Servicing and Stormwater Management Report
Our File No. : 120191

Please find enclosed the 'Servicing and Stormwater Management Report' for the above noted project. This report is submitted in support of the Site Plan Application for the proposed development.

Should you have any questions or require additional information, please contact the undersigned.

Yours truly,

NOVATECH

Cara Ruddle, P.Eng.
Senior Project Manager | Land Development Engineering

TABLE OF CONTENTS

LIST OF FIGURES

LIST OF APPENDICIES

LIST OF ENGINEERING DRAWINGS

1.0 INTRODUCTION

Novatech has been retained to prepare a Servicing and Stormwater Management Report for the proposed development located at 1050 Canadian Shield Avenue, Ottawa (formerly Kanata), Ontario. The property at 1050 Canadian Shield Avenue is formally Block 2 of the Kanata Town Center Central Business District which is identified on Plan 4M-1325 provided in **Appendix A**. This report will support a Site Plan Application for the subject development. **Figure 1** Key Plan shows the site location.

2.0 EXISTING CONDITIONS

The site is currently mostly undeveloped consisting of grass with some shrub, trees, and a gravel parking area. The site is bounded by Campeau Drive to the north, the Red Oak Retirement Residence to the east, Canadian Shield Avenue to the south, and Great Lakes Avenue to the west. The property contains an existing berm on all sides with an opening in the south-east corner. The topography slopes in a south easterly direction towards Canadian Shield Avenue. There are existing municipal services in the Campeau Drive, Great Lakes Avenue and Canadian Shield Avenue Right-of Ways. **Figure 2** shows the existing site conditions.

3.0 PROPOSED DEVELOPMENT

The site is 1.10 hectares in size, and it is proposed to develop a six-storey, 244-unit apartment building with an underground parking structure and 274m^2 of commercial space with street access. There will be amenity areas provided in the building (such as a gym facility) but it is understood that these are for residents only. The building footprint is approximately 6205m^2 at the ground floor level. Access to the building and underground parking is proposed from Canadian Shield Avenue. A landscaped courtyard area is proposed within the center of the building over the proposed underground parking garage roof with external access from Campeau Drive. Refer to **Figure 3** for the proposed site layout.

4.0 SERVICING REPORT REFERENCES

- J.L. Richards & Associated Limited, Kanata Town Center Stormwater Management Report, Dated January 1999.
- J.L. Richards & Associated Limited, Kanata Town Center Servicing Brief (Revised), Dated June 13, 2012.
- J.L. Richards & Associated Limited, Kanata Town Centre Central Business District Master Design Sheet Update - Sanitary Peak Flows Block 4, Block 5 and Block west of Block 9 (Zone 122), Dated August 18, 2017.

5.0 WATER SERVICING

The proposed development is in the 3W pressure zone of the City of Ottawa water distribution network. There is an existing 200mm diameter watermain in the Canadian Shield Avenue right-of-way, a 200mm and a 900mm diameter watermain in the Great Lakes Avenue right-of-way, and a 300mm and 900mm diameter watermain within the Campeau Drive right-of-way. It is proposed to servcie the development by connecting to the existing 200mm diameter watermain within the Great Lakes Avenue right-of-way. As per the City of Ottawa Technical Bulletin ISDTB-2014-02, the proposed development will require two service connections since the average day demand for the proposed development is greater than 50 cubic meters of water.

The City of Ottawa design criteria for Water Distribution systems were used to calculate the theoretical water demand for the proposed six-storey apartment building. The water demand has been calculated for the building based on a population of 561 people and 274m^2 of commercial space, a summary of the flows is provided in **Table 6.1**.

Table 6.1 Water Demand Summary

	Proposed Development
Water Demand Rate	Residential: 350 (L/c/d) Commercial: 75 (L/9.3m^2/day)
Units/Area	25 – 1 Bed, 158 – 2 Bed, 45- 3-Bed, 16 – 4-Bed
Density	1.4 ppu - 1 Bed, 2.1 ppu - 2 Bed, 3.1 ppu - 3 Bed, 3.4
Factors	Residential : MD=2.5, PH=2.20 Commercial: MD=1.5, PH =1.8
Average Day Demand (L/s)	2.30
Maximum Daily Demand (L/s)	5.72
Peak Hour Demand (L/s)	12.57
FUS Fire Flow Requirement (L/s)	183.00
Max Day+Fire Flow (L/s)	188.72

The required fire demand was calculated using the Fire Underwriters Survey (FUS) Guidelines. The proposed building is to be sprinklered with the Siamese connection located by the water services along Great Lakes Avenue. Existing hydrants within the Canadian Shield, Great Lakes Avenue, and Campeau Drive Right-of-Ways will provide fire protection for the proposed development. The required fire demand was calculated to be 2,906 USGPM (or 11,000 L/min). Refer to **Appendix B** for a copy of the water calculations.

The above water demand info was submitted to the City and boundary conditions provided from the City's water model. The boundary conditions are provided in **Table 6.2**.

Table 6.2 Water Boundary Conditions

Criteria	**Head (m)**	**Pressure (psi)**
Connection 1 (Ground Elevation = 99.5m)		
Max HGL	161.3	87.7
Peak Hour	156.3	80.5
Max Day + Fire Flow	147.9	68.6
Connection 2 (Ground Elevation = 99.4)		
Max HGL	161.3	87.9
Peak Hour	156.3	80.7
Max Day + Fire Flow	147.7	68.5

These boundary conditions were used to analyze the performance of the proposed watermain for three theoretical conditions:

1) High Pressure check under Average Day conditions
2) Peak Hour demand
3) Maximum Day + Fire Flow demand.

The following **Table 6.3** summarizes the results from the hydraulic water analysis.

Table 6.3 Water Analysis Results Summary

Condition	Demand (L/s)	Min/Max Allowable Operating Pressures (psi)	Limits of Design Operating Pressures (psi)[1]
Connection 1			
High Pressure	2.27	80psi (Max)	88.3
Peak Hour	12.42	40psi (Min)	81.2
Maximum Daily + *Fire Flow*	188.65	20psi (Min)	69.3
Connection 2			
High Pressure	2.27	80psi (Max)	88.3
Peak Hour	12.42	40psi (Min)	81.2
Maximum Daily + *Fire Flow*	188.65	20psi (Min)	69.0

[1]Pressures based on a P1 FEE of 99.20m

Based on the proceeding analysis it can be concluded that the watermain, as designed, will provide adequate system pressures for the fire flow + maximum day demand and peak hour demand. Refer to **Appendix B** for detailed hydraulic calculations and boundary conditions.

Since the average day demand for the development is greater than 50 cubic metres, two water services are required to service the building. Therefore, two 200mm diameter water services are proposed to service the building and will connect to the existing 200mm diameter watermain within the Great Lakes Avenue right-of-way. The two services will be separated by an isolation valve within the existing watermain system in the event maintenance on the City system is required. In the average day (high pressure), and the peak hour condition the system pressures are above the 80psi threshold, therefore pressure reducing valves will be required on both service connections. Refer to the General Plan of Services drawing (120191-GP) for the water servicing information.

6.0 SANITARY SERVICING

There are existing 200mm diameter sanitary sewers along Canadian Shield and Great Lakes Avenues and a 250mm diameter sanitary sewer along Campeau Drive. It is proposed to service the development by connecting a 200mm dia. sanitary service to the existing 200mm diameter sanitary sewer within the Canadian Shield Avenue right-of-way. This existing sanitary sewer flows east along Canadian Shield Avenue and connects to the existing 200mm sanitary sewer under Maritime Way where it flows south and connects to an existing 825mm sanitary trunk sewer. Refer to the General Plan of Services (120191-GP) for sanitary servicing information.

Flows for the proposed development have been calculated based on a total population of 561 people and 274m^2 of commercial space. The sanitary flows were calculated based on an average domestic demand of 280 L/day, and a commercial area flow of 75 L/9.3m^2/day. The total peak flow calculated for the apartment building is 6.22 L/s. Sanitary flow calculations are included in **Appendix C** for reference.

The subject site is included in the Kanata Town Centre – Central Business District (KTC-CBD) Subdivision. A Technical Memorandum prepared by J.L. Richards dated June 13, 2012 provides design criteria for the KTC-CBD Subdivision area based on estimated developments within the subdivision. The Memorandum assumed that the subject property, which was denoted as Block 2 would be a commercial development. Refer to **table 7.1** for a comparison of the proposed development and the original allocated sanitary flows for the site from the J.L Richards design memorandum.

Table 7.1 Sanitary flow summary

	Proposed Development	J.L. Richards Allocated Flow
Flow Rate	280 L/c/d	50000L/ha/day
Units	25 – 1 Bed, 158 – 2 Bed, 45-3-Bed, 16 – 4-Bed	0
Commercial area (m^2)	274	13,600m^2
Density	1.4 ppu - 1 Bed 2.1 ppu - 2 Bed 3.1 ppu - 3 Bed 3.4 ppu - 4 Bed	n/a
Population	561	n/a
Peaking Factor	3.2	3.97
Peak Daily Flow (L/s)	5.77	1.18
Peak Extraneous	0.45	0.38
Total Peak Design	6.22	1.56

The total flow for the proposed development exceeds the allotted flow from the original J.L Richards design by 4.66 L/s. Based on the previous J.L. Richards memo, it is anticipated that the existing sewers will have adequate capacity for the development. The J.L Richards Memorandum includes a drainage area plan and the updated August 2017 sanitary sewer design sheets for the KTC-CBD subdivision and the downstream sanitary sewer system to the intersection of Campeau and Teron Road. A review of these design sheet indicates that there is adequate capacity within the downstream sanitary sewer for the proposed development. Flows for the proposed development have been provided to JL Richards to update their Technical Memorandum and the Master Sanitary Sewer Design Sheets and confirm adequate capacity of the downstream sanitary sewer system. The updated memo from JL Richards will be added to this report upon receipt. A copy of the August 2017 Technical Memorandum with design sheets are included in **Appendix E**.

7.0 STORM SERVICING

There is an existing 375mm and 450mm diameter storm sewer within the Canadian Shield Avenue right-of-way, an existing 300mm diameter storm sewer within the Great Lakes right-f-way and a 525mm diameter storm sewer within the Campeau Drive right-of-way. The existing 450mm diameter storm sewer within Canadian Shield Avenue is the proposed storm sewer outlet for the subject site. This existing storm sewer outlets to the existing Stormwater Management Facility downstream of the site at the end of Maritime Way (adjacent to Highway 417).

The building frontage areas will sheet drain across the boulevard area and to the existing storm sewer systems within each of the Campeau Drive, Great Lakes Avenue and Canadian Shield Avenue right-of-ways. Stormwater from the remainder of the site will be collected in area drains and into a private storm sewer system which will outlet to the existing 450mm diameter storm sewer along Canadian Shield Avenue. The storm servicing information is shown on the General Plan of Services (120191-GP).

8.0 STORMWATER MANAGEMENT

8.1 Stormwater Management Criteria

As indicated previously, the subject site is part of the Kanata Town Centre – Central Business District Subdivision. This subdivision is serviced by a Stormwater Management Facility (wet pond) currently located to the south-east of the site along Maritime Way (adjacent to the highway). The facility provides both quantity and quality control of stormwater. The facility design is outlined in a report entitled 'Stormwater Management Report Kanata Town Centre Central Business District' prepared by J.L. Richards & Associates Ltd. dated January 1999. A subsequent Technical Memorandum was prepared by J.L. Richards dated June 13, 2012. This Technical Memorandum updates the servicing information based on an increase in number of units proposed. The following Stormwater Management criteria is proposed for the subject development based on criteria established in the above noted J.L. Richards Report/Memorandum:

- Post-development peak flows to the existing storm sewer are to be controlled to the 5-year pre-development levels for all storms up to and including the 100-year event with a run-off coefficient of 0.8.

8.2 Quantity Control

Stormwater from the proposed development for storms up to and including the 100-year storm event will be controlled to the 5-year pre-development level with a run-off coefficient of 0.8 and a time of concentration of 20 minutes. The allowable release to the existing Canadian Shield Avenue storm sewer was calculated to be 171.9L/s.

The site has been divided into three different drainage areas as follows:

Area A-1

- The area surrounding the building that will sheet drain to the surrounding right-of-ways, and properties as per existing conditions

Area A-2

- Flows from the building roof and central courtyard area will be directed to the existing storm sewer along Canadian Shield. These flows will be captured by roof drains and area deck drains and will be conveyed by internal building plumbing to an underground storage tank under the front of the building. Flows from the storage tank will be controlled by an inlet control device prior to release to the existing storm sewer along Canadian Shield Avenue. Storage will be provided for storms up to and including the 100-year event within the storage tank.

