Phase I
Environmental Site Assessment

280 Eric Czapnik Way
Ottawa, Ontario

Prepared for:

Landric Homes Inc.
1173 Cyrville Road, Suite 202
Ottawa, Ontario
K1J 7S6

Attention: Eric Danis, Development Director

LRL File No.: 200041

June 4, 2020

EXECUTIVE SUMMARY

Landric Homes has retained LRL Associates Ltd. (LRL) to complete a Phase I Environmental Site Assessment (ESA) on the property located at 280 Eric Czapnik Way in Ottawa (Orleans), Ontario (herein referred to as the "Site"). This assessment was conducted to identify potential environmental concerns or liabilities related to the past and present operations conducted on the property and the adjacent lands. The assessment included a review of the history of the Site, contact with relevant regulatory agencies, a limited walk-through Site inspection of the property and interviews with those knowledgeable of the Site. This assessment was conducted in the context of a proposed development application.

The Site is situated at the eastern extents of the City of Ottawa limits, within the Orleans ward of the City, within a high-density residential setting. Commercial developments (retail/office space) is present at the southwestern extents of the 250 m search radius. The Site is currently undeveloped and has been since at least 1946. According to available aerial photographs reviewed as part of this assessment, the Site and surrounding properties have been generally undeveloped, or agricultural fields, treed and low density residential as of at least 1946 through 1960. Further residential development to the neighbouring lands has been prominent since 1970's. It is understood that a multi-unit residential development is proposed to be constructed on the Site.

The Site is irregular shaped with an area of approximately 5,200 m² (0.52 hectare). The majority of the Site is covered by overgrown grasses and shrubs, excluding the eastern extent where granular crushed stone is present across the surface utilized as a staging/storage area for a neighbouring construction project. A large mound of fill, approximately 860 m², is present across the majority of the property extending between approximately 10 to 15 m above grade. Furthermore, smaller piles of granular crushed stone fill, being approximately 235 m² is present at the eastern extent of the Site. These granular crushed stone pile also include concrete and traces of asphalt debris. The topography of the Site is sloping north with elevations ranging between 60 and 70 m amsl. The mound of fill across the majority of the property accounts for an additional large incline the property. The Ottawa River is located approximately 1.1 km north of the Site, however, the Petrie Island Wetland is located approximately 800 m to the north of the Site.

Records of six (6) potable supply wells were retrieved within 250 m of the Site. Each of which are drilled into the underlying bedrock formation. However, presently the neighbouring properties are service by municipal water, sanitary and storm sewer services. The Site is not serviced nor is there any indication of private services present.

Fourteen records of Certificates of Approvals were retrieved although the exact location of each cannot be confirmed due to limited information available in the record (i.e. address). These records were identified as being "unplottable". The records present low risks for environmental concerns as a result of the type of approval and processes.

Records were retrieved for a total of ten (10) environmental compliance approvals, five (5) spills of which two (2) are listed as occurring along the Highway 17/174 located north of the Site, one (1) waste generator, and two (2) fuel oil spills and leaks incidents. Each of which present low risk for environmental concerns as a result of either the type of process issued, the distance from the site, the product released, or the inferred hydrogeological and topographic features of the area.
One (1) record was retrieved of an abandoned mine within 250 m of the Site. The Queenswood Village Quarry is listed as an abandoned mine as of 2003 that operated since at least 1989 as a limestone industry. Although the location of the quarry matches that of the Site (Lot 36,

Concession 1, South of Ottawa River), based on a review of available aerial photographs dating back to the mid-1940's, no visible evidence of a quarry was identified. Furthermore, the general area of the Site was developed significantly in the 1970's, when, according to the AMIS, the quarry was in operation. The risk associated with the former quarry operations is considered low.

No records of a coal tar industrial site, pollutant release, environmental registry, or manufacturing facilities under the Scott's Manufacturing Directory within a 250 m radius of the Site. No records of active or closed waste disposal sites were retrieved within 1 km of the Site.

Based on the results of the Phase I Environmental Site Assessment the following areas of potential environmental concern were identified:

PEC	Location	Comments	Contaminants of Potential Concern	Media Potentially Impacted	Level of Risk
Fill of unknown quality	Across the majority of the Site.	Approximate area of 860 m². The quality of the fill material should be confirmed to permit for informative decisions on the appropriate handling and potential adverse effects to the site conditions as a result.	VOC, PHC, Metals	Soil	Moderate to High
Asphalt debris	Eastern portion of the Site.	Small quantities observed at the time of the Site visit within the granular crushed stone piles	PHC, VOC	Soil	Low
Spills	Highway 17 construction site in Cumberland Township.	145 L spill of hydraulic oil in September 1993 to the ground from paver equipment.	VOC, PHC	Soil and Groundwater	Low
	Highway 174 Westbound.	An unspecified amount of coolant was spilt to the Highway 174 westbound from as a result of malfunction with a City of Ottawa public transit vehicle.	Glycol	Soil and Groundwater	Low

Notes: PEC – Potential Environmental Concern
VOC – Volatile Organic Compounds
PHC – Petroleum Hydrocarbon Compounds

Risk levels: Low – Unlikely potential for environmental impacts
Moderate – Some potential for environmental impacts
High – Definite potential for environmental impacts

The potential environmental risks to the Site associated with properties within 250 m are considered low to moderate. The records of the spills along the Highway 17/174 present low risk for environmental concern due to the distance from the Site and hydrogeological and geological features of the general area. The existing pile of fill across the Site presents a moderate to high risk for potential environmental concern. Although the material appeared to consist primarily of sand and till, with granular crushed stone and traces of concrete, the material has not been confirmed suitable for use on the Site or has the safe handling procedures for off-Site disposal been established. The small quantities of asphalt debris were encountered in granular crushed stone fill piles along the eastern foot of the fill mound. The risk associated with the asphalt debris is low, however asphalt is not considered suitable for use as fill and should be disposed of off-site at a licensed facility.

Based on the findings of the Phase I ESA, a Phase II ESA is not recommended. However, the following additional environmental work is recommended:

- The asphalt debris encountered in the granular crushed stone fill piles along the eastern foot of the fill mound should be removed from the Site and disposed of accordingly at a licenced facility. Although granular crushed stone is considered acceptable for use as fill material, asphalt is not permitted to be buried as fill material according to provincial regulations; and
- Representative confirmatory samples of the large fill mound across the majority of the Site should be collected and analysed in accordance with the applicable provincial regulations, Ontario Regulation 406/19: On-Site and Excess Soil Management, 2019 to confirm if the material is acceptable to be used on Site for fill, or how to handle and disposed of the material at an off-Site location accordingly, and safely.
    - The fill mound is approximately 860 m² in area and extends between approximately 10 and 15 m in height for an approximate volume of 12,450 m³. According to O. Reg. 406/19, a minimum of 56 soil samples are to be collected from the fill mound at various locations, including various intervals into the mound, for the analysis of the parameters of the concern.
    - Analytical results of the fill material will be compared to the O. Reg. 153/04:
        - Table 7: Generic Site Condition Standards (SCS) for Shallow Soils in a Non-Potable Ground Water Condition, residential land use and coarse-textured soils if the material is to be left on Site for future use as fill material;
        - Table 1: Full Depth Background SCS residential land use and coarse-textured soils if the material is to be disposed of off-Site at a property other than a waste disposal site or soil recycling facility; and
        - TCLP Schedule 4, O. Reg. 558, for off-Site disposal acceptance at a licenced waste disposal facility.
    - Soils which do not comply with the representative SCS be disposed of accordingly.
        - No soils in excess of the Table 7 SCS will be permitted for use on Site; and
        - Once soils are removed from the Site which are in excess of Table 7, the conditions of the ground surface underlying the fill mound will be verified through additional verification sampling.

APPENDICES

(In order following Figures)

1 INTRODUCTION

Landric Homes has retained LRL Associates Ltd. (LRL) to complete a Phase I Environmental Site Assessment (ESA) on the property located at 280 Eric Czapnik Way in Ottawa (Orleans), Ontario (herein referred to as the "Site"). The Site is situated within a residential area at the eastern extents of the City of Ottawa limits, within the Orleans ward of the City. The Site is currently undeveloped and has been since at least the mid-1940's (circa 1946). It is understood that a multi-unit residential development is proposed to be constructed on the Site. This assessment was conducted to identify potential environmental concerns or liabilities related to the past and present operations conducted on the property and the adjacent lands. The assessment included a review of the history of the Site, contact with relevant regulatory agencies, a limited walk-through Site inspection of the property and interviews with those knowledgeable of the Site. This assessment was conducted in the context of a proposed development application.

The Phase I ESA identifies the existing environmental conditions and potential environmental liabilities associated with the subject property, focusing on the possible presence of contamination on the property. It includes a review of available information (historical data and aerial photographs) and a visual Site inspection to assess potential contamination of past or present activities conducted on the property itself and on adjacent properties.

