### Introduction

EXP was retained by B+H Architects on behalf of Children's Hospital of Eastern Ontario (CHEO) to prepare a Traffic Impact Assessment (TIA) for the parking garage being constructed as a part of the Phase 1 1Door4Care (1D4C) hospital expansion located at 401 Smyth Road. The proposed parking garage is to be located on the northeast corner of the Ring Road (E-W) and Emergency Access Road Intersection as shown in *Figure 1*. The new parking garage is anticipated to house 1,050 parking spaces.

Figure 1: Site Location

### 1. Screening

A TIA screening form for the proposed development was completed to identify the needs of the TIA. A copy of the completed screening form is attached to this report as *Appendix A* and the findings are as follows:

### TRIP GENERATION

The proposed parking garage is anticipated to include 1,050 parking spaces. On its opening, the parking garage will replace existing surface parking lots currently used to service existing hospital trips. These surface parking lots will be displaced by the parking garage and the 1D4C building construction. However, given a pent-up demand for CHEO staff parking passes and room within the new garage to accommodate them before the occupation of the 1D4C building, some new vehicle trips will be generated. As a result, building the new parking garage will create more than 60 new vehicle trips; thus, it triggers the trip generation component of the TIA.

LOCATION

The parking garage is not in a design priority area or transit-oriented development zone and does not propose a new driveway to a boundary street; thus, the location triggers are not satisfied.

**SAFETY** 

The proposed development does not trigger any of the safety triggers.

Upon review of the City's screening assessment, EXP has confirmed the need to complete a TIA for the proposed development.

## 2. Scoping

### 2.1 Existing and Planned Conditions

### 2.1.1 Proposed Development

CHEO is planning to expand hospital facilities within the existing CHEO campus. This includes a proposed treatment center for children called 1Door4Care. As shown in *Figure 1*, the building is anticipated to displace the existing surface parking lot currently in that location. It is anticipated that this building will be occupied by 2024. As part of this expansion, a new 33,500 m<sup>2</sup> parking garage will also be constructed within the CHEO campus.

The focus of this TIA is on the parking garage as it will be constructed in 2024, prior to the 1D4C expansion that is expected to be complete by 2027.

As shown in *Figure 1*, the parking garage is anticipated to be located in the northwest quadrant of the intersection of General Hospital Access Road and Ring Road (E-W). The parking garage is expected to be a 7-storey building (including an open-air roof) that houses 1,050 parking spaces. The first two floors of the proposed structure will service visitor parking demand and the 5 floors above will service staff parking demand. It is anticipated that this parking garage will be constructed and open for use by 2024.

On it's opening, the parking garage will replace Lot E, an existing 270 stall gravel surface parking lot. Also, another 286 surface parking stalls will be displaced as the 1D4C building will be constructed at the location of Lot B. *Figure 2* illustrates the impact the location of parking facilities impacted by the parking garage and the future 1D4C building.

Parking Facility

Number of Parking Stalls

Lot B

286 Stalls (Existing)
To be displaced by the future 1D4C building

Lot E

270 Stalls (Existing)
To be displaced by the Parking Garage

Parking Garage

1050 Stalls (New)

Figure 2: Parking Facilities

The site is currently zoned as Major Institutional (I2) Zone. The purpose of the Zone I2 is to:

• Ensure that major institutional uses such as hospitals, colleges, and universities are located at appropriate locations within areas designated as General Urban Area, Central Area, and Mixed-Use Centre in the Official Plan;

- Ensure that these large-scale high-traffic generating institutions locate only on large parcels of land, with direct access to an arterial road and near rapid transit stations and/or service;
- Impose regulations that ensure that the size and intensity of these uses are compatible with adjacent uses; and
- Permit minor institutional uses and provide for a range of ancillary service uses.

**Table 1** outlines the proposed land uses that will be used for this analysis. They were obtained from the Institute of Transportation Engineer's (ITE) *Trip Generation Manual 11<sup>th</sup> Edition*. Please note that the parking garage is not anticipated to generate any new trips on its own but will facilitate the need for a pent-up demand that will generate new auto trips to the campus. There are up to 360 staff on an existing parking waitlist. It is assumed spaces in the parking garage will be filled by this waitlist.

