Appendix J – Synchro Intersection Worksheets – 2033 Future Total Conditions
Appendix K – MMLOS Analysis
Appendix L – TDM Checklist

1 Screening

This study has been prepared according to the City of Ottawa’s 2017 Transportation Impact Assessment (TIA) Guidelines. Accordingly, a Step 1 Screening Form has been prepared and is included as Appendix A, along with the Certification Form for the TIA Study PM. As shown in the Screening Form, a TIA is required including the Design Review component and the Network Impact Component. This study has been prepared to support a zoning bylaw amendment and site plan applications.

2 Existing and Planned Conditions

2.1 Proposed Development

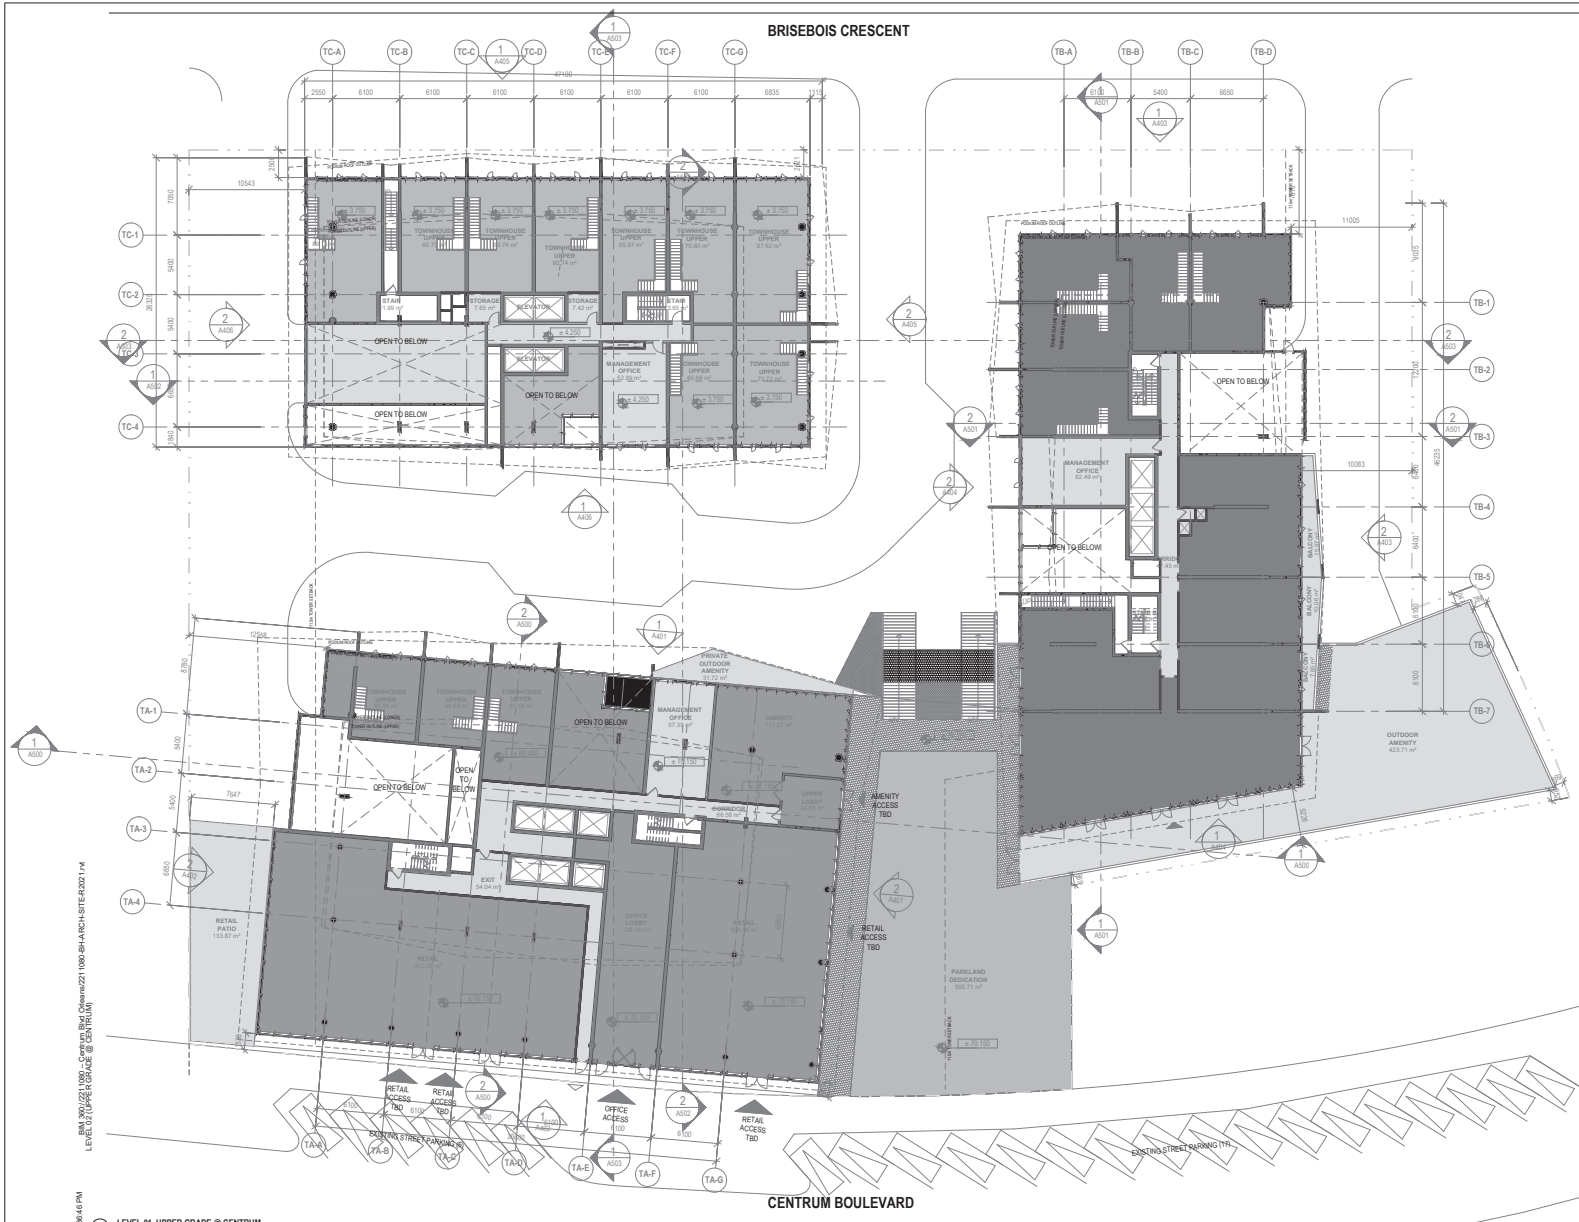

The development site is located at 265 Centrum Boulevard within the Mixed-Use Centre Zone (MC14[1520] S152). The existing site was a YMCA, now closed, and it will be replaced with three towers, two residential towers including 764 units, and one mix-used tower including 363 residential units, 8,970 sq. ft retail space, and 31,570 sq. ft office space. The site plan proposes a total of 516 vehicle parking spaces and 1254 bicycle parking spaces. The preliminary accesses are proposed to include three along Brisebois Crescent, and the existing two accesses on Brisebois Crescent will be removed. Build-out is anticipated to occur in a single phase by 2028. Figure 1 illustrates the study area context. Figure 2 illustrates the proposed concept plan.

2.2 Existing Conditions

2.2.1 Area Road Network

Place d'Orleans Drive: Place d'Orleans Drive is a City of Ottawa arterial road with a four-lane cross-section. The posted speed limit is 60km/h. Sidewalks are present on both sides of the road. The City-protected right of way is 37.5 metres within the study area. Place d'Orleans Drive is a designated truck route.

St Joseph Boulevard: St Joseph Boulevard is a City of Ottawa arterial road with a divided, four-lane cross-section. The posted speed limit is 50km/h west of Prestone Drive and 60km/h east of Prestone Drive. Sidewalks are present on both sides of the road. The City protected right-of-way is 32.0 metres from Gabriel Street to 130 m west of Duford Drive and 37.5 metres east to Trim Road. St Joseph Boulevard is a designated truck route.

