances was recommended to minimize soil disposal costs.

3.2 Environmental Source Information

Environmental information for the Site was obtained from the sources described in the sub-sections below. Distances provided relative to the Site are approximations. Locations of records with respect to surface run-off and groundwater flow direction relative to the Site are also inferred.

3.2.1 Provincial, Federal and Private Database Search

Environmental Risk Information Service (ERIS) was retained by DST to complete a search of federal, provincial and private databases for environmental information regarding the Site and properties within 250 m of the Site.

In total, there were 45 records found for the Site and 399 records found for the Phase One ESA Study Area (within 250 m of the Site). The following table provides a summary of the pertinent results of the database search as they relate to potential impacts to the environmental condition of the soil and groundwater at the Site:

Database Search Summary

Name/Location	Approximate Distance from the Site	Details
Sheffield Road Junkyard; AIM Recycling Group Inc. / Bakermat Inc.; Bakermat Inc.; American Iron & Metal GP Inc.; American Iron & Metal LP; Arcelormittal Ottawa Inc.	On Site	<ul style="list-style-type: none"> - Site listed in the Anderson's Waste Disposal Sites (ANDR) as an auto junkyard with railway spur from 1972 to 1980. - Auto Wreckers (AUWR) record indicates that the site was listed as a scrap metal yard, but no dates were provided. - Certificate of Approval (CA) record indicates approval in July 1997 for industrial air from a waste oil furnace, model CB-1400 and an approval for air emissions in August 2004. -Environmental Registry (EBR) records and indicate approval was granted for discharge to the air in 1997 and 2004. -Environmental Compliance Approval (ECA) record indicates the Site was approved for discharge to the air in 2004 and for industrial sewage works in May of 2017.

Name/Location	Approximate Distance from the Site	Details
<p>Sheffield Road Junkyard; AIM Recycling Group Inc. / Bakermet Inc.; Bakermet Inc.; American Iron & Metal GP Inc.; American Iron & Metal LP; Arcelormittal Ottawa Inc.</p>	<p>On Site</p>	<p>-Fuel Storage Tank (FST) record indicates one active, steel, single wall horizontal AST for diesel with a capacity of 4540 litres is present as a private fuel outlet. No date was indicated of the installation year of the tank.</p> <p>-Hazardous Waste Generator (GEN) records indicate one or more of the following hazardous wastes were generated on-Site from 1986 to as of July 2019: acid solutions containing heavy metals, aliphatic solvents and residues, petroleum distillates, light fuels, petroleum-based waste oil/sludges, waste crankcase oils and lubricants, emulsified oils, and waste compressed gas cylinders.</p> <p>- Water Well Information System (WWIS) record for an industrial water supply well indicates a well was installed in bedrock at 61 m (200 ft) bgs in June 1972.</p> <p>-National Pollutant Release Inventory (NPRI) records indicate Arcelormittal Ottawa Inc. submitted reports in 2009 through 2015 for the previous year's activities.</p> <p>-Private and Retail Fuel Storage Tanks (PRT) record indicates Bakermet Inc. registered a 68,190 L private storage tank. No other details regarding the tank were identified in the record.</p>

Name/Location	Approximate Distance from the Site	Details
Sheffield Road Junkyard; AIM Recycling Group Inc. / Bakermet Inc.; Bakermet Inc.; American Iron & Metal GP Inc.; American Iron & Metal LP; Arcelormittal Ottawa Inc.	On Site	- Ontario Spills (SPL) records indicate that 6 spills occurred on the Site: 1) oil and water runoff from the Site to storm sewer in April 1997. Possible environmental impact was identified to the land and water. 2) 90 L of transmission oil was released to the ground and Green's Creek in April of 1997 with a confirmed environmental impact to land or water. 3) Approximately 12 L of non-PCB transformer oil was released to the ground due to a cooling system leak and equipment failure in August 1995. Soil contamination was confirmed. 4) Approximately 200 L of diesel was released to the ground from a truck's damaged fuel tank in May 1997. The record indicates the spill was cleaned up and an environmental impact was not anticipated. 5) Approximately 25 gallons (100 L) of transmission/waste oil was released into the creek in April 2014. The incident reason was unknown. 6) Smoke was released to the air on May 1, 2010 due to a fire in the pile of cars awaiting shredding.
4 Refuel Canada Bantree Street and Sheffield Road.	15 m west of the Site	- 15-20 L of disel fuel spilled to the roadway from a tanker truck rollover due to a collision.
2526 Sheffield Road	20 m west of the Site	-SPL record indicates 8 L of diesel was released to the ground and was cleaned on January 28, 2003. Soil contamination was not anticipated.
METCAN Fabrications Inc., TES Limited, W.J. Mowat 2548 Sheffield Road	20 m southwest of the Site	- GEN records indicate the businesses listed generated one or more of the following wastes between 1986 and 1998: aliphatic solvents, paint/pigment/coating residues, waste oils and lubricants, and petroleum distillates.
Hove Street Properties Limited 2505 Sheffield Road	Adjacent property to the north	- ECA record indicates the approval of industrial sewage works in 2017.
Roofmart Ontario Inc. 2505 Sheffield Road	Adjacent property to the north	- GEN records indicate that this property was a waste generator of: organic laboratory chemicals in 2015 and 2016 under generator number ON3521319; and light fuels in 2010 under generator number ON6882176.

Name/Location	Approximate Distance from the Site	Details
Hospital Food Services Ontario Inc. 2585 Sheffield Road	Adjacent property to the south	-GEN record indicates that this property was a waste generator of alkaline wastes including other metals, light fuels, paint/pigment/coating residues, aliphatic solvents, waste compressed gases, petroleum distillates, waste oils & lubricants, pathological wastes, from 1995 to 2006 under generator number ON2025400.
Ottawa Greenbelt Construction Company Ltd., Greenbelt R. W. Tomlinson, American Iron and Metal Company Inc. AIM Recycling, Ottawa Regional Hospital Service Inc., Collautti Construction Ltd., Sheffield Limited Partnership, J. Connelly Rental Ltd 2575 Sheffield Road	Adjacent property to the south	-GEN record indicates that Ottawa Greenbelt Construction was a waste generator of miscellaneous waste organic chemicals as of December 2018 under generator number ON8002391. -GEN record indicates that AIM Recycling was a waste generator of acid solutions containing heavy metals, other specified inorganic sludges, slurries or solids, aliphatic solvents and residues, light fuels, petroleum-based waste oils/sludges, waste oils & lubricants, waste crankcase oil and lubricants, emulsified oils, oil skimmings and sludges, and oil water/waste oil from waste transfer processing sites under generator number ON3828897 in 2012, 2013, 2014, 2015, 2016, as of December 2018 and as of July 2019, and in 2012 under generator number ON7925570. -SPL record indicates that an oily sheen and odour in private catch basin and Green's Creek was identified on April 19, 2017 due to improper storage from American Iron&Metal GP Inc. -Waste Disposal Sites (WDS) record indicates that American Iron & Metal LP was identified as an end-of-life vehicle waste disposal site as of September 29, 2016 under certificate number R-007-1658601454 and November 15,+ 2017 under certificate number R-007-9110281881. -GEN record indicates Greenbelt R.W. Tomlinson Ltd. was a waste generator of acid solutions containing heavy metals, miscellaneous wastes and inorganic chemicals, aliphatic solvents and residues, miscellaneous waste organic chemicals under generator number ON8246981 as of December 2018 and as of July 2019. -GEN record indicates Colautti Construction Ltd. was a waste generator of aliphatic solvents, polymeric resins, paint/pigment/coating residues,

Name/Location	Approximate Distance from the Site	Details
		<p>alkaline wastes containing other metals, waste oils & lubricants, and amines in 2016 and as of 2017 under generator number ON51667964.</p> <p>-GEN records indicate Ottawa Regional Hospital Linen Service was a waste generator of petroleum distillates from 1986 to 1990 and petroleum distillates, organic laboratory chemicals, other polymeric wastes, halogenated solvents, organic laboratory chemicals, amines, inorganic laboratory chemicals, paint/pigments/coasting residues, waste compressed gases, acid waste with heavy metals, reactive anion wastes, alkaline wastes including other metals, aliphatic solvents, petroleum distillates, pathological wastes, and waste oils& lubricants from 1992 to 2009 under generator number ON0982200, and pathological wastes in 1997 to 2001 under generator number ON2209700.</p> <p>-SPL record indicates Healthcare Linen Services released 1200 L of hydrogen peroxide on May 6, 2004 with the reason not determined. Environmental impacts were identified as possible.</p> <p>-GEN record indicates Sheffield Limited Partnership generated aliphatic solvents in 2010 under generator number ON4766695 as a dry cleaning and laundry services.</p> <p>GEN record indicates J. Connelly Rental Ltd generated waste crankcase oils and lubricants as of July 2019 under generator number ON6524186.</p>
<p>2575293 Ontario Inc. 2191 Bantree Street.</p>	<p>80 m west of the Site</p>	<p>- Environmental Activity and Sector Registry (EASR) record indicates that this property as registered as an automotive refinishing facility in April of 2018.</p> <p>-ECA record indicates approval was granted in January 2017 for industrial sewage works.</p>
<p>Weston Bakeries Ltd. 2510 Sheffield Road</p>	<p>105 m northwest of the Site.</p>	<p>- List of TSSA expired facilities (EXP) records indicate that this property has three expired FS liquid fuel tanks, private outlet, and piping (expired December 1990).</p> <p>- FST record for this property indicates a steel fuel tank with a capacity of 13,841 L installed in 1981 (expired December 1990).</p>

Name/Location	Approximate Distance from the Site	Details
		- GEN records indicate Weston Bakeries generated aliphatic solvents, petroleum distillates and waste oils & lubricants from 1996 to 1998 under generator number ON0336201. -PRT records indicate a retail fuel storage tank with the capacity of 14,138 L and a private fuel storage tank with a capacity of 13,638 L were present on the property.