Area A-3

- Flows from the sunken patio area at the south west corner of the building will also be directed to the storm sewer along Canadian Shield Avenue. Stormwater in this area will be collected by deck drains and connect into the storm service downstream of the stormwater storage tank.

Refer to the Stormwater Management Plan (120191-SWM) for the various drainage areas. **Table 9.1** below summarizes the flow, storage required, and storage provided for each of the site drainage areas.

Table 9.1 Stormwater Management Summary

Area ID	Area (ha)	1:5 Year Weighted Cw	Orifice Size & Type	5 Year Storm Event			100 Year Storm Event		
				Flow (L/s)	Req Vol (cu.m)	Max. Vol. Prov (cu.m.)	Flow (L/s)	Req Vol (cu.m)	Max. Vol. Prov (cu.m.)
A-1	0.196	0.37	N/A	21.1	N/A	N/A	42.2	N/A	N/A
A-2	0.871	0.90	189mm	82.6	147	>312	116.6	275	>312
A-3	0.025	0.90	N/A	6.5	N/A	N/A	12.4	N/A	N/A
Total Flow				**110.2**			**171.2**		
Allowable				**171.9**			**171.9**		

Refer to **Appendix D** for Rational Method calculations and modeling results. Refer to the Grading Plans (120191-GR) and the Stormwater Management Plan (120191-SWM) for more details.

8.3 Quality Control

Quality control of stormwater is provided from the existing Stormwater Management Facility located downstream of the site at the end of Maritime Way (adjacent to the highway). Sections of the J.L Richards Kanata Town Center Stormwater Management Report dated January 1999 have been provided in Appendix A of the report which details the total treated drainage area and the design parameters used in the QUALHYMO model. The J.L Richards report identifies that the SWMF facility has been designed for a treatment level of 70% TSS removal. The proposed

development of Block 2 of the Kanata Town Center was included in the sub-watershed area number 3 for the QUALHYMO model and has been accounted for in the design of stormwater management facility for quality control.

8.4 Major Overland Flow Route

A major overland flow route will be provided for storms greater than the 100-year storm event. Stormwater from the central courtyard, and the rear of the site will be directed to Campeau Drive. Stormwater from the storage tank in the building will overflow out of the access lid to Canadian Shield Avenue and will flow towards the existing SWM facility. The major overland system is shown on the Grading Plan (dwg 120191-GR).

9.0 EROSION AND SEDIMENT CONTROL

9.1 Temporary Measures

Temporary erosion and sediment control measures will be implemented during construction. Silt fence, mud mats and filter socks in catchbasins, and area drains will be used as erosion and sediment control measures.

Erosion and sediment control measures should be inspected daily and after every rain event to determine maintenance, repair or replacement requirements. Sediments or granulars that enter site sewers shall be removed immediately by the contractor. These measures will be implemented prior to the commencement of construction and maintained in good order until vegetation has been established. Refer to the Grading Plan and Notes and Details Plan (dwg 120191-GR, 120191-ND) for additional information.

10.0 CONCLUSIONS AND RECOMMENDATIONS

- Water servicing for the proposed development will be serviced by two connections. Two 200mm diameter water services will connect to the existing 200mm diameter watermain within the Great Lakes Avenue right-of-way. The two services will be separated by an isolation valve within the existing watermain system in the event maintenance on the City system is required. The existing watermain infrastructure can provide adequate domestic flows and pressure for fire protection. Pressure reducing valves will be required on both water service connections.
- The proposed building will be serviced by a 200mm diameter sanitary service. The proposed building service will connect to the existing 200mm sanitary sewer within the Canadian Shield Avenue right-of-way. The existing sanitary sewer has adequate excess capacity to service the development.
- Quantity control of stormwater will be provided through a stormwater storage tank to attenuate flows to the existing storm sewer along Canadian Shield Avenue to the 5-year pre-development level for storms up to and including the 100-year event. The allowable release rate is 171.9 L/s and the post-development stormwater release rates are 110.2 L/s and 171.2 L/s for the 5 and 100 year events respectively.
- Quality control of stormwater management will be provided in the existing end of pipe stormwater management facility located on Maritime Way.
- An overland flow route is provided.
- Erosion and sediment control measures will be implemented prior to and during construction.

APPENDIX A

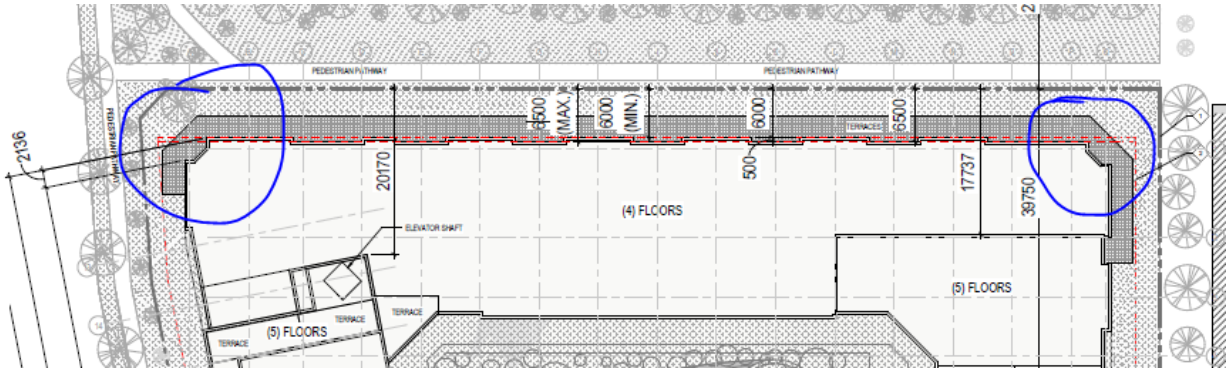
Correspondence

Planning Comments

1. The proposal is subject to a Minor Zoning By-law Amendment application and a subsequent Site Plan Control, Complex application. The application fee and timeline can be found here.
2. The site is zoned MC15 [2027].

Zoning Deficiencies

3. In the MC15 subzone, there is a requirement for office types uses (FSI of 1.5 or amount equal to residential) before residential is allowed. Similarly, retail and other commercial uses is only allowed when office/residential types use reaches FSI of 0.75 or greater. The goal is to promote office type uses first before allowing a mix of uses within the building.
4. All part of the building facing Campeau requires a maximum setback of 6.5m.



5. Maximum setback from a lot line abutting Great Lakes and Canadian Shield for at least 80% width of any building wall
   a. 0.5 m; or
   b. 2 m where a patio is located between the building wall and a lot line
6. Please confirm what the proposed building height is along Great Lakes and Canadian Shield. The cross section shows 7 storeys based on average grade which exceed the zoning and OP requirement of 6 storeys. If this design is kept, an Official Plan Amendment will also be required.
7. Please confirm if the minimum building separation to the adjacent retirement is met. The requirement is 12m for any portion greater than 15m in height. If the proposal changes based on the urban design comments (below) into two buildings, please make sure that proper separation distance is maintained.
8. Exceed maximum gfa of 2,500 sq m above for floors above 15m in height. This means that any floor even with a portion exceeding 15m need to adhere to the 2,500 sq m requirement.
9. Please confirm if minimum landscape area of 30% is met.
10. Please confirm if 50% of the length of any ground floor wall facing a public street must consist of windows and/or entrances.

11. Any proposed non-residential use on the ground floor must have direct access to the street.
12. Please confirm parking count at the time of submission.
13. Please confirm sufficient amenity space is provided as per section 137.

Official Plan

14. The site is designated as Town Centre within the City's Official Plan.
15. Employment target of at least 10,000 jobs in the Town Centre. Based on the 2016 Employment Survey, the current job number is 8,093. Please confirm that the remaining parcels can sufficient achieve the 10,000 jobs target if there is a request to reduce the amount of employment uses on-site.
16. Please confirm if the proposal meets the 120 people/jobs per gross hectare density target in Figure 2.3 of the OP.
17. The site is designated as Centre Business District with a maximum height of 6 storeys under the Kanata Town Centre Secondary Plan.
18. Under the secondary plan, the following is required. Any deviation will result in the need of an OPA application.

    Development facing Campeau Drive (between the City lands to the west and Gray Crescent) will be subject to the following provisions:

    a. A minimum building height of three storeys is required

    b. The maximum building height is three storeys for any development within 25 metres of the lot line abutting Campeau Drive Current design does not meet this.

    c. Mid-rise buildings up to a maximum of six storeys are permitted provided the building transitions from three storeys along Campeau Drive in accordance with the principles in Section 4.11 of the Official Plan. Current design does not meet this.

    d. To maintain a landscaped buffer and parkway character between the edge of the Town Centre and residential neighbourhoods to the north, yard setbacks from a lot line abutting Campeau Drive will generally be 6 metres.

19. A 100% residential building does not meet the intent of the Central Business District. It is the intent of this designation that these lands become an urban place that provides for employment uses, complemented by higher density residential uses. Given that this site has a zoning that requires a minimum of 1.5 FSI for non-residential uses before residential is permitted, an amendment to eliminate all non-residential uses may not be suitable. Please incorporate some non-residential uses into the building and preferably along the ground floor facing

Canadian Shield and Great Lakes. The frontage facing Campeau should remain residential in nature.

20. Cash-in-lieu of parkland will be required based on the Parkland Dedication By-law. If this has been previously paid through the subdivision process, please provide evidence of payment.
21. Please consult the Ward Councillor, Jenna Sudds, prior to application submission.

Urban Design Comments

1. A Design Brief is required. The requirements are attached.
2. Urban Design Review Panel will be required for the proposed increase in height and density beyond the current 2500 sq. m. threshold for all building gfa above 15 metres in height.
3. PRUD staff are concerned with a complete elimination of 100% of the requirement for non-residential uses, given the current requirement for 1.5 FSI of non-residential use. At a minimum the ground floor abutting Canadian Shield Avenue and Great Lakes Avenue should contain non-residential uses.
4. The provision of non-residential uses at grade is not conducive to the proposed 7+/- setback along Canadian Shield. Although some relief to the current 2 m maximum setback may be considered, a complete removal of this requirement is not supported.
5. More points of access and entry to the central courtyard should be provided.
6. Provide an additional main entrance in an additional location (Intersection of Campeau and Great Lakes shown)
7. The eastern yard functions as a rear yard for the site. The setback from this property line should be a minimum of 7.5 metres to provide adequate separation from the abutting second phase of the retirement home to the east. This area should be utilized to provide a north/south pedestrian connection on site.
8. All at grade residential units should have grade related terraces with direct access to the public realm – similar to Place St. Emillion abutting the storm water management pond.
9. Consider two buildings in lieu of one large building to allow for better light penetration into the courtyard and circulation.
10. Non-residential uses should be focused along the Canadian Shield and Great Lakes frontages where on-street parking is provided.

Engineering Comments

General:

- More comments from Infrastructure Planning Unit will follow, If any.

- It is the sole responsibility of the consultant to investigate the location of existing underground utilities in the proposed servicing area and submit a request for locates. The location of existing utilities and services shall be documented on an **Existing Conditions Plan**.
- All underground and above ground building footprints and permanent walls need to be shown on the plans to confirm that any permanent structure does not encroach within the right-of-way.
- Any easements on the subject site shall be identified and respected by any development proposal and shall adhere to the conditions identified in the easement agreement. A **legal survey plan** shall be provided and all easements shall be shown on the engineering plans.
- Please provide an **Existing Conditions/Removals Plan** as part of the engineering drawing set. Any existing services are to be removed or abandoned in accordance with City standards.
- Please note that the proposed servicing design and site works shall be in accordance with the following documents:
    - Ottawa Sewer Design Guidelines (October 2012)
    - Technical Bulletin PIEDTB-2016-01
    - Technical Bulletins ISTB-2018-01, ISTB-2018-02 and ISTB-2018-03.
    - Ottawa Design Guidelines - Water Distribution (2010)
    - Geotechnical Investigation and Reporting Guidelines for Development Applications in the City of Ottawa (2007)
    - City of Ottawa Slope Stability Guidelines for Development Applications (revised 2012)
    - City of Ottawa Environmental Noise Control Guidelines (January 2016)
    - City of Ottawa Accessibility Design Standards (2012) (City recommends development be in accordance with these standards on private property)
    - Ottawa Standard Tender Documents (latest version)
    - Ontario Provincial Standards for Roads & Public Works (2013)
    - Record drawings and utility plans are also available for purchase from the City (Contact the City's Information Centre by email at InformationCentre@ottawa.ca or by phone at (613) 580-424 x.44455).