Centrum Boulevard: Centrum Boulevard is a City of Ottawa collector road with a two-lane cross-section. The posted speed limit is 40km/h. Sidewalks and angle parking are provided on both sides of the road. The existing right of way is 26.0 metres within the study area.

Prestone Drive: Prestone Drive is a City of Ottawa collector road with a divided four-lane cross-section north of St Joseph Boulevard, and a major collector road south of St Joseph Boulevard with an undivided two-lane cross-section. The posted speed limit is 40km/h. Sidewalks are present on both sides of the road. Within the study area, the existing right of way is 24.5 metres north of St Joseph Boulevard and 26.0 metres south of St Joseph Boulevard.

Brisebois Crescent: Brisebois Crescent is a City of Ottawa local road with a two-lane cross-section. The unposted speed limit is assumed to be 50km/h. Sidewalks are present on one side of the road, and perpendicular parking is provided on the south side of the road. The existing right of way is 18.0 metres within the study area.

2.2.2 Existing Intersections

The existing key area intersections within 400 metres of the site have been summarized below:

Centrum Boulevard at Place d'Orleans Drive The intersection of Centrum Boulevard at Place d'Orleans Drive is a signalized intersection. The northbound and southbound approaches each consist of a shared left-turn/through lane and a shared through/right-turn lane. The eastbound approach consists of an auxiliary left-turn lane, a through lane, and an auxiliary channelized right-turn lane, and the westbound approach consists of a left-turn lane and a shared through/channelized right-turn lane. No turn restrictions were noted.

Centrum Boulevard at Brisebois Crescent West The intersection of Centrum Boulevard at Brisebois Crescent West is an unsignalized intersection with stop control on the minor approaches of Brisebois Crescent West. All approaches consist of a shared all-movements lane. No turn restrictions were noted.

Centrum Boulevard at Prestone Drive The intersection of Centrum Boulevard at Prestone Drive is an unsignalized T-intersection with all-way stop control. The northbound approach consists of a left-turn lane and a right-turn lane. The eastbound approach consists of a shared through/right-turn lane, and the westbound approach consists of a shared left-turn/through lane. No turn restrictions were noted.

Centrum Boulevard at Brisebois Crescent East The intersection of Centrum Boulevard at Brisebois Crescent East is an unsignalized T-intersection with stop control on the minor

approach of Brisebois Crescent East. All approaches consist of a shared all-movements lane. No turn restrictions were noted.