Additional records for properties greater than 150 m from the Site are available within the ERIS report but have not been summarized herein due to their distance from the Site. The full ERIS report, as well as full descriptions of each database searched, is provided in Appendix D.

The following justification is given for not carrying forward the database information as PCAs that contribute to APECs at the Site:

- Due to the location of the spills, to catch basins or sewers, it is unlikely that these spills significantly impacted the environmental quality of the soils and groundwater at the Site.
- Due to limited volume of diesel fuel released in two spills (15-20 L spilled onto the roadway, and 8 L released to the ground), it is unlikely this diesel fuel spill onto the roadway significantly impacted the environmental quality of the soils and groundwater at the Site.
- Due to the businesses no longer in business and the inferred cross-gradient location with respect to groundwater flow direction, the waste generator activities located at 2548 Sheffield Road are unlikely to have significantly impacted the soil and groundwater at the Site.
- Due the timing (in the recent past 2015 and 2016) and the inferred cross-gradient location with respect to groundwater flow direction, the wastes generated at the adjacent property to the north are unlikely to have significantly impacted the Site.
- Due to the inferred cross-gradient location, with respect to the inferred groundwater flow direction to the east, it is unlikely that the waste generation activities at 2585 Sheffield Road has significantly impacted the Site.
- Due to the activities listed (automotive refinishing), it is unlikely that the activities at 2191 Bantree Street have impacted the soil and groundwater quality at the Site.

3.2.2 Environment and Climate Change Canada

On August 15, 2019, DST submitted a request to Environment and Climate Change Canada (ECCC) under the *Access to Information Act*, to provide available information related to environmental concerns (general correspondence, occurrence reports, abatement), orders, tanks (ASTs/USTs), spills, investigations/prosecutions (with owner/tenant information), and waste generator number/classes. This includes certificates of approval such as: air emissions, water, sewage, waste water, industrial discharge, waste systems, and pesticide licenses, and any other

environmental concerns related to the Site. A response was not received as of the issuance date of this report. If the search results do affect the conclusions of this report, an addendum to the report will be issued by DST.

3.2.3 Ministry of Environment, Conservation and Parks

The Ontario MECP Freedom of Information (FOI) office was contacted for information on the Site, such as past or existing environmental permits, existing environmental orders, fuel storage tanks, or any other environmentally related information. A request was sent to the MECP on August 21, 2019. A response was not received as of the issuance date of this report. If the search results do affect the conclusions of this report, an addendum to the report will be issued by DST.

3.2.4 Ministry of Natural Resources and Forestry

The Ministry of Natural Resources and Forestry (MNR) Kemptville District was contacted on August 20, 2019 for any information they may have on the Site and properties in the Phase One Study Area. Such information typically includes rare, threatened or endangered species, environmentally sensitive sites, and Area of Natural and Scientific Interest (ANSI), or any other related information of environmental interest. A response was not received as of the issuance date of this report. If the search results do affect the conclusions of this report, an addendum to the report will be issued by DST.

3.2.5 City of Ottawa

On August 16, 2019, DST submitted a request to the City of Ottawa for Historical Land Use Inventory information for the Site. A response was not received as of the issuance date of this report. If the search results do affect the conclusions of this report, an addendum to the report will be issued by DST.

3.2.6 Technical Standards and Safety Authority

TSSA Fuel Handling Division is responsible for records regarding licensing of fuel handling facilities in Ontario. The TSSA was contacted on August 16, 2019 for any information with respect to environmental concerns, which could include past or existing environmental spills, information on fuel tanks, or any other related environmental information at the Site. A response was received from the TSSA on August 19, 2019, indicating that two records were found for the Site. Of the two records, one record had an “active” status for a fuel service (FS) liquid fuel tank. The other record is for a FS Private fuel outlet – self serve, and the status is under review. A copy of TSSA’s response is provided in Appendix D.

3.2.7 City Directory

The city directory search provides the names of businesses that were operating at certain municipal addresses at a point in time. They do not provide details as to the activities at the properties.

DST retained ERIS for a city directory search for the Site and select surrounding properties. City directory results for the Site and surrounding properties was provided by ERIS from the years

1960 until 2011. The results are summarized in the table below. The ERIS response is included in Appendix D.

City Directory Search Summary

Address	Distance to the Site	Years Listed	Listings
Site Listings			
2555 Sheffield Road	Site	2006/07-2011	-Baker Bros Iron & Metal -Bakermet Inc -Palmer-Levitan Ltd
		2001/02	Not Listed
		1992-1996/97	- Baker Bros Iron & Metal -Bakermet Inc -Palmer-Levitan Ltd
		1987	Bakermet Inc. metal recycling
		1981/82	Bakers Met Inc.
		1971-1976	Baker Bros Iron & Metal Ltd.

Adjacent and Neighbouring Properties Listings			
2191 Sheffield Road	Neighbouring Property to the West (across Sheffield Road)	1960-2011	Address not listed
2505 Sheffield Road	Adjacent Property to the North	1971-2011	Roofmart Ontario Ltd.
		1960-1965	Address not listed
2510 Sheffield Road	Neighbouring Property to the West (across Sheffield Road)	2006/07-2011	Boulangeries Weston Ltd
		1971-2001/02	Weston Bakeries Ltd.
		1960-1965	Address not listed
2574 Sheffield Road	Neighbouring Property to the Southwest (across Sheffield Road)	2001/02-2011	-Boyd Commercial Warehousing & Distribution Services Ltd (2001/02-2006/07) -Eurodata Inc -C Com Satellite Systems (2001/02, 2011 only)
		1992-1996/97	Eurodata Inc.
		1987	Vacant
		1976-1981/82	CIP Victoria Ltd Monarch Papers Ltd.
		1960-1971	Address not listed
2575 Sheffield Road	Adjacent property to the south	2011	Equili-Bri.Ca
		1976-2006/07	Ottawa Carleton Regional Hospital Linen Services Inc.
		1960-1971	Address not listed

The records do not indicate a potential environmental concern to the Site from the neighbouring nor adjacent properties. The records do indicate a potential environmental concern to the Site due to the presence of an on-site scrap metal yard from at least 1971 to the present.

3.3 Physical Setting Sources

Aerial photographs, as well as soil, bedrock geology, and topography maps were reviewed for information pertaining to the physical setting of the Site. A description of the results for each record reviewed is provided below.

3.3.1 Aerial Photographs

Aerial photographs can provide an indication of historical land uses with respect to the Site and surrounding properties. Eight aerial photographs were obtained and reviewed for the years 1965, 1976, 1991, 2002, 2007, 2011, 2015 and 2017. Selected aerial photographs showing the approximate Site location are located in Appendix C.

The following table highlights the observed features at the Site and surrounding properties within 250 m for each aerial photograph.

Aerial Photographs Observations

Aerial Photograph Year	Site Observations	Surrounding Properties Observations
1965	<ul style="list-style-type: none"> The southern third of the Site appears to be developed with a building at the southwest corner, and a railway spur entering the Site at the southeast corner and across the Site to the west. The northern two thirds of the Site are used for agricultural land. 	<ul style="list-style-type: none"> North of the Site: Used for agricultural land. East of the Site: Railway tracks followed by vacant undeveloped land followed by Green's Creek. South of the Site: Used for agricultural land. West of the Site: Used for agricultural land.
1976	<ul style="list-style-type: none"> A larger portion of the Site building is present along the west side of the Site, with additions on the north and south sides of the original building. The shredder is present in the northeast corner. The truck scale building is present. Piles of metal are present across the Site. Railway spur present on the south side of the Site. 	<ul style="list-style-type: none"> North of the Site: Developed with one small building on the west half of the property, with a roadway heading west to Sheffield Road. The remainder of the property is grass-covered. East of the Site: Railway tracks, followed by vacant undeveloped land and Green's Creek. South of the Site: Building and parking area on west half of the property. Remaining properties are grass-covered. West of the Site: One building (2510 Sheffield Road) is present with associated parking. An additional building (2574 Sheffield Road) is present with parking areas on the east and west sides.

Aerial Photograph Year	Site Observations	Surrounding Properties Observations
1991	<ul style="list-style-type: none"> The Site appears to be developed in approximately the same configuration the 1976 photograph. Site building has increased in size with an addition on the west side of the previous building. Shredder is present in the northeast corner of the Site. 	<ul style="list-style-type: none"> North of the Site: building appears the same on the adjacent property to the north as in 1976 photograph. The property further to the north is developed with storage containers on the north and south sides. East of the Site: Railway tracks, followed by vacant undeveloped land and Green's Creek. South of the Site: A second building is present on the east portion of the property. West of the Site: Developed with buildings along Bantree Street, and southwest of the Site, in approximately the same configuration as present.
2002	<ul style="list-style-type: none"> Similar to the 1991 aerial photograph. Additions to the Main Site Building are visible to the east, along the south property line, and at the north end of the building. The Garage Building is present in the northwest corner of the Site. 	<ul style="list-style-type: none"> North of the Site: Similar to the 1991 aerial photograph. An additional building was constructed at the east end of the property. East of the Site: Railway tracks, followed by vacant undeveloped land and Green's Creek. Trees appearing on both sides of Green's Creek. South of the Site: Similar to the 1991 aerial photograph. West of the Site: Similar to the 1991 aerial photograph.
2007	<ul style="list-style-type: none"> Similar to 2002 aerial photograph. 	<ul style="list-style-type: none"> North of the Site: Similar to the 2002 aerial photograph with an extension of the paved area to the west of the western building. A building is present on the property further north. East of the Site: Similar to the 2002 aerial photograph. South of the Site: Similar to the 2002 aerial photograph. West of the Site: Similar to the 2002 aerial photograph; however, the property at 2191 Bantree Street is no longer grass covered.
2011	<ul style="list-style-type: none"> Similar to 2007 aerial photograph. The railway spur is no longer present on Site. 	<ul style="list-style-type: none"> North of the Site: Similar to the 2007 aerial photograph. East of the Site: Similar to the 2007 aerial photograph. South of the Site: Similar to the 2007 aerial photograph. West of the Site: Similar to the 2007 aerial photograph, with the property at 2191 Bantree Street now used for parking.