Potential contamination represents the uncontrolled release of foreign substances within the natural environment. Such an event can result in air, soil and groundwater contamination that may represent environmental liabilities towards the Site and perhaps towards adjacent properties. The ESA evaluates in a consistent manner, within the time constraints imposed for this report, whether such events have occurred at this Site. This level of work is a method of risk reduction and does not eliminate risk for the client.

1.1 Property Information

Address:	280 Eric Czapnik Way, Ottawa, Ontario
Frontage:	Eric Czapnik Way
Zoning:	Residential Fifth Density (R5) – Mid-high rise apartments
Legal description:	Block 9, Plan 4M1542; subject to an easement as in OC591803; subject to an easement in gross over Part 2 Plan 4R-28903 as in OC1722931; subject to an easement as in OC1723610; Subject to an easement as in OC1828333; City of Ottawa.
Property Identification Number:	14508-0355 (LT)
UTM Coordinates:	18T 0460472 E 5036801 N
Dimensions:	Irregular: Being between approximately 106 and 120 m wide (east-west) by between approximately 28 and 64 m deep.
Area:	Approximately 5,200 m^2 (0.52 hectare)

The Site's location is shown in **Figure 1** and the general Site configuration is shown on the Site Plan in **Figure 2**. For the purposes of this report Highway 174, will be inferred as running in an east-west direction.

1.2 Site Occupancy

Current owner:	Landric Homes Inc.
Site Contact:	Name: Eric Danis
	Address : 63 Chemin de Montréal Est, Gatineau, QC J8M 1K3
	Phone : (819) 663-0003
	Email : ericdanis@constructionlaverendrye.com
Owner since:	February 2020
Current use:	Vacant
Current use since:	At least 1976

2 SCOPE OF INVESTIGATION

LRL conducted this work in accordance to standard Phase I ESA procedures, which generally reflect the requirements of the Canadian Standards Association (CSA) document entitled Phase I Environmental Site Assessment, Z768-01 (R2016). The scope of work for the Phase I ESA consisted of the following:

- Reviewing reasonably ascertainable records regarding the occupancy of the Site and surrounding properties (i.e. business directories, fire insurance plans and aerial photographs);
- Interviewing current and previous owners and/or tenants and local and provincial authorities;
- Conducting a Site visit that consists of a “walk-through” visual assessment of the Site and adjacent properties (from publicly accessible areas); and
- Evaluation of the information collected.

This report will present the results of the ESA carried out between April 8th, 2020 and May 13th, 2020.

3 RECORDS REVIEW

3.1 General

3.1.1 Phase I Study Area Determination

Study area:	250 m
Rational for extending study area beyond the minimum 250 m	
Not applicable.	

3.1.2 First Developed Use Determination

First developed use is defined by O. Reg. 153/04 Section 22(1) as the first property use after 1875 that resulted in a building or structure or the first potentially contaminating activity, whichever is earlier.

First developed use:	Stockpiling of Fill Material
Year	Mid-1970's. Based on available aerial photographs reviewed as part of this assessment, the Site was developed with agricultural fields from between 1946 through at least 1960. From the mid-1970's (circa 1976) through 2011, the Site is vacant with earth moving activities, confirmed to include the addition of fill material, as viewed during the Site visit (Section 5.1).
Basis for determination of first developed use	
Aerial Photographs and Site Visit	

3.1.3 Fire Insurance Plans

Fire Insurance Plans (FIP) mapped streets and buildings of urban Canada in detail and illustrate building construction, occupancy and potential fire hazards. They also provide detailed information regarding storage tanks, transformers, boilers and electrical rooms. The original plans were produced between 1875 and 1923 and continued to be produced and updated until production ceased in 1974. No Fire Insurance Plans were found for the Site.

3.1.4 Property Underwriters' Report

Property Underwriters Site Plans and Reports provide detailed information on a site-specific basis and include descriptions of building construction, heating sources, production processes, and the presence of chemicals or materials which may be stored on Site. They also indicate the presence of environmental hazards such as electrical rooms, transformers, boilers, and storage tanks. No Property Underwriters' Reports were available for the Site.

3.2 City Directories

City directories have been produced for most urban and some rural areas since the late 1800s. These directories are often archived in research and municipal libraries. The directories are generally not comprehensive and may contain gaps in time periods. Where available, city directories were reviewed in a minimum five-year increment to determine historical property use of the subject and adjoining properties.

As a result of the current viral pandemic situation, access to the available city directories was not permitted by the retained search provider. No records are available at this time.

3.3 Chain of Title

Land Titles contain legal title information concerning property ownership, transfer details, and any encumbrances such as mortgages or easements. Each time a new transaction occurs, property records are updated as soon as the instrument is registered. A copy of the Chain of Title is included in **Appendix A**.

Records search provider:	Service Ontario Land Registry Office
Date of search:	April 3, 2020
Pertinent Information:	The search covered the period from October 1846 to February 2020. In October 1846, the Site was transferred from Crown to Canada Company. Thereafter, until 1991, the Site was transferred amongst various individuals. The land transactions succeeding 1991 included various corporations and commercial listings as follows: • In August 1991, the Site was transferred from Richmond Glen Estates Ltd. to the Regional Municipality of Ottawa-Carleton, becoming City of Ottawa in 2005; • Easements to various utility companies and corporations, included Hydro One Networks Inc., Bell Canada, Enbridge Gas Distribution Inc., and Rogers Communications Inc., were issued between 2006 and 2016; • The property changed ownership in 2007 from the City of Ottawa to OTCP Residential Lands G.P. Inc., which changed their name to Forum Investment and Development Corporation in 2011; and • The Site was transferred to Hillside Vista Inc. in November 2011 before the final transaction to the current property owner, Landric Homes Inc., in February 2020.

3.4 Environmental Reports

No previous environmental reports were provided to LRL to review as part of this investigation.

3.5 Environmental Source Information

3.5.1 The City of Freedom of Information Request

The City of Ottawa was contacted to obtain available information for the Site through a Freedom of Information request.

Interview subject:	The City of Ottawa
Date:	May 13th, 2020
Pertinent information:	
Under the Freedom of Information Act, a Freedom of Information request was made to the City of Ottawa. A formal response is expected and will be reviewed by LRL. If the response details any issues of potential environmental concern with respect to the Site, a copy will be forwarded to the client so that it can be appended to this report.	

3.5.2 City of Ottawa Historical Land Use Inventory (HLUI)

The City of Ottawa has compiled a Historical Land Use Inventory (HLUI) which is intended to be used to gather information on the type and location of all land uses within the City of Ottawa limits (rural and urban) that had or have the potential to have an adverse environmental impact by way of contamination to soil, groundwater or surface water spanning the period of between 1990 and 1998, with additional entries in 1999. The HLUI is to be used as a screening tool to aid in the review of development applications by the City of Ottawa, as well as to support in environmental site assessments and other related property investigations.

The activities defined in the HLUI are based on the 1980 Canadian Standard Industrial Classification (SIC) codes. The HLUI is not an inventory of brownfields in Ottawa and is developed based on historical land use activities which does not contain any information on actual property conditions. Therefore, a property listed in the HLUI does not necessarily mean that property is contaminated at this time as subsequent or more recent remedial or environmental activities may have been carried out to alter the condition of the property.

Interview subject:	The City of Ottawa
Date:	May 13th, 2020
Pertinent information:	
A Historical Land Use Inventory search request was made to the City of Ottawa. A formal response is expected and will be reviewed by LRL. If the response details any issues of potential environmental concern with respect to the Site, a copy will be forwarded to the client so that it can be appended to this report.	

3.5.3 Ontario Ministry of Environment, Conservation and Parks Freedom of Information Request

The Ontario Ministry of Environment, Conservation and Parks (MECP) was contacted under the FOI Act to obtain available information for the Site regarding:

- Certificates of Approvals or any permits relating to air emissions (including noise), water taking and discharging, waste disposal sites, septic systems, pesticides storage or other similar instruments;
- Incidents, orders, offences, spills, discharges of contaminants or inspections;
- Waste management records, including current and historical waste storage locations and waste generator and waste receiver information; and
- Reports submitted to the MECP related to the environmental conditions of the property.

Attempts were made to submit the MECP FOI request via fax, however, LRL was unable to successfully submit the request due to an apparent high volume of inquiries at this time. An additional attempt to reach the MECP by email for aid on this matter was made, however unfortunately the response did not provide LRL with additional resources to facilitate the submission. Once the FOI is submitted, a formal response will be expected, and will be reviewed by LRL. If the response details any issues of potential environmental concern with respect to the site, a copy will be forwarded to the client so that it can be appended to this report.

