1 INTRODUCTION AND SITE DESCRIPTION

LRL Associates Ltd. was retained by Avenue 31 to prepare a servicing report to support site plan application for the property located at the southwest corner of the intersection of Boundary Road and Thunder Road in Ottawa ON. The civic address for the parcel is 6150 Thunder Road.

Figure 1: Arial View of Subject Lands

The proposed development will consist of five (5) separate industrial buildings varying in size, totaling a building footprint area of 41 065 m^2. Surrounding the buildings will be asphalt parking lots and travel ways to enhance vehicular maneuverability, as well as landscaped area. To optimize functionality of the industrial site, included in the asphalt areas are loading docks as well as additional trailer parking in the central portion of the site. The site will have three (3) main entrances; one access off of boundary road, and two separate entrances off of Thunder Road. A detailed site plan has been included in Appendix A for reference.

The specifics of the proposed buildings outlined in the site plan are summarized in table 1 below.

Table 1: Site Development, Proposed Building Details

	Industrial Building A	Industrial Building B	Industrial Building C	Industrial Building D	Industrial Building E	Total
Building Size	8 920 m^2	8 920 m^2	8 920 m^2	10 405 m^2	3 900 m^2	41 065 m^2

Number of Trailer Parking Spaces	15	15	15	15	0	60

This report has been prepared in consideration of the terms and conditions noted above and with the civil drawings prepared for the new development relating to the site plan in Appendix A. Should there be any changes in the design features, which may relate to the servicing and stormwater considerations, LRL Associates Ltd. should be advised to review the report recommendations and design conclusions.

2 PRE CONSULTATION

A pre consultation with the City of Ottawa Staff took place on August 9th, 2021. Following the meeting, noes were circulated outlining general submission requirements and engineering considerations relating to the domestic water supply and stormwater management criteria. Refer to Appendix B for the circulated pre consultation notes.

3 ADDITIONAL SITE PLAN CONTROL ENGINEERING REPORT

To support the civil design aspects of the subject site, additional investigations and reports were completed.

The following documents were prepared for the development and have been referenced

- Environmental Impact Statement, prepared by Kilgour and Associates Ltd, dated July 15, 2021.
- Geotechnical Investigation, prepared by Patterson Group Inc., dated July 22, 2021
- SWM Report, prepared by J.F. Sabourin and Associates Inc., dated November 2021.

4 EXISTING SITE AND AVAILABLE SERVICES

The subject site measures approximately 12.3 ha with most of the land vacant with ground cover consisting primarily of long grasses, shallow vegetation and trees surrounding the boundary of he property.

The property is bordered to the east by Boundary Road, North by Thunder Road, and is bounded on the northwest corner by an unnamed drain.

Existing topography of the land is relatively flat, with elevations ranging from approximately 76.0 m to 77.5 m. The general elevation interior to the site boundary is slightly lower than those of the surrounding roads. Appendix C includes an overall site boundary with contours demonstrating the existing topography.

The site does not have access to municipal storm, sanitary or traditional water service as the infrastructure does not exist on Boundary Road or Thunder Road; however, the site is within the service boundary of the Carlsbad Springs trickle-feed water system. This system is supplied by the City of Ottawa's central distribution system and distributed via a network of small diameter pipes in the area of the subject lands. Further discussion relating to the servicing requirements for the industrial development are summarized in the following sections.

5 WATER SERVICE

5.1 Carlsbad Springs Trickle-Feed Water Supply System

The proposed development site boundary falls within the Carlsbad Springs trickle-feed Water System. The Carlsbad Springs trickle-feed Water System is intended to provide sufficient water for indoor (domestic) use only through a network of small diameter mainline piping. During the design and planning stages of this system, no allowances were made for outdoor water use fire protection, therefore fire suppression requirements will have to be addressed with a designed site-specific fire reservoir.

A 102mm diameter pipe exists along Boundary Road and a 75mm pipe exists along Thunder Road which would be utilized for domestic supply.