Aerial Photograph Year	Site Observations	Surrounding Properties Observations
2015	<ul style="list-style-type: none"> The Main Site Building, Garage Building and Truck Scale Building are present in the same locations as present. The western two thirds of the Site are concrete-covered, and the eastern one third of the Site is soil. The shredder is no longer present. 	<ul style="list-style-type: none"> North of the Site: Similar to the 2011 aerial photograph. East of the Site: Similar to the 2011 aerial photograph with more trees. South of the Site: East Building is demolished. Appears to be storage of tires, drums, wood skids, metal bins. Truck scale present on the south property line, south of the west building. The west building is smaller, portions of the south of the building have been demolished. West of the Site: Similar to the 2011 aerial photograph.
2017	<ul style="list-style-type: none"> Developed in approximately the same configuration as present. 	<ul style="list-style-type: none"> North of the Site: Similar to the 2011 and 2015 aerial photographs. East of the Site: The area between the railway tracks and Green's Creek are fully forested. South of the Site: Similar to 2015 aerial photograph. West of the Site: Similar to the 2015 aerial photograph. A building is present at 2191 Bantree Street.

Based on a review of the aerial photographs, the property to the south may pose a potential environmental concern to the Site due to drum storage and the former railway spur located on the southern portion of the Site is considered a PCA. However, the details of PCAs, in this case, cannot be identified based solely on the review of the aerial photographs.

3.3.2 Topography, Hydrology, and Geology

DST reviewed available maps to determine Site and surrounding features such as local geology, topography, hydrogeology and locations of nearby watercourses. The maps reviewed and a description of the noted Site and surrounding property features are described in the table below.

Summary of Maps Reviewed

Map Title	Source	Site and Surrounding Property Features
Ontario Base Mapping	geoOttawa (City of Ottawa GIS), 2019	<ul style="list-style-type: none"> The Site and surrounding properties are situated at an elevation of approximately 64 m above mean sea level (amsl). The Phase One Study Area is situated at approximately 64 m amsl. Green's Creek is below 64 m amsl, but the land on either side is at a higher elevation. The nearest surface water feature is Green's Creek, which is located approximately 45 m east of the Site.

Map Title	Source	Site and Surrounding Property Features
Natural Heritage Information Centre	Ministry of Natural Resources, 2019	<ul style="list-style-type: none"> There are two wetlands within the Phase One Study Area: one to the north surrounding Green's Creek, and one to the west, at the west end of 2510 Sheffield Road. There are no Areas of Natural and Scientific Interest (ANSIs) within the Phase One Study Area.
Ontario Geological Survey (OGS) Bedrock Geology of Ontario	Ministry of Northern Development and Mines, 2011	<ul style="list-style-type: none"> The bedrock geology in the area of the Site consists of shale, limestone, dolostone, and siltstone of the Georgian Bay Formation, Blue Mountain Formation, Billings formation, Collingwood Member, and Eastview Member.
OGS Earth Surficial Geology of Southern Ontario	Ministry of Northern Development and Mines, 2010	<ul style="list-style-type: none"> The Site consists of fine-textured glaciomarine deposits of silt and clay with minor sand and gravel, massive to well-laminated.

3.3.3 Fill Materials

There was evidence of fill material based upon review of the Golder Phase II ESA report and DST Limited Phase II ESA report summarized in Section 3.1.5. Golder reported granular fill material to depths ranging from 0.8 to 1.4 m bgs. Imported fill was likely used when during the various stages of the development of the Site. No other evidence of imported fill materials was reported in the environmental records.

3.3.4 Water Bodies and Area of Natural Significance

There are three water bodies within the Phase One Study Area: Green's Creek, approximately 45 m east of the Site, a wetland around Green's Creek, approximately 130 m north of the Site, and a wetland on the west portion of 2510 Sheffield Road, approximately 205 m west of the Site. The closest waterbody to the Site is Green's Creek. There are no areas of natural significance in the Phase One Study Area.

3.3.5 Well Records

An online search of MECP well records was completed by DST, as well as the database search completed by ERIS for Water Well Information System (WWIS). One well record was identified for the Site, and 20 well records were identified within the Phase One Study Area.

The purpose for the well record on the Site was listed as industrial water supply. The well was installed in the shale bedrock at approximately 60 m bgs (200 ft) on May 17, 1972. The well was located approximately in the center of the Site. No record for this well abandonment can be found.

The stratigraphy identified in the well record for the on-Site well (Well ID No. 1511776 installed May 1972), was listed as follows:

- Fill from surface to 0.6 m bgs;
- Clay from 0.6 m bgs to 6.4 m bgs;
- Hardpan from 6.4 m to 9.4 m bgs; and

- Grey shale from approximately 9.4 m bgs to 61 m bgs.

The static water level was measured at 12 m bgs on June 19, 1972. However, from information gleaned from review of the Golder Phase II ESA report and DST Limited Phase II ESA report (summarized in Section 3.1.5), groundwater at the Site ranged from approximately 1.14 to 3.6 m bgs, and the groundwater flow direction was determined to be to the east. The groundwater values may seem inconsistent; however, the well installed in 1972 was in the bedrock aquifer, and the monitoring wells installed in 2008 and 2019 were in the shallow aquifer.

3.4 Site Operating Records

No Site Operating Records were provided to DST for review.

4 Interviews

Interviews of public and government agencies regarding specific details of properties are handled through FOI requests due to privacy legislation. The details of these information requests are provided in Sections 3.2.2 through 3.2.7.

DST conducted an in-person interview during the Site reconnaissance on August 19, 2019, with Mr. Jeffrey Dupelle and Mr. Dan Dupelle, the Client representatives for the Site. It should be noted that Mr. Jeffrey Dupelle and Mr. Dan Dupelle have been associated with the Site for approximately 32 and 20 years, respectively. The information provided to DST during the interview is incorporated into the appropriate Site reconnaissance sections of the report.

5 Site Reconnaissance

5.1 General Requirements

The findings documented in this section are based on observations made by DST at the time of the Site reconnaissance. The Site reconnaissance took place on August 19, 2019, and the conditions were sunny with a temperature of approximately 25°C. Mr. Dan Dupelle (the Client and Site Representative), accompanied DST during the Site reconnaissance.

Select photographs taken during the Site reconnaissance are included in Appendix B.

5.2 Specific Observations at the Phase One Property

5.2.1 Description of Structures and Other Improvements

The Site is developed with three buildings: one one- and two-storey building used as a warehouse and for office space, located in the southwest corner of the Site; one one-story garage/maintenance building located in the northwest corner of the Site; and a one-story scale house located in between the other two buildings, on the west side of the Site. Based on the Records Review (refer to Section 3 of this report), the Main Site Building was built in sections over time from before 1965, (the 1965 aerial photograph shows the original part of the building constructed) with additions visible in the 1976, 1991 and 1999 aerial photographs. The Garage Building was constructed in 1998, based on the information provided during the interview, and the Scale House was constructed prior to 1976.

The Main Building is a slab-on-grade and concrete block construction with an approximate footprint area of 3,506 m² (37,738 ft²). The Garage Building is a slab-on-grade and concrete block construction with an approximate footprint of 492 m² (5,295 ft²). The Scale House is a slab-on-grade and metal siding construction of approximately 26 m² (280 ft²). The three buildings were active at the time of the Site reconnaissance.

Besides the Site buildings, the western two-thirds of the Site are concrete-covered to the east of the main building, with asphalt to the north of the Main Building and west of the Garage Building and used to store and move scrap metal. There is an asphalt-paved parking area in the northwest corner of the Site, surrounded by landscaped areas. The eastern third of the Site is a soil surface re-graded from the Site re-development in 2015. Trees and vegetation are present around the perimeter of the Site. Staining was observed throughout both the Main Site Building and Garage Building. There was no evidence of major cracking in the concrete in the vicinity of the staining. The Site is accessed via driveways from Sheffield Road, and adjacent property to the south at 2575 Sheffield Road, on the eastern third of the Site.

5.2.2 Description of Below-Ground Structures

The southern section of the Main Site Building has a small subgrade portion that houses the hydraulic system for the hydraulic bailer for metal shavings. Photographs of the hydraulic bailer can be seen in Appendix B. No other below-ground structures were noted at the Site at the time of the Site reconnaissance.

5.2.3 Details of Tanks

According to DST's records review, there were records of one liquid fuel tank at the Site, a horizontal, steel diesel aboveground storage tank (AST). DST observed a horizontal, steel AST used for diesel fuel for the heavy machinery on Site located to the north of the Scale House, in the western portion of the Site. No visual or olfactory evidence of spills or staining was noted in the area of the AST at the time of the Site reconnaissance.

Two ASTs were observed inside the Garage Building: one used for engine oil and one used for hydraulic oil. Staining/ evidence of spills was observed; however, the concrete floor of the Garage did not exhibit any cracking in the area of the staining. A waste oil AST was observed on the north side of the Garage Building. No visual or olfactory evidence of spills or staining associated with the waste oil AST was noted at the time of the Site reconnaissance.

An AST was observed in the southern portion of the Main Site Building containing emulsified oil, which is collected when the hydraulic bailer compresses metal turnings from machine shops which are coated in oil. No visual or olfactory evidence of spills or staining associated with the emulsified oil AST was noted at the time of the Site reconnaissance.

An AST was observed connected to the hydraulic bailer, located in the southern portion of the Main Site Building, in the basement. The basement area solely contains the hydraulic components of the bailer, used to compress scrap metal into bales or cubes for storage and/ or shipment. The hydraulic oil is contained in a horizontal AST in the basement of the Main Building. No visual or olfactory evidence of spills or staining associated with the hydraulic oil AST was noted at the time of the Site reconnaissance.

5.2.4 Potable and Non-Potable Water Sources

The Site is serviced by municipal water supplied by the City of Ottawa.