3.5.4 Inventory of Coal Tar Industrial Sites in Ontario

The MECP has created an inventory of all known and historical coal gasification plants. It identifies industrial sites that produced and continue to produce or use coal tar or other related tars. The program was discontinued in 1988.

Database:	Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario
Years covered:	Up to 1988
Search radius:	250 m
Description of data, analysis and findings relevant to the Phase I ESA:	
No records were found within a 250 m radius of the Site.	

3.5.5 Technical Standards and Safety Authority

Fuel storage at commercial and industrial facilities is regulated by the Technical Standards and Safety Authority (TSSA). Records of aboveground storage tanks are maintained for bulk storage facilities only. Underground storage tanks are required to be registered with the TSSA. There are no requirements to register private underground and aboveground fuel oil storage tanks for heating or waste oil. Records of registered and licensed tanks have been maintained since 1990.

Interview subject:	Connie Hill, Public Information Agent
Date:	April 20, 2020
Pertinent information:	
TSSA was contacted regarding available information concerning the presence of petroleum storage tanks, fuel spill records, accidents or fuel-related incidents which may be registered on the Site or surrounding properties. The TSSA has indicated that there are no records of fuel storage tanks on the Site or the adjacent properties (558 and 556 Recolte Private, 273 and 275 Eric Czapnik Way, 325 and 345 Centrum Boulevard, 3217, 3245 and 3251 St-Joseph Boulevard.)	

3.5.6 Ministry of Environment, Conservation and Parks Well Records

The Ministry of Environment, Conservation and Parks' well records database provides information of locations and characteristics of water wells throughout Canada in accordance with Ontario Regulation 903. Information of the stratigraphy, depth of bedrock and approximate depth of water table is also provided. Copies of the Well Records retrieved are included in **Appendix B**.

Database:	MECP Well Records
Search radius:	250 m
Date accessed:	April 20, 2020

Description of data, analysis and findings relevant to the Phase I ESA:

Six (6) well records are located within a 250 m radius of the Site, all of which are for domestic purposes. Each of the well records are included in **Appendix B** and are summarized below:

- Well No. 1513193, located approximately 130 m east of the Site, is a drilled well installed in 1963 for domestic purposes. The subsurface stratigraphy was described as boulders and broken rock from ground surface to 4.3 m below ground surface (bgs), underlain by grey limestone to 18.9 m, where the well was terminated. The static water level was measured to be 3.0 m bgs;
- Well No. 1513198, located approximately 135 m southeast of the Site, is a drilled well installed in 1969 for domestic purposes. The subsurface stratigraphy was described as clay to 39.5 m bgs, underlain by coarse gravel and boulders (inferred to be mixed with clay) to 45.1 m bgs, followed by limestone to a depth of 48.2 m bgs, where the well was terminated. The static water level was measured to be 7.6 m bgs;
- Well No. 1516402, located approximately 136 m southeast of the Site, is a drilled well installed in 1977 for domestic purposes. The subsurface stratigraphy was described as clay to 5.2 m bgs, underlain by grey slate to approximately 13.7 m bgs, followed by limestone bedrock to 38.1 m bgs, where the well was terminated. The static water level was measured to be 10.4 m bgs;
- Well No. 1513197, located approximately 154 m southeast of the Site, is a drilled well installed in 1967 for domestic purposes. The subsurface stratigraphy was described as loose stone and clay to 1.2 m bgs, underlain by grey limestone to 55.2 m bgs, where the well was terminated. The static water level was measured to be 12.2 m bgs;
- Well No. 1513195, located approximately 158 m southeast of the Site, is a drilled well installed in 1965 for domestic purposes. The subsurface stratigraphy was described as broken stone and clay to 1.2 m bgs, underlain by grey limestone to 54.9 m bgs, where the well was terminated. The static water level was measured to be 9.1 m bgs; and
- Well No. 1513194, located approximately 195 m southeast of the Site, is a drilled well installed in 1964 for domestic purposes. The subsurface stratigraphy was described as grey limestone to 53.6 m bgs, where the well was terminated. The static water level was measured to be 9.1 m bgs.

3.5.7 National Pollutant Release Inventory

The National Pollutant Release Inventory is maintained by Environment Canada. It is designed to collect comprehensive data regarding releases to air, water or land, and water transfers for recycling. The database was accessed through a database service provider (Ecolog Eris, Toronto, Ontario) and their report is included in **Appendix C**.

Database:	National Pollutant Release Inventory
Years covered:	1993 to May 2017
Search radius:	250 m
Description of data, analysis and findings relevant to the Phase I ESA:	
No records were found within a 250 m radius of the Site.	

3.5.8 Certificates of Approvals

Any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval (CofA) before it can operate lawfully. The database was accessed through a database service provider (Ecolog Eris, Toronto, Ontario) and their report is included in **Appendix C**.

Database:	Certificates of Approval
Years covered:	1985 to October 2011
Search radius:	250 m

Description of data, analysis and findings relevant to the Phase I ESA:

No records were found within a 250 m radius of the Site. However, the database service provider has included additional records which cannot be confirmed as being within the 250 m search radius of the Site. Fourteen records were retrieved. These records are identified as "Unplottable" due to limited information available in the records, namely addresses. The unplottable records of spills which cannot be confirmed as beyond a 250 m radius of the Site are summarized as follows:

- A Certified of Approval for municipal sewage was issued to the Cumberland Township – Highway 17, Trans Canada Highway 17 in July 1990;
- A Certificate of Approval for municipal sewage was issued to the Conseil Scolaire de Langue Francaise, St. Joseph Boulevard Cumberland Township in May 1991;
- A Certificate of Approval for municipal sewage was cancelled in February 192 for J. Joannisse, listed at Lot 30 Concession 1, Cumberland Township;
- A Certificate of Approval for municipal sewage was cancelled in May 1993 at 10th Line Road, in the Township of Cumberland;
- A Certificate of Approval for municipal sewage was approved in September 1993 and a second one in October 1993 at Rural Route #34, Cumberland Township;
- A Certificate of Approval for municipal sewage was approved to Builder Development Corp., in February 1994 for St. Joseph Boulevard Apartment, located in the Cumberland Township;
- A revised amendment Certificate of Approval application for municipal water was approved in March 1985 for Centrum Boulevard in Cumberland;
- A Certificate of Approval for municipal and private sewage works was approved for DCR Phoenix Development Corporation Limited, in February 2008;

- A Certificate of Approval for municipal and private sewage works was approved to 1534436 Ontario Limited March 2004;
- Twelve records of Certificate of Approvals for Municipal and Private Sewage Works, issued to DCR/Phoenix Development Corporation Limited, were retrieved. The approval dates ranged between Municipal and Private Sewage Works, approved in March 2004 and January 2011;
- A Certificate of Approval for municipal and private sewage works was issued to 1534436 Ontario Limited in March 2004;
- Two (2) listings of municipal water Certified of Approvals for Perez Corporation, located at Centrum Boulevard Cumberland, were approved in December 1987; and

The records retrieved for CofA approvals identified in the "Unplottable" records present low risk for environmental concerns as a result of the type of approval and processes issued (i.e. air emissions, municipal and private sanitary and water services).

3.5.9 Environmental Compliance Approval

In October 2011, the previously used Certificate of Approval process was replaced by the more efficient Environmental Compliance Approval (ECA) system. There are variations in the methodology for the application process, as well as the improved ECA application process and how the application can be applied with comparison to the previous CofA process. The database was accessed through a database service provider (Ecolog Eris, Toronto, Ontario) and their report is included in **Appendix C.**

Database:	Environmental Compliance Approval
Years covered:	October 2011 – March 31, 2020
Search radius:	250 m

Description of data, analysis and findings relevant to the Phase I ESA:

Nine (9) records were retrieve for Environmental Compliance Approval's within 250 m of the Site. No records were retrieved for the Site. The records found are summarized as follows:

- Two (2) records were retrieved for Hillside Vista Inc., c/o DCR Phoenix Development Corp Ltd., located at 241 Centrum Boulevard, for the approval of municipal and private sewage works ECA in October 2015;
- Two (2) records were retrieved for DCR/Phoenix Development Corp Ltd., located at 241 Centrum Boulevard, for the approval of the municipal and private sewage works in February 2016 and November 2018;
- Two (2) records were retrieved for 1534436 Ontario Limited, for a municipal and private sewage works ECA in March 2004. The specific address was not provided, however based on the coordinates provided (Longitude: -75.5032/ Latitude: 45.4843), it is located approximate 90 m northeast of the Site; and
- Three (3) records for OTCP Arts Centre G.P. Inc. located at Commercial Drive, Reference Plan 4R-21938 for an ECA for municipal and private sewage works, in February and June 2008.