Stormwater Management Criteria and Information:

- It appears the subject site is located within **the KTC SWM Pond (Phase 2)** catchment (see attached). The consultant should review the attached report and confirm SWM criteria, flow allowance to the existing storm system, design assumptions, etc. Consult Operations staff to determine how the existing facility is currently performing (i.e. ability to achieve targets, condition of infrastructure within the SWM block, etc.
- **Water Quality Control:** Please consult with the local conservation authority regarding water quality criteria prior to submission of a Site Plan Control Proposal application to establish any water quality control restrictions, criteria and measures for the site. Correspondence and clearance shall be provided in the Appendix of the report.

- Please note that foundation drain is to be independently connected to sewermain unless being pumped with appropriate back up power, sufficient sized pump and back flow prevention.
- Please note that as per *Technical Bulletin PIEDTB-2016-01 section 8.3.11.1 (p.12 of 14)* **there shall be no surface ponding on private parking areas during the 2-year storm rainfall event**. Depending on the SWM strategy proposed underground or additional underground storage may be required to satisfy this requirement.
- **Underground Storage:** Please note that the Modified Rational Method for storage computation in the Sewer Design Guidelines was originally intended to be used for above ground storage (i.e. parking lot) where the change in head over the orifice varied from 1.5 m to 1.2 m (assuming a 1.2 m deep CB and a max ponding depth of 0.3 m). This change in head was small and hence the release rate fluctuated little, therefore there was no need to use an average release rate.
- When underground storage is used, the release rate fluctuates from a maximum peak flow based on maximum head down to a release rate of zero. This difference is large and has a significant impact on storage requirements. **We therefore require that an average release rate equal to 50% of the peak allowable rate shall be applied to estimate the required volume. Alternatively, the consultant may choose to use a submersible pump in the design to ensure a constant release rate.**
- In the event that there is a disagreement from the designer regarding the required storage, The City will require that the designer demonstrate their rationale utilizing dynamic modelling, that will then be reviewed by City modellers in the Water Resources Group.
- Note that the above will added to upcoming revised Sewer Design Guidelines to account for underground storage, which is now widely used.
- Provide sufficient details and information on any proposed underground storage system. A cross-section of any underground storage system is to be provided with sufficient details and information. In case of a pump failure or blockage an overflow should be provided. Backup power supply is required if using a pump.
- Please note that the minimum orifice dia. for a plug style ICD is 83mm and the minimum flow rate from a vortex ICD is 6 L/s in order to reduce the likelihood of plugging.
- Post-development site grading shall match existing property line grades in order to minimize disruption to the adjacent residential properties. A **topographical plan of survey** shall be provided as part of the submission and a note provided on the plans.
- Please provide a **Pre-Development Drainage Area Plan** to define the pre-development drainage areas/patterns. **Existing drainage patterns shall be maintained and discussed as part of the proposed SWM solution**.
- If rooftop control and storage is proposed as part of the SWM solutions sufficient details (Cl. 8.3.8.4) shall be discussed and document in the report and on the plans. Roof drains are to be connected downstream of any incorporated ICDs within the SWM system and not to the foundation drain system.

Storm Sewer:

- Storm sewer monitoring maintenance holes are required to be installed at the property line (on the private side of the property) as per City of Ottawa Sewer-Use By-Law 2003-514 (14) *Monitoring Devices*.
- As-built drawings of the existing services within the vicinity of the site shall be obtained and reviewed in order to determine proper servicing and SWM plan for the subject site(s).
- Storm service connections are to have backwater valves.

Sanitary Sewer:

- **An analysis and demonstration that there is sufficient/adequate residual capacity to accommodate any increase in wastewater flows in the receiving and downstream wastewater system is required to be provided**. **The City can provide flows for existing areas and direction on how to estimate future flows for vacant areas within the sewer shed.**
- Please apply the wastewater design flow parameters *in Technical Bulletin PIEDTB-2018-01.*
- Sanitary sewer monitoring maintenance holes are required to be installed at the property line (on the private side of the property) as per City of Ottawa Sewer-Use By-Law 2003-514 (14) *Monitoring Devices*.
- Sanitary service connections are to have backwater valves.

Water:

- **Water Supply Redundancy:** Residential buildings with a basic day demand greater than $50m^3$/day (0.57 L/s) are required to be connected to a minimum of two water services separated by an isolation valve to avoid a vulnerable service area as per the *Ottawa Design Guidelines - Water Distribution, WDG001, July 2010 Clause 4.3.1 Configuration.* The basic day demand for each site anticipated to exceed $50m^3$/day therefore 2 water services will be required. There shall be primary water service and a secondary connection.
- Please review Technical Bulletin ISTB-2018-0, maximum fire flow hydrant capacity is provided in Section 3 Table 1 of Appendix I. A **hydrant coverage figure** shall be provided and **demonstrate there is adequate fire protection**.
- Boundary conditions are required to confirm that the require fire flows can be achieved as well as availability of the domestic water pressure on the City street in front of the development. Use Table 3-3 of the MOE Design Guidelines for Drinking-Water System to determine Maximum Day and Maximum Hour peaking factors for 0 to 500 persons and use Table 4.2 of the Ottawa Design Guidelines, Water Distribution for 501 to 3,000 persons. Please provide the following information to the City of Ottawa via email to request water distribution network boundary conditions for the subject site. Please note that once this information has been provided to the City of Ottawa it takes approximately 5-10 business days to receive boundary conditions.
    - Type of Development and Units
    - Site Address

- A plan showing the proposed water service connection locations.
- **Average Daily Demand** (L/s)
- **Maximum Daily Demand** (L/s)
- **Peak Hour Demand** (L/s)
- **Fire Flow** (L/min)
- [*Fire flow demand requirements shall be based on Fire Underwriters Survey (FUS) Water Supply for Public Fire Protection*
- *1999*]
- *Exposure separation distances shall be defined on a figure to support the FUS calculation and required fore flow (RFF).*
- Hydrant capacity shall be assessed to demonstrate the RFF can be achieved. Please identify which hydrants are being considered to meet the RFF on a fire hydrant coverage plan as part of the boundary conditions request.

Snow Storage:

- Any portion of the subject property which is intended to be used for permanent or temporary snow storage shall be as shown on the approved site plan and grading plan. Snow storage shall not interfere with approved grading and drainage patters or servicing. Snow storage areas shall be setback from the property lines, foundations, fencing or landscaping a minimum of 1.5m. Snow storage areas shall not occupy driveways, aisles, required parking spaces or any portion of a road allowance. If snow is to be removed from the site please indicate this on the plan(s).

Permits and Approvals:

- The consultant shall determine if this project will be subject to an Environmental Compliance Approval (ECA) for Private Sewage Works. It shall be determined if the exemptions set out under Ontario Regulation 525/98: *Approval Exemptions* are satisfied. All regulatory approvals shall be documented and discussed in the report.

Geotechnical Investigation:

- A Geotechnical Study/Investigation shall be prepared in support of this development proposal.
- Reducing the groundwater level in this area can lead to potential damages to surrounding structures due to excessive differential settlements of the ground. The impact of groundwater lowering on adjacent properties needs to be discussed and investigated to ensure there will be no short term and long term damages associated with lowering the groundwater in this area.
- Geotechnical Study shall be consistent with the **Geotechnical Investigation and Reporting Guidelines for Development Applications**.

https://documents.ottawa.ca/sites/default/files/documents/cap137602.pdf

Transportation Comments

Note that these are for re-zoning only. Additional information will be required at the time of SPA.

- Follow Traffic Impact Assessment Guidelines:
    - A TIA is required.
    - Note that because this application is for rezoning only at this time, the Design Review components (Module 4.1-4.4) are excluded.
    - It is noted that provided parking is identified as T.B.C. within the brochure. If a reduction in parking is sought, then Module 4.2 must also be included within the TIA.
    - Start this process asap. The application will not be deemed complete until the submission of the draft step 1-4, including the functional draft RMA package (if applicable) and/or monitoring report (if applicable).
    - Request base mapping asap if RMA is required. Contact Engineering Services (https://ottawa.ca/en/city-hall/planning-and-development/engineering-services)
- ROW protection on Campeau Dr between Didsbury and Teron is 40m even.
- The TMP includes the following planned infrastructure within the study area:
    - LRT along Hwy 417, Grade Separated Crossings (Ultimate Network, Map 3)
    - BRT along Hwy 417, Grade Separated Crossings (2031 Network Concept, Map 4)
    - Future BRT along Hwy 417 (2031 Affordable Network, Map 5)
    - Campeau Dr and Kanata Avenue are identified as Widened Arterials (2031 Network Concept, Map 10)
    - Kanata Avenue widening is identified as part of Phase 2 works (2031 Affordable Network, Map 11), note that the timing of Kanata Avenue widening is yet to be determined but is anticipated to be somewhere around 2031.
- Ensure the separation between the garage entrance and the moving aisle meets the Private Approach Bylaw.
- Sidewalk is to be continuous across access as per City Specification 7.1.
- Notes of items that will be evaluated at the time of SPA are provide for your information:
    - Show all details of the roads abutting the site up to and including the opposite curb; include such items as pavement markings, accesses and/or sidewalks.
    - Turning movement diagrams required for all accesses showing the largest vehicle to access/egress the site.

- Turning movement diagrams required for internal movements (loading areas, garbage).
- Show all curb radii measurements; ensure that all curb radii are reduced as much as possible
- Show lane/aisle widths.

Forester Comments (Privately Owned Trees)

1. a Tree Conservation Report (TCR) must be supplied for review along with the suite of other plans/reports required by the City; an approved TCR is a requirement of Site Plan or Plan of Subdivision approval.
2. any removal of privately-owned trees 10cm or larger in diameter requires a tree permit issued under the Urban Tree Conservation Bylaw; the permit is based on the approved TCR
3. any removal of City-owned trees will require the permission of Forestry Services who will also review the submitted TCR
4. the TCR must list all trees on site by species, diameter and health condition
5. the TCR must list all trees on adjacent sites if they have a critical root zone that extends onto the development site
6. If trees are to be removed, the TCR must clearly show where they are, and document the reason they cannot be retained
7. the City encourages the retention of healthy trees; if possible, please seek opportunities for retention of trees that will contribute to the design/function of the site.
8. Please ensure newly planted trees have an adequate soil volume for their size at maturity. Here are the recommended soil volumes:

Tree Type/Size	Single Tree Soil Volume (m3)	Multiple Tree Soil Volume (m3/tree)
Ornamental	15	9
Columnar	15	9
Small	20	12
Medium	25	15
Large	30	18
Conifer	25	15

9. For more information on the process or help with tree retention options, contact Mark Richardson mark.richardson@ottawa.ca

Forester Comment (City Owned Trees)

- The site plan must be developed such that there is no excavation or disturbance within the Critical Root Zones of these existing trees.
- Entrances and walkways must be limited in order to reduce the number of trees impacted. Any trees that must be removed from City property will require compensation.
- Metal tree protection fencing must be installed to separate the trees from the construction site prior to any works taking place.

Please refer to the links to "Guide to preparing studies and plans" and fees for general information. Additional information is available related to building permits, development charges, and the Accessibility Design Standards. Be aware that other fees and permits may be required, outside of the development review process. You may obtain background drawings by contacting informationcentre@ottawa.ca.

These pre-con comments are valid for one year. If you submit a development application(s) after this time, you may be required to meet for another pre-consultation meeting and/or the submission requirements may change. You are as well encouraged to contact us for a follow-up meeting if the plan/concept will be further refined.

Please contact me at stream.shen@ottawa.ca or at 613-580-2424 extension 24488 if you have any questions.

Sincerely,

Stream Shen MCIP RPP

Hi Cara,

Attached is the BC requested.
Please note that 2 connections will be needed as units exceeds 50.

Thanks,
Ahmed

Subject: RE: 1050 Canadian Shield - questions

Ahmed:
We are looking for boundary conditions for the existing watermain infrastructure to complete a water servicing analysis for the 1050 Canadian Shield development. The development will consist of an apartment complex with commercial space on the ground level. Attached is a key plan showing the site location, and a geomap image showing the existing water infrastructure. Water Demands for the proposed development areprovided below:

AVG DAY = 2.27 L/s
MAX DAY = 5.65 L/s
PEAK HOUR = 12.42 L/s
MAX DAY + FIRE =188.65 L/s

Due to the demands from the site exceeding 50m3/day it is proposed to have 2 service connections to Canadian Shield avenue separated by a valve.

Please do not hesitate to call or email should you have any questions. Thanks.