5.2.5 Underground Utilities and Service Corridors

The Site is serviced by underground utilities, including hydro to the Garage Building and Scale House, natural gas and municipal sewer and water.

5.2.6 Features of Structures and Buildings

Entry and Exit Points

There are four entrances to the Site: the main entrance on the west side of the Site, via a driveway from Sheffield Road; two entrances from the property to the south (2575 Sheffield Road); and a gate at the southeast corner of the Site, formerly used for rail access.

Access points into the Main Site Building are at the northwest corner to access reception for the offices. There are garage doors and loading docks along the east side of the building. Access points into the Garage Building are on the south side, via garage doors, and on the north side of the building via doorways. Access to the Scale House is on the west side.

Heating and Cooling Systems

The Site buildings are heated and cooled by ceiling-mounted heating, ventilation and air conditioning (HVAC) units. The HVAC units were observed throughout the Main Site Building warehouse areas.

Drains, Pits and Sumps

Floor drains were observed during the Site reconnaissance. A linear drain was observed just inside the garage doors of the Garage Building. Mr. Dan Dupelle reported that the drain discharges into a holding tank at the southwest corner of the Garage Building. The holding tank is pumped out on a regular basis and the contents are disposed off site by a licensed waste hauler.

Catch basins were observed around the concrete-covered portion of the Site. The sewers connected to the catch basins all discharge into an oil/water separator located at the south east corner of the Site prior to discharging to the City of Ottawa Storm Sewer system. The oil/water separator is inspected weekly and cleaned out bi-annually, and discharge water samples are collected monthly.

Chemical Storage

Containers of hydraulic oil, engine oil and other mechanic fluids were observed in the Garage Building, both in the mechanic area and in the storage area on the east end of the building. Evidence of minor stains was observed in the vicinity of the hydraulic and engine oil storage in the mechanic section of the Garage Building, but the concrete floor was in good condition in this area.

Waste Removal

Waste removal at the Site is handled on an as-required basis by a licensed waste hauler.

Stains or Corrosion

There was staining observed on the floor inside the warehouse area of the Main Site Building, and on the floor of the Garage Building. Due to rain earlier during the day of the Site reconnaissance, it was difficult to observe if the exterior concrete area or soil covered exterior area were stained.

5.2.7 Wells

Two monitoring wells from the DST Limited Phase II ESA (MW19-4 and MW19-9) were on the Site during the Site reconnaissance. MW19-6, located at the south property line, was not observed.

5.2.8 Ground Surface

The floor surface within the Main Site Building was tile in the office area at the north end of the building, and concrete within the warehouse areas in the remaining portion of the building. The

flooring in the Garage Building and Scale House was concrete. The area between the Main Building and Sheffield Road consists of grassed areas and an asphalt-paved parking area. The western two-thirds of the Site consist of a concrete surface, while the eastern third of the Site is bare soil. There are vegetated areas around the perimeter of the Site.

5.2.9 Railway Lines or Spurs

No railway spurs or lines were observed on Site; however, the Alexandria Railway Line was observed adjacent to the Site, to the east, within the Phase One Study Area. It should be noted that a historical railway spur was formerly present on Site, entering the Site at the southeast corner and extending west across two-thirds of the Site.

5.2.10 Stained Soil and Stressed Vegetation

Due to earlier rain, there were no obvious visual evidence of stained soil on the eastern third of the Site. There was no obvious visual evidence of stressed vegetation at the time of the Site reconnaissance.

5.2.11 Fill and Debris

There was evidence of imported fill observed during the Site reconnaissance. Fill materials were encountered in the eastern portion of the Site. Mr. Dan Dupelle identified the eastern third of the Site received fill to raise the ground surface approximately 3 to 4 meters to be level with the remainder of the Site. Mr. Dupelle reported that the fill material was from the re-grading of the western two thirds of the Site preparing for imported granular material for the base of the concrete surface.

Additionally, there is evidence of fill materials down to a depth of approximately 1.4 m bgs reported in the Golder Phase II ESA (see Section 3.1.5).

No debris was observed at the Site during the Site reconnaissance outside of the operations of the scrap yard.

5.2.12 Hazardous Materials

Eleven designated substances are regulated by the Ministry of Labour (MOL) under the Occupational Health and Safety Act (OHSA) through the development of designated substance regulations that control worker exposure to designated substances. The designated substances identified in OHSA include *asbestos, vinyl chloride, arsenic, benzene, lead, coke oven emissions, ethylene oxide, acrylonitrile, mercury, isocyanates, and silica*. Guidelines have been developed for building projects such as renovations, construction, and demolition where designated substances may be disturbed. The following sections address Special Attention Items such as lead and/or lead based paints, mercury, asbestos containing materials (ACMs), and silica, and their potential presence within the Site building.

Lead and/or Lead-Containing Paint

Lead may be present in a variety of building materials and is commonly associated with paints, solder material, pipe plumbing, ceramic tile glazing and mechanical equipment due to its ability to resist corrosion. Exposure to lead may cause lead poisoning and is considered to be a human health risk. The historic use of lead-containing paints (LCPs) is a source of exposure through ingesting peeling or flaking paints, and/or routine contact with painted surfaces containing lead. Regulations have been established that limit worker exposure to lead, and guidelines have been published with work procedures to be followed when performing work that generates airborne lead containing dust.

Due to the inferred construction dates of the different buildings on Site (early 1960s to 2002), lead-based paint and other lead-based materials may have been utilized in the Site buildings.

Mercury

Liquid mercury is commonly associated with mechanical equipment such as thermostats, thermometers, barometers, pressure gauges, and electrical switches. A small amount of mercury is present in fluorescent light tubes and compact fluorescent light bulbs. Removal of materials suspected to contain mercury should be conducted in accordance with "The Safe Handling of Mercury: A Guide for the Construction Industry".

Fluorescent light tubes, potentially containing mercury, were observed within the Main Site Building during the Site reconnaissance.

Asbestos-Containing Materials (ACMs)

Asbestos is a naturally occurring fibrous mineral which has been widely used historically due to physical properties that, amongst other things, allow asbestos to withstand high temperatures. Asbestos has been used in a number of building products including, but not limited to: thermal and electrical insulation, floor and ceiling tiles, plaster and drywall joint compound.

Based on the dates of construction of the buildings on Site (early 1960s through 2002), ACMs may be present in building materials within the buildings on Site. At the time of the Site reconnaissance, no suspect ACMs were observed at the Site.

Urea Formaldehyde Foam Insulation

Based on the inferred date of construction of the Site building, urea formaldehyde foam insulation (UFFI) may have been used. UFFI was banned in Canada in 1980. There was no apparent visual evidence of such use within the buildings on Site.

Silica

Silica is a naturally occurring mineral found in a variety of construction materials and is commonly associated with manufactured concrete products, ceramic tiles, mortar, and products in the electronics industry.

Many building materials within the Site buildings are expected to contain silica, such as, but not limited to, concrete foundations, and block walls.

Polychlorinated Biphenyls

In 1977, the Canadian government enacted a set of chlorobiphenyls regulations which limited the use of polychlorinated biphenyls (PCBs). As such, the only allowable use of PCBs in Canada is in electrical transformers and capacitors existing in Canada before July 1, 1980, and certain other “closed use” equipment (specifically heat transfer equipment, hydraulic equipment and vapour diffusion pumps) that were in Canada before September 1, 1977 (Hilborn and Buccini, 1998).

PCBs are also commonly found within electrical ballasts manufactured prior to 1981, within fluorescent light fixtures and high intensity discharge (HID) lamps. Light fixtures with T12 lamps are more likely to contain ballasts that were manufactured prior to 1981. T8 lamps are associated with light fixtures that were manufactured after the phase-out of PCB-containing ballasts. The letter “T” denotes the shape of the light fixture (e.g. tubular) and the number which follows indicates the diameter in eighths of an inch.

There were fluorescent light tubes observed within the Main Site Building at the Site at the time of the Site reconnaissance.

Ozone Depleting Substances

Canada signed the Montreal Protocol on September 16, 1987 which controlled the use of Ozone Depleting Substances (ODSs) and banned over 100 ODSs grouped into the following categories: chlorofluorocarbons (CFCs); halons; carbon tetrachloride (CTC); hydrochlorofluorocarbons (HCFC); methyl chloroform; and methyl bromide. ODSs can be found in older refrigerating and air conditioning equipment.

During the Site reconnaissance, no equipment suspected of containing ODSs was observed as the HVAC systems were for heating only.

Mould

No visual evidence of mould was present in the readily accessible areas of the Site buildings.

5.2.13 Potentially Contaminating Activities

In accordance with the definitions within O. Reg. 153/04 (as amended) Schedule D (Table 2, Phase One ESAs), there were six PCAs identified on the Phase One Property during the Site reconnaissance.

- Item # 16 – *Drum and Barrel and Tank Reconditioning and Recycling* – drums and tanks were observed at the east side of the Site;
- Item #28 – *Gasoline and Associated Products Storage in Fixed Tanks* – Four ASTs were observed on Site during the Site reconnaissance;
- Item #30 – *Importation of Fill Material of Unknown Quality* – Granular fill was imported as the base of the concrete area covering the western two thirds of the Site. The eastern

portion, according to Mr. Dupelle, received excess soil from the regrading of the area to be covered with concrete. Fill material was also encountered across the Site during the Golder Phase II ESA and DST Limited Phase II ESA investigations;

- Item #49 – *Salvage yard, including automobile wrecking* – the Site is a salvage yard for metal;
- Item #52 – *Storage, maintenance, fuelling and repair of equipment, vehicles, and material used to maintain transportation systems* – The Garage building is used to repair equipment and vehicles. There is also a diesel AST on Site to fuel the equipment.
- Item #58 – *Waste Disposal and Waste Management, including thermal treatment, landfilling and transfer of waste, other than use of biosoils as soil conditioners* – the Site is a scrap yard for metal and transfer station for waste such as tires and other non-metal components.

5.2.14 Unidentified Substances

No unidentified substances were observed at the Site at the time of the Site reconnaissance.