The database service provider has included additional records which cannot be confirmed as being within the 250 m search radius of the Site. These records are identified as "unplottable" due to limited information available in the records, namely addresses. The "unplottable"

records of spills which cannot be confirmed as beyond a 250 m radius of the Site are summarized as follows:

- DCR/Phoenix Development Corporation Limited, approved an ECA for municipal and Private Sewage Works in December 2010.

The records retrieved for ECA approvals within 250 m of the Site, as well as the "Unplottable" records present low risk for environmental concerns as a result of the type of ECA and processes issued (i.e. municipal sanitary and water services).

3.5.10 Environmental Site Registry

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments or regulations that could significantly affect the environment. Applications for permits, licences or certificates of approval to release substances into the air or water are posted on the registry. The database was accessed through database service provider (Ecolog Eris, Toronto, Ontario) and their report is included in **Appendix C**.

Database:	Environmental Registry
Years covered:	1994 to February 29, 2020
Search radius:	250 m
Date accessed:	April 13, 2020
Description of data, analysis and findings relevant to the Phase I ESA:	
No records were found within a 250 m radius of the Site.	

3.5.11 Waste Disposal Site Inventory

The MECP's Waste Management branch maintains an inventory of known open (active or inactive) and closed disposal site in Ontario.

Database:	Waste Disposal Site Inventory
Years covered:	1970 to 1990
Search radius:	1000 m
Description of data, analysis and findings relevant to the Phase I ESA:	
No records were retrieved within 1000 m (1 km) of the Site.	

3.5.12 Other Databases

Other Databases are covered by the Ecolog Eris Report included in **Appendix C**. They are outlined below.

3.5.12.1 Ontario Spills

Database:	Ontario Spills
Years covered:	1988 to August 2019
Search radius:	250 m
Date accessed:	January 29, 2020

Description of data, analysis and findings relevant to the Phase I ESA:

The search of the Ontario Spills database has revealed two (2) records of spills within a 250 m radius of the Site. The records retrieved are summarized as follows:

- In May 2002, an unknown amount of an unspecified material was spilt to the ground at a Hydro One site located near 325 Centrum Boulevard, approximately 100 m west of the Site. The spill is reported to have been from a drum at an unfenced decommissioned site. No further details are available; and
- In January 2016, a natural gas (methane) leak was reported at a townhouse located at 3275 St-Joseph Boulevard, approximately 120 m southeast of the Site. The leak was a result of a fire/explosion.

Both occurrences present low risk for environmental concern to the Site due to their distance from the Site and the type of product released. Natural gas is not considered a potential environmental concern.

The database service provider has included additional records which cannot be confirmed as being within the 250 m search radius of the Site. These records are identified as “unplottable” due to limited information available in the records, namely addresses. The “unplottable” records of spills which cannot be confirmed as beyond a 250 m radius of the Site are summarized as follows:

- In August 1990, at Highway 17 Cumberland Township, an unspecified amount of natural gas was released into the atmosphere as a result of a damaged pipe or hose from moving equipment. As mentioned above, natural gas is not considered a potential environmental concern, therefore the risk associated with this spill is considered low;
- In September 1993, a reported 145 L of hydraulic oil was spilt to the ground from paver equipment at a Highway 17 construction site in the Cumberland Township. Highway 17 was renamed to Highway 174 upon completion of the expansion of the highway in 1997. Therefore, it is possible the identified hydraulic oil spill occurred on the highway situated 30 m north of the Site. The risk for environmental concern associated with the historical spill is low based on the inferred groundwater flow direction being north towards the Ottawa River, downgradient of the Site, as well as the topographic features of the Site and surrounding lands. The Site is elevated in comparison to the highway, therefore it is unlikely residual from the spill would have migrating onto the Site; and
- In 2007, an unspecified amount of coolant was spilt to the Highway 174 westbound from as a result of malfunction with a City of Ottawa public transit vehicle (OC Transpo). Environmental impacts were listed as not being anticipated, and as previously mentioned, due to the inferred hydrogeological and topographic features of the area, the risk for potential environmental concern to the Site is considered to be low.

3.5.12.2 Abandoned Mine Information System (AMIS)

The AMIS database provides information on abandoned and inactive mines located on Crown land as well as on privately owned property. Such information regarding the former facilities includes the name of facility, the status, background information, operation dates and mine features as well as the primary material extracted, hazards and remediation.

Database:	Abandoned Mine Information System
Years covered:	1800 to October 2018
Search radius:	250 m
Description of data, analysis and findings relevant to the Phase I ESA:	
One (1) record was retrieved from the AMIS which included the former Queenswood Village Quarry. The Queenswood Village Quarry is listed as an abandoned mine as of 2003. The reason for the closure is unspecified however it is revealed that the quarry operated since at least 1989 as a limestone industry. The location of the quarry is described as Lot 36, Concession 1, South of Ottawa River. The Site is situated within the area described. However based on a review of available aerial photographs dating back to the mid 1940's (described in greater detail in Section 3.6.1), no visible evidence of a quarry was identified. Furthermore, the general area of the Site was developed significantly as of the 1970's, when, according to the AMIS, the quarry was in operation.	

3.5.12.3 Ontario Regulation 347 Waste Generators Summary

The MECP's Waste Management branch maintains an inventory of Waste Generators in Ontario.

Database:	Ontario Regulation 347 Waste Generators Summary
Years covered:	1986 to January 31, 2020
Search radius:	250 m
Date accessed:	April 13, 2020
Description of data, analysis and findings relevant to the Phase I ESA:	
One (1) record for a registered waste generator was retrieved within 250 m of the Site. Place Beausejour, located at 340 Centrum Boulevard, approximately 110 m southwest of the Site, is registered as a generator of Oil Skimmings and Sludges in 2016. The risk for potential environmental concern to the Site is considered to be low due to the distance from the Site.	

3.5.12.4 Ontario Regulation 347 Waste Receivers Summary

Under Regulation 347 of the Ontario Environmental Protection Act (EPA), a receiver of regulated waste is required to register the facility as a waste receiver. The EPA regulates waste disposal through Certificates of Approval and Provisional Certificates Approval.

Database:	Ontario Regulation 347 Waste Receivers Summary
Years covered:	1986 to 2016
Search radius:	250 m
Date accessed:	April 13, 2020
Description of data, analysis and findings relevant to the Phase I ESA:	
No records were found within a 250 m radius of the Site.	

3.5.12.5 Private and Retail Fuel Storage Tanks

Database:	Private and Retail Fuel Storage Tanks
Years covered:	1989 to 1996
Search radius:	250 m
Description of data, analysis and findings relevant to the Phase I ESA:	
No records were found within a 250 m radius of the Site.	

3.5.12.6 Fuel Oil Spills and Leaks

The Spill Action Centre compiles and lists the registered spills and leaks of petroleum products, natural gas including propane and hydrogen. The information in the list is not a complete inventory of the spills and leaks, but rather a copy of the incidents reported to the Spills Action Centre. The records include incidents such as fuel-related spills, fires and explosions. The information listed is not confirmed for accuracy of completeness.

Database:	Fuel Oil Spills and Leaks
Publication Date:	February 28, 2017
Search radius:	250 m

Description of data, analysis and findings relevant to the Phase I ESA:

Records of two (2) incidents were retrieved within a 250 m radius of the Site. They include the following:

- In February 2015, an approximate 1 L of natural gas was released at 303 Pintail Terrace, residential dwelling located approximately 180 m north of the Site, as a result of a down draft through a vent; and
- In January 2016, a release of 1 L of natural gas was reported at 3275 St-Joseph Boulevard, 120 m southeast of the Site, 1 L as a result of an explosion at a townhouse.

Natural gas is not considered a potential environmental concern therefore the risk associated with the incidents is considered low.

3.5.12.7 Scott's Manufacturing Directories

Scott's Directories is a data bank containing information on over 70,000 manufacturers in Ontario.

Database:	Scott's Manufacturing Directory
Years covered:	1992 to March 2011
Search radius:	250 m
Description of data, analysis and findings relevant to the Phase I ESA:	
No records were found within a 250 m radius of the Site.	

3.5.12.8 Inventory of PCB Storage Sites

The MECP maintains an inventory of PCB storage sites within the Ontario.

Database:	Inventory of PCB Storage Sites
Years covered:	1987 – October 2014; and 2012 – December 2013
Search radius:	250 m
Description of data, analysis and findings relevant to the Phase I ESA:	
No records were found within a 250 m radius of the Site.	

3.6 Physical Setting Sources

3.6.1 Aerial Photographs

Select aerial photographs reviewed were obtained through database service provider (Ecolog Eris, Toronto, Ontario) and their report is included in **Appendix D**. Their search returned aerial photographs through the National Air Photo Library (NAPL). Photographs retrieved by Ecolog Eris included the following years: 1946, 1955, 1960 and 1988. The remaining aerial photographs reviewed were obtained by LRL through the City of Ottawa interactive mapping system, geoOttawa (1976, 1991, 2002, 2011 and 2017).