Table 1: Proposed Land Use

ITE Land Use Code	Size	Land Use
610	33,500 m <sup>2</sup>	Hospital (Parking Garage)

Vehicle access to the parking garage is anticipated to be provided from Ring Road (E-W) via a full movement access.

### 2.1.2 Existing Conditions

#### **Roads and Traffic Control**

The characteristics of the roads and intersections in the vicinity of the subject site are described below.

- Smyth Road
  - Smyth Road is a four-lane east-west running arterial road which features a posted speed limit of 50 km/h. The road features an urban cross-section with sidewalks on both sides of the road. Two signalized intersections serve the overall hospital and medical campus (CHEO/Ottawa General Hospital): Smyth Road / Ring Road (N-S) / South Haven Place (more focused to serve CHEO) and Smyth Road / General Hospital Access Road. Smyth Road / Ring Road (N-S) / South Haven Place features no turn lanes on Smyth Road. Smyth Road / General Hospital Access Road (more focused on serving OGH) features an eastbound left-turn lane and a westbound right-turn lane. Smyth Road is classified as a Spine Cycling Route and Truck Route by the City of Ottawa.

#### Ring Road

o Ring Road is a two-lane road with a posted speed of 50 km/h that circles the CHEO and the General Hospital Campus. Portions of Ring Road have sidewalk; however, it is not a continuous network. The northern portion of Ring Road features a multi-use path on its north side. The intersection of Ring Road (N-S) / Ring Road (E-W) in the southwest area of the campus is stop-controlled in the E-W direction. The Smyth Road / Ring Road (N-S) / South Haven Place intersection is signalized with southbound left and right turn lanes. North and southbound thru movements are not permitted at this intersection.

### • General Hospital Access Road

 General Hospital Access Road is a north-south running local road that connects Ring Road to Smyth Road and provides access to the Ottawa Hospital General Campus. The road features sidewalks on both sides of the road. The intersection of Smyth Road / General Hospital Access Road features two southbound left turn lanes

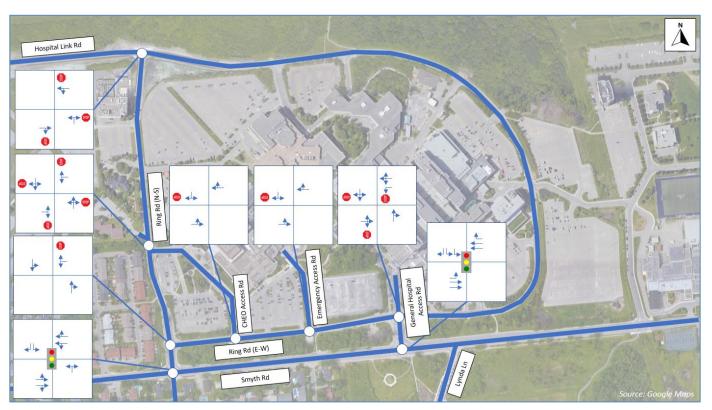

and one right turn lane. The intersection with Ring Road (E-W) is stop-controlled in the southbound, eastbound, and westbound directions, and is free-flowing in the northbound direction.

### • Hospital Link Road

Hospital Link Road is an east-west running two-lane local road with a posted speed of 50 km/h. The road
connects Ring Road to Alta Vista Road. There is no sidewalk along Hospital Link Road; however, there is a bidirectional multiuse path on its south side.

The existing lane configuration and traffic controls for the study area road network are presented in *Figure 3*.

Figure 3: Existing Lane Configuration and Traffic Controls

### **Walking and Cycling**

Walking and cycling facilities are somewhat limited within and around the CHEO campus. Existing facilities are as follows:

- Smyth Road features sidewalk on both sides of the road.
- The northern portion of Ring Road has a bi-directional multi-use path on its north side.
- Sidewalks are present intermittently along portions of Ring Road.