5.3 Enhanced Investigation Property

The Site is designated as an enhanced investigation property (EIP) because the Site is an industrial property listed under clause 32(1)(b) of O. Reg. 153/04 (as amended) for the purpose of this Phase One ESA. Specifically, the Site is used as a salvage yard and did historically include an automobile wrecking yard on the premises.

5.4 Written Description of Investigation

As part of the Phase One ESA, DST conducted a Site reconnaissance on August 19, 2019. The subsections below describe the findings of the investigation.

5.4.1 Summary of Phase One Property Observations

The Site is located at the municipal address of 2555 Sheffield Road and is developed with three buildings. Main Building: located in the southwest corner of the Site is a two-storey and one-storey slab-on-grade structure used as an indoor recycling warehouse and offices; Garage Building: located in the northwest corner of the Site is a one-storey with second storey mezzanine slab-on-grade structure used as a maintenance garage, mechanical warehouse and offices; and Scale House: located in the east of the entrance on the west side of the Site, is a one-storey slab-on-grade structure used as an office space for the truck scales. Based on the Records Review (see Section 3 of this report), the Main Building was originally constructed in the early 1960s with several additions up to 2002, the Garage Building was constructed in 1998, and the Scale House was constructed between 1965 and 1976. The 2002 aerial photograph shows the Site developed with the Site buildings in their present configuration. The total footprint areas of the Site buildings are:

- Main Building is approximately 3,506 m² (37,738 ft²)
- Garage Building is approximately 492 m² (5,295 ft²); and

- Scale House is approximately 26 m² (280 ft²).

The three buildings were active at the time of the Site reconnaissance. In addition to the Site buildings, there were temporary structures, including concrete block three-sided bins for sorting the material.

Besides the Site buildings, most of the Site includes concrete-paved areas on the western two-thirds, and bare soil on the eastern third, with vegetated areas along the perimeter of the Site. There was minor staining observed within the Main Site Building and Garage Building. Due to earlier rain, it was not possible to observe staining on exterior portions of the Site. The Site is accessed via driveways from Sheffield Road, and two driveways from the adjacent property to the south (2575 Sheffield Road).

Six PCAs were identified on the Phase One Property during the Site reconnaissance (refer to Section 5.2.13).

5.4.2 Off-Site Phase One Study Area Observations

Properties in the Phase One Study Area were observed from publicly accessible areas. The property uses of the immediate adjacent and neighbouring properties surrounding the Site are summarized in the following table.

Immediate Adjacent and Neighbouring Property Uses

Direction	Surrounding Property Activities
North	2505 Sheffield Road – Roofmart roofing supply yard
East	Alexandra Rail Corridor, followed by Green’s Creek and a forested area.
South	2575 Sheffield Road – Industrial property owned by AIM Recycling used for depollution of vehicles, leased to Colautti Construction Limited, J. Connelly Rental, and Coffrages Synergy Formwork.
West	2510, 2574, 2540 Sheffield Road, 2191 Bantree Street, – Bakery (Boulangeries Weston Limitee), TD Insurance Auto Centre, and Novatech DKI restoration specialists.

5.4.2.1 Potentially Contaminating Activities

In accordance with the definitions within O. Reg. 153/04 (as amended) Schedule D (Table 2, Phase One ESAs) and through observations of the properties surrounding the Site during the Site reconnaissance from publicly accessible vantage points, DST noted the following PCAs that were observed at other properties within the Phase One Study Area, as shown on Figure 3 in Appendix A and described in detail in Section 6.2.2.

- PCA Item #46 - *Rail Yards, Tracks and Spurs*
- PCA Item #49 - *Salvage Yard, including automobile wrecking;*
- PCA Item #52 - *Storage, maintenance, fuelling and repair of equipment, vehicles, and material used to maintain transportation systems.*

5.4.2.2 Water Bodies

Green's Creek, which is located within the Phase One Study Area, is the closest water body to the Site, located approximately 45 m east of the site.

5.4.2.3 Area of Natural Significance

There are no areas of natural significance within the Phase One Study Area.

6 Review and Evaluation

6.1 Current and Past Uses

Based on a review of the Chain of Title, aerial photographs, city directories, and the interview, the Site was first developed in the early 1960s, with the 1965 aerial photograph showing the Site as developed with one building located in the southwest corner of the Site and a railway spur entering the Site at the southeast corner and continuing west across the Site. The earliest available aerial photograph for review (1965) shows the northern two-thirds of the Site and surrounding properties as primarily agricultural land. The 1976 aerial photograph shows portions of the Phase One Study Area developed. According to the available Chain of Title, city directories and observations at the time of the Site reconnaissance, the Site has been used as a metal scrap yard from the time of its first development to the present.

6.2 Potentially Contaminating Activities

6.2.1 Potentially Contaminating Activities at the Phase One Property

Based on information obtained during the records review, interview, and Site reconnaissance, the following PCAs were identified at the Site, as shown on Figure 2a in Appendix A:

Potentially Contaminating Activities at the Phase One Property

Potentially Contaminating Activity	Location on Phase One Property	Description	Contributes to APEC?
PCA 1 PCA Item No 49 – Salvage Yard, including automobile wrecking	Entire Phase One Property	Based upon review of aerial photographs and city directory search, the Site has been used for a metal scrap yard since the late 1960s.	Yes
PCA 2 PCA Item No. 28 – Gasoline and Associated Products Storage in Fixed Tanks	Northwest corner and southwest corner	Based upon review of aerial photographs, the TSSA response, ERIS records and the Site reconnaissance, the northwest corner of the Site contains four above ground storage tanks: one exterior AST for diesel to fuel the on-Site equipment, one interior AST for engine oil to service the on-Site equipment, on interior AST for hydraulic oil, and one exterior AST for waste oil located on the north side of the Garage Building. The southwest corner of the Main Site Building and Site contain two ASTs: one AST for emulsified oil, and one	No

Potentially Contaminating Activity	Location on Phase One Property	Description	Contributes to APEC?
		AST for hydraulic oil for the hydraulic bailer.	
PCA 3 PCA Item No. 52 – Storage, maintenance, fuelling and repair of equipment, vehicles, and material used to maintain transportation systems	Northwest corner of the Site	Based upon aerial photographs, Site reconnaissance and interview, the Garage Building services the heavy equipment used on Site since 1998, when the Garage Building was constructed. Also based on the Site interview, there was a former garage in the southwest corner of the Main Site Building.	Yes
PCA 4 PCA Item No. 30 – Importation of Fill Material of Unknown Quality	Entire Phase One Property	Based on aerial photographs and the Site interview, the eastern third of the Site was filled in with soil from the grading of the western two-thirds of the Site. Granular fill was also imported for the base of the concrete covering the western two-thirds of the Site. Fill was observed in the boreholes advanced during the Golder Phase II ESA and DST Limited Phase II ESA.	Yes
PCA 5 PCA Item No 46 – Rail Yards, Track and Spurs	South east corner and southern third of the Phase One Property	Based on Aerial photographs and the Site interview, there was a rail spur on-Site that entered the Site at the southeast corner and continued west across the southern third of the Site. The rail spur was present in the 1965 aerial photograph through to the 2011 aerial photograph but is not visible in the 2015 aerial photograph.	No
PCA 6 PCA Item No 58 - <i>Waste Disposal and Waste Management, including thermal treatment, landfilling and transfer of waste, other than use of biosoils as soil conditioners</i>	Eastern two thirds of the Site	The Site is a scrap yard for metal and transfer station for waste such as tires and other non-metal components. The metal and other materials are stored on the eastern two thirds of the Site.	Yes

6.2.2 Potentially Contaminating Activities in the Phase One Study Area

Through observation of the properties surrounding the Site during the Site reconnaissance and review of records and aerial photographs, the following PCAs were observed at other properties within the Phase One Study Area, as shown on Figure 2b in Appendix A:

Potentially Contaminating Activities within the Phase One Study Area

Potentially Contaminating Activity	Location in Phase One Study Area	Description	Contributes to APEC?
PCA 7 PCA Item No. 49 - Salvage Yard, including automobile wrecking	Adjacent property to the south	Based on aerial photographs and interview, a metal scrap yard was present on the adjacent property to the south from 2012 to 2015.	No (inferred cross gradient location)
PCA 8 PCA Item No 16 – Drum and Barrel and Tank Reconditioning and Recycling	Adjacent property to the south	Based on aerial photographs and interview, drums were present from 2012 to 2015 on the adjacent property to the south to be recycled.	No (inferred cross gradient location)
PCA 9 PCA Item No 46 - Rail Yards, Track and Spurs	Adjacent property to the east	Based on aerial photographs, interview and Site reconnaissance, the Alexandria Railway Line has been present east of the Site since before 1965 when it was visible in the aerial photograph. The Railway line is currently present east of the Site.	No (inferred down-gradient location)
PCA 10 PCA Item No 52 - Storage, maintenance, fuelling and repair of equipment, vehicles, and material used to maintain transportation systems	Neighbouring properties west of the Site	Multiple auto repair garages were identified in the city directory search and during the Site reconnaissance.	No (distance and Sheffield Road between properties and Site)

6.3 Areas of Potential Environmental Concern

Based on the PCAs identified in Section 6.2, the following APECs were identified on the Site.

APEC	Location of APEC on Phase One Property	Area of Potential Environmental Concern	Potential Contaminants of Potential Concern (PCOCs)	Media Potentially Impacted
APEC 1 Metal Salvage Yard	Entire Phase One Property	Potential residual contamination due to presence of a metal salvage yard from between 1965 and 1976 to present, resulting from PCA 1 and PCA 6.	Metals (particularly heavy metals, such as lead)	Soil, Groundwater
APEC 2 Former and Current maintenance garage	Northwest and southwest corners of the Phase One Property	Potential contamination from the current maintenance garage in the northwest corner and former auto garage in the southwest corner of the Main building, resulting from PCA 3.	PHCs F1-F4, VOCs, PAHs	Soil, Groundwater
APEC 3 Fill material of unknown quality likely present on-Site	Entire Phase One Property	Potential contamination due to the presence of fill material of unknown quality likely placed at the Site during development and based on observations during the Site reconnaissance and previous environmental reports, resulting from PCA 4.	Metals, PHCs F1-F4 and PAHs	Soil, Groundwater

PCA 2 did not contribute to an APEC as during the Site reconnaissance no evidence of staining was observed around the exterior tanks. The minor staining observed around the interior tanks was not a concern as the concrete floors were in good condition and did not have any cracks in the vicinity of the stains.