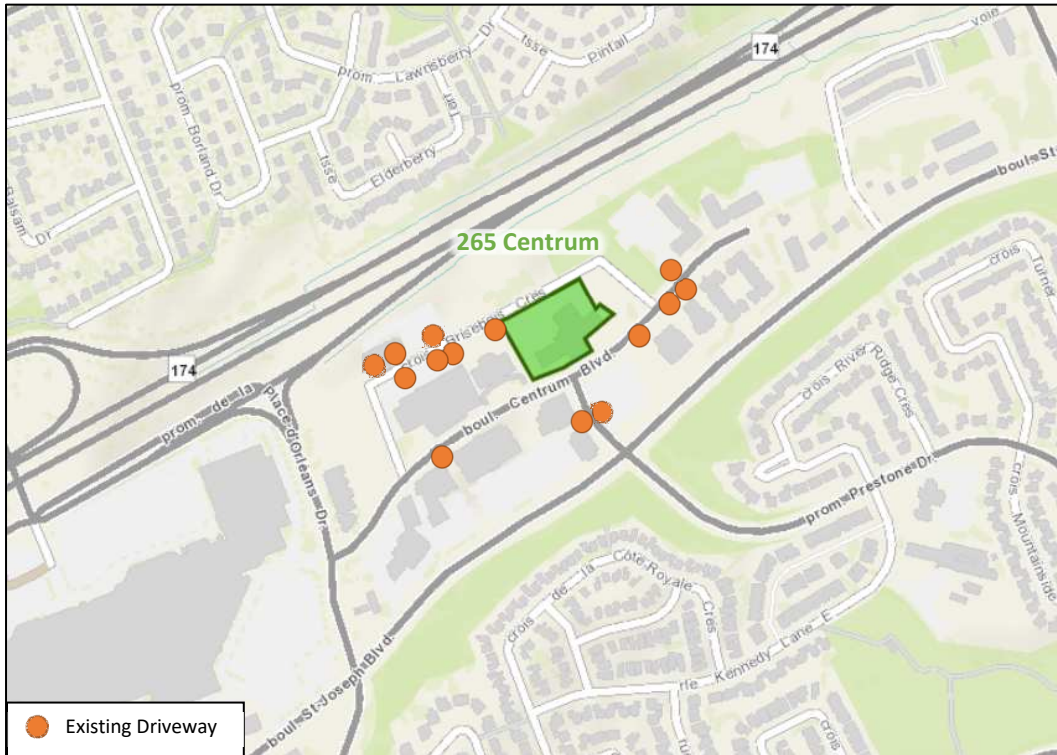

St Joseph Boulevard at Prestone Drive

The intersection of St Joseph Boulevard at Prestone Drive is a signalized intersection. The northbound approach consists of an auxiliary left-turn lane and a shared through/channelized right-turn lane, and the southbound approach consists of a left-turn lane and a shared through/channelized right-turn lane. The eastbound and westbound approaches each consist of an auxiliary left-turn lane, two through lanes, and an auxiliary channelized right-turn lane. No turn restrictions were noted.

2.2.3 Existing Driveways

Within 200 metres of the site accesses, three driveways to an office, three driveways to an art school, and one driveway to a library are on Brisebois Crescent. One driveway to a retail plaza, one to a parking lot, three to condominiums, and one to townhouses are present on Centrum Boulevard. On Prestone Drive, one driveway to a retail plaza and one to a parking lot are present. Figure 3 illustrates the existing driveways.

Figure 3: Existing Driveways

Source: <http://maps.ottawa.ca/geoOttawa/> Accessed: January 31, 2023

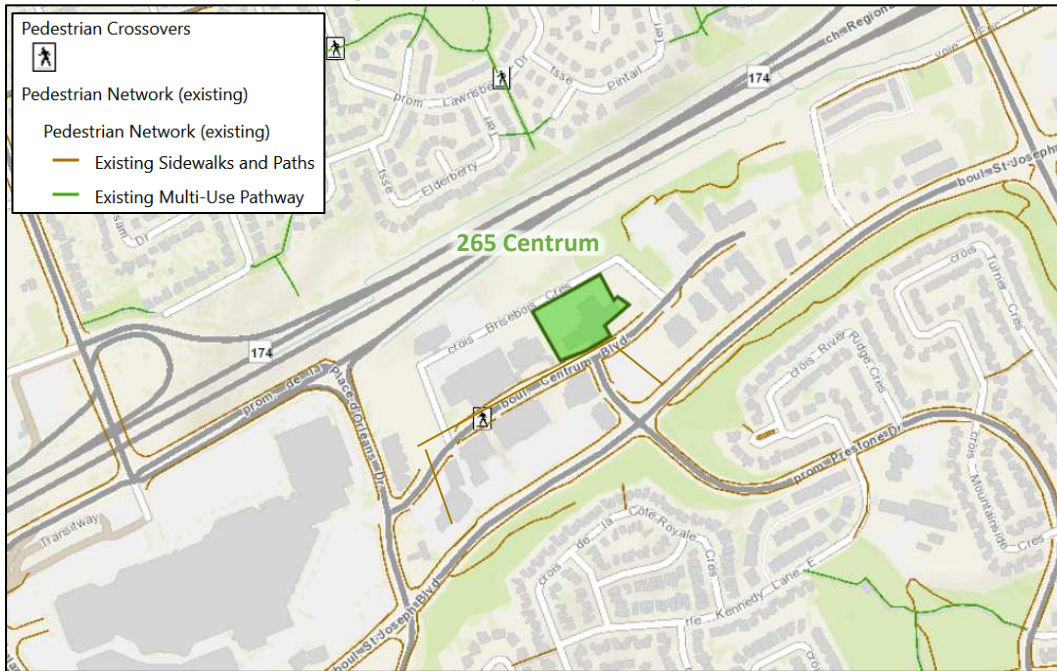

2.2.4 Cycling and Pedestrian Facilities

Figure 4 illustrates the pedestrian facilities in the study area and Figure 5 illustrates the cycling facilities.

Sidewalks are provided on both sides of Place d’Orleans Drive, St Joseph Boulevard, Centrum Boulevard, and Prestone Drive. Sidewalks are also provided on one side of Brisebois Crescent.