The subject site has been allocated a pre-set constant flow rate, referred to as equivalent units (2,700L/d per unit) – however; the assigned three (3) equivalent units for the subject property does not necessarily represent the amount of water expected to be consumed within the development. In fact, given the magnitude of the site, and proposed development layout, to ensure that the domestic demands of the development could be fulfilled by the trickle-feed system, calculations have been done based on allocated building uses and seven (7) equivalent units are required to meet domestic demands of approximately 18 750 L/day further explained in section 5.2 below.

Prior to this submission for site plan application, Avenue 31 had mandated Stantec to further review the system and comment on the availability of domestic water to service the parcel and the availability of the required additional equivalent units.

5.2 Domestic Demands

The domestic demands of the site are intended to be met using the flow provided by the trickle-feed water system in conjunction with buildings specific water tanks or cisterns to meet peak instantaneous demands. The sizing of such cisterns would be determined during the detailed building design phase for building permit.

The demands summarized in table 3 on the following page provide a magnitude of the average water demands which are required to meet the domestic flow requirements of a fully built out site with specifics as outlined in the site development plan included in Appendix A.

To calculate the average day water demands for the development, the following design parameters have been used based on available City of Ottawa Design Guidelines.

- Office Space – 75 L/9.2m^2 of office space per day
- Loading Bay – 150 L/day per loading bay

Table 2: Domestic Demands based on Building Use

Use	Average Day Demands	Value	Total (L/day)
Office Space	75 L/9.2m^2	1 645 m^2 of Office Space	*Building A=1 834*
			Building B=1 834
			Building C=1 834
			Building D=2 120
			Building E=1 020
			8 641
Loading Bay	150L/Loading Bay	55 Loading Bays	*Building A=1 800*
			Building B=1 800

			Building E=600

		Total Consumption	*Building A=4 034*
			Building B= 4 034

			Building D=4 620
			Building E=2 020
			18 741
		Number of Equivalent Residential Units (2 700 L/day ea.)	**7**

For the proposed development with five (5) separate industrial buildings, approximately 7 equivalent residential units are required. Shall the interior layout of the building change, or specifics of number of loading docks

To ensure that the demand for the development on the system is limited to the number of equivalent units requested above, a water meter chamber is required at the property boundary to accommodate (while ensuring it is not exceeded). The water meter will be in a concrete underground chamber located at the entrance off of Thunder Road, located with in the City's right

of way, ultimately owned and operated by the City of Ottawa. Details of this chamber are located on the civil servicing drawing C901 located in Appendix E.

5.3 Fire Protection

In order to provide adequate fire protection and fulfill the fire suppression demands for the subject site, an above grade (or equivalent) storage tanks is required. Detailed design and selection of the most appropriate tanks will be completed and required during the building permit stage of future development on this site.

Based on available information at the time of this application, preliminary storage volumes of approximately 1 590 m^3 of water will be required to supply fire protection. The required fire flows for the development were calculated to be 9000 L/min based on table two in Appendix A-3.2.5.7 of the Ontario Building Code. Appendix D contains the fire flow calculations for the development. During the design, based on separation distances of the buildings, calculations are based on assuming that protection for one building (requiring the highest fire protection demand) will be required. Further verification and sizing is required by the fire consultant and mechanical engineering consultant during the building permit detailed design.

The location of the fire tanks and pumps are central to the site as can be seen on the site plan and engineering drawings. This system will be owned and operated privately.

On site fire hydrants have been supplied to ensure coverage for the entire footprint of each building. Hydrant locations can be viewed in the C401 DWG included in Appendix E.

6 SANITARY SERVICE

There is no municipal sanitary sewer proximal to the proposed development, and the development property is outside of the serviced urban boundary of the City of Ottawa. Municipal potable water is available – in limited quantity – adjacent to the site.

An on-site wastewater collection and treatment system is required to service the staff and users of site facilities. The treatment system shall be scaled to meet the required flows under the Ontario Building Code table 8.2.1.3 for the subject development. The wastewater treatment and discharge will require approval by the Ministry of the Environment, Conservation and Parks (MECP) in the form of an Environmental Compliance Approval (ECA) for the works. Detailed engineering and MECP consultation shall occur during site plan approval and prior to building permit applications.