#### **Existing Transit Operations**

The following transit routes pass by or enter the CHEO Campus:

Route 45: Hospital to Hurdman & N Rideau

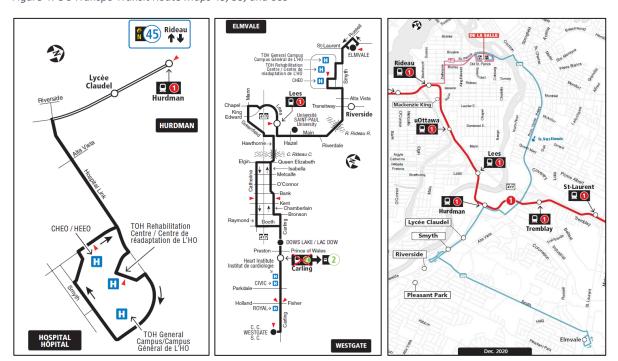

Route 45 is a route that runs between CHEO Campus and Hurdman Station. It runs 7 days a week with 15-minute weekday headways and 30-minute weekend headways. In the vicinity of the CHEO Campus, bus stops are located in the eastbound and northbound direction of Ring Road.

### • Route 55: Elmvale to Westgate

- Route 55 is a route that runs between Elmvale and Westgate, stopping at the CHEO front door as part of its
  route. It runs 7 days a week with 15-minute weekday headways and 30-minute weekend headways. In the
  vicinity of the CHEO Campus, a few bus stops are located along Ring Road and Smyth Road.
- Route 609: De La Salle to Elmvale
  - Route 609 is a route that runs between De La Salle and Elmvale, stopping along Smyth Road as part of its
    route. It runs a limited service on weekdays only. In the vicinity of the CHEO Campus, a few bus stops are
    located along Smyth Road.

Snippets of the three route maps associated with these routes are shown in Figure 4.

Figure 4: OC Transpo Transit Route Maps 45, 55, and 609

### **Existing Traffic Management Measures**

There are no existing traffic management measures currently provided near the site.

#### **Traffic Volumes**

Traffic volumes at the study intersections were provided by the City of Ottawa's Public Works Department or taken from a CHEO expansion traffic study completed by Stantec in June 2021. The City of Ottawa traffic counts and the traffic volume figures from the Stantec report are attached as *Appendix B*. Turning movement counts were collected during weekday AM and PM peak periods. *Table 2* shows the month and year that traffic counts were collected.

Table 2: Collected Turning Movement Counts

Location	Month / Year	Source*
Ring Road (N-S) / Hospital Link Road	February / 2020	Stantec Traffic Study
Ring Road (N-S) / CHEO Access Road	February / 2020	Stantec Traffic Study
Ring Road (N-S) / Ring Road (E-W)	February / 2020	Stantec Traffic Study
Ring Road (N-S) / Smyth Road	October / 2022	City of Ottawa Traffic Count
CHEO Access Road / Ring Road (E-W)	February / 2020	Stantec Traffic Study
Emergency Access Road / Ring Road (E-W)	February / 2020	Stantec Traffic Study
General Hospital Access Road / Ring Road (E-W)	February / 2020	Stantec Traffic Study
General Hospital Access Road / Smyth Road	December / 2019	City of Ottawa Traffic Count

<sup>\*</sup>Stantec Traffic Study is the 1Door4Care: Children's Hospital of Eastern Ontario (CHEO) 1Door4Care Project – Transportation Study (June 2021) prepared by Stantec.

To develop 2022 traffic volumes, a 1% annual growth rate was applied to the traffic counts collected prior to 2022. To develop the 1% growth rate, the City of Ottawa's long-range model (Exhibit 2.11 of the 2013 TMP) was used to provide the growth rate to/from the inner suburbs between 2011 and 2031.

It should be noted that the growth rate was only applied to through traffic along Smyth Road as traffic growth on the CHEO campus is largely based on the expansion of on-site services and facilities. *Figure 5* illustrates the Existing 2022 traffic volumes at the study area intersections.