Review of the photographs was completed to develop a general history of the development of the Site and surrounding properties. Aerial photographs may be at a scale that limits a detailed review of the Site and surrounding properties. Copies of select aerial photographs are included in **Appendix E**.

Year	Photo Number	Scale
1946	--	1:15 000
1955	--	1:35 000
1960	--	1:25 000
1976	--	--
1988	--	1:20 000
1991	--	--
2002	--	--
2011	--	--
2017	--	--

Rational for time period between aerial photographs used

A regular interval of approximately 10 years was used, when possible. No aerial photographs are available prior to the mid-1940's.

Summary of information obtained from aerial photographs

The Site and surrounding properties are generally undeveloped, agricultural fields or treed in the 1946. Structures inferred to be residential or agricultural related are observed on select neighbouring lands to the north and south of the Site and a road is observed to the north of the Site running in an east-west direction. No significant changes were observed to the Site or the neighbouring lands in 1955 and 1960 aerial photographs with the exception to a road present to the south of the Site, inferred to be the present-day St-Joseph Boulevard. Increased residential development is observed to the south of the Site in the 1976 aerial imagery (AP1), which increased more so in 1988, as well as at the lands to the north, east and west. High-density development is observed to the north and south. Highway 174 is observed north of the Site in 1991 (AP2) with increased development to the west of the Site. No significant changes were observed in 2002, 2011 and 2017 (AP3). Earth moving activities are observed on the eastern portion of the Site, and the neighbouring lands are developed to the east, including Eric Czapnik Way.

Relevant information regarding potentially contaminating activity and areas of potential environmental concern

No potentially contaminating activity or potential environmental concerns were identified.

3.6.2 Topography, Hydrology & Geology

A topographic map was obtained to illustrate the location of the Site in relation to any water bodies in the area and document the regional topography. The map is included in **Appendix F**.

Map:	Ontario Base Map
Approximate elevation:	Between approximately 60 and 70 m above mean sea level (amsl).
Topography:	Sloping north with a large incline across the centre of the property (mound of fill material)
Nearest open water body:	Ottawa River located approximately 1.1 km north of the Site, however, the Petrie Island Wetland is located approximately 800 m to the north of the Site.

Geological maps were reviewed to obtain information on regional geology, surficial soils and bedrock.

Generalized surficial geology[1]:	Champlain Sea Sediments: Clay and silt underlying erosional terraces; upper part of marine deposits removed to variable depths by fluvial erosional so in places clay is uniform blue-grey unit includes lenses, bars, and channel-fills to sand and pockets of nonmarine silt that were formed during terrace (or channel) cutting. Bedrock Paleozoic: Limestone, dolomite, sandstone, and locally shale; relatively flat-lying; mainly occurring as bare, tabular outcrops; includes areas thinly veneered by unconsolidated Quaternary sediments up to 1 m thick.
Generalized bedrock geology[2]:	Ottawa Formation: Limestone with some shaly partings; some sandstone in basal part.

[1] St-Onge D.A., 2009: Surficial geology, lower Ottawa valley, Ontario-Quebec; Geological Survey of Canada, Map 2104A, scale 1:125000.

[2] Harrison J.E., 1980: Generalized bedrock geology, Ottawa-Hull, Ontario-Quebec; Geological Survey of Canada, Map 1508A, scale 1:125000.

4 INTERVIEWS

Interview subject:	Eric Danis, Development Director Landric Homes Inc. (Owner of Site)
Date:	May 13, 2020

Pertinent information:

- Mr. Danis indicated that Landric Homes Inc. purchased the property in February 2020, however he has been familiar with the Site for the last 2-years.
- According to Mr. Danis, the Site is currently vacant, and it is anticipated to construct a four-storey multi tenant residence.
- To the best of Mr. Danis knowledge, he is not aware of any current or historical potential contaminating activities on the Site of the adjacent properties such as fueling stations, manufacturing facilities, dry cleaners, commercial painting facility of landfill.
- Mr. Danis has indicated, that to best of his knowledge, the Site has never been equipped or developed with a septic system, water supply well, storm drain utilities, under/aboveground storage tanks, chemical storage or additional indicators of potential environmental concerns.
- No waste is produced on the Site according to Mr. Danis.
- To the best of Mr. Danis knowledge, the Site has never had notices of environmental violations from any regulatory agency, investigations by a government agency or potential responsibility for environmental contamination, or any lawsuits, disputes or administrative proceeding regarding environmental concerns associated with the site or activities conducted on the site.

5 SITE RECONNAISSANCE

5.1 Site Visit Information

Date:	May 8, 2020
Time:	12:40 PM – 13:20 PM
Weather Conditions:	Overcast, 5°C
Person conducting Site visit:	Jessica Arthurs, Environmental Technician
Limitation to visit:	Dense cover of fallen overgrown grasses from last season covered the majority of the Site which limited observations to the ground surface beneath the foliage.
Property Use	Generally undeveloped and vacant with a construction staging and storage yard at the eastern extent in support of the ongoing construction activities on the neighbouring lands to the south and southeast. Further details are provided in Section 0.

Photographs from the Site visits are included in **Appendix G.**

5.2 General

5.2.1 Hazardous Materials & Unidentified Substances

Hazardous materials:	Not observed.
Unidentified substances:	Not observed.

5.2.2 Storage Tanks & Containers

Aboveground storage tanks (ASTs):	Not observed.
Underground storage tanks (USTs):	Not observed.
Fill ports, vent pipes:	Not observed.
Storage containers:	Not observed.

5.2.3 Odours

Odours:	Not observed.
Air emissions:	Not observed.

5.3 Exterior Observations

5.3.1 Topography, Geology & Hydrogeology

Landscaped & vegetated area:	The majority of the Site is covered by overgrown grasses and shrubs, excluding the eastern extent where granular crushed stone is present across the surface. Small clusters of trees are present at the southeastern, northwestern and northeastern portions of the Site.
Pavement, roads & driveways:	Not observed, however the eastern extent of the Site is utilized as a staging/storage area for a neighbouring construction project. This portion of the Site is covered with a granular crushed stone material. Further details of the staging area are provided in Section 5.3.3.
Topography:	The Site slopes steeply to the north from the southern property line. The location currently used as a construction staging/storage area at the eastern extent of the Site is generally flat with steep slopes along the north and northeastern extents. A large mound of fill is present across the majority of the property extending to approximately 10 and 15 m above grade.
Surface drainage:	Not observed.
Drainage improvements:	Not observed.

Receives drainage from adjacent lands:	Suspected from the adjacent residential property, including associated parking and circulation area, to the south.
Watercourses, ditches or standing water:	Not observed on the Site, however a ditch is present north of the Site along the southern extent of the neighbouring Highway 174. It is anticipated that runoff from the highway is intercepted by the ditch.
Other observations:	Bedrock outcrops were observed on the adjacent land to the south of the Site.

5.3.2 Structures

The Site is vacant with no existing structures. No evidence indicative of historical developments was observed on the Site.

Structures:	Not Applicable.
Location:	Not Applicable.
Use:	Not Applicable.
Construction date:	Not Applicable.
Footprint:	Not Applicable.
Floors:	Not Applicable.
Basement:	Not Applicable.
Exterior finish:	Not Applicable.

5.3.3 Other Observations

Wells:	Not observed.
Sewage disposal:	Not observed.
Pits and lagoons:	Not observed.
Wastewater:	Not observed.
Solid waste:	Approximately 235 m² of granular crushed stone with concrete and traces of asphalt debris is present at the eastern extent of the Site along the foot of the fill mound. Furthermore, traces of concrete are present along the south base of the large mound of fill across the subject Site.
Stained material:	Not observed.
Stressed vegetation:	Not observed.
Fill or previous fill activities:	A large mound of fill is present across the majority of the Site. The pile is estimated to extend between 10 and 15 m in height and covers an area of approximately 860 m². The material appears to be primarily sand and till with granular crushed stone. However, grass cover limited a detailed examination of the entire pile.
Earth-moving activity:	Not observed.
Other	The eastern extent of the Site is used as a staging/storage area of neighbouring construction activities. Materials and supplies generally associated with construction were observed, including modu-loc fencing and components, traffic control barrels, water service piping and fittings, sanitary or storm piping and fittings and snow fencing. No evidence of the storage of chemicals or fuels was observed.

5.4 Utilities

Potable Water:	No.
Wastewater:	No.
Storm Sewer:	No.
Electricity:	No.
Telephone:	No.
Natural Gas:	No.

5.5 Interior of Structures

No building structures are present on the Site.

Heating Systems	Not Applicable.
Cooling Systems	Not Applicable.
Floor drains:	Not Applicable.
Sumps:	Not Applicable.
Paint booth:	Not Applicable.
Staining or corrosion (other than water):	Not Applicable.
Mechanical equipment:	Not Applicable.
Interior finishing	Not Applicable.
Other:	Not applicable.

