---

FYI – MNRF has accepted our ABIC/Drummond SAR rehab plan. We should provide a copy to Sean with our SP Rev. submission.

Hi Hugo,

Here is the reply from Carolyn.

She's happy with the Brazeau and Drummond sites and their SAR plans.

Best

Tony

Subject: 2020-09-10\_Drummond and Brazeau aggregate pits following closure and regrading

To: Anthony Francis <[afrancis@kilgourassociates.com](mailto:afrancis@kilgourassociates.com)>

Hi Tony,

Review: Species at risk review for Caivan projects at 3713 and 3809 Borrisokane Road

Sorry, I thought we had spoken and confirmed that the plan moving forward for the closure of these two pits 3713 and 3809 Borrisokane Road (Drummond and Brazeau Pitts) with regard to species at risk (Barn Swallow and Bank Swallow) was reasonable and that the proponent was following the rules as set out by the regulation. I know we had additionally discussed placement of the kiosks on Rideau Valley CA property.

I have reviewed the property location for any outstanding concerns for species at risk or species at risk habitat in consideration of the residential and commercial development that will occur at these locations in the future. I agree with your assessment in that there is likely no further concerns for species at risk or species at risk habitat for these two locations.

If you would like to discuss further please let me know.

Best,

*Carolyn Hann*

Hi Carolyn,

Hope you've had a good summer. I'm am following up on this email that we sent you last spring regarding the mitigation plans for Barn Swallows and Bank Swallows at the Drummond and Brazeau

pits. Have you had a chance to review the memo or the plans? If so, did you have any comments or concerns?

Best regards

Tony

Hello Carolyn,

I hope you are doing well. Please find attached our memo regarding two former sand and gravel pits that are currently being regraded following their closure. The sites had previously furnished some nesting habitat for two SAR birds (Bank Swallow and Barn Swallow), though the nesting sites for both species were provided and maintained directly by mining activities and structures that could only be present only while the pits were operational.

As the pit lands have now been substantially regraded - and are still subject to ongoing and extensive earthworks to fully flatten the entire area - per their respective closure plans and their management plans (in accordance with the notices of activity filed by the pit operators) the area is unlikely to still provide useful habitat.

If you have any questions or comments on our memo, please contact us any time.

Best regards

Tony