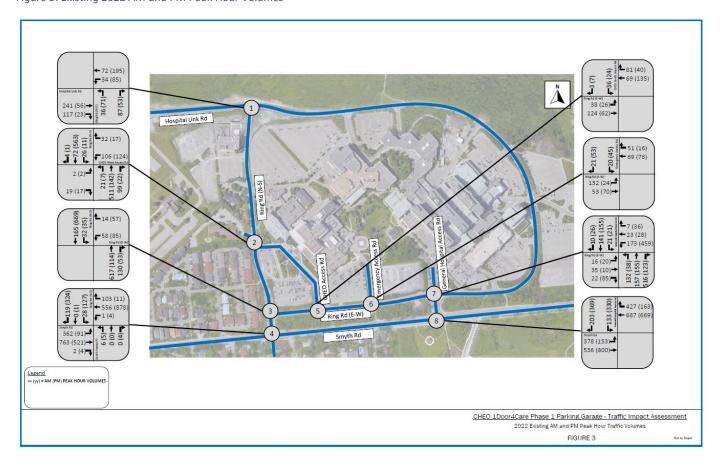

Figure 5: Existing 2022 AM and PM Peak Hour Volumes

#### **Collision History**

Collision data was provided by the City of Ottawa for the period of 2016 to 2020 along Smyth Road. Collision data was not available within the hospital campus as these are private roads. The collision data was reviewed to determine if there are any collision patterns during the five (5) year period. *Table 3* provides a summary of the collision data. The raw collision data can be found in **Appendix C**.

Table 3: Collision Data Summary

	Collision Type	Ring Road (N-S) / Smyth Road	General Hospital Access / Smyth Road	Smyth Road between Ring Road (N-S) and General Hospital Access
	Non-Fatal Injury	4	1	2
Classification	Property Damage Only	13	16	3
	Non-Reportable	-	1	-
	Rear End	8	8	2
Collision	Sideswipe	3	5	2
	Turning Movement	5	4	1
Туре	Angle	1	-	-
	SMV Other	-	1	-
	Following Too Close	6	4	1
	Failed to yield right-of-way	6	1	-
	Improper Lane Change	2	1	-
	Speed too fast for condition	1	-	-
Driver	Lost Control	-	3	-
Action	Disobeyed Traffic Control	-	1	-
	Improper Turn	-	2	-
	Driving Properly	-	1	-
	Unknown	2	5	2
	Other	-	-	2
	Clear	12	14	4
Environment	Rain	3	2	1
	Snow	2	2	-
	Dawn	1	2	-
Light	Daylight	12	10	2
Light	Dusk	1	2	1
	Dark	3	4	2

The collision data presented in *Table 3* found that approximately 1 in 5 collisions that occurred along this section of Smyth Road resulted in a non-fatal injury, suggesting the majority of vehicles are travelling at low enough speeds so as not to cause bodily harm.

There were no identifiable collision patterns in the provided data which suggests there is not any specific area of concern. The main type of collision was rear-end (45%) followed by sideswipe (25%) and turning movement (25%). The most common type of driver action was following too close (28%) or failing to yield the right-of-way (18%). The majority of collisions occurred in clear weather (75%) during the daytime (60%).

#### 2.1.3 Planned Conditions

#### **Planned Projects**

Based on the City of Ottawa's 2013 Transportation Master Plan, the following transportation projects nearby the proposed development are scheduled to occur. Please note these projects are listed under the Road Network Concept plans and therefore are not anticipated to be finalized by the study's ultimate horizon year.

### Alta Vista Transportation Corridor

- Bus / High Occupancy vehicle lanes and transit signal priority between Riverside Drive and Ottawa Health Sciences Centre.
- New four-lane road between Nicholas Street / Highway 417 interchange and Riverside Drive.
- New four-lane road (including two peak-period bus lanes) between the Ottawa Health Sciences Centre and Walkley Road.

### Smyth Road

Transit signal priority and queue jump lanes between Alta Vista Transportation Corridor and St. Laurent Boulevard.

### **Planned Developments**

Table 4 lists development applications that were identified on the City of Ottawa's Development Application Search Tool.