No existing cycling facility is within the study area. St Joseph Boulevard is a cross-town bikeway, and Place d’Orleans Drive and Prestone Drive south of St Joseph Boulevard are local routes.

Figure 4: Study Area Pedestrian Facilities

Source: <http://maps.ottawa.ca/geoOttawa/> Accessed: January 31, 2023

Figure 5: Study Area Cycling Facilities

Source: <http://maps.ottawa.ca/geoOttawa/> Accessed: January 31, 2023

Pedestrian and cyclist volumes included in study area intersection counts, presented in Section 2.2.7, have been compiled and are illustrated in Figure 6 and Figure 7, respectively. The intersection of Centrum Boulevard at

Prestone Drive and Centrum Boulevard at Brisebois Crescent East do not have data available, and it will be collected.

Figure 6: Existing Pedestrian Volumes

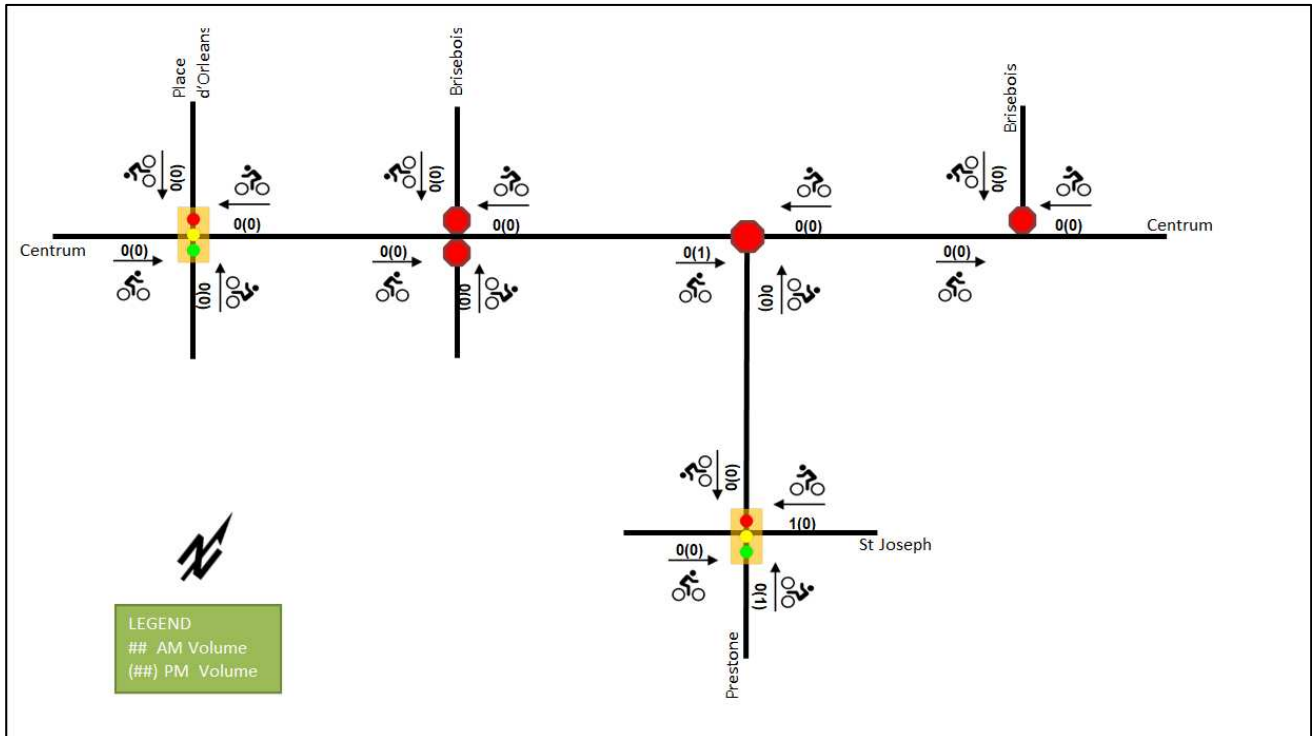

Figure 7: Existing Cyclist Volumes

2.2.5 Existing Transit

Figure 8 illustrates the transit system map in the study area and Figure 9 illustrates nearby transit stops and stations. All transit information is from January 31, 2023, and is included for general information purposes and context to the surrounding area.