PCA 5 did not contribute to an APEC as the railway spurs were removed during the Site re-development in 2015. The soil from around the spur was likely re-graded, mixed and placed in other areas on the Site.

PCA 6 did not contribute to an APEC as the scrap yard was present in the recent past (for three years) and was located cross-gradient to the Site based on the inferred groundwater flow direction to the east.

PCA 7 did not contribute to an APEC as the drum storage occurred in the recent past (for three years) and was located cross-gradient to the Site based on the inferred groundwater flow direction to the east. The drums were empty when stored (based on information provided during the interview), thus the contents would not have been a factor.

PCA 8 did not contribute to an APEC as the railway lines are located downgradient to the Site based on the inferred groundwater flow direction to the east.

6.4 Areas of Environmental Concern

Based on a review of previous environmental investigations (Golder Phase II ESA and DST Limited Phase II ESA), the following Areas of Environmental Concern (AECs) were identified:

AEC	Location of AEC on Phase One Property	Area of Environmental Concern	Contaminants of Concern (COCs)	Media Impacted
<p>AEC 1 Soil contamination identified in Golder Phase II ESA</p>	<p>Eastern portion and just east of the Main Building</p>	<p>The fill material sampled from boreholes BH08-2, BH08-4 and BH08-5 were found to contain PHC F2 and F3, zinc and vanadium concentrations greater than the applicable standards at the time.</p>	<p>PHC F1 to F4, metals</p>	<p>Soil</p>
<p>AEC 2 Soil contamination identified in DST Limited Phase II ESA</p>	<p>Northeast corner, central east portion, northwest corner</p>	<p>The fill material sampled from boreholes MW19-6, BH19-7, MW19-9, BH19-10B, BH19-11B, BH19-12, BH19-13, BH19-14, and BH19-15 contained concentrations of one or more of metals and PHC F1 to F3 greater than the O.Reg. 153/04, as amended, Table 3 Standards.</p>	<p>PHC F1 to F3, metals</p>	<p>Soil</p>
<p>AEC 3 Groundwater contamination identified in DST Limited Phase II ESA</p>	<p>Northeast corner and south of the Scale House</p>	<p>Groundwater from monitoring wells MW19-4 and MW19-9 contained concentrations of VOCs greater than the O.Reg. 153/04, as amended, Table 3 Standards.</p>	<p>VOCs</p>	<p>Groundwater</p>

6.5 Phase One Conceptual Site Model

The illustrative requirements, according to O. Reg. 153/04, of the Phase One Conceptual Site Model (CSM) are shown on Figures 2a and 2b provided in Appendix A. These figures include: the

location of the existing buildings at the Site and in the Phase One Study Area; the roads and water bodies, including names, within the Phase One Study Area; uses of properties adjacent to the Site; and the location of PCAs within the Phase One Study Area and APECs at the Site. As there are no areas of natural significance or drinking water wells at the Site or surrounding area, these items are not depicted on the Figures.

The PCAs and evaluation of any APECs are discussed in Sections 6.2 and 6.3.

The topography of the Site was analyzed using maps and information provided by Ontario Base Maps ordered through ERIS and geoOttawa, the City of Ottawa's online mapping database (available at <http://maps.ottawa.ca/GeoOttawa/>). The Ontario Base Map shows the ground surface elevation for the Site at approximately 64 m amsl. The regional topography appears to be flat. Based on visual observations during the Site visit, the Site and surrounding areas are generally flat with a valley around Green's Creek.

Green's Creek is the only surface water body in the Phase One Study Area and is located approximately 45 m east of the Site. Based on the regional topography and location of the nearest surface water body, the inferred direction of the regional shallow horizontal groundwater flow is to the east. Depending on climate conditions and the amount of surface water available, ditching, underground services and ground surface may affect the shallow groundwater flow on a local level.

Underground utilities at the Site generally consist of storm sewers with catch basins and manholes around the concrete covered area of the Site. The sanitary sewer discharge is out the west side of the Site under Sheffield Road, whereas the storm sewer discharges at the southeast corner of the Site to Green's Creek. It is not anticipated that underground utilities are present near the groundwater table and, therefore, it is unlikely that underground utilities will affect contaminant distribution and transport.

The geological maps reviewed indicate that the Phase One Study Area is underlain by Paleozoic Bedrock – Ordovician limestone, dolostone, shale, and siltstone of the Georgian Bay Formation, Blue Mountain Formation, Billings formation, Collingwood Member, and Eastview Member (OGS, 2011). The surficial geology mapped according the Ontario Geological Survey (OGS) Earth Surficial Geology of Southern Ontario (OGS, 2010) indicates that Site and Phase One Study Area consists of fine-textured glaciomarine deposits of silt and clay with minor sand and gravel, massive to well-laminated. Additionally, borehole data obtained from the Golder Phase II ESA and DST Limited Phase II ESA, summarized in Section 3.1.5, indicated the following stratigraphy:

- Fill material consisting of debris and crushed stone ranging in depth from 0.8 to 1.4 m bgs;
- Weathered crust layer of silty clay below the fill layer ranging in depth from 1.0 to 2.9 m bgs;
- Silty clay, clayey silt and sandy silt were present at greater depths; and
- Shale bedrock was encountered between 9.0 and 1.2 m bgs.

Review of the Golder Phase II ESA and DST Limited Phase II ESA (summarized in Section 3.1.5) indicated that the shallow groundwater at the Site ranged from 1.14 m bgs to 3.18 m bgs and 2.3 m bgs to 3.6 m bgs, respectively.

Issues relating to uncertainty or absence of information were not significantly encountered during the completion of the Phase One ESA and, therefore, it is not anticipated that uncertainty or absence of information will affect the validity of this Phase One CSM.

7 Conclusions & Recommendations

An evaluation of actual and potential contamination was completed on the Site and properties within 250 m of its boundaries during this Phase One ESA. The information evaluated to identify PCAs and to determine APECs on the Site included record searches, a Site reconnaissance, and interviews with persons knowledgeable about the property.

Based on the findings of the Phase One ESA, the following APECs and AECs were identified at the Site.

Areas of Potential Environmental Concern

APEC	Location of APEC on Phase One Property	Potentially Contaminating Activity (PCA)	Location of PCA (on-Site or off-Site)	Contaminants of Potential Environmental Concern	Media Potentially Impacted
APEC 1 Metal Salvage Yard	The Entire Phase One Property	49 – Salvage Yard, including automobile wrecking	On Site	- Metals	Soil, Groundwater
APEC 2 A former maintenance garage	Southwest corners of the Phase One Property	52 – Storage, maintenance, fuelling and repair of equipment, vehicles, and material used to maintain transportation systems	On Site	- PHC F1-F4 - VOCs - PAHs	Soil, Groundwater
APEC 3 Fill material of unknown quality likely present on-Site	The Entire Phase One Property	30 – Importation of Fill Material of Unknown Quality	On Site	- Metals - PHC F1-F4 - PAHs	Soil, Groundwater

Areas of Potential Environmental Concern

AEC	Location of AEC on Phase One Property	Area of Environmental Concern	Contaminants of Concern (COCs)	Media Impacted
AEC 1 Soil contamination identified in Golder Phase II ESA	Eastern portion and just east of the Main Building	The fill material sampled from boreholes BH08-2, BH08-4 and BH08-5 were found to contain PHC F2 and F3, zinc and vanadium concentrations greater than the applicable standards at the time.	PHC F1 to F4, metals	Soil
AEC 2 Soil contamination identified in DST Limited Phase II ESA	Northeast corner, central east portion, northwest corner	The fill material sampled from boreholes MW19-6, BH19-7, MW19-9, BH19-10B, BH19-11B, BH19-12, BH19-13, BH19-14, and BH19-15 contained concentrations of one or more of metals and PHC F1 to F3 greater than the O.Reg. 153/04, as amended, Table 3 Standards.	PHC F1 to F3, metals	Soil
AEC 3 Groundwater contamination identified in DST Limited Phase II ESA	Northeast corner and south of the Scale House	Groundwater from monitoring wells MW19-4 and MW19-9 contained concentrations of VOCs greater than the O.Reg. 153/04, as amended, Table 3 Standards.	VOCs	Groundwater

7.1 Requirement for Further Investigation

The APECs identified in the Phase One ESA have been addressed and evaluated by the DST Limited Phase II ESA. Therefore, no further investigation is required at this time.

A project-specific designated substances survey (DSS) is recommended to assess the presence of hazardous materials (lead based, asbestos containing, ODS) that may be disturbed during any renovation or deconstruction activities.

7.2 Record of Site Condition Based on Phase One ESA Alone

A record of site condition is not required for this Phase One Property.

It should be noted that responses from the MNRF, MECP, ECCC and City of Ottawa information requests remain outstanding. If relevant information which alters the conclusions of the report is received following the issuance of this report, an addendum to this report will be issued by DST.

8 Closure

This report was prepared for the exclusive use of AIM Recycling Ottawa. Any use of this report by any third party, or any reliance on or decisions to be made based on it, are the responsibility of such parties. DST accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report. Full Report Limitations are included in Section 11 of this report.

We trust the information herein meets your present requirements. Should you have any questions, please do not hesitate to contact the undersigned.

Yours truly,

For **DST Consulting Engineers Inc.**

Director, Senior Principal

9 Qualifications of the Assessors

Brenda Thom, M.Sc. (Eng.), P.Eng.: Ms. Thom is an Environmental Engineer with DST. Ms. Thom has over 10 years of experience in the environmental industry. She has been primarily involved with numerous Phase I/II Environmental Site Assessments, site remediation, water quality and monitoring programs.