Table 4: Development Application Summary

Location	Туре	Year
700 Coronation	4-storey, 35-unit residential building with 47 parking spaces.	Unknown
355 Everest	8-storey mid-rise apartment building with 101 units and 3 levels of underground parking with 108 spaces.	2020
1967 Riverside	Infill of the existing hospital campus with a continuum of care seniors community consisting of a Long-Term Care Home (256 beds) in Phase 1, and a 15-storey registered retirement home (270 beds) and shared amenity space in the second phase.	Unknown
200 Steamline	A seven-building high-rise development to be constructed in three	Phase 1: 2021
230 Steamline	phases. The first phase of the proposal consists of two buildings, 15	Phase 2: 2027
260 Steamline	and 22 storeys high, with a total of 414 units. When phase 3 is completed, a total of 1,890 units will be constructed.	Phase 3: 2031
1971 St-Laurent	Three 17-storey residential use buildings with at-grade residential and amenity space and public park space all fronting on St. Laurent Blvd. Parking is provided at-grade and within a proposed new multi-level above-ground parking garage.	Unknown

### 2.2 Study Area and Time Periods

### 2.2.1 Study Area

The proposed study area for this proposed development is shown in *Figure 6* and includes the following nine (9) intersections:

- Ring Road (N-S) / Hospital Link Road
- Ring Road (N-S) / CHEO Access Road
- Ring Road (N-S) / Ring Road (E-W)
- Ring Road (N-S) / Smyth Road

- CHEO Access Road / Ring Road (E-W)
- Emergency Access Road / Ring Road (E-W)
- Parking Garage Entrance / Ring Road (E-W)
- General Hospital Access Road / Ring Road (E-W)
- General Hospital Access Road / Smyth Road

Figure 6: Study Intersections

### 2.2.2 Time Periods

The proposed scope of the transportation assessment includes the following analysis time periods:

- Weekday AM peak hour of roadway
- Weekday PM peak hour of roadway

### 2.2.3 Horizon Years

The scope of the transportation assessment proposes the following horizon years:

- 2022 existing conditions
- 2024 future background conditions

• 2024 total future conditions (parking garage build-out)

A future TIA that incorporates the 1D4C building will be completed at a later date. Therefore, a 5-year future horizon is not being analyzed as part of this TIA.

### 2.3 Exemption Review

The Exemptions Review table from the City of Ottawa Transportation Impact Assessment Guidelines is summarized below in *Table 5*. Many elements are exempt as this TIA is only reviewing the parking garage. Another TIA will need to be completed when assessing the 1D4C building.

Table 5: Exemptions Review

Module	Element	Exemption Considerations	Exempt? (Yes/No)
Design Review Compo	onent		
4.1. Development	4.1.2. Circulation and Access	Only required for site plans	No
Design	4.1.3. New Street Networks	Only required for plans of subdivisions	Yes
4.2. Parking	4.2.1. Parking Supply	Only required for site plans	No
	4.2.2. Spillover Parking	Only required for site plans where parking is 15% below unconstrained demand	No
Network Impact Comp	oonent		
4.5. Transportation Demand Management	All Elements	Not required for site plans expected to have fewer than 60 employees and/or students on location at any given time	Yes
4.6. Neighbourhood Traffic Management	4.6.1. Adjacent Neighbourhoods	Only required when the development relies on local or collector streets for access and total volumes exceed ATM capacity thresholds	Yes
4.8. Network Concept		Only required when proposed development generates more than 200 person-trips during the peak hour in excess of the equivalent volume permitted by establishing zoning	Yes

## 3. Forecasting

### 3.1 Development Generated Travel Demand

### 3.1.1 Trip Generation and Mode Shares

#### **Trip Generation Rates**

**Table 6** outlines the proposed auto trip generation rates that will be used for this analysis. They were obtained from the Institute of Transportation Engineer's (ITE) *Trip Generation Manual 11<sup>th</sup> Edition*. It was assumed Code 610 – Hospital would be the most appropriate proposed land use.

Please note that the parking garage is not anticipated to generate any new person trips. However, there currently are 360 staff on an existing parking waitlist. These staff likely use an alternative mode (transit, cycle, or walk) when travelling to work currently. With the construction of the parking garage, it is anticipated there will be a modal shift from transiting / cycling / walking to driving as parking spaces in the parking garage will be filled by this waitlist.

Furthermore, the Ottawa General Hospital and CHEO have separate parking facilities with on-site signage that directs drivers to their own facilities. Visitors will follow the signs, so it is anticipated that no further trips will be generated. For staff parking, each of the two hospitals manage their own parking structure and they cater exclusively to their own staff. Given this, we do not see those attending OGH to use the CHEO parking structure and vice versa.