The geotechnical and hydrogeological characteristics of the site, as well as the proximity to a suitable surface water receiver, suggest discharge to a water course is the preferred outlet option subject to confirmation through consultation with the MECP. A similar approach is presently employed for a neighbouring development of similar scale.

Discharge to the seasonal drainage ditch which intersects the north edge of the development is expected to require a high level of treatment prior to discharge. Consideration for storm water

discharge – which is proposed to outlet to the same receiver – along with sanitary flows will be required to ensure the overall discharge from the property meets Provincial objectives for post-development impacts. The downstream water quality cannot be negatively impacted as a result of the site development.

The proposed servicing will provide wastewater collection and treatment for all of the build out of the site. Pre-fabricated, manufactured treatment systems suitable for the proposed influent include sequencing batch reactor (SBR) technology, moving bed biological reactor (MBBR) technology, and membrane biological reactor (MBR) technology. The flexibility, adaptability and adjustability of the SBR process offer distinct advantages over other technologies; however, it is expected that tertiary filtration will be required post treatment to ensure effluent solids and phosphorus limits are consistently met. The final determination of process technology and configuration will be confirmed during further detailed engineering working alongside the manufacturer.

Expected influent characteristics include,

- Flow – an average day flow (ADF) of between twenty (20) and fifty (50) cubic metres per day (m3/d) is typical of the proposed site use;
- Organic carbon (cBOD5) – typical domestic-commercial wastewater composition suggests a figure between 200 and 275 milligrams per litre (mg/l);
- Kjedahl nitrogen (TKN) - typical domestic-commercial wastewater composition suggests a figure between 60 and 80 milligrams per litre (mg/l);
- Solids (TSS) - typical domestic-commercial wastewater composition suggests a figure between 275 and 350 milligrams per litre (mg/l);
- Phosphorus (TP) - typical domestic-commercial wastewater composition suggests a figure between 10 and 15 milligrams per litre (mg/l);
- Temperature - typical domestic-commercial wastewater composition suggests a figure between 12 and °C; and,
- pH - typical domestic-commercial wastewater composition suggests a figure between 6.5 and 8.5.

Expected effluent quality, comparable to similar operating sites,

- cBOD5 – 10 mg/l;
- TSS – 10 mg/l;
- Ammonia (TAN) – 2 to 5 mg/l (seasonal);
- TP – 0.1 mg/l;
- pH – 6.5 to 9.0; and,
- e. coli. – 200 CFU/100ml.

These effluent limits are achievable through each of the shortlisted technologies listed earlier. The concentration in the discharge will be lowered when blended with discharge from the stormwater pond.

7 STORMWATER MANAGEMENT

Currently there is no municipal storm sewer adjacent to the subject lot. In pre-development conditions, the stormwater accumulated on the property would be retained from various depressions in the topography, sheet drain in the north direction to the unnamed drain or towards the undeveloped lands bordering the parcel to the south and west, ultimately reaching the surrounding pervious area.

A combination of an on-site sewer network, detention areas, quality treatment units, best management practices and low impact development principles are designed to be implemented to ensure the proposed development will meet the City's stormwater quantity and quality requirements.

J.F. Sabourin and Associates was retained to complete the modeling and summarize further details of the stormwater management approach for the proposed development. Refer to the separate report for all further details.

Conclusions of the stormwater management report have been integrated into the servicing drawings included in Appendix E. Site grading has been detailed to ensure surface storage is provided.

8 CONCLUSIONS

This report has been prepared to support the site plan application for the proposed industrial development located at 6150 Thunder Road.