Eric Domingue, P.Eng., M.A.Sc.: Mr. Domingue has worked in the environmental industry for over 25 years and has served both the public and private sectors. Mr. Domingue has extensive experience in contaminated site investigations, quality assurance sampling, remediation, and post-remediation long-term monitoring activities. Mr. Domingue also has significant project management, onsite contractor supervision and contract management experience. Mr. Domingue has participated in managing and conducting numerous environmental site assessments for federal and provincial government departments. Through his experience in the consulting business, he has successfully dealt with public, private and institutional stakeholders on hundreds of projects and has worked extensively in the Eastern Ontario and National Capital Regions.

11 Limitations of Liability and Third Party Reliance

DST Consulting Engineers Inc. (DST) has prepared this report for the exclusive use of AIM Recycling Ottawa (the “Client”). The information, conclusions and recommendations given herein are specific for this project and this Client only, for the scope of work described herein. DST will not be responsible for the use of this report by any third party, or reliance on or any decision to be made based on it without the prior written consent of DST. DST accepts no responsibility for damages, if any, suffered by any third party as a result of decisions or actions based on this report.

This report presents an overview of issues of potential environmental concern, reflecting DST’s best judgment using information reasonably available at the time of DST’s Site reconnaissance. The assessment was partly based on information from various sources of which the accuracy has not been verified, and because observations made during the Site reconnaissance may have been limited by existing conditions, this report does not guarantee that the subject property is free of hazardous or potentially hazardous material or conditions, or that latent or undiscovered conditions will not become evident in the future. DST has prepared this report using information understood to be factual and correct and shall not be responsible for conditions arising from information or facts that were concealed or not fully disclosed to DST at the time of the Site reconnaissance and assessment.

The conclusions regarding environmental conditions, which are presented in this report, are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground. This report therefore cannot warrant that all conditions on or off the subject property have been identified within this assessment.

Since onsite and surrounding activities are beyond DST’s control, and can change at any time after the completion of this assessment, the observations, findings, and opinions can be considered valid only as of the date provided on this report.

Conclusions and recommendations contained in this assessment were developed in accordance with currently accepted engineering standards and practices. Standards, guidelines and practices related to environmental investigations may change over time. Those which were applied at the time of this investigation may be obsolete or unacceptable at a later date.

APPENDIX B

Site Photographs

Photograph 1: View inside the warehouse section of the north branch of the Main Building (August 2019).

Photograph 2: Looking northeast at the loading docks of the original section of the Main Building (August 2019).

Photograph 3: Looking east at the exterior metal storage outside the loading docks of the original section of the Main Building (August 2019).

Photograph 4: View of the emulsified oil AST at the southwest corner of the Main Building (August 2019).

Photograph 5: View of the open hydraulic bailer chamber on the top of the photo, the rollers located on the bottom of the photograph raise up to the warehouse floor for removal of the bailed metal (August 2019)

Photograph 6: Looking east at the warehouse storage of metal at the east end of the south branch of the Main Building (August 2019).

Photograph 7: Looking west along the hydraulic piston of the hydraulic bailer located in the southwest corner of the Main Building (August 2019).

Photograph 8: Looking west at the hydraulic oil AST (blue tank on the right hand side) connected to the hydraulic bailer at the southwest corner of the Main Building (August 2019).

Photograph 9: Looking west at the east elevation of the north branch of the Main Building. The center portion is the original building constructed prior to 1965 (August 2019).

Photograph 10: Looking west along the south property line. This is also the approximate location of MW19-06 which could not be located. The east end of the south arm of the Main Building (August 2019).

Photograph 11: Looking east along the south property line (August 2019).

Photograph 12: Looking north along the line between the concrete covering and the bare soil portions of the Site (August 2019).

Photograph 13: Looking south at the location of the oil/water separator and discharge to the storm sewer that runs along the south property line (August 2019).

Photograph 14: Looking southeast at the gate where the former railway spur entered the Site (August 2019).

Photograph 15: Looking north along the east property line (August 2019).

**Photograph 16: Looking northwest over the Site from the southeast corner
(August 2019).**

Photograph 17: Looking south over the east portion of the Site (August 2019).

Photograph 18: Looking west along the north property line. The Garage Building is visible in the background (August 2019).

**Photograph 19: Looking southeast across the Site from the northwest corner
(August 2019).**

Photograph 20: View southeast at the diesel AST and Scale House in the background (August 2019).

Photograph 21: View north inside the garage (August 2019).

Photograph 22: View inside the garage of the two white ASTs. The one on the left contains hydraulic oil and the one on the right contains engine oil. Pails of hydraulic oil and engine oil around the tanks (August 2019).

Photograph 23: Waste oil AST on the north side of the Garage Building. There was water on the right side of the tank from the rain water dripping from the sheet metal (August 2019).

Photograph 24: Looking west at the linear drain on the south side of the Garage Building. The drain discharges to a holding tank that is emptied on an as needed basis (August 2019).

Photograph 25: Looking east at the entrance of the truck scales and the Scale House (August 2019).

Photograph 26: Looking southwest at the northern end of the Main Building, at the offices built in 1998 (August 2019).

Photograph 27: Looking north at MW19-04. The east side of the truck scales and the Garage Building in the background (August 2019).

Photograph 28: Looking north at MW19-09 and the southwest corner of the warehouse on the adjacent property to the north (August 2019).

Submittal Requirements

The following are required to be submitted with this application:

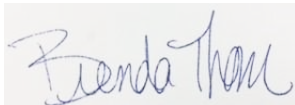

- 1. Consent to Disclose Information:** Consultants and other third parties may make requests for information on behalf of an individual or corporation. However, if the requester is not the owner of the property, **the requester must provide the City of Ottawa with a 'consent to disclose information' letter, signed by the property owner.** This will authorize the City of Ottawa to release any relevant information about the property or its owner(s) to the requester. Consent for disclosure is required in the event that personal information or proprietary company information is found concerning the property and its owner. All consents must clearly indicate the name of the property owner as well as the name of the requester, and must be signed and dated.
- 2. Disclaimer:** Requesters must read and understand the conditions included in the attached disclaimer and submit a signed disclaimer to the City of Ottawa's Planning, Infrastructure and Economic Development Department. This disclaimer is related to the Historic Land Use Inventory and must be received by the City of Ottawa, signed and dated by the requester, before the process can begin.
- 3. A site plan or key plan of the property, its location and particular features.**
- 4. Any significant dates or time frames that you would like researched.**

Disclaimer
For use with HLUI Database

CITY OF OTTAWA ("the City") is the owner of the Historical Land Use Inventory ("HLUI"), a database of information on the type and location of land uses within the geographic area of Ottawa, which had or have the potential to cause contamination in soil, groundwater or surface water.

The City, in providing information from the HLUI, to DST Consulting Engineers Inc. ("the Requester") does so only under the following conditions and understanding:

1. The HLUI may contain erroneous information given that such records and sources of information may be flawed. Changes in municipal addresses over time may have introduced error in such records and sources of information. The City is not responsible for any errors or omissions in the HLUI and reserves the right to change and update the HLUI without further notice. The City does not, however, make any commitment to update the HLUI. Accordingly, all information from the HLUI is provided on an "as is" basis with no representation or warranty by the City with respect to the information's accuracy or exhaustiveness in responding to the request.
2. City staff will perform a search of the HLUI based on the information given by the Requester. City staff will make every effort to be accurate, however, the City does not provide an assurance, guarantee, warranty, representation (express or implied), as to the availability, accuracy, completeness or currency of information which will be provided to the Requester. The HLUI in no way confirms the presence or absence of contamination or pollution of any kind. The information provided by the City to the Requester is provided on the assumption that it will not be relied upon by any person whatsoever. The City denies all liability to any such persons attempting to rely on any information provided from the HLUI database.
3. The City, its employees, servants, agents, boards, officials or contractors take no responsibility for any actions, claims, losses, liability, judgments, demands, expenses, costs, damages or harm suffered by any person whatsoever including negligence in compiling or disseminating information in the HLUI.
4. Copyright is reserved to the City.
5. Any use of the information provided from the HLUI which a third party makes, or any reliance on or decisions to be based on it, are the responsibilities of such third parties. The City, its employees, servants, agents, boards, officials or contractors accept no responsibility for any damages, if any, suffered by a third party as a result of decisions made as a result of an information search of the HLUI.
6. Any use of this service by the Requestor indicates an acknowledgement, acceptance and limits of this disclaimer.
7. All information collected under this request and all records provided in response to this request are subject to the provisions of the Municipal Freedom of Information and Protection of Privacy Act, R.S.O. 1990, c. M.56, as amended.

[Online UTM coordinate converter](#)

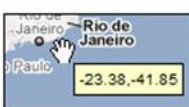

How to get X, Y coordinates from Google Maps (2 options):

- 1.) Right-click on the map, at the point of interest, and select 'What's here?'.
-The Latitude & Longitude of the mouse click, in decimal degrees, will automatically appear in the Search box.

OR

- 2.) Click on 'Maps Labs' in Google Maps.
-The following window will appear:

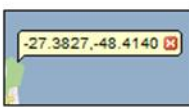

[Maps Labs](#) - [Help](#)
 Google Maps - ©2012 Google - [Terms of Use](#)

LatLng Tooltip
Marcelo C

Displays a tooltip next to the mouse cursor showing the latlng directly underneath it. Press SHIFT to activate tooltip.

Enable
 Disable

LatLng Marker
Marcelo C

Adds an option to the context menu that lets you drop a mini marker showing the latlng of the position that the cursor was pointing at when the context menu was evoked

Enable
 Disable

Important: To save your enabled Labs for next time, you must [sign in](#) to your Google account.

- Enable the LatLng Tooltip and then Save Changes.
- Now every time the **SHIFT** button is pressed in Google Maps, a Tool tip will appear with the Latitude and Longitude of the mouse location in decimal degrees.