5.6 Adjacent Land Use

The current land uses of the adjoining properties were observed from the property limits and publicly accessible locations to assess potential impacts to the Site that may arise from off-Site operations. The properties surrounding the subject Site are as follows:

North:	Undeveloped followed by Highway 174.
South:	High density residential and associated parking and circulation area.
East:	Eric Czapnik Way followed by high density residential.
West	Grassed parkland with evidence of municipal service manhole covers.

5.7 Special Attention Items

Eleven chemical contaminants have been identified under the Occupational Health and Safety Act (OHSA) and regulations have been set in place to prohibit, regulate restrict, limit or control workers exposure to these substances. Other hazardous materials not included in the OHSA but under the Environmental Protection Act were also observed. The observations presented herein do not constitute a designated substance/hazardous material survey but are rather for information purposes only.

5.7.1 Designated Substances

Asbestos Containing Material (ACM) Since the late 1970's the manufacture and use of asbestos containing building materials started to decrease. It is commonly presumed that buildings constructed prior to 1980 are more likely to contain both friable and non-friable forms of asbestos. General buildings constructed up to the mid 1980's are more likely to contain non-friable asbestos (flooring, joint compound). Not Applicable.
Lead Lead may be present in a variety of building materials including paint and water distributions pipes, however lead based paints (LBP) are considered the most significant hazard. According to published information by Health Canada concerning LBP, buildings constructed before 1980 may contain lead-based interior and exterior paints. Not Applicable.
Mercury Minor amounts of mercury are commonly found in a variety of building material including mercury vapour lamps, fluorescent light tubing and thermostats and other electrically control switches. Not Applicable.
Others No other designated substances were identified (i.e. arsenic, ethylene oxide, silica, vinyl chloride, benzene, coke oven emissions, acrylonitrile or isocyanates).

5.7.2 Other Hazardous Building Materials/Items

Microbial Contamination and Mould:
Not Applicable.

Ozone-Depleting Substances (ODS):
ODS such as chlorofluorocarbons (CFC) and hydrochlorofluorocarbon (HCFC) are typically found in refrigeration equipment, air conditioners, aerosols, cleaning solvents and fire extinguishers. Federal regulations required the elimination of production and import of CFC and a freeze on the production and import of HCFC by January 1, 1996. The regulations govern only the production and import therefore these materials are stilled used as long as a supply is in place.

Not Applicable.

Polychlorinated Biphenyls (PCB):
The Federal Chlorobiphenyls Regulation, SOR/91-152 prohibits PCBs from being used in products, equipment, machinery, electrical transformers and capacitors which were manufactured or imported into the country after July 1, 1980. However, older equipment in use after this date may still contain PCBs if the equipment fluid has not been replaced. PCB-containing equipment can also include fluorescent, mercury, and sodium vapour light ballasts.

Not Applicable.

Urea Formaldehyde Foam Insulation (UFFI):
UFFI was widely used as an insulating material until December 1980 when a ban was enacted under the Hazardous Products Act. UFFI was commonly injected through walls by drilling injection holes in roof structures, ceilings and overhangs.

Not Applicable.

Radon:
Radon gas is a product of the decay series of uranium that is commonly found in geological units that contain black shale, sandstone or granite. Radon can percolate up through the soil where it may accumulate in basement of buildings with cracks or joints in the foundation. Because the existence of radon is dependent upon geological factors, it is more a regional concern than site specific. Based on the review of radon maps of Eastern Ontario, radon levels in the area of the Site are moderate. Radon exposure can lead to increased risk of developing lung cancer.

Electric and Magnetic Fields:
Electromagnetic fields are generally associated with high frequency power lines. No high voltage power lines were noted within 250 m of the Site.

Noise and Vibration:
Noise and vibration are typical of an urban environment.

Methane:
Methane gas is a colourless and odourless gas commonly formed by the decomposition of organic material. The Site is not close to any active or closed waste disposal sites, marshes, swamps or peat deposits therefore methane is not a concern.

6 REVIEW AND EVALUATION OF INFORMATION

6.1 Current and Past Uses

Below is a summary of the current and past uses of 280 Eric Czapnik Way, Ottawa, Ontario:

Year	Name of Owner	Description of Property Use	Property Use	Source of Information
<1846	Crown	Unknown	Unknown	Land Title Search
1846 -1991	Various Individuals	Undeveloped	Agricultural fields or treed as of at least 1946 through approximately 1976.	Aerial photographs and Land Title Search
1991 - 2005	Richmond Glen Estates Ltd.	Undeveloped	Vacant	Aerial photographs and Land Title Search
2005 - 2007	Regional Municipality of Ottawa-Carleton	Undeveloped	Vacant	Aerial photographs and Land Title Search
2007 - 2011	City of Ottawa to OTCP Residential Lands G.P. Inc. / Forum Investment and Development Corporation	Undeveloped	Vacant	Aerial photographs and Land Title Search
2011 – February 2020	Hillside Vista Inc.	Undeveloped	Vacant	Aerial photographs and Land Title Search
February 2020 to Present	Landric Homes Inc.	Undeveloped	Vacant	Aerial photographs and Land Title Search

6.2 Potential Contaminating Activity & Areas of Potential Environmental Concern

A potentially contaminating activity is a use or activity set out in Table 2 of Schedule D of the O. Reg. 153/04. These activities are summarized in the Table included in **Appendix H**. The activities on the Site and lands within 250 m generally consist of residential, vacant and Highway 174 infrastructure with commercial land use in the distant southwest (retail/office space).

Based on the results of the Phase I Environmental Site Assessment the following areas of potential environmental concern were identified:

PEC	Location	Comments	Contaminants of Potential Concern	Media Potentially Impacted	Level of Risk
Fill of unknown quality	Across the majority of the Site.	Approximate area of 860 m². The quality of the fill material should be confirmed to permit for informative decisions on the appropriate handling and potential adverse effects to the site conditions as a result.	VOC, PHC, Metals	Soil	Moderate to High
Asphalt debris	Eastern portion of the Site.	Small quantities observed at the time of the Site visit within the granular crushed stone piles	PHC, VOC	Soil	Low
Spills	Highway 17 construction site in Cumberland Township.	145 L spill of hydraulic oil in September 1993 to the ground from paver equipment.	VOC, PHC	Soil and Groundwater	Low
	Highway 174 Westbound.	An unspecified amount of coolant was spilt to the Highway 174 westbound from as a result of malfunction with a City of Ottawa public transit vehicle.	Glycol	Soil and Groundwater	Low

Notes: PEC – Potential Environmental Concern
VOC – Volatile Organic Compounds
PHC – Petroleum Hydrocarbons

Risk levels: Low – Unlikely potential for environmental impacts
Moderate – Some potential for environmental impacts
High – Definite potential for environmental impacts

6.3 Phase I Conceptual Site Model

The location of the Site is shown in the attached **Figure 1** and the current layout of the Site is shown in the attached **Figure 2**. The Phase I ESA identified the following:

- The Site is situated at the eastern extents of the City of Ottawa limits, within the Orleans ward of the City, within a high-density residential setting. Commercial developments (retail/office space) is present at the southwestern extents of the search radius. The Site is currently undeveloped and has been since at least 1946. It is understood that a multi-unit residential development is proposed to be constructed on the Site.
- The Site is irregular shaped with an area of approximately 5,200 m² (0.52 hectare). The majority of the Site is covered by overgrown grasses and shrubs, excluding the eastern extent where granular crushed stone is present across the surface and is utilized as a staging/storage area for a neighbouring construction project.
- A large mound of fill is present across the majority of the property with an approximate area of 860 m² and an elevation of between approximately 10 to 15 m above grade. An approximately 235 m² of granular crushed stone with concrete and traces of asphalt is present at the eastern extent of the Site. Furthermore, traces of concrete are present along the south base of the large mound of fill.