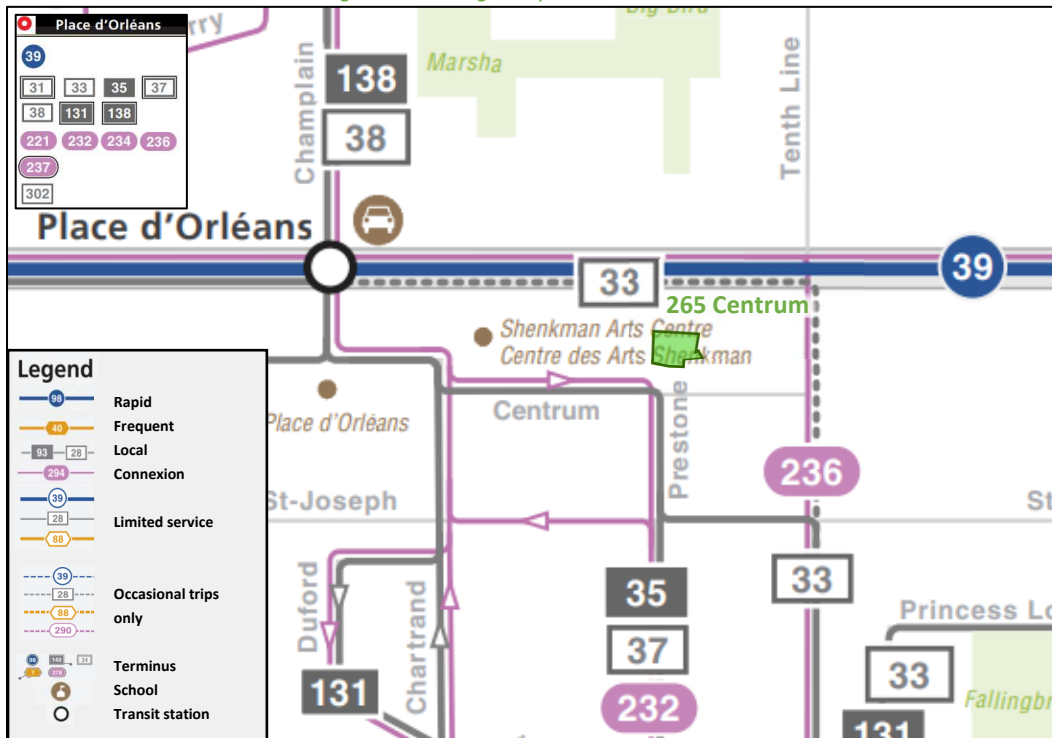

Within the study area, routes #33, #35, #37, #232, and #302 travel along Centrum Boulevard and Prestone Drive, and routes #37, #131, and #234 travel along Place d’Orleans Drive. The frequency of these routes within proximity of the proposed site based on January 31, 2023 service levels are:

- Route # 33 – 30-minute service all day
- Route # 35 – 30-minute service all day
- Route # 37 – 30-minute service all day until 8:00 PM
- Route # 232 – 30-minute service in the peak period/direction
- Route # 302 – One bus in the peak period/direction
- Route # 131 – 30-minute service all day, 1-hr service after 9:00 PM
- Route # 234 – 30-minute service in the peak period/direction

Place d’Orléans station is located within 800 metres from the site. The bus station serves bus routes #33, #35, #37, #38, #39, #131, #221, #232, #234, #236, #302, #639, and #678.