Records Found

Hello,

Thank you for your request for confirmation of public information.

- We confirm that there are **fuel storage tanks records** in our database at the subject address(es).

Inst Number	Segment1	Address	City	Status
9284787	FS PRIVATE FUEL OUTLET - SELF SERVE	2555 SHEFFIELD RD	OTTAWA	Under Review
10906749	FS LIQUID FUEL TANK	2555 SHEFFIELD RD	OTTAWA	Active

For a further search in our archives please complete our release of public information form found at https://www.tssa.org/en/about-tssa/release-of-public-information.aspx?_mid_=392 and email the completed form to publicinformationservices@tssa.org or through mail along with a fee of \$56.50 (including HST) per location. The fee is payable with credit card (Visa or MasterCard) or with a Cheque made payable to TSSA.

The *Technical Standards and Safety Act* and associated regulations do not require the registration of private fuel outlets. Nor does it require that any documentation on these facilities be submitted to or reviewed or approved by TSSA. As a result, TSSA has limited information on these facilities. TSSA cautions that any information provided may be inaccurate, incomplete or out of date.

Although TSSA believes the information provided pursuant to your request is accurate, please note that TSSA does not warrant this information in any way whatsoever.

Kind regards,

Connie Hill | Public Information Agent

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

<u>1</u>	2 of 43	-/0.0	61.8 / 0.00	Sheffield Rd junkyard 1972 Gloucester ON K1B 3V6	ANDR
Legal Description:		Gloucester			
Location Description:		E side of Sheffield Rd* opp. Bantree*, W side of CNR, with spur, 75m E of Greens Ck			
Municipality:		Gloucester City			
Current Municipality:		Gloucester City			
RM:		Ottawa-Carleton Region			
Facility:		Auto Junkyard			
Date Active:		1972-80			
Date Begun:					
Date Complete:					
Area (Ha):		1.25			
Landfill Type:					
Group Name:					
Operated By:		Baker Bros Iron & Metal Co Ltd			
Serial:		JY OTC19 1972			
NTS:		31G05			
Diameter (m):		125			

Historical Summary:

		This application is for the use and operation of a waste transfer station for the purpose of recycling paper products. This facility will have a processing capacity of 100 tonnes per day and will be capable of storing 1000 tonnes of waste material. Co-mingle waste (a combination of plastic, bottles, cans, styro-foam and glass bottles) will also be collected at this facility. This facility will serve the Regional Municipality of Ottawa Carleton.

The City of Ottawa and its contractor were fined \$120,000 for failing to comply with a permit to take water and discharging sediment into Stillwater Creek, a tributary of the Ottawa River. 'Polluters should be aware that the ministry's Investigations and Enforcement Branch will vigorously pursue charges when our environmental laws are broken', said Environment Minister Jim Bradley. In 2010, the city awarded a contract for a water main installation along several streets in Ottawa to Colautti Construction Ltd. 'a local company that specializes in the construction of sewer and water lines. For dewatering required by construction, a permit to take water was issued to the City that required a number of conditions including turbidity testing. Following reports in August 2010 of possible impairments to Stillwater Creek as a result of drilling work, a ministry investigation found the company was responsible for a discharge of sediment into Stillwater Creek. Although there was no evidence of any actual impact to fish in Stillwater Creek as a result of the sediment discharge on that day, sediment discharges can adversely affect fish and benthic organisms. The City was also found to have not been conducting the required turbidity testing. The City of Ottawa and Colautti Construction Ltd. were fined a total of \$120,000 plus victim fine surcharges of \$30,000 and were given sixty days to pay the fines.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.

Abandoned Aggregate Inventory:

Provincial [AAGR](#)

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial [AGR](#)

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2018

Abandoned Mine Information System:

Provincial [AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Oct 2018

Anderson's Waste Disposal Sites:

Private [ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Automobile Wrecking & Supplies:

Private [AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Jan 31, 2019

Borehole:

Provincial [BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval:

Provincial [CA](#)

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities:

Federal

CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2017

Commercial Fuel Oil Tanks:

Provincial

CFOT

List of commercial underground fuel oil tanks made available by the Fuels Safety Program of the Technical Standards & Safety Authority (TSSA). Ontario Regulation 213/01 of the Technical Standards and Safety Act (2000) requires that all underground tanks be registered with the TSSA. Note: the Fuels Safety Division does not register waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of commercial fuel tanks in the province. The TSSA updates information in its system on an ongoing basis; this listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Chemical Register:

Private

CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2019

Compressed Natural Gas Stations:

Private

CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 - Mar 2019

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial

COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial

CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Jul 2019

Certificates of Property Use:

Provincial

CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994-Jul 31, 2019

Drill Hole Database:

Provincial

DRL

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Oct 2018

Environmental Activity and Sector Registry:

Provincial

EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Jul 30, 2019

Environmental Registry:

Provincial [EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Jul 31, 2019

Environmental Compliance Approval:

Provincial [ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Jul 30, 2019

Environmental Effects Monitoring:

Federal [EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private [EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Apr 30, 2019

Environmental Issues Inventory System:

Federal [EIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial [EMHE](#)

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

Environmental Penalty Annual Report:

Provincial [EPAR](#)

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2018

List of TSSA Expired Facilities:

Provincial [EXP](#)

List of facilities and tanks - for which there was once a registration - no longer registered with the Fuels Safety Program of the Technical Standards and Safety Authority (TSSA). Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc. Tanks which have been removed from the ground are included in the expired facilities inventory held by the TSSA. Notes: the Fuels Safety Division did not register private fuel underground/aboveground storage tanks prior to January of 1990, or furnace oil tanks prior to May 1, 2002; nor does the Division register waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province. The TSSA updates information in its system on an ongoing basis; this listing is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Federal Convictions:

Federal

FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal

FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government.

Government Publication Date: Jun 2000-May 2019

Fisheries & Oceans Fuel Tanks:

Federal

FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2018

Fuel Storage Tank:

Provincial

FST

List of registered private and retail fuel storage tanks made available by the Fuels Safety Program of the Technical Standards & Safety Authority (TSSA). Ontario Regulation 213/01 of the Technical Standards and Safety Act (2000) requires that all underground tanks be registered with the TSSA. Notes: the Fuels Safety Division did not register private fuel underground/aboveground storage tanks prior to January of 1990, or furnace oil tanks prior to May 1, 2002; nor does the Division register waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of fuel storage tanks/tank facilities in the province. The TSSA updates information in its system on an ongoing basis; this listing is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Fuel Storage Tank - Historic:

Provincial

FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial

GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Jul 31, 2019

Greenhouse Gas Emissions from Large Facilities:

Federal

GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO₂ eq).

Government Publication Date: 2013-Dec 2017

TSSA Historic Incidents:

Provincial

HINC

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal

IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

TSSA Incidents:

Provincial

INC

List of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC) and made available by the Technical Standards and Safety Authority (TSSA). Under the Technical Standards & Safety Act (2000), the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors, and equipment or appliances that use fuels. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province. The TSSA updates information in its system on an ongoing basis; this listing is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Landfill Inventory Management Ontario:

Provincial

LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the ministry compiles new and updated information. The inventory will include small and large landfills. Additionally, each year the ministry will request operators of the larger landfills complete a landfill data collection form that will be used to update LIMO and will include the following information from the previous operating year. This will include additional information such as estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills will include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Feb 28, 2019

Canadian Mine Locations:

Private

MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences:

Provincial

MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Jan 2019

National Analysis of Trends in Emergencies System (NATES):

Federal

NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:

Provincial

NCPL

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2017

National Defense & Canadian Forces Fuel Tanks:

Federal

NDFT

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal

NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Apr 2018

National Defence & Canadian Forces Waste Disposal Sites:

Federal

NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal

NEBI

Locations of pipeline incidents from 2008 to present, made available by the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Dec 31, 2018

National Energy Board Wells:

Federal

NEBP

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017

Oil and Gas Wells:

Private

OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-May 31, 2019

Ontario Oil and Gas Wells:

Provincial

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Jun 2019

Inventory of PCB Storage Sites:

Provincial [OPCB](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders:

Provincial [ORD](#)

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994-Jul 31, 2019

Canadian Pulp and Paper:

Private [PAP](#)

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks:

Federal [PCFT](#)

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register:

Provincial [PES](#)

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: 1988-Mar 2019

TSSA Pipeline Incidents:

Provincial [PINC](#)

List of pipeline incidents (strikes, leaks, spills) made available by the Technical Standards and Safety Authority (TSSA). Under the Technical Standards & Safety Act (2000), the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors, and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of pipeline incidents in the province. The TSSA updates information in its system on an ongoing basis; this listing is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Private and Retail Fuel Storage Tanks:

Provincial [PRT](#)

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water:

Provincial [PTTW](#)

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994-Jul 31, 2019

Ontario Regulation 347 Waste Receivers Summary:

Provincial [REC](#)

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-2016

Record of Site Condition:

Provincial **RSC**

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Jul 2019

Retail Fuel Storage Tanks:

Private **RST**

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Jan 31, 2019

Scott's Manufacturing Directory:

Private **SCT**

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial **SPL**

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Feb 2019

Wastewater Discharger Registration Database:

Provincial **SRDS**

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2017

Anderson's Storage Tanks:

Private **TANK**

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal **TCFT**

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970-Aug 2018

TSSA Variances for Abandonment of Underground Storage Tanks:

Provincial **VAR**

List of variances granted for abandoned tanks. Under the Technical Standards and Safety Authority (TSSA) Liquid Fuels Handling Code and Fuel Oil Code, all underground storage tanks must be removed within two years of disuse. If removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of tank variances in the province. The TSSA updates information in its system on an ongoing basis; this listing is hence limited by the record date provided here.

Government Publication Date: Feb 28, 2017

Waste Disposal Sites - MOE CA Inventory:

Provincial

[WDS](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Jul 30, 2019

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial

[WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial

[WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Feb 28, 2019

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.