- According to available aerial photographs reviewed as part of this assessment, the Site and surrounding properties are generally undeveloped, agricultural fields, treed and low density-residential between at least 1946 through 1960. Increased residential development on the neighbouring lands have been present since at least the mid 1970's.
- Records of six (6) potable supply wells were retrieved within 250 m of the Site. Each of which are drilled into the underlying bedrock formation. However, presently the neighbouring properties are service by municipal water, sanitary and storm sewer services. The Site is not serviced nor is there any indication of private services present.
- The topography of the Site is sloping north with elevations ranging between 60 and 70 m amsl. The mound of fill across the majority of the property accounts for an additional large incline the property. The Ottawa River located approximately 1.1 km north of the Site, however, the Petrie Island Wetland is located approximately 800 m to the north of the Site.
- No records of Certificates of Approval were found within a 250 m radius of the Site. However, the database service provider has included additional records, which, although cannot be confirmed as being within the 250 m search radius, have the potential of being within the search radius based on information included in the record. Fourteen additional records were retrieved and are identified as "unplottable" due to limited information available in the records, namely addresses. The "unplottable" records present low risk for environmental concerns as a result of the type of approval and processes issued (i.e. air emissions, municipal and private sanitary and water services).
- Nine (9) records were retrieved for Environmental Compliance Approval's within 250 m of the Site, and one (1) record was retrieved for within the "unplottable" records reviewed. No records were retrieved for the Site. The records retrieved for ECA's present low risk for environmental concerns as a result of the type of ECA and processes issued (i.e. municipal sanitary and water services).
- Two (2) records of spills within a 250 m radius of the Site, and three (3) "unplottable" records were retrieved. Generally, these occurrences present low risks for environmental concern to the Site due to their distances and the type of product released. However, the following "unplottable" records retrieved are of a slightly elevated risk for environmental concern, as the confirmed location of the incidents are not known:
    - A reported 145 L spill of hydraulic oil in September 1993 to the ground from paver equipment at a Highway 17 construction site in the Cumberland Township was identified. Highway 17 was renamed to Highway 174 upon completion of the expansion of the highway in 1997.Therefore, it is possible the identified hydraulic oil spill did occur on the highway situated 30 m north of the Site. The risk for environmental concern associated with the historical spill is low based on the inferred groundwater flow direction being north towards the Ottawa River, down-gradient of the Site, as well as the topographic features of the Site and surrounding lands. The Site is elevated in comparison to the highway; therefore it is unlikely residual from the spill would have migrating onto the Site; and
    - In 2007, an unspecified amount of coolant was spilt to the Highway 174 westbound as a result of malfunction with a City of Ottawa public transit vehicle (OC Transpo). Environmental impacts were listed as not being anticipated, and as previously mentioned, due to the inferred hydrogeological and topographic features of the area, the risk for potential environmental concern to the Site is considered to be low.
- One (1) record was retrieved of an abandoned mine. The Queenswood Village Quarry is listed as an abandoned mine as of 2003. The reason for the closure is unspecified,

however it is revealed that the quarry operated since at least 1989 as a limestone industry. Although the location of the quarry matches that of the Site (Lot 36, Concession 1, South of Ottawa River). Based on a review of available aerial photographs dating back to the mid-1940's, no visible evidence of a quarry was identified. Furthermore, the general area of the Site was developed significantly in the 1970's, when, according to the AMIS, the quarry was in operation. The risk associated with the former quarry operations is considered low.

- One (1) record for a registered waste generator was retrieved within 250 m of the Site. Place Beausejour, located at 340 Centrum Boulevard, approximately 110 m southwest of the Site, is registered as a generator of Oil Skimmings and Sludges in 2016. The risk for potential environmental concern to the Site is considered to be low due to the distance from the Site.
- Records of two (2) incidents were retrieved within a 250 m radius of the Site, both involving the release of natural gas. Natural gas is not considered a potential environmental concern, therefore the potential risk associated with the incidents is considered low.
- No records of a coal tar industrial site, pollutant release, environmental registry, or manufacturing facilities under the Scott's Manufacturing Directory within a 250 m radius of the Site. No records of active or closed waste disposal sites were retrieved within 1 km of the Site.

The potential environmental risks to the Site associated with properties within 250 m are considered low to moderate. The records of the petroleum and coolant spills along the Highway 17/174 present low risk for environmental concern due to the distance from the Site and hydrogeological and geological features of the general area. The existing pile of fill presents a moderate to high risk to the Site. The material appeared to consist primarily of till, with granular crushed stone and traces of concrete. The material has not been confirmed suitable for use on the Site or has the safe handling procedures for off-Site disposal been established. The small quantities of asphalt debris were encountered in granular crushed stone fill piles along the eastern foot of the fill mound. The risk associated with the asphalt debris is low, however asphalt is not considered suitable for use as fill and should be disposed of off-site at a licensed facility.

7 CONCLUSIONS

Based on the findings of the Phase I ESA, a Phase II ESA is not recommended. However, the following additional environmental work is recommended:

- The asphalt debris encountered in the granular crushed stone fill piles along the eastern foot of the fill mound should be removed from the Site and disposed of accordingly at a licenced facility. Although granular crushed stone is considered acceptable for use as fill material, asphalt is not permitted to be buried as fill material according to provincial regulations; and
- Representative confirmatory samples of the large fill mound across the majority of the Site should be collected and analysed in accordance with the applicable provincial regulations, Ontario Regulation 406/19: On-Site and Excess Soil Management, 2019 to confirm if the material is acceptable to be used on Site for fill, or how to handle and disposed of the material at an off-Site location accordingly, and safely.
    - The fill pile is approximately 860 m² in size and extends between approximately 10 and 15 m in height for an approximate volume of 12,450 m³. According to O. Reg. 406/19, a minimum of 56 soil samples are to be

collected from the fill pile at various locations, including various intervals into the mound, for the analysis of the parameters of the concern.

- Analytical results of the fill material will be compared to the O. Reg. 153/04:
  - Table 7: Generic SCS for Shallow Soils in a Non-Potable Ground Water Condition, residential land use and coarse-textured soils if the material is to be left on Site for future use as fill material;
  - Table 1: Full Depth Background SCS residential land use and coarse-textured soils if the material is to be disposed of off-Site at a property other than a waste disposal site or soil recycling facility; and
  - TCLP Schedule 4, O. Reg. 558, for off-Site disposal acceptance at a licenced waste disposal facility.
- Soils which do not comply with the representative SCS be disposed of accordingly.
  - No soils in excess of the Table 7 site condition standards will be permitted for use on Site; and
  - Once soils which are in excess of Table 7 are removed from the Site, the conditions of the ground surface underlying the fill mound will be verified through additional verification sampling.

8 LIMITATIONS AND USE OF REPORT

The results of this Phase I ESA should not be considered a warranty that the subject property is free from any and all contaminants from former and current practices, other than those noted in this report, nor that all compliance issues have been addressed.

The findings contained in this report are based on data and information collected during the Phase I ESA of the subject property conducted by LRL Associates Ltd. The conclusions and recommendations are based solely on-Site conditions encountered at the time of our inspection on May 8th, 2020, supplemented by historical information and data obtained as described in this report. No assurance is made regarding changes in conditions subsequent to the time of this investigation. If additional information is discovered or obtained, LRL Associates Ltd. should be requested to re-evaluate the conclusions presented in this report and to provide amendments as required.

In evaluating the subject property, LRL Associates Ltd. has relied in good faith on information provided by individuals as noted in this report. We assume that the information provided is factual and accurate. We accept no responsibility for any deficiencies, misstatements or inaccuracies contained in this report as a result of omissions, misinterpretation or fraudulent acts of the persons contacted.

This report is intended for the sole use of Landric Homes Inc. and their authorized agents. LRL Associates Ltd. will not be responsible for any use of the information contained within this report by any third party.

In addition, LRL Associates Ltd. will not be responsible for the real or perceived decrease in the property value, its saleability or ability to gain financing, through the reporting of factual information.

Yours truly,
LRL Associates Ltd.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ***Note:*** *Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.*

Abandoned Aggregate Inventory: Provincial AAGR

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory: Provincial AGR

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Sep 2019

Abandoned Mine Information System: Provincial AMIS

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Oct 2018

Anderson's Waste Disposal Sites: Private ANDR

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks: Provincial AST

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies: Private AUWR

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Jan 31, 2020

Borehole: Provincial BORE

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval: Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities: Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2017

Commercial Fuel Oil Tanks: Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.
Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2017

Chemical Register: Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Compressed Natural Gas Stations: Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 - Feb 2020

Inventory of Coal Gasification Plants and Coal Tar Sites: Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions: Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Nov 2019

Certificates of Property Use: Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994-Feb 29, 2020

Drill Hole Database: Provincial DRL

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Sep 2019

Environmental Activity and Sector Registry: Provincial EASR

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011-Mar 31, 2020

Environmental Registry: Provincial EBR

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Feb 29, 2020

Environmental Compliance Approval: Provincial ECA

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011-Mar 31, 2020

Environmental Effects Monitoring: Federal EEM

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches: Private EHS

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Jan 31, 2020

Environmental Issues Inventory System: Federal EIIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event: Provincial EMHE

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

Environmental Penalty Annual Report: Provincial EPAR

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land or water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2018

List of Expired Fuels Safety Facilities: Provincial EXP

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2017

Federal Convictions: Federal FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land: Federal FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Nov 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS): Federal FED TANKS

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fisheries & Oceans Fuel Tanks: Federal FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2018

Fuel Storage Tank: Provincial FST

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.
Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2017

Fuel Storage Tank - Historic: Provincial FSTH

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary: Provincial GEN

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Jan 31, 2020

Greenhouse Gas Emissions from Large Facilities: Federal GHG

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO2 eq).