Table 6: Trip Generation Rates

ITE Land Use Code	Employees	Peak Hour	Vehicle Trip Rate Per Employee	Entering	Exiting
Hospital (610)	360	AM	0.28	72%	28%
Hospital (610)	360	PM	0.28	30%	70%

#### **Future Mode Share Targets**

The CHEO parking garage is located in the Inner Area as defined by the City of Ottawa's 2013 Transportation Master Plan. Based on information in the Transportation Master Plan, in 2011 the Inner Area had a transit mode share of 42% and 20% for trips going to and coming from the Inner Area. By 2031 this is expected to minorly increase (approx. 2%).

The City of Ottawa typically requires TIAs to develop mode share targets for proposed developments. However, mode share targets have not been developed for this TIA as a parking garage is only going to service vehicle trips. When a TIA is completed for the CHEO facility mode share targets can be further explored.

#### **Vehicle Trip Generation**

Using the rates noted in *Table 6*, EXP estimated the number of site-generated auto-trips. The estimated site-generated auto trips are shown in *Table 7*. Also, the City of Ottawa's typical method of calculating person-trips was not completed as the proposed development is a parking garage and will only serve auto trips.

EXP Services Inc.

Table 7: Site-Generated Trips

		Weekday AM Peak Hour		Wee	kday PM Pea	ak Hour	
ITE Land Use Code	Trip Type	Total	In	Out	Total	In	Out
Hospital (610)	Auto Trips	101	73	28	101	30	71

While 360 staff are on the parking waitlist, the ITE auto trip rate was still applied to the number of employees as all vehicle trips are not anticipated to occur during the peak hours and are expected to be spread throughout the day.

### 3.1.2 Trip Distribution

The distribution of site-generated traffic entering/exiting the site was developed using traffic data from the intersections of Smyth Road / Ring Road (N-S), Smyth Road / General Hospital Access Road, and Hospital Link Road / Ring Road (N-S). Key movements from these traffic counts were used to develop the proportion of traffic entering/exiting the site from each direction. The trip distribution percentages for site-generated traffic is presented in *Table 8*.

Table 8: Trip Distribution Percentages

	Intersection	Movement	AM Peak Hour %	PM Peak Hour %
	Smyth Road / Ring Road (N-S)	EBL	40	36
Entering	Smyth Road / General Hospital Access Road	WBR	47	55
	Hospital Link Road / Ring Road (N-S)	EBR	13	9
	Smyth Road / Ring Road (N-S)	SBR	16	45
Exiting	Smyth Road / General Hospital Access Road	SBL	64	45
	Hospital Link Road / Ring Road (N-S)	NBL	20	10

### 3.1.3 Trip Assignment

Site-generated trips were then assigned to the road network based on the proportions developed in *Section 3.1.2*. The AM and PM peak hour site-generated traffic volumes are presented in *Figure 7*.

Figure 7: AM and PM Peak Hour Site Generated Trips

Children's Hospital of Eastern Ontario (CHEO) 1Door4Care Phase 1A – Parking Garage Traffic Impact Study – Forecasting Submission

Project Number: MRK-21023468-A0

Date: 2023/01/25

### **3.2 Background Network Travel Demands**

### **3.2.1 Transportation Network Plans**

Transportation network improvements are planned to occur near the development. However, as described in **Section 2.1.3**, these improvements are not anticipated to occur until well after the opening of the proposed parking garage. As such, adjustments to traffic volumes and the road network to account for these improvements have not been made within the TIA.

### 3.2.2 Background Growth

To develop the 2024 background traffic volumes, a 1% annual growth rate was applied to the 2022 traffic volumes.

To develop the 1% growth rate, the City of Ottawa's long-range model (Exhibit 2.11 of the 2013 TMP) was used to estimate the growth rate to/from the inner suburbs between 2011 and 2031.

It should be noted that the growth rate was only applied to through traffic along Smyth Road as traffic growth on the CHEO campus is largely based on the expansion of on-site services and facilities. *Figure 8* illustrates the Background 2024 AM and PM peak hour traffic volumes at the study area intersections. *Figure 9* illustrates the Total (Background + Site Generated) 2024 AM and PM peak hour traffic volumes.