Subject: RE: 1050 Canadian Shield - questions

Hi Cara,

As per the preconsult notes that were provided early (attached);

- A**n analysis and demonstration that there is sufficient/adequate residual capacity to accommodate any increase in wastewater flows in the receiving and downstream wastewater system is required to be provided**. **The City can provide flows for existing areas and direction on how to estimate future flows for vacant areas within the sewer shed.**

As per your below request attached is the latest memo **SANITARY FLOW ANALYSIS MARITIME WAY** .

Please let me know if you need more information.

Thanks,
Ahmed

Subject: 1050 Canadian Shield - questions

Stream:
I am not sure who the reviewing Engineer is for the 1050 Canadian Shield property so I will start with you. We worked on two previous sites at 1088 and 1136 Maritime Way and were required to have a Technical Memorandum updated by JL Richards on the downstream sanitary sewer to confirm capacity. The 1050 Canadian Shield property is in the same drainage area. There have also been some other developments in the area so I was looking to get a copy of the most recent JL Richards Memorandum. The latest memo we have on file is 'Kanata Town Centre Central Business District, Master Design Sheet Update - Sanitary Peak Flows, Block 4, Block 5 and Block west of Block 9 (Zone 122)' by JL Richards dated August 18, 2017. Also, will my client be required to update this JL Richards Memorandum again?

Thanks.

Ground Elevation = 99.4 m

Notes

1. As per the Ontario Building Code in areas that may be occupied, the static pressure at any fixture shall not exceed 552 kPa (80 psi.) Pressure control measures to be considered are as follows, in order of preference:
    a. If possible, systems to be designed to residual pressures of 345 to 552 kPa (50 to 80 psi) in all occupied areas outside of the public right-of-way without special pressure control equipment.
    b. Pressure reducing valves to be installed immediately downstream of the isolation valve in the home/ building, located downstream of the meter so it is owner maintained.

Disclaimer

The boundary condition information is based on current operation of the city water distribution system. The computer model simulation is based on the best information available at the time. The operation of the water distribution system can change on a regular basis, resulting in a variation in boundary conditions. The physical properties of watermains deteriorate over time, as such must be assumed in the absence of actual field test data. The variation in physical watermain properties can therefore alter the results of the computer model simulation. Fire Flow analysis is a reflection of available flow in the watermain; there may be additional restrictions that occur between the watermain and the hydrant that the model cannot take into account.

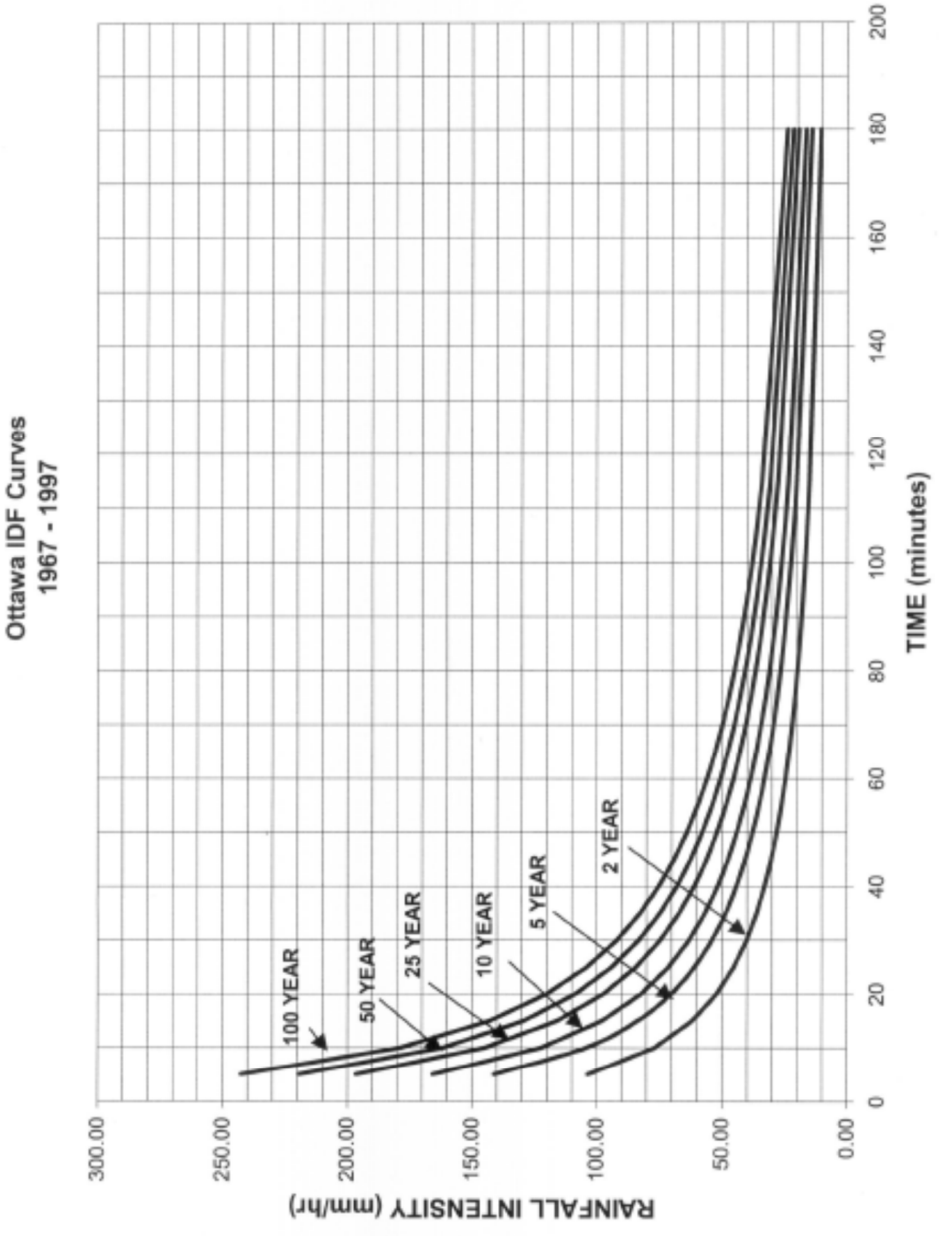
APPENDIX 5-A OTTAWA INTENSITY DURATION FREQUENCY (IDF) CURVE



RATIONAL METHOD

The Rational Method was used to determine both the allowable runoff as well as the post-development runoff for the proposed site. The equation is as follows:

Q=2.78 CIA

Where:
Q is the runoff in L/s
C is the weighted runoff coefficient*
I is the rainfall intensity in mm/hr**
A is the area in hectares

*The weighted runoff coefficient is determined for each of the catchment areas as follows:

$$C = \frac{(A_p \times C_p) + (A_{imp} \times C_{imp})}{A_{tot}}$$

Where:
A_p is the pervious area in hectares
C_p is the pervious area runoff coefficient (C_{perv}=0.20)
A_{imp} is the impervious area in hectares
C_{imp} is the impervious area runoff coefficient (C_{imp}=0.90)
A_{tot} is the catchment area (A_{perv} + A_{imp}) in hectares

** The rainfall intensity is taken from the City of Ottawa IDF Curves using a time of concentration (tc) of 10 minutes resulting in a rainfall intensity of 104.2mm/hr and 178.6mm/hr for the 1:5 year and 1:100 year design events respectively.

Note: The post-development C values are to be increased by 25% for the 1:100 year event (max. C_{imp}=1.0).

Re: Kanata Town Centre Central Business District
Master Design Sheet Update - Sanitary Peak Flows
Block 4, Block 5 and Block west of Block 9 (Zone 122)

We understand that the City is requesting an update to the Master Sanitary Sewer Design Sheet for the Kanata Town Centre Central Business District (KTC-CBD) from JL Richards such to incorporate the proposed peak flow revision from Block 4, Block 5, and the parcel west of Block 9 (previously Robinson'96 - Zone 122). Refer to attached JLR Sanitary Drainage Plan and Robinson Consultants Figure 7.1 for locations of Block 4, Block 5 and Zone 122.

We understand that the City will ultimately decide (as the owner of the existing sewers within the KTC-CBD and downstream system) whether the proposed peak flow increase is acceptable and that if accepted, it will not require a reduction of the allowable peak flows for the remaining future development in the KTC-CBD.

As requested, we have incorporated the proposed sanitary peak flow increase associated with your following developments:

a) Proposed Block 4 - Residential development
The proposed development will result in a theoretical increase in peak flow from 3.88 L/s to 4.71 L/s at MH 513 where the Block 4 development outlets to Maritime Way. This represents a theoretical peak flow increase of 0.83 L/s from the anticipated 2012 land use (i.e., hotel use, based on 270 L/pers/day).

b) Proposed Block 5 - Residential development
The proposed development will result in a theoretical increase in peak flow from 3.52 L/s to 5.13 L/s at MH 511 where the Block 5 development outlets to Maritime Way. This represents a theoretical peak flow increase of 1.61 L/s from the anticipated 2012 land use (i.e., hotel use, based on 270 L/pers/day).

c) Proposed parcel west of Block 9 (previously identified in the 1996 Robinson KTC Sanitary Design as Zone 122) – Retirement Home – Claridge Homes
The proposed development will result in a theoretical increase in peak flow from 2.84 L/s to 7.19 L/s at MH 7A where Claridge Homes development outlets to Maritime Way. This represents a theoretical peak flow increase of 3.57 L/s from the anticipated 2012 land use (i.e., Commercial use based on 2787m2 office space and Infiltration based 1.5ha). Theoretical flows for Zone 122 were taken from Robinson Consultants Sanitary Trunk Information from Table 4.7 and Figure 7.1, see attached copies.

At the most downstream MH at the intersection of Teron Rd and Campeau Dr (MH Ex. 2) shown on the attached Sanitary Sewer Design Sheet for the Kanata Village Green subdivision (prepared in 1998 by JLR), the proposed 3 developments would result in a theoretical increase in peak flow from 475.94 L/s to 480.24 L/s which corresponds to a 4.3 L/s (0.9%) peak flow increase.

Based on the available theoretical residual capacities noted in the attached updated Master Sanitary Sewer Design Sheet, the existing sanitary sewer system from the intersection of Rock Mountain Gate and Maritime Way to the intersection of Campeau Dr and Teron Rd has the capacity to accommodate the additional theoretical peak flows of Block 4, Block 5 and Zone 122. Downstream of the Campeau Drive intersection, JLR does not have on record design sheets for the City's existing downstream sanitary sewer system.

Should you have any questions or require anything further, please do not hesitate to call.

(1) As per Kanata Town Centre Sanitary Trunk Sewer Study, revised March 27, 1996, by Robinson Consultants Inc.

(2) Park or open space area.

(3) Equivalent population base on 208 rooms and 20 staff members.

(4) Allowance for an ultimate flow of 188 l/s to provide flexibility in future development as per Kanata Town Centre Sanitary Trunk Study.

(5) Additional flow associated with hotel ammenities including swimming pool with bathrooms and laundry as per design calculations for Block 1 provided by WSP (October 2016)

(6) Additional flow associated with overall ammenities including beauty salon, staff, dining and laundry as per design calculations for 1250 Maritime Way (Timberwalk Retirement Home) provided by Novatech (July 31,2017)

Hi Lucie,

The sanitary info for the block 4 and 5 developments are as follows:

1088 Maritime Way (Block 4)

San service connection between SANMH 512-513
San Drainage Area = 1.121 ha
No. Units = 144
Population = 271

1136 Maritime Way (Block 5)

San service connection between SANMH 510-511
San Drainage Area = 0.915 ha
No. Units = 154
Population = 301

Regards,

Matthew Hrehoriak, B.Eng., EIT

RE: Servicing Brief (Revised)
Kanata Town Centre
Central Business District Subdivision

PURPOSE OF UNDERTAKING

This Servicing Brief was prepared, in support of Urbandale Corporation's re-zoning application for the Kanata Town Centre - Central Business District (KTC-CBD) Subdivision. The following confirms that water, sanitary and storm sewer services are readily available to accommodate this subdivision.

DESCRIPTION OF PROPERTY

The subject lands encompass an area of approximately 18.8 hectares within the KTC-CBD, in the City of Ottawa (former City of Kanata). The lands are bounded to the north by Campeau Drive, to the west by a partial of land fronting Castlefrank Drive, south by Hwy. 417 and to the east by the Hydro One corridor (refer to Figure 1 attached). This subdivision is comprised of residential and commercial developments. Civil infrastructure (i.e., local watermains, storm and sanitary sewers) within the ROWs are all existing and in service. The trunk storm sewer, sanitary sewer, and watermain along the south leg of Maritime Way were constructed by Urbandale Corporation in 1998 and the remaining local infrastructure in 2007-2008. The 900 mm dia. feedermain on Great Lakes Avenue was constructed for the City of Ottawa in 2008-2009.