Based on the forgoing the conclusions in relation to the serviceability of the site are as follows:

- Water:
    - Domestic demands will be required to be supplied by the Carlsbad Springs trickle-feed supply system. Approximately seven (7) equivalent connections are required to meet the domestic demands of the proposed buildings.
    - A storage tank and pressure system as well as on site fire hydrants are required to provide the water required for fire suppression is required to meet the fire demands of development on the subject property.
- Sanitary Sewage
    - Onsite sewage treatment and collection facility will be designed in detail to release treated effluent to the unnamed drain running through the property. This final effluent rate will be considered during the stormwater management design as well to ensure post development flow rates do not exceed predevelopment conditions. Current Stormwater design outlets at a lesser rate the predevelopment with this taken into consideration.
- Stormwater
    - Currently stormwater runoff flows uncontrolled to the South & West borders of the property.
    - The property is mostly pervious area in existing conditions. In developing the lot into a "light industrial" lot, the development has increased the impervious area greatly.
    - Stormwater release rate will be controlled through a number of on-site orifices and three (3) dry retention areas. The storm sewer network will require insulation due to

low cover, and a pump to elevate the conveyed water to the retention area at the downstream section of the network.

- An outlet control device/structure at the two main outlets (towards Boundary Roadside ditch, and the unnamed ditch) will ensure flows do not exceed predevelopment values.
- Storm quality treatment units are proposed. Final sizing to be confirmed upon further detailed design.
- Reference to separate Stormwater Management Report Prepared by J.F. Sabourin and Associates Inc. is required for full SWM design description and modeling details.

Subect:

- This pre-consultation meeting is to discuss the site plan control application needed for an industrial development at 5368 Boundary Road and a portion of 6150 Thunder Road.
- 6150 Thunder Road and 5368 Boundary Road are subject to a current Zoning By-law Amendment and Official Plan Amendment applications. Please note the site is not currently zoned nor designated for industrial development.
- The following notes are provided based on the assumption that the site will be zoned RG for Rural General industrial. Please note that a decision has not been rendered by the City Council on this matter yet. There is no current date expected for these applications to go before the Agriculture and Rural Affairs Committee nor council for a decision.
- Matters of holding symbols, split zoning, or setbacks greater than those typical of the RG zone may be recommended by staff to the ARAC on the above noted OPA and ZBLA applications.
- The following notes are provided based on a typical industrial site plan application. Staff would be pleased to update these pre-consultation notes, and the list of required plans and studies should an Official Plan Amendment and Zoning By-law Amendment be approved on the site.

- Please note that a City of Ottawa New Official Plan is scheduled to go to Council for a decision in Fall of 2021. The required submissions should speak to the proposed policies of the New Official Plan and how the proposal intends to comply with proposed policies. Depending on timing of application submission, the policy regime and requirements may change.

Proposed:

- Proposed is a one storey warehouse with retail and office component. Illustrated in the site plan provided is a 585 m2 office, a 585 m2 retail and a 4,960 m2 warehouse space and 74 parking spaces.
- 6150 Thunder Road is 16.71 ha in size, with frontage on both Thunder Road and Boundary Road. The property is bisected by an unnamed watercourse. The lands subject to the site plan pre-consultation are those located north of the watercourse and understood to be about 2.5 ha in size.
- The subject site is located directly south of a series of existing residences that front onto Thunder Road. Opposite the subject lands are on/off ramps of the 417 Highway. To the west of the property, lands are forested and contain the headwaters of Bearbrook Creek.
- The subject lands are designated General Rural in the Official Plan.
- There site is part of the Natural Heritage System identified on Schedule L1
- The proposed use is not appropriate in the General Rural Area. An OPA is required to bring the lands into the Rural Employment lands to support the use.
- The property is currently zoned RU (Rural Countryside) which does not permit warehouse/office, or retail use. A zoning amendment will be required to permit a warehouse, or retail use.
- The subject lands are serviced with water by the Carlsbad Trickle Feed (Pubic service area). Water availability to the site is limited. Please see Engineering notes below.
- Until such a time as a zoning amendment is approved for the site, it is challenging discuss the permitted uses or zoning provisions. Should a zoning amendment for a rural industrial use be approved by City Council for the site, matters of water servicing, compatibility with adjacent users, natural heritage or hazard lands may result in the use of zoning hold symbols, or setbacks different than those typical in the proposed RG zone being utilized.