### 3.2.3 Other Developments

Developments that are currently under construction or in the development approval process are listed in *Table 4*. Due to their locations and after reviewing available TIAs conducted for the developments, the developments are not anticipated to have a significant impact on the study area identified in this TIA. As such, trips generated by these developments have not applied and have been considered as part of the background growth (i.e., the 1% annual growth rate applied).

#### 3.3 Demand Rationalization

Demand rationalization is carried out when estimated future peak hour demand on the transportation network exceeds future capacity. Given the relatively small number of trips being added onto the road network in this TIA, it is not anticipated to be required. Demand rationalization has not been applied at this time but will be considered if appropriate as TDM measures could be effective on the behaviour of CHEO staff.

Figure 8: Background 2024 AM and PM Peak Hour Traffic Volumes

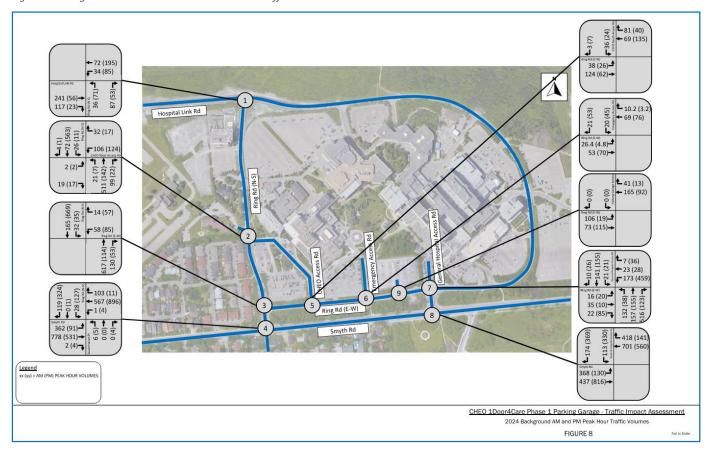

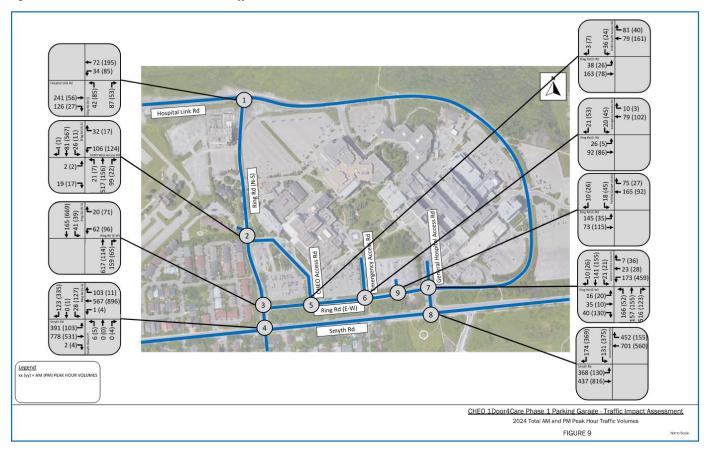

Figure 9: Total 2024 AM and PM Peak Hour Traffic Volumes

Appendix A – TIA Screening Form

## **Certification Form for TIA Study PM**

### **TIA Plan Reports**

On 14 June 2017, the Council of the City of Ottawa adopted new Transportation Impact Assessment (TIA) Guidelines. In adopting the guidelines, Council established a requirement for those preparing and delivering transportation impact assessments and reports to sign a letter of certification.

Individuals submitting TIA reports will be responsible for all aspects of development-related transportation assessment and reporting, and undertaking such work, in accordance and compliance with the City of Ottawa's Official Plan, the Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines.

By submitting the attached TIA report (and any associated documents) and signing this document, the individual acknowledges that s/he meets the four criteria listed below.