STORM SEWER SERVICING

Outlet:

The KTC-CBD lands are tributary to the KTC-CBD Stormwater Management Facility (SWMF) located in the southeast corner of the subdivision (refer to Figure 1 for Pond location), which subsequently drains to Watts Creek. This SWMF was designed, and subsequently constructed, to accommodate the development of the KTC-CBD subdivision and provides quantity as well as quality control for the stormwater flows. Details of the SWMF can be found in the Stormwater Management Report, Kanata Town Centre, Central Business District, dated January 1999 and prepared by J.L. Richards & Associates Limited.

Minor/Major System:

The KTC-CBD storm drainage system has been designed using the dual drainage concept, consisting of a minor and a major system. The minor system conveys storm runoff generated during frequent storm events (i.e., 1:5 year or less) via a local storm sewer collection system outletting to the KTC-CBD

DATE: OCT. 2006		
SCALE: N.T.S.		JOB No.: 15712

SWMF where, as noted, water quality and quantity treatment is provided. In accordance with the noted SWMF Design Report, the following runoff coefficients were used at detailed design of the local storm sewers

Residential - Low Density	C=0.40
Residential - Medium Density	C=0.45
Residential - High Density	C=0.50 and 0.60
Commercial Area	C=0.80 and 0.90
Parkland	C=0.20

An excerpt from the noted 1999 Stormwater Management Report, indicating assigned runoff coefficients 'C', allowable capture rates, and required on-site storage volumes for the specific land parcels is included in Attachment 1. The servicing design for each Block in the KTC-CBD shall adhere to these SWM design requirements.

The major system was established at the detailed design stage to convey excess runoff generated during severe events which would not be captured in the minor system. The excess runoff will be conveyed via overland routes to the KTC-CBD SWMF. The grading plans of the KTC-CBD lands have been developed with roadway sags. Local Blocks of land are expected to incorporate parking lot, cistern and roof top storage (or a combination thereof) at Site Plan Control, to ensure that the minor / major drainage concept, as specified in the Attachment 1 Table, is properly implemented.

A Hydraulic Grade Line (HGL) Analysis was carried out during detailed design to verify the anticipated amount of freeboard provided between the maximum storm sewer HGL elevations and the building underside of footing elevations. At detailed design of each Block, and as required at Site Plan Control, the on-site HGL clearance will require confirmation. The analysis was based on the estimated maximum water elevations of the KTC-CBD SWMF.

WATER SERVICING

The local network of water servicing for the KTC-CBD Subdivision was originally developed based on the existing 610 mm and 406 mm diameter watermains on Maritime Way. Water servicing specifics for the subdivision were addressed in detail in the Hydraulic Network Analysis (HNA) Report, which was prepared and submitted to the City in conjunction with the detailed servicing design of this project. The HNA Report for KTC-CBD demonstrated that the proposed (now existing) watermain sizing satisfied the water demand during the maximum hourly and fire flow conditions, as per the City of Ottawa Design Guidelines. Furthermore, the analysis included an assessment of pressures during low demand conditions (i.e., high pressure check) ensuring that the system pressures do not exceed the maximum pressure requirements set by the Ontario Building Code (OBC).

Since then a 900 mm diameter feedermain was constructed in 2008-2009 on Great Lakes Avenue, linking the existing 610 mm diameter feedermain on Maritime Way to the existing 900 mm diameter feedermain on Campeau Drive. At detailed design of each Block, and as required at Site Plan Control, the designer will have to obtain boundary conditions from the City of Ottawa and carry out an HNA for their respective Block.

SANITARY SEWER SERVICING

There is an existing 825 mm diameter trunk sanitary sewer along the south leg of Maritime Way and extends easterly along a service easement to Gray Crescent in Village Green. This sanitary trunk sewer was designed by JLR (1998) to accommodate the development of the KTC-CBD subdivision and upstream lands. Local sanitary sewers were subsequently designed by JLR (2007) and constructed. At the time of the original design of the trunk sewer the land parcels were designated for commercial use and the sanitary flows were estimated using 50,000 L/ha/d (MOE guidelines for sanitary flow for commercial zones). Subsequently, the land use was revised to include residential use, as well as commercial use. As such, in 2007, JLR revised the original sanitary flow estimate according to the projected land use to design the local sewers. Currently, Blocks 3, 6 and 8 have been sold and either developed or partially developed. As such, the estimated sanitary flows generated by the local Blocks have currently been updated to reflect exiting conditions and projected development of local Blocks. Table 1 provides a summary of the existing and anticipated land uses.

Table 1 - Kanata Town Centre Existing and Anticipated Land Uses

Block No.	Land Use Description	Number of Units/Rooms	Population	Daily Sewage Flow	Area
1	Hotel Suites	167	301	270 L/pp/d*	1.48
2	Commercial			50,000 L/pp/d	1.36
3	Retirement Home	208	333		1.02
4	Apartments	120	216	350 L/pp/d	1.37
5	Apartments	120	216	350 L/pp/d	1.02
6	Apartments with Community Centre			350 L/pp/d**	2.83
7	Commercial	N/A		50,000 L/pp/d	1.70
8	Hotel	125	225	270 L/pp/d*	1.02
9	Commercial	N/A	N/A	50,000 L/pp/d	4.96
10	Walkway Easement	N/A	N/A	N/A	0.28

Note: * Additional flow of dining room and staff accounted for in design
** Additional flow from Community Centre pool 40 L/pp/d accounted for in design

The current peak flow estimate has been revised in accordance with the land uses presented in Table 1. A comparison of the original peak flow estimate (1998) and the current peak flow estimate is presented in Table 2. The revised peak flow estimate, based on the current land use projections and existing land uses, creates an increase of estimated flow of 4.05 L/s (274.66 L/s – 270.61 L/s) at the Trunk easement. This flow, however, with a reduction in the downstream peaking factor due to the increase in residential units in the CBD, normalizes close to the original (1998) estimated flow and actually estimates a small reduction of 0.15 L/s (475.94 L/s - 475.79L/s) at the end of the residential subdivision at the intersection of Campeau Drive and Teron Road. The original peak flow design estimate (1998) and the updated detailed design spreadsheet, as well as the sanitary drainage boundary plan, can be found in Attachment 2.

Table 2 - Kanata Town Centre Estimated Sanitary Peak Flow

Location	Tributary Area	Up MH	Down MH	Original Assigned Flow Estimate (1998)	Current Flow Estimate (2012)
Trunk Easement	Upstream + KTC-CBD	500	94	**270.61**	**274.66**
Total Flow at end of Residential	Upstream + KTC-CBD + Residential to Teron Road	Ex.	Ex. 2	**475.94**	**475.79**

SUMMARY

The existing trunk (1998) and local (2007-2008) infrastructure servicing the subject lands, which are referred to as KTC-CBD, have capacity to service the local Blocks, with regards to stormwater and wastewater; based on the SWM design parameters provided in Attachment 1 and wastewater based on the revised existing and proposed land uses as per Table 1 of this report.. Domestic water is available along the frontage of each Block with the understanding that a site specific HNA is to be carried out at Site Plan Control to demonstrate conformance with the City Guidelines

(1) As per Kanata Town Centre Sanitary Trunk Sewer Study, revised March 27, 1996, by Robinson Consultants Inc.

(2) Park or open space area.

(3) Equivalent population base on 208 rooms and 20 staff members.

(4) Allowance for an ultimate flow of 188 l/s to provide flexibility in future development as per Kanata Town Centre Sanitary Trunk Study.

(5) Additional flow associated with hotel ammenities including swimming pool with bathrooms and laundry as per design calculations for Block 1 provided by WSP (October 2016)

APPENDIX F
Development Servicing Study Checklist

4. Development Servicing Study Checklist

The following section describes the checklist of the required content of servicing studies. It is expected that the proponent will address each one of the following items for the study to be deemed complete and ready for review by City of Ottawa Infrastructure Approvals staff.

The level of required detail in the Servicing Study will increase depending on the type of application. For example, for Official Plan amendments and re-zoning applications, the main issues will be to determine the capacity requirements for the proposed change in land use and confirm this against the existing capacity constraint, and to define the solutions, phasing of works and the financing of works to address the capacity constraint. For subdivisions and site plans, the above will be required with additional detailed information supporting the servicing within the development boundary.

4.1 General Content

N/A ☐ Executive Summary (for larger reports only).

☒ Date and revision number of the report.

☒ Location map and plan showing municipal address, boundary, and layout of proposed development.

☒ Plan showing the site and location of all existing services.

☒ Development statistics, land use, density, adherence to zoning and official plan, and reference to applicable subwatershed and watershed plans that provide context to which individual developments must adhere.

☒ Summary of Pre-consultation Meetings with City and other approval agencies.

☒ Reference and confirm conformance to higher level studies and reports (Master Servicing Studies, Environmental Assessments, Community Design Plans), or in the case where it is not in conformance, the proponent must provide justification and develop a defendable design criteria.

☒ Statement of objectives and servicing criteria.

☒ Identification of existing and proposed infrastructure available in the immediate area.

☒ Identification of Environmentally Significant Areas, watercourses and Municipal Drains potentially impacted by the proposed development (Reference can be made to the Natural Heritage Studies, if available).

☒ Concept level master grading plan to confirm existing and proposed grades in the development. This is required to confirm the feasibility of proposed stormwater management and drainage, soil removal and fill constraints, and potential impacts to neighbouring properties. This is also required to confirm that the proposed grading will not impede existing major system flow paths.

N/A ☐ Identification of potential impacts of proposed piped services on private services (such as wells and septic fields on adjacent lands) and mitigation required to address potential impacts.

N/A ☐ Proposed phasing of the development, if applicable.

☒ Reference to geotechnical studies and recommendations concerning servicing.

☒ All preliminary and formal site plan submissions should have the following information:

- Metric scale
- North arrow (including construction North)
- Key plan
- Name and contact information of applicant and property owner
- Property limits including bearings and dimensions
- Existing and proposed structures and parking areas
- Easements, road widening and rights-of-way
- Adjacent street names

4.2 Development Servicing Report: Water

N/A ☐ Confirm consistency with Master Servicing Study, if available

☒ Availability of public infrastructure to service proposed development

N/A ☐ Identification of system constraints

☒ Identify boundary conditions

☒ Confirmation of adequate domestic supply and pressure

☒ Confirmation of adequate fire flow protection and confirmation that fire flow is calculated as per the Fire Underwriter's Survey. Output should show available fire flow at locations throughout the development.

☒ Provide a check of high pressures. If pressure is found to be high, an assessment is required to confirm the application of pressure reducing valves.

N/A ☐ Definition of phasing constraints. Hydraulic modeling is required to confirm servicing for all defined phases of the project including the ultimate design

☒ Address reliability requirements such as appropriate location of shut-off valves

N/A ☐ Check on the necessity of a pressure zone boundary modification.

☒ Reference to water supply analysis to show that major infrastructure is capable of delivering sufficient water for the proposed land use. This includes data that shows that the expected demands under average day, peak hour and fire flow conditions provide water within the required pressure range

☒ Description of the proposed water distribution network, including locations of proposed connections to the existing system, provisions for necessary looping, and appurtenances (valves, pressure reducing valves, valve chambers, and fire hydrants) including special metering provisions.

N/A ☐ Description of off-site required feedermains, booster pumping stations, and other water infrastructure that will be ultimately required to service proposed development, including financing, interim facilities, and timing of implementation.

☒ Confirmation that water demands are calculated based on the City of Ottawa Design Guidelines.

☒ Provision of a model schematic showing the boundary conditions locations, streets, parcels, and building locations for reference.

4.3 Development Servicing Report: Wastewater

☒ Summary of proposed design criteria (Note: Wet-weather flow criteria should not deviate from the City of Ottawa Sewer Design Guidelines. Monitored flow data from relatively new infrastructure cannot be used to justify capacity requirements for proposed infrastructure).

☒ Confirm consistency with Master Servicing Study and/or justifications for deviations.

N/A ☐ Consideration of local conditions that may contribute to extraneous flows that are higher than the recommended flows in the guidelines. This includes groundwater and soil conditions, and age and condition of sewers.

☒ Description of existing sanitary sewer available for discharge of wastewater from proposed development.

☒ Verify available capacity in downstream sanitary sewer and/or identification of upgrades necessary to service the proposed development. (Reference can be made to previously completed Master Servicing Study if applicable)

☒ Calculations related to dry-weather and wet-weather flow rates from the development in standard MOE sanitary sewer design table (Appendix 'C') format.