Design Considerations

- A planning rationale would be required to support the site plan application: It must assess the types and levels of contaminant discharges expected by the specific industry, including those associated with transportation facilities which serve the industries. **Necessary mitigative measures should be identified based upon technical assessments.** Rationalization of site design should be provided. Discussion of existing and proposed D-6 Guidelines needs to be provided. Greater setbacks than the minimums provided in the zoning by-law may be required.
- The city will be looking for recommendations to reduce energy and water consumption through landscaping and lot layout, as per OP section 4.9
- The public frontage of the site should be designed to include high quality landscaping.
- Elevation drawings are required for the proposed buildings.
- A landscape plan is required as part of the submission package.

Engineering Considerations

- Connection will be to the Carlsbad Trickle Feed Water System. A servicing report or brief will be required to confirm that there is capacity in the system to supply the site. There are 3 residential equivalent connections to the Trickle Feed System available to site (combined with 6150 Thunder road lands to the north of the unnamed water course). Staff advise there

are 6 additional connections available on first come first serve basis for site plans at the time of registration.
- Stormwater will need to be controlled post development to the pre-development rates. Quality controls will come from the CA.
- The site will require a septic system. As the flows are expected to exceed 10,000l/d, then the approval will be the MECP and not the Ottawa Septic Office.
- MECP approval for stormwater will most likely be required. You will need to confirm with the MECP.
- You will need to confirm whether this property is in the capture area of the Municipal Drains in the area. There is some Drainage Act Approvals proceeding in this area.
- All approvals from other authorities, including ECA approvals from the MECP should be identified.

Transportation and Noise Considerations

- Please provide a figure to confirm the sight lines for the access close to Boundary on Thunder.
- Any comments related to the site plan that were not addressed previously at ZBLA and OPA applications should be addressed.
- Ensure the throat length at the access is met per TAC standards for a collector road.
- Stationary noise study will be required (site is in close proximity to noise sensitive use).

Environmental Considerations

- Any development will require an EIS as the site is identified as part of the City's Natural Heritage System (Official Plan Schedule L1). The EIS will need to address,
    - Significant woodlands and compensation for any removal
    - Headwater Drainage Feature assessment and watercourse relocation. Consideration of thermal regimes.
    - Potential SAR habitat, OP Section 4.7.4
    - Watercourse Setbacks, OP section 4.7.3. Low impact development cannot be located in these setbacks.
    - Significant wildlife habitat
    - Setbacks from wetlands on adjacent properties.
- Tree Conservation Report (TCR) will be required. TCR can be combined with the EIS to reduce duplications. Guidance for this report can be found on the city's website through the link provided below.
- We encourage the applicant to review and draw design elements from the City's Bird-Safe Design Guidelines to incorporate into their design, especially for the office section

of their proposal where large glass windows are anticipated. https://ottawa.ca/en/city-hall/public-engagement/projects/bird-friendly-design-guidelines

- The city will be looking for recommendations to reduce energy and water consumption through landscaping and lot layout, as per OP section 4.9
- Please draw best practices from the City's protocol to protection wildlife during construction into the EIS recommendations
- Here are some relevant links:
  https://documents.ottawa.ca/sites/documents/files/documents/eis_guidelines2015_en.pdf

  https://documents.ottawa.ca/sites/documents/files/birdsafedesign_guidelines_en.pdf

  https://documents.ottawa.ca/sites/documents/files/documents/construction_en.pdf
- The applicant should consult with the with Conservation Authority regarding potential floodplain and if any permits will be required.

Conservation Authority Comments

Environmental

- An EIS with mitigation recommendations for the protection of the adjacent natural features, thermal impacts of the stormwater infrastructure, and offsetting requirements for the loss of headwater drainage features.
- headwater drainage features assessment following standard protocols
- A landscaping plan implementing the requirements of the EIS
- A detail design of the any realigned drainage features

Stormwater Management

- Treatment to achieve 80% TSS removal. The stormwater package should include, at a minimum, a report demonstrating how the standards are achieved, a grading and drainage plan and a sediment and erosion control plan.
- The design must implement the recommendations of the floodplain analysis, environmental studies and plans

Hazards

- Completion of a flood analysis demonstrating that development of the property will have no negative impacts on flooding or erosion upstream or downstream of the property.