Government Publication Date: 2013-Dec 2017

TSSA Historic Incidents: Provincial HINC

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks: Federal IAFT

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks: Provincial INC

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2017

Landfill Inventory Management Ontario: Provincial LIMO

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the ministry compiles new and updated information. The inventory will include small and large landfills. Additionally, each year the ministry will request operators of the larger landfills complete a landfill data collection form that will be used to update LIMO and will include the following information from the previous operating year. This will include additional information such as estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills will include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Feb 28, 2019

Canadian Mine Locations: Private MINE

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences: Provincial MNR

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Jan 2020

National Analysis of Trends in Emergencies System (NATES): Federal NATE

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports: Provincial NCPL

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2018

National Defense & Canadian Forces Fuel Tanks: Federal NDFT

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills: Federal NDSP

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Apr 2018

National Defence & Canadian Forces Waste Disposal Sites: Federal NDWD

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents: Federal NEBI

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Dec 31, 2019

National Energy Board Wells: Federal NEBP

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES): Federal NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory: Federal NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory: Federal NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017

Oil and Gas Wells: Private OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-Feb 29, 2020

Ontario Oil and Gas Wells: Provincial OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Jun 2019

Inventory of PCB Storage Sites: Provincial OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013

Orders: Provincial ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994-Feb 29, 2020

Canadian Pulp and Paper: Private PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014

Parks Canada Fuel Storage Tanks: Federal PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register: Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: 1988 - Mar 2020

Pipeline Incidents: Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing in an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2017

Private and Retail Fuel Storage Tanks: Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water: Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994-Feb 29, 2020

Ontario Regulation 347 Waste Receivers Summary: Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-2016

Record of Site Condition: Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.
RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Jan 2020

Retail Fuel Storage Tanks: Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Jan 31, 2020

Scott's Manufacturing Directory: Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills: Provincial SPL

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

Government Publication Date: 1988-Aug 2019

Wastewater Discharger Registration Database: Provincial SRDS

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2017

Anderson's Storage Tanks: Private TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks: Federal TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970-Aug 2018

Variances for Abandonment of Underground Storage Tanks: Provincial VAR

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.
Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2017

Waste Disposal Sites - MOE CA Inventory: Provincial WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011-Mar 31, 2020

Waste Disposal Sites - MOE 1991 Historical Approval Inventory: Provincial WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System: Provincial WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Feb 28, 2019

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

SITE VISIT PHOTOGRAPHS

SITE VISIT PHOTOGRAPHS

Our File Ref.: 200041
Client: Landric Homes Inc.
Project: Phase I Environmental Site Assessment
Site Location: 280 Eric Czapnik Way, Ottawa, Ontario

Photograph No. 1 Date: 5/4/2020 Description General Site conditions from the northeast portion of the property facing west along the northern extent.	

Photograph No. 2 Date: 5/4/2020 Description From the north facing south along the eastern portion of the Site. Large fill mound present in background.	

Photograph No. 3	
Date: 5/4/2020	
Description General Site conditions at the northwest portion of the property, facing west.	

Photograph No. 4	
Date: 5/4/2020	
Description General Site conditions along the northern extent of the Site, from west facing east. The large fill mound is visible along the right limit of the photograph.	

Photograph No. 5	
Date: 5/4/2020	
Description Southwest portion of the Site facing south. Neighbouring high-density residential developments are visible in the background.	

Photograph No. 6	
Date: 5/4/2020	
Description Southwester portion of the Site facing east. Large fill mound is present in the background.	

Photograph No. 7	
Date: 5/4/2020	
Description Western extent of the large fill mound present across the majority of the Site.	

Photograph No. 8	
Date: 5/4/2020	
Description South-central base of fill mound. Evidence of concrete waste.	

Photograph No. 9	
Date: 5/4/2020	
Description Construction staging area at the eastern portion of the Site. Evidence of construction related materials including fencing components, drainage pipes and supplies packaging.	

Photograph No. 10	
Date: 5/4/2020	
Description Construction staging yard at the eastern portion of the Site. General material observed include modu-loc fencing, water and sanitary/storm sewer utility piping and components.	

Photograph No. 11	
Date: 5/4/2020	
Description Granular and traces of asphalt debris pile at the eastern portion of the Site.	

Photograph No. 12	
Date: 5/4/2020	
Description Cement, granular and traces of asphalt debris across the northeastern portion of the Site.	

Photograph No. 13	
Date: 5/4/2020	
Description High-density residential development to the east of the Site from the Site facing west along Eric Czapnik Way.	

Photograph No. 14	
Date: 5/4/2020	
Description Adjacent property to the west of the Site: vacant land followed by high density residential.	

Photograph No. 15	
Date: 5/4/2020	
Description Neighbouring land to the southwest of the Site: High-density residential.	

Photograph No. 16	
Date: 5/4/2020	
Description Bedrock outcrop along the southern extent of the wester portion of the Site.	

Photograph No. 17	
Date: 5/4/2020	
Description Central of Site facing north towards the Highway 174, and high-density residential development in the background.	

Photograph No. 18	
Date: 5/4/2020	
Description Adjacent property to the south of the Site: Multi-tenant residence and associated parking and circulation area.	

Photograph No. 19	
Date: 5/4/2020	
Description Adjacent property to the north of the eastern portion of the Site. Construction of Eric Czapnik Way extension, and evidence of historical land use in the background (agricultural silo).	

Photograph No. 20	
Date: 5/4/2020	
Description Construction activities to the southeast of the Site.	

APPENDIX H

TABLE 2 OF SCHEDULE D OF O. REG. 153/04

Ontario Regulation 153/04 – Schedule D
Summary of Potentially Contaminating Activities & Areas of Potential Environmental Concern

Acid and Alkali Manufacturing, Processing and Bulk Storage	Explosives and Firing Range	Petroleum-derived Gas Refining, Manufacturing, Processing and Bulk Storage
Adhesives and Resins Manufacturing, Processing and Bulk Storage	Fertilizer Manufacturing, Processing and Bulk Storage	Pharmaceutical Manufacturing and Processing
Airstrips and Hangars Operation	Fire Retardant Manufacturing, Processing and Bulk Storage	Plastics (including Fibreglass) Manufacturing and Processing
Antifreeze and De-icing Manufacturing and Bulk Storage	Fire Training	Port Activities, including Operation and Maintenance of Wharves and Docks
Asphalt and Bitumen Manufacturing	Flocculants Manufacturing, Processing and Bulk Storage	Pulp, Paper and Paperboard Manufacturing and Processing
Battery Manufacturing, Recycling and Bulk Storage	Foam and Expanded Foam Manufacturing and Processing	Rail Yards, Tracks and Spurs
Boat Manufacturing	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles	Rubber Manufacturing and Processing
Chemical Manufacturing, Processing and Bulk Storage	Gasoline and Associated Products Storage in Fixed Tanks	Salt Manufacturing, Processing and Bulk Storage
Coal Gasification	Glass Manufacturing	Salvage Yard, including automobile wrecking
Commercial Autobody Shops	Importation of Fill Material of Unknown Quality	Soap and Detergent Manufacturing, Processing and Bulk Storage
Commercial Trucking and Container Terminals	Ink Manufacturing, Processing and Bulk Storage	Solvent Manufacturing, Processing and Bulk Storage
Concrete, Cement and Lime Manufacturing	Iron and Steel Manufacturing and Processing	Storage, maintenance, fuelling and repair of equipment, vehicles, and material used to maintain transportation systems
Cosmetics Manufacturing, Processing and Bulk Storage	Metal Treatment, Coating, Plating and Finishing	Tannery
Crude Oil Refining, Processing and Bulk Storage	Metal Fabrication	Textile Manufacturing and Processing
Discharge of Brine related to oil and gas production	Mining, Smelting and Refining; Ore Processing; Tailings Storage	Transformer Manufacturing, Processing and Use
Drum and Barrel and Tank Reconditioning and Recycling	Oil Production	Treatment of Sewage equal to or greater than 10,000 litres per day
Dye Manufacturing, Processing and Bulk Storage	Operation of Dry Cleaning Equipment (where chemicals are used)	Vehicles and Associated Parts Manufacturing
Electricity Generation, Transformation and Power Stations	Ordnance Use	Waste Disposal and Waste Management, including thermal treatment, landfilling and transfer of waste, other than use of biosoils as soil conditioners
Electronic and Computer Equipment Manufacturing	Paints Manufacturing, Processing and Bulk Storage	Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products
Explosives and Ammunition Manufacturing, Production and Bulk Storage	Pesticides (including Herbicides, Fungicides and Anti-Fouling Agents) Manufacturing, Processing, Bulk Storage and Large-Scale Applications