☒ Description of proposed sewer network including sewers, pumping stations, and forcemains.

N/A ☐ Discussion of previously identified environmental constraints and impact on servicing (environmental constraints are related to limitations imposed on the development in order to preserve the physical condition of watercourses, vegetation, soil cover, as well as protecting against water quantity and quality).

N/A ☐ Pumping stations: impacts of proposed development on existing pumping stations or requirements for new pumping station to service development.

N/A ☐ Forcemain capacity in terms of operational redundancy, surge pressure and maximum flow velocity.

N/A ☐ Identification and implementation of the emergency overflow from sanitary pumping stations in relation to the hydraulic grade line to protect against basement flooding.

☐ Special considerations such as contamination, corrosive environment etc.

4.4 Development Servicing Report: Stormwater Checklist

☒ Description of drainage outlets and downstream constraints including legality of outlets (i.e. municipal drain, right-of-way, watercourse, or private property)

N/A ☐ Analysis of available capacity in existing public infrastructure.

☒ A drawing showing the subject lands, its surroundings, the receiving watercourse, existing drainage patterns, and proposed drainage pattern.

☒ Water quantity control objective (e.g. controlling post-development peak flows to pre-development level for storm events ranging from the 2 or 5 year event (dependent on the receiving sewer design) to 100 year return period); if other objectives are being applied, a rationale must be included with reference to hydrologic analyses of the potentially affected subwatersheds, taking into account long-term cumulative effects.

N/A ☐ Water Quality control objective (basic, normal or enhanced level of protection based on the sensitivities of the receiving watercourse) and storage requirements.

☒ Description of the stormwater management concept with facility locations and descriptions with references and supporting information.

N/A ☐ Set-back from private sewage disposal systems.

☒ Watercourse and hazard lands setbacks.

N/A ☐ Record of pre-consultation with the Ontario Ministry of Environment and the Conservation Authority that has jurisdiction on the affected watershed.

☒ Confirm consistency with sub-watershed and Master Servicing Study, if applicable study exists.

- [X] Storage requirements (complete with calculations) and conveyance capacity for minor events (1:5 year return period) and major events (1:100 year return period).
- [X] Identification of watercourses within the proposed development and how watercourses will be protected, or, if necessary, altered by the proposed development with applicable approvals.
- [X] Calculate pre and post development peak flow rates including a description of existing site conditions and proposed impervious areas and drainage catchments in comparison to existing conditions.
- N/A [ ] Any proposed diversion of drainage catchment areas from one outlet to another.
- [X] Proposed minor and major systems including locations and sizes of stormwater trunk sewers, and stormwater management facilities.
- N/A [ ] If quantity control is not proposed, demonstration that downstream system has adequate capacity for the post-development flows up to and including the 100-year return period storm event.
- N/A [ ] Identification of potential impacts to receiving watercourses
- N/A [ ] Identification of municipal drains and related approval requirements.
- [X] Descriptions of how the conveyance and storage capacity will be achieved for the development.
- [X] 100 year flood levels and major flow routing to protect proposed development from flooding for establishing minimum building elevations (MBE) and overall grading.
- [X] Inclusion of hydraulic analysis including hydraulic grade line elevations.
- [X] Description of approach to erosion and sediment control during construction for the protection of receiving watercourse or drainage corridors.
- N/A [ ] Identification of floodplains – proponent to obtain relevant floodplain information from the appropriate Conservation Authority. The proponent may be required to delineate floodplain elevations to the satisfaction of the Conservation Authority if such information is not available or if information does not match current conditions.
- N/A [ ] Identification of fill constraints related to floodplain and geotechnical investigation.

4.5 Approval and Permit Requirements: Checklist

The Servicing Study shall provide a list of applicable permits and regulatory approvals necessary for the proposed development as well as the relevant issues affecting each approval. The approval and permitting shall include but not be limited to the following:

☒ Conservation Authority as the designated approval agency for modification of floodplain, potential impact on fish habitat, proposed works in or adjacent to a watercourse, cut/fill permits and Approval under Lakes and Rivers Improvement Act. The Conservation Authority is not the approval authority for the Lakes and Rivers Improvement Act. Where there are Conservation Authority regulations in place, approval under the Lakes and Rivers Improvement Act is not required, except in cases of dams as defined in the Act.

☐ Application for Certificate of Approval (CofA) under the Ontario Water Resources Act.

N/A ☐ Changes to Municipal Drains.

N/A ☐ Other permits (National Capital Commission, Parks Canada, Public Works and Government Services Canada, Ministry of Transportation etc.)

4.6 Conclusion Checklist

☒ Clearly stated conclusions and recommendations

N/A ☐ Comments received from review agencies including the City of Ottawa and information on how the comments were addressed. Final sign-off from the responsible reviewing agency.

☒ All draft and final reports shall be signed and stamped by a professional Engineer registered in Ontario

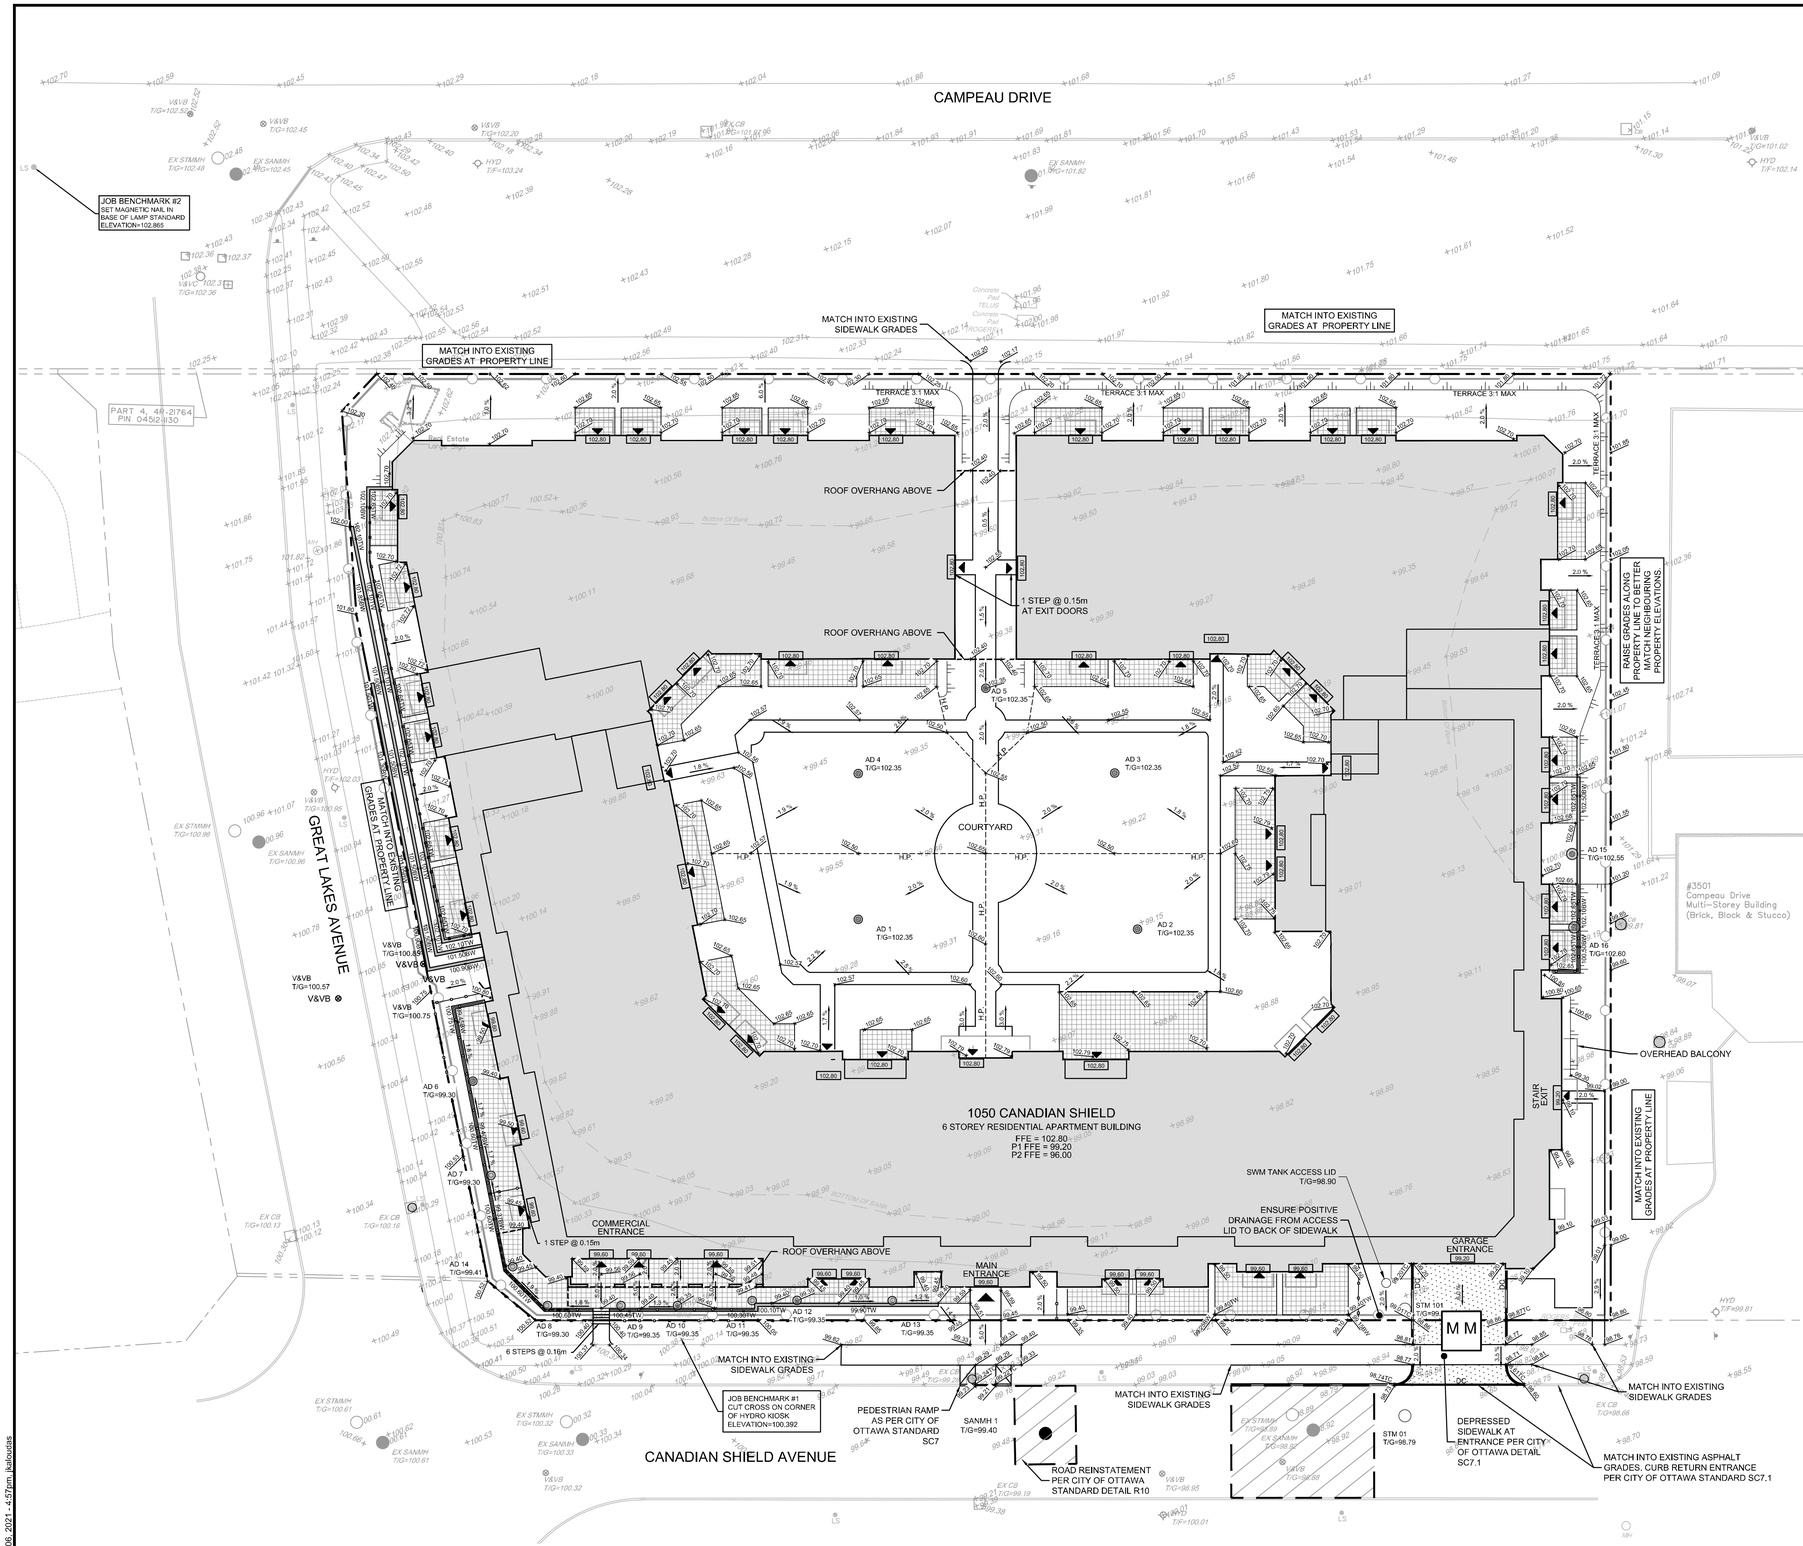
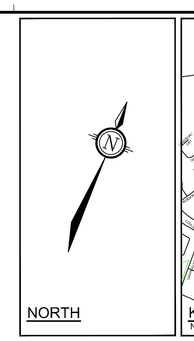
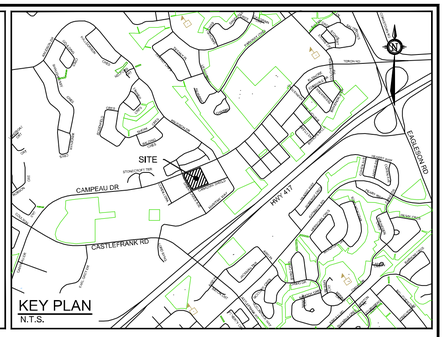
PLANAT.DWG - 841mmx594mm