Conservation Authority Regulations

- Any interference with a watercourse may require a permit under O. Reg. 170/06 and restrictions may apply

MTO comments

- A building and land use permit is required from the MTO. MTO staff will be looking to review a Transportation Impact Assessment, a Stormwater Management Plan, and a Site Illumination Plan.

It is important to note that the need for additional studies and plans may result during application review. If following the submission of your application, it is determined that material that is not identified in this checklist is required to achieve complete application status, in accordance with the Planning Act and Official Plan requirements, City Planning will notify you of outstanding material required within the required 30 day period. Mandatory pre-application consultation will not shorten the City's standard processing timelines, or guarantee that an application will be approved. It is intended to help educate and inform the applicant about submission requirements as well as municipal processes, policies, and key issues in advance of submitting a formal development application. This list is valid for one year following the meeting date. If the application is not submitted within this timeframe the applicant must again pre-consult with the City.

Notes:

2. The City requires sufficient information (water, stormwater, sanitary) - required as per Official Plan section 4.4.2. for proposals. May be a brief at submission stage.

4. Geotechnical Study / Slope Stability Study – required as per Official Plan section 4.8.3. All site plan applications need to demonstrate the soils are suitable for development. A Slope Stability Study may be required with unique circumstances (Schedule K or topography may define slope stability concerns).

6. Groundwater Impact Assessment required as per Official Plan sections 4.4.2, 4.7.5 & 4.8.2. When reviewing development applications the City will consider the potential impact on groundwater.

8. Wellhead Protection Plan required as per Official Plan sections 4.4.2, 4.4.2.4, 4.7.5 & 4.8.2. When reviewing development applications, the City will consider the potential impact on wellhead protection areas (municipal wells and wells with an MRA).

10. Erosion and Sediment Control Plan – required with all site plan applications as per Official Plan section 4.7.3.

11. Stormwater Management Report/Brief - required with all site plan applications as per Official Plan section 4.7.6.

12. Hydrogeological and Terrain Analysis Study – required as per Official Plan 4.4.2.1, 4.4.2.4 & 4.7.5. Will be required for a proposed change in land use that would allow residential development or institutional uses (such as schools or seniors homes) on private water and wastewater servicing.

14. Noise and Vibration Study – a Noise Study will be required if noise sensitive development is proposed within 250 metres of an existing or proposed highway or a railway right-of-way, or 100 metres of an arterial or collector roadway or rapid-transit corridor. A Vibration Study will be required if the proposed development is within 75 metres of either an existing or proposed railway ROW. A Noise Study may also be required if the proposed development is adjacent to an existing or proposed stationary noise source..

35. An Impact Assessment of an Adjacent Waste Disposal/Former Landfill Site study is required for development proposals within 500 metres of a solid waste disposal site or other appropriate influence area or former landfill site. For contaminated sites a Record of Site Condition or letter of continued use is required.

39.A Mineral Resource Impact Assessment study is required, as per Official Plan section 3.7.4 adjacent to an unlicensed Limestone Resource or Sand and Gravel Resource Area (very limited uses considered within 500 metres of Limestone Resource Area or 300 metres of Sand and Gravel Resource Area). EROSION AND SEDIMENT CONTROL NOTES

GENERAL

THE CONTRACTOR SHALL IMPLEMENT BEST MANAGEMENT PRACTICES, TO PROVIDE FOR PROTECTION OF THE AREA DRAINAGE SYSTEM AND THE RECEIVING WATERCOURSE, DURING CONSTRUCTION ACTIVITIES. THE CONTRACTOR ACKNOWLEDGES THAT FAILURE TO IMPLEMENT APPROPRIATE EROSION AND SEDIMENT CONTROL MEASURES MAY BE SUBJECT TO PENALTIES IMPOSED BY ANY APPLICABLE REGULATORY AGENCY.