### **CERTIFICATION**

<b>~</b>	I have reviewed and have a sound understanding of the objectives, needs and requirements of the City of Ottawa's Official Plan, Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines;
<b>~</b>	I have a sound knowledge of industry standard practice with respect to the preparation of transportation impact assessment reports, including multi modal level of service review;
<b>~</b>	I have substantial experience (more than 5 years) in undertaking and delivering transportation impact studies (analysis, reporting and geometric design) with strong background knowledge in transportation planning, engineering or traffic operations; and
<b>V</b>	I am either a licensed¹ or registered² professional in good standing, whose field of expertise  is either transportation engineering  or transportation planning.

<sup>1,2</sup> License of registration body that oversees the profession is required to have a code of conduct and ethics guidelines that will ensure appropriate conduct and representation for transportation planning and/or transportation engineering works.

## City of Ottawa 2017 TIA Guidelines Screening Form

### 1. Description of Proposed Development

Municipal Address	401 Smyth Road
Description of Location	NW corner of the Ring Road/General Hospital Access Intersection.
Land Use Classification	Parking Garage
Development Size (units)	N/A
Development Size (m²)	1,050 space Parking Garage; 33,519 m2
Number of Accesses and Locations	1 Access on Ring Road
Phase of Development	Phase 1 of 2 (there will be additional related to 1Door4Care).
Buildout Year	Parking Garage built and occupied by 2024.

If available, please attach a sketch of the development or site plan to this form.

### 2. Trip Generation Trigger

Considering the Development's Land Use type and Size (as filled out in the previous section), please refer to the Trip Generation Trigger checks below.

Land Use Type	Minimum Development Size
Single-family homes	40 units
Townhomes or apartments	90 units
Office	3,500 m <sup>2</sup>
Industrial	5,000 m <sup>2</sup>
Fast-food restaurant or coffee shop	100 m²
Destination retail	1,000 m <sup>2</sup>
Gas station or convenience market	75 m²

<sup>\*</sup> If the development has a land use type other than what is presented in the table above, estimates of person-trip generation may be made based on average trip generation characteristics represented in the current edition of the Institute of Transportation Engineers (ITE) Trip Generation Manual.

# If the proposed development size is greater than the sizes identified above, the Trip Generation Trigger is satisfied.

Parking Garage with 1,050 parking spaces. The proposed development will generate more than 60 new person trips due to an existing latent parking demand consisting of 360 staff. The garage will house displaced surface parking spaces on the hospital campus due to new building development as well as facilitate the latent demand.

71 Revision Date: October, 2020

### 3. Location Triggers

	Yes	No
Does the development propose a new driveway to a boundary street that is designated as part of the City's Transit Priority, Rapid Transit or Spine Bicycle Networks?		
Is the development in a Design Priority Area (DPA) or Transit-oriented Development (TOD) zone?*		$\times$

<sup>\*</sup>DPA and TOD are identified in the City of Ottawa Official Plan (DPA in Section 2.5.1 and Schedules A and B; TOD in Annex 6). See Chapter 4 for a list of City of Ottawa Planning and Engineering documents that support the completion of TIA).

If any of the above questions were answered with 'Yes,' the Location Trigger is satisfied.

## 4. Safety Triggers

	Yes	No
Are posted speed limits on a boundary street are 80 km/hr or greater?		X
Are there any horizontal/vertical curvatures on a boundary street limits sight lines at a proposed driveway?		$\times$
Is the proposed driveway within the area of influence of an adjacent traffic signal or roundabout (i.e. within 300 m of intersection in rural conditions, or within 150 m of intersection in urban/ suburban conditions)?		X
Is the proposed driveway within auxiliary lanes of an intersection?		X
Does the proposed driveway make use of an existing median break that serves an existing site?		X
Is there is a documented history of traffic operations or safety concerns on the boundary streets within 500 m of the development?		X
Does the development include a drive-thru facility?		X

If any of the above questions were answered with 'Yes,' the Safety Trigger is satisfied.

### 5. Summary

	Yes	No
Does the development satisfy the Trip Generation Trigger?	X	
Does the development satisfy the Location Trigger?		$\square$
Does the development satisfy the Safety Trigger?		$\square$

If none of the triggers are satisfied, <u>the TIA Study is complete</u>. If one or more of the triggers is satisfied, the TIA Study must continue into the next stage (Screening and Scoping).