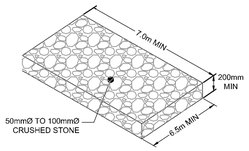






LEGEND

- PROPERTY LINE
- 98.40 — PROPOSED ELEVATION
- x 98.40 — EXISTING ELEVATION
- x 97.79TW — PROPOSED TOP OF WALL ELEVATION
- 97.79BW — PROPOSED BOTTOM OF WALL ELEVATION
- 97.88TC — PROPOSED TOP OF CURB ELEVATION
- 102.80 — PROPOSED DOOR SILL ELEVATION
- 2.0 % — SLOPE AND DIRECTION
- V&VB — PROPOSED VALVE AND VALVE BOX
- PROPOSED BUILDING ENTRANCE
- DIRECTION OF MAJOR OVERLAND FLOW
- AD — PROPOSED AREA DECK DRAIN BY OTHERS (REFER TO MECH DRAWINGS FOR MORE INFO)
- PROPOSED FILTER BAGS AT CATCHBASINS, CATCHBASIN MANHOLES AND TRENCHDRAINS
- M M — PROPOSED MUD MAT
- LIGHT DUTY SILT FENCE (OPSD 219.110)
- H.P. — PROPOSED HIGH POINT
- PROPOSED CURB
- DC — PROPOSED DEPRESSED CURB
- TERRACING 3:1 SLOPE MAX (UNLESS OTHERWISE INDICATED)
- PROPOSED RETAINING WALL
- PROPOSED RAILING
- SAWCUT
- ROAD REINSTATEMENT
- V&VC — *EXISTING VALVE & VALVE CHAMBER*
- V&VB — *EXISTING VALVE & VALVE BOX*
- *EXISTING HYDRANT*
- SAN MH — *EXISTING SANITARY MANHOLE*
- STM MH — *EXISTING STORM MANHOLE*
- CB 1 — *EXISTING CATCHBASIN*
- LS — *EXISTING LIGHT STANDARD*



MUD MAT DETAIL
NOT TO SCALE

PAVEMENT STRUCTURE:

HEAVY DUTY PAVEMENT
40mm HL3 OR SP 12.5
50mm HL8 PR SP 19.0
150mm OPSS GRANULAR "A"
450mm OPSS GRANULAR "B" TYPE II

REFER TO 120191-ND FOR ADDITIONAL NOTES

NOTE:
THE POSITION OF ALL POLE LINES, CONDUITS, WATERMAINS, SEWERS AND OTHER UNDERGROUND AND OVERGROUND UTILITIES AND STRUCTURES IS NOT NECESSARILY SHOWN ON THE CONTRACT DRAWINGS, AND WHERE SHOWN, THE ACCURACY OF THE POSITION OF SUCH UTILITIES AND STRUCTURES IS NOT GUARANTEED. BEFORE STARTING WORK, DETERMINE THE EXACT LOCATION OF ALL SUCH UTILITIES AND STRUCTURES AND ASSUME ALL LIABILITY FOR DAMAGE TO THEM.

PLANA1.DWG - 341mmx594mm

GENERAL NOTES:

1. COORDINATE AND SCHEDULE ALL WORK WITH OTHER TRADES AND CONTRACTORS.
2. DETERMINE THE EXACT LOCATION, SIZE, MATERIAL AND ELEVATION OF ALL EXISTING UTILITIES PRIOR TO COMMENCING CONSTRUCTION. PROTECT AND ASSUME RESPONSIBILITY FOR ALL EXISTING UTILITIES WHETHER OR NOT SHOWN ON THIS DRAWING.
3. OBTAIN ALL NECESSARY PERMITS AND APPROVALS FROM THE CITY OF OTTAWA BEFORE COMMENCING CONSTRUCTION.
4. BEFORE COMMENCING CONSTRUCTION OBTAIN AND PROVIDE PROOF OF COMPREHENSIVE, ALL RISK AND OPERATIONAL LIABILITY INSURANCE FOR $5,000,000.00. INSURANCE POLICY TO NAME OWNERS, ENGINEERS AND ARCHITECTS AS CO-INSURED AND THE CITY OF OTTAWA AS THIRD PARTY.
5. RESTORE ALL DISTURBED AREAS ON-SITE AND OFF-SITE, INCLUDING TRENCHES AND SURFACES ON PUBLIC ROAD ALLOWANCES TO EXISTING CONDITIONS OR BETTER TO THE SATISFACTION OF THE CITY OF OTTAWA AND ENGINEER.
6. REMOVE FROM SITE ALL EXCESS EXCAVATED MATERIAL, ORGANIC MATERIAL AND DEBRIS UNLESS OTHERWISE INSTRUCTED BY ENGINEER. EXCAVATE AND REMOVE FROM SITE ANY CONTAMINATED MATERIAL. ALL CONTAMINATED MATERIAL SHALL BE DISPOSED OF AT A LICENSED LANDFILL FACILITY.
7. ALL ELEVATIONS ARE GEODETIC.
8. REFER TO GEOTECHNICAL REPORT (No. PG5371-1, DATED MAY 19, 2021), PREPARED BY PATERSON GROUP FOR SUBSURFACE CONDITIONS, CONSTRUCTION RECOMMENDATIONS, AND GEOTECHNICAL INSPECTION REQUIREMENTS. THE GEOTECHNICAL CONSULTANT IS TO REVIEW ON-SITE CONDITIONS AFTER EXCAVATION PRIOR TO PLACEMENT OF THE GRANULAR MATERIAL.
9. REFER TO ARCHITECT'S AND LANDSCAPE ARCHITECT'S DRAWINGS FOR BUILDING AND HARDSURFACE AREAS AND DIMENSIONS.
10. REFER TO STORMWATER MANAGEMENT REPORT (R-2021-097) PREPARED BY NOVATECH ENGINEERING CONSULTANTS LTD.
11. SAW CUT AND KEY GRIND ASPHALT AT ALL ROAD CUTS AND ASPHALT TIE IN POINTS AS PER CITY OF OTTAWA STANDARDS (R10).
12. PROVIDE LINE/PARKING PAINTING AS REQUIRED FOR REINSTATEMENT.
13. CONTRACTOR TO PROVIDE THE CONSULTANT WITH A GENERAL PLAN OF SERVICES INDICATING ALL SERVICING AS-BUILT INFORMATION SHOWN ON THIS PLAN. AS-BUILT INFORMATION MUST INCLUDE: PIPE MATERIAL, SIZES, LENGTHS, SLOPES, INVERT AND T/G ELEVATIONS, STRUCTURE LOCATIONS, VALVE AND HYDRANT LOCATIONS, T/WM ELEVATIONS AND ANY ALIGNMENT CHANGES, ETC.

SEWER NOTES:

1. SPECIFICATIONS:

ITEM	SPEC. No.	REFERENCE
CATCHBASIN (600x600mm)	705.010	OPSD
STORM / SANITARY MANHOLE (1200Ø)	701.010	OPSD
CB, FRAME & COVER	400.020	OPSD
STORM / SANITARY MH FRAME	S25	CITY OF OTTAWA
SANITARY COVER	S24	CITY OF OTTAWA
STORM COVER (CLOSED)	S24.1	CITY OF OTTAWA
STORM COVER (OPEN)	S28.1	CITY OF OTTAWA
SEWER TRENCH	S6 & S7	CITY OF OTTAWA
STORM SEWER	PVC DR 35	CITY OF OTTAWA
SANITARY SEWER	PVC DR 35	CITY OF OTTAWA
ELBOW CB	S31	CITY OF OTTAWA
TEE CB	S30	CITY OF OTTAWA

2. SERVICES ARE TO BE CONSTRUCTED TO 1.0m FROM FACE OF BUILDING AT A MINIMUM SLOPE OF 1.0%.
3. PIPE BEDDING, COVER AND BACKFILL ARE TO BE COMPACTED TO AT LEAST 95% OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY. THE USE OF CLEAR CRUSHED STONE AS A BEDDING LAYER SHALL NOT BE PERMITTED.
4. FLEXIBLE CONNECTIONS ARE REQUIRED FOR CONNECTING PIPES TO MANHOLES (FOR EXAMPLE KOR-N-SEAL, PSX: POSITIVE SEAL AND DURASEAL), THE CONCRETE CRADLE FOR THE PIPE CAN BE ELIMINATED.
5. THE OWNER SHALL REQUIRE THAT THE SITE SERVICING CONTRACTOR PERFORM FIELD TESTS FOR QUALITY CONTROL OF ALL SANITARY SEWERS. LEAKAGE TESTING SHALL BE COMPLETED IN ACCORDANCE WITH OPSS 410.07.16, 410.07.16.04 AND 407.07.24. DYE TESTING IS TO BE COMPLETED ON ALL SANITARY SERVICES TO CONFIRM PROPER CONNECTION TO THE SANITARY SEWER MAIN. THE FIELD TESTS SHALL BE PERFORMED IN THE PRESENCE OF A CERTIFIED PROFESSIONAL ENGINEER WHO SHALL SUBMIT A CERTIFIED COPY OF THE TEST RESULTS.
6. STORM MANHOLES AND CBMHS ARE TO HAVE 300mm SUMPS UNLESS OTHERWISE INDICATED.
7. CONTRACTOR TO TELEVISE (CCTV) ALL PROPOSED SEWERS, 200mmØ OR GREATER PRIOR TO BASE COURSE ASPHALT. UPON COMPLETION OF CONTRACT, THE CONTRACTOR IS RESPONSIBLE TO FLUSH AND CLEAN ALL SEWERS & APPURTENANCES.
8. DYE TESTING IS TO BE COMPLETED ON SANITARY SERVICES TO CONFIRM PROPER CONNECTION TO THE SANITARY SEWER MAIN.
9. A SANITARY BACKWATER VALVE ON THE SANITARY SERVICE IS REQUIRED.
10. ALL DRAINAGE FOR THE UNDERGROUND PARKING LEVELS IS REQUIRED TO BE DIRECTED TO THE SANITARY SEWER.