THE CONTRACTOR ACKNOWLEDGES THAT SURFACE EROSION AND SEDIMENT RUNOFF RESULTING FROM THEIR CONSTRUCTION OPERATIONS HAS POTENTIAL TO CAUSE A DETRIMENTAL IMPACT TO ANY DOWNSTREAM WATERCOURSE OR SEWER, AND THAT ALL CONSTRUCTION OPERATIONS THAT MAY IMPACT UPON WATER QUALITY SHALL BE CARRIED OUT IN MANNER THAT STRICTLY MEETS THE REQUIREMENT OF ALL APPLICABLE LEGISLATION AND REGULATIONS.

AS SUCH, THE CONTRACTOR SHALL BE RESPONSIBLE FOR CARRYING OUT THEIR OPERATIONS, AND SUPPLYING AND INSTALLING ANY APPROPRIATE CONTROL MEASURES, SO AS TO PREVENT SEDIMENT LADEN RUNOFF ENTERING ANY SEWER OR WATERCOURSE WITHIN OR DOWNSTREAM OF THE WORKING AREA.

THE CONTRACTOR ACKNOWLEDGES THAT NO ONE MEASURE IS LIKELY TO BE 100% EFFECTIVELY FOR EROSION PROTECTION AND CONTROLLING SEDIMENT RUNOFF AND DISCHARGES FROM THE SITE. THEREFORE, WHERE NECESSARY THE CONTRACTOR SHALL IMPLEMENT ADDITIONAL MEASURES ARRANGED IN SUCH MANNER AS TO MITIGATE SEDIMENT RELEASE FROM THE CONSTRUCTION OPERATIONS AND ACHIEVE SPECIFIC MAXIMUM PERMITTED CRITERIA WHERE APPLICABLE. SUGGESTED ON-SITE MEASURES MAY INCLUDE, BUT SHALL NOT BE LIMITED TO, THE FOLLOWING METHODS: SEDIMENT PONDS, FILTER BAGS, PUMP FILTERS, SETTLING TANKS, SILT FENCE, STRAW BALES, FILTER CLOTHS, CATCH BASIN FILTERS, CHECK DAMS AND/OR OTHER RECOGNIZED TECHNOLOGIES AND METHOD AVAILABLE AT THE TIME OF CONSTRUCTION. SPECIFIC MEASURES SHALL BE INSTALLED IN ACCORDANCE WITH REQUIREMENTS OF OPSS 577 WHERE APPROPRIATE, OR IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS.

WHERE, IN THE OPINION OF THE CONTRACT ADMINISTRATOR OR REGULATORY AGENCY, THE INSTALLED CONTROL MEASURES FAIL TO PERFORM ADEQUATELY, THE CONTRACTOR SHALL SUPPLY AND INSTALL ADDITIONAL OR ALTERNATIVE MEASURES AS DIRECTED BY THE CONTRACT ADMINISTRATOR OR REGULATORY AGENCY, AS SUCH, THE CONTRACTOR SHALL HAVE ADDITIONAL CONTROL MATERIALS ON SITE AT ALL TIME WHICH ARE EASILY ACCESSIBLE AND MAY BE IMPLEMENTED BY HIM AT THE MOMENT'S NOTICE.

PRIOR TO COMMENCING WORK, THE CONTRACTOR SHALL SUBMIT TO THE CONTRACT ADMINISTRATOR SIX COPIES OF A DETAILED EROSION AND SEDIMENT CONTROL PLAN (ESCP). THE ESCP WILL CONSIST OF WRITTEN DESCRIPTION AND DETAILED DRAWINGS INDICATING THE ON-SITE ACTIVITIES AND MEASURES TO BE USED TO CONTROL EROSION AND SEDIMENT MOVEMENT FOR EACH STEP OF THE WORK.

CONTRACTOR'S RESPONSIBILITIES

THE CONTRACTOR SHALL ENSURE THAT ALL WORKERS, INCLUDING SUB-CONTRACTOR, IN THE WORKING ARE ARE AWARE OF THE IMPORTANCE OF THE EROSION AND SEDIMENT CONTROL MEASURES AND INFORMED OF THE CONSEQUENCES OF THE FAILURE TO COMPLY WITH THE REQUIREMENTS OF ALL REGULATORY AGENCIES.