EROSION AND SEDIMENT CONTROL NOTES:

1. THE OWNER AGREES TO PREPARE AND IMPLEMENT AN EROSION AND SEDIMENT CONTROL PLAN TO THE SATISFACTION OF THE CITY OF OTTAWA, APPROPRIATE TO THE SITE CONDITIONS, PRIOR TO UNDERTAKING ANY SITE ALTERATIONS (FILLING, GRADING, REMOVAL OF VEGETATION, ETC.) AND DURING ALL PHASES OF SITE PREPARATION AND CONSTRUCTION IN ACCORDANCE WITH THE CURRENT BEST MANAGEMENT PRACTICES FOR EROSION AND SEDIMENT CONTROL SUCH AS BUT NOT LIMITED TO INSTALLING FILTER CLOTHS ACROSS MANHOLE/CATCHBASIN LIDS TO PREVENT SEDIMENTS FROM ENTERING STRUCTURES AND INSTALL AND MAINTAIN A LIGHT DUTY SILT FENCE BARRIER AS REQUIRED.
2. THE CONTRACTOR SHALL PLACE FILTER CLOTH UNDER THE CATCHBASIN AND MANHOLE GRATES FOR THE DURATION OF CONSTRUCTION AND WILL REMAIN IN PLACE DURING ALL PHASES OF CONSTRUCTION.
3. SILT FENCING FOR ENTIRE PERIMETER OF SITE, SHALL BE UTILIZED TO CONTROL EROSION FROM THE SITE DURING CONSTRUCTION.
4. THE CONTRACTOR ACKNOWLEDGES THAT FAILURE TO IMPLEMENT EROSION AND SEDIMENT CONTROL MEASURES MAY BE SUBJECT TO PENALTIES IMPOSED BY ANY APPLICABLE REGULATORY AGENCY.
5. EROSION AND SEDIMENT CONTROL MEASURES MAY BE MODIFIED IN THE FIELD AT THE DISCRETION OF THE CITY OF OTTAWA SITE INSPECTOR OR CONSERVATION AUTHORITY.

GRADING NOTES:

1. ALL TOPSOIL, ORGANIC OR DELETERIOUS MATERIAL MUST BE ENTIRELY REMOVED FROM BENEATH THE PROPOSED PAVED AREAS AS DIRECTED BY THE SITE ENGINEER OR GEOTECHNICAL ENGINEER.
2. EXPOSED SUBGRADES IN PROPOSED PAVED AREAS SHOULD BE PROOF ROLLED WITH A LARGE STEEL DRUM ROLLER AND INSPECTED BY THE GEOTECHNICAL ENGINEER PRIOR TO THE PLACEMENT OF GRANULARS.
3. ANY SOFT AREAS EVIDENT FROM THE PROOF ROLLING SHOULD BE SUB-EXCAVATED AND REPLACED WITH SUITABLE MATERIAL THAT IS FROST COMPATIBLE WITH THE EXISTING SOILS AS RECOMMENDED BY THE GEOTECHNICAL ENGINEER.
4. THE GRANULAR BASE SHOULD BE COMPACTED TO AT LEAST 100% OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY VALUE. ANY ADDITIONAL GRANULAR FILL USED BELOW THE PROPOSED PAVEMENT SHOULD BE COMPACTED TO AT LEAST 98% OF THE STANDARD PROCTOR MAXIMUM DRY DENSITY VALUE.
5. MINIMUM OF 2% GRADE FOR ALL GRASS AREAS UNLESS OTHERWISE NOTED.
6. MAXIMUM TERRACING GRADE TO BE 3:1 UNLESS OTHERWISE NOTED.
7. ALL GRADES BY CURBS ARE EDGE OF PAVEMENT GRADES UNLESS OTHERWISE INDICATED.
8. ALL CURBS SHALL BE BARRIER CURB (150mm) UNLESS OTHERWISE NOTED AND CONSTRUCTED AS PER CITY OF OTTAWA STANDARDS (SC1.1).
9. REFER TO LANDSCAPE PLAN FOR PLANTING AND OTHER LANDSCAPE FEATURE DETAILS.
10. CONTRACTOR TO PROVIDE THE CONSULTANT WITH A GRADING PLAN INDICATING AS-BUILT ELEVATIONS OF ALL DESIGN GRADES SHOWN ON THIS PLAN.

WATERMAIN NOTES:

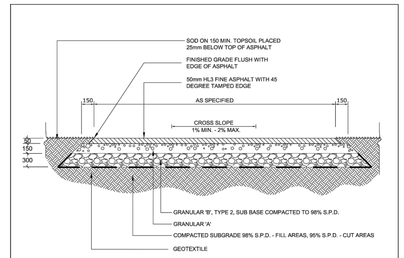
1. SPECIFICATIONS:

ITEM	SPEC. No.	REFERENCE
WATERMAIN TRENCHING	W17	CITY OF OTTAWA
THERMAL INSULATION IN SHALLOW TRENCHES	W22	CITY OF OTTAWA
WATERMAIN CROSSING BELOW SEWER	W25	CITY OF OTTAWA
WATERMAIN	PVC DR 18	

2. SUPPLY AND CONSTRUCT ALL WATERMAINS AND APPURTENANCES IN ACCORDANCE WITH THE CITY OF OTTAWA STANDARDS AND SPECIFICATIONS. EXCAVATION, INSTALLATION, BACKFILL AND RESTORATION OF ALL WATERMAINS BY THE CONTRACTOR. CONNECTIONS AND SHUT-OFFS AT THE MAIN AND CHLORINATION OF THE WATER SYSTEM SHALL BE PERFORMED BY CITY OFFICIALS.
3. WATERMAIN SHALL BE MINIMUM 2.4m DEPTH BELOW GRADE UNLESS OTHERWISE INDICATED.
4. PROVIDE MINIMUM 0.25m CLEARANCE BETWEEN OUTSIDE OF PIPES AT ALL CROSSINGS.
5. WATER SERVICE IS TO BE CONSTRUCTED TO WITHIN 1.0m OF FOUNDATION WALL AND CAPPED, UNLESS OTHERWISE INDICATED.

SWM TANK NOTES:

1. THE MINIMUM INTERNAL SIZE OF THE STORMWATER MANAGEMENT TANK IS TO BE 312m^3. REFER TO THE CROSS SECTION DETAIL AND THE ARCHITECT'S DRAWINGS FOR TANK DIMENSIONS, CONFIGURATION, MATERIALS AND WATERPROOFING DETAILS.
2. THE ACCESS HATCHES ARE TO OPERATE AS THE EMERGENCY OVERFLOW FOR THE SWM TANK. PROVIDE THE FRAME AND COVERS PER S25 & S28.1 RESPECTIVELY.
3. PROVIDE CIRCULAR HOLLOW ALUMINIUM MAINTENANCE HOLE STEPS ALONG TANK WALLS AT THE ACCESS HATCHES PER OPSD 405.010.



NOTES:

ALL MEASUREMENTS ARE IN MILLIMETRES UNLESS OTHERWISE NOTED

EXCAVATION:	EXCAVATE TO 500mm MIN. DEPTH OR DEEPER, AS REQUIRED. CONTRACTOR SHALL BE RESPONSIBLE FOR THE REMOVAL AND REPLACEMENT OF ANY UNSUITABLE SUBGRADE MATERIAL SUCH AS TOPSOIL, ALL SOFT SPOTS AND/OR ORGANIC MATTER AND REPLACEMENT WITH CLEAN SUBSOIL FILL. SUBGRADE SHALL BE CONSOLIDATED TO A 98% S.P.D. REMOVE EXCAVATED MATERIAL OFF SITE UNLESS OTHERWISE DIRECTED
GRANULAR BASE:	GRANULAR 'A' - 100% STANDARD PROCTOR DENSITY MIN., GRANULAR B, TYPE 2, SUB BASE GRANULARS TO OPSS
ASPHALT:	50 TOP SURFACE LAYER (AFTER COMPACTION) OF HOT MIX HL3 FINE IN ACCORDANCE WITH O.P.S.S. STANDARDS
EDGE TREATMENT:	ASPHALT EDGE TO BE 45 DEGREES WELL TAMPED TO FORM UNIFORMLY SMOOTH, CLEAN EDGES WITHOUT LATERAL DEVIATIONS. SOD TO FEATHER IN WITH EXISTING SOD AND GRADES AT A MAXIMUM SLOPE OF 4:1. ALL SODDED AREAS SHALL BE 25mm BELOW THE ASPHALT SURFACE. REPLACE ALL TOPSOIL AND SOD AS DIRECTED IN CUT AND FILL SITUATIONS
DRAINAGE:	SLOPE TO BE A MINIMUM OF 2% ON CROWNED OR CROSS SLOPED PATHS AS DIRECTED ON SITE OR AS SHOWN IN DRAWINGS
SODDING:	ALL DISTURBED AREAS ALONG ASPHALT WALKWAYS SHALL BE SODDED OVER 150mm TOPSOIL FOR A MINIMUM DISTANCE OF 900mm
GEOTEXTILE:	GEOTEXTILE SHALL BE APPROVED NON-WOVEN CLASS 1 GEOTEXTILE AS PER MS-22.15 WHEN WARRANTED BY SOIL CONDITIONS, SUBJECT TO APPROVAL BY THE CONTRACT ADMINISTRATOR

**NOTE: TO BE CONFIRMED WITH SOIL INVESTIGATIONS AND MODIFIED ACCORDINGLY*

	TITLE: ASPHALT WALKWAY/ SERVICE ACCESS - HEAVY DUTY	DATE: FEB 2013
		REV: FEB 2016
		DWG No: SC21

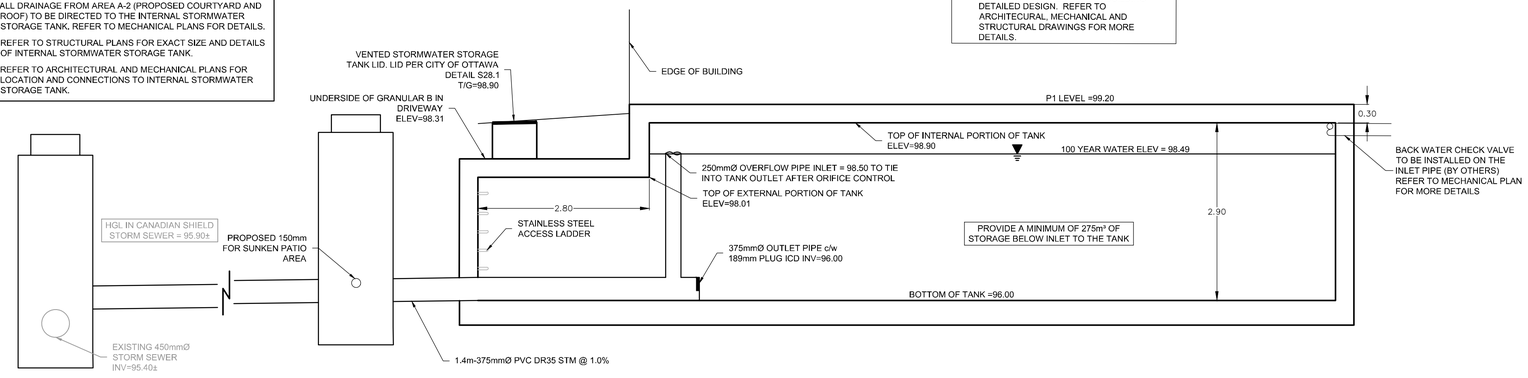
STORMWATER STORAGE TANK TABLE

DESIGN EVENT	CONTROLLED FLOW FROM STORAGE TANK	STORAGE TANK VOLUME	
		REQUIRED	PROVIDED
1:2 YR	68.6 L/s	105 m³	>312 m³
1:5 YR	82.6 L/s	147 m³	
1:100 YR	116.6 L/s	275 m³	

NOTES:

1. ALL DRAINAGE FROM AREA A-2 (PROPOSED COURTYARD AND ROOF) TO BE DIRECTED TO THE INTERNAL STORMWATER STORAGE TANK. REFER TO MECHANICAL PLANS FOR DETAILS.
2. REFER TO STRUCTURAL PLANS FOR EXACT SIZE AND DETAILS OF INTERNAL STORMWATER STORAGE TANK.
3. REFER TO ARCHITECTURAL AND MECHANICAL PLANS FOR LOCATION AND CONNECTIONS TO INTERNAL STORMWATER STORAGE TANK.

NOTE:
1. ELEVATIONS SHOWN ARE APPROXIMATE AND WILL BE CONFIRMED DURING BUILDING DETAILED DESIGN. REFER TO ARCHITECURAL, MECHANICAL AND STRUCTURAL DRAWINGS FOR MORE DETAILS.



SWM TANK DETAIL
1:50 SCALE

NOTE:
THE POSITION OF ALL POLE LINES, CONDUITS, WATERMAINS, SEWERS AND OTHER UNDERGROUND AND OVERGROUND UTILITIES AND STRUCTURES IS NOT NECESSARILY SHOWN ON THE CONTRACT DRAWINGS, AND WHERE SHOWN, THE ACCURACY OF THE POSITION OF SUCH UTILITIES AND STRUCTURES IS NOT GUARANTEED. BEFORE STARTING WORK, DETERMINE THE EXACT LOCATION OF ALL SUCH UTILITIES AND STRUCTURES AND ASSUME ALL LIABILITY FOR DAMAGE TO THEM.