THE CONTRACTOR SHALL PERIODICALLY, AND WHEN REQUESTED BY THE CONTRACT ADMINISTRATOR, CLEAN OUT ACCUMULATED SEDIMENT DEPOSITS AS REQUIRED AT THE SEDIMENT CONTROL DEVICES, INCLUDING THOSE DEPOSITS THAT MAY ORIGINATE FROM OUTSIDE THE CONSTRUCTION AREA. ACCUMULATED SEDIMENT SHALL BE REMOVED IN SUCH A MANNER THAT PREVENTS THE DEPOSITION OF THIS MATERIAL INTO THE SEWER WATERCOURSE AND AVOIDS DAMAGE TO CONTROL MEASURES. THE SEDIMENT SHALL BE REMOVED FROM THE SITE AT THE CONTRACTOR'S EXPENSE AND MANAGED IN COMPLIANCE WITH REQUIREMENTS FRO EXCESS EARTH MATERIAL, AS SPECIFIED ELSEWHERE IN THE CONTRACT.

THE CONTRACTOR SHALL IMMEDIATELY REPORT TO THE CONTRACT ADMINISTRATOR ANY ACCIDENTAL DISCHARGES OF SEDIMENT MATERIAL INTO EITHER THE WATERCOURSE OR THE STORM SEWER SYSTEM. FAILURE TO REPORT WILL BE CONSTITUTE A BRACH OF THIS SPECIFICATION AND THE CONTRACTOR MAY ALSO BE SUBJECT TO THE PENALTIES IMPOSED BY THE APPLICABLE REGULATORY AGENCY. APPROPRIATE RESPONSE MEASURES, INCLUDING ANY REPAIRS TO EXISTING CONTROL MEASURES OR THE IMPLEMENTATION OF ADDITIONAL CONTROL MEASURES, SHALL BE CARRIED OUT BY THE CONTRACTOR WITHOUT DELAY.

THE SEDIMENT CONTROL MEASURES SHALL ONLY BE REMOVED WHEN, IN THE OPINION OF THE CONTRACT ADMINISTRATOR, THE MEASURE OR MEASURES, IS NO LONGER REQUIRED. NO CONTROL MEASURE MAY BE PERMANENTLY REMOVED WITHOUT PRIOR AUTHORIZATION FROM THE CONTRACT ADMINISTRATOR. ALL SEDIMENT AND EROSION CONTROL MEASURES SHALL BE REMOVED IN A MANNER THAT AVOIDS THE ENTRY OF ANY EQUIPMENT, OTHER THAN HAND-HELD EQUIPMENT, INTO ANY WATERCOURSE, AND PREVENTS THE RELEASE OF ANY SEDIMENT OR DEBRIS INTO ANY SEWER OR WATERCOURSE WITHIN OR DOWNSTREAM OF THE WORKING AREA. ALL ACCUMULATED SEDIMENT SHALL BE REMOVED FROM THE WORKING AREA AT THE CONTRACTOR'S EXPENSE AND MANAGED IN COMPLIANCE WITH THE REQUIREMENTS FOR EXCESS EARTH MATERIAL

WHERE, IN THE OPINION OF EITHER THE CONTRACT ADMINISTRATOR OR A REGULATORY AGENCY, ANY OF THE TERMS SPECIFIED HEREIN HAVE NOT BEEN COMPLIED WITH OR PERFORMED IN A SUITABLE MANNER, OR TAT ALL, THE CONTRACTOR ADMINISTRATOR OR A REGULATORY AGENCY HAS THE RIGHT TO IMMEDIATELY WITHDRAW ITS PERMISSION TO CONTINUE THE WORK BUT MAY RENEW ITS PERMISSION UPON BEING SATISFIED THAT THE DEFAULTS OR DEFICIENCIES IN THE PERFORMANCE OF THIS SPECIFICATION BY THE CONTRACTOR HAVE BEEN REMEDIED.