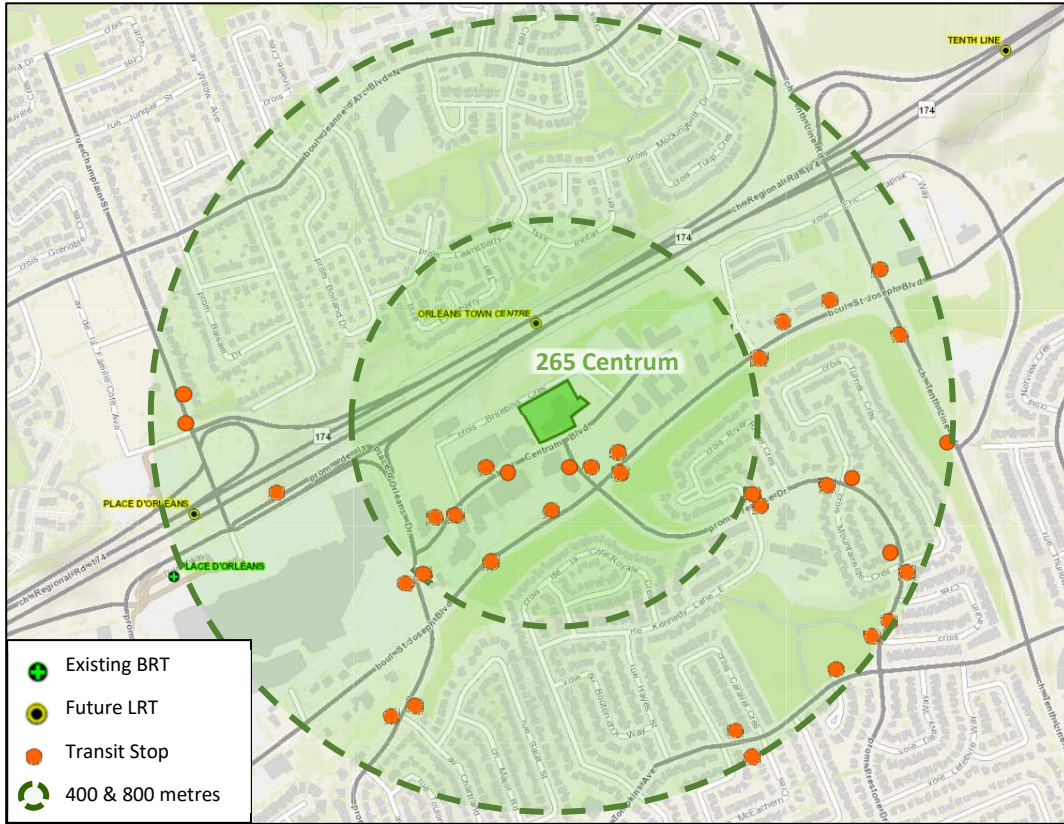

Place d’Orléans station will be converted to accommodate LRT, and the future Place d’Orléans station is located within 800 metres from the site. The completion of the future Place d’Orléans station is anticipated by the end of 2024. Future Orleans Town Centre LRT is noted to be located within 400 metres from the site, however, the timeline is unknown.

Figure 8: Existing Study Area Transit Service

Source: <http://www.octranspo.com/> Accessed: January 31, 2023

Figure 9: Existing Study Area Transit Stops

Source: <http://maps.ottawa.ca/geoOttawa/> Accessed: March 23, 2023

2.2.6 Existing Area Traffic Management Measures

An on-road messaging of maximum speed limit of 40 km/h is present on Prestone Drive.

2.2.7 Existing Peak Hour Travel Demand

Existing turning movement counts were acquired from the City of Ottawa and The Traffic Specialist for the existing study area key intersections. The intersection of Centrum Boulevard at Prestone Drive and Centrum Boulevard at Brisebois Crescent East do not have data available, and it will be collected. Table 1 summarizes the intersection count dates.

Table 1: Intersection Count Date

Intersection	Count Date	Source
Centrum Boulevard at Place d’Orleans Drive	Thursday, January 31, 2019	City of Ottawa
Centrum Boulevard at Brisebois Crescent West	Thursday, 12 March, 2020	The Traffic Specialist
Centrum Boulevard at Prestone Drive	Tuesday, February 14, 2023	The Traffic Specialist
Centrum Boulevard at Brisebois Crescent East	Wednesday, February 08, 2023	The Traffic Specialist
St Joseph Boulevard at Prestone Drive	Tuesday, March 20, 2018	City of Ottawa

Figure 10 illustrates the existing traffic counts and Table 2 summarizes the existing intersection operations. The level of service for signalized intersections is based on volume to capacity ratio (v/c) calculations for individual lane movements and HCM 2000 v/c calculations for the overall intersection, and average delay for unsignalized intersections. Detailed turning movement count data is included in Appendix B and the Synchro worksheets are provided in Appendix C.

Figure 10: Existing Traffic Counts

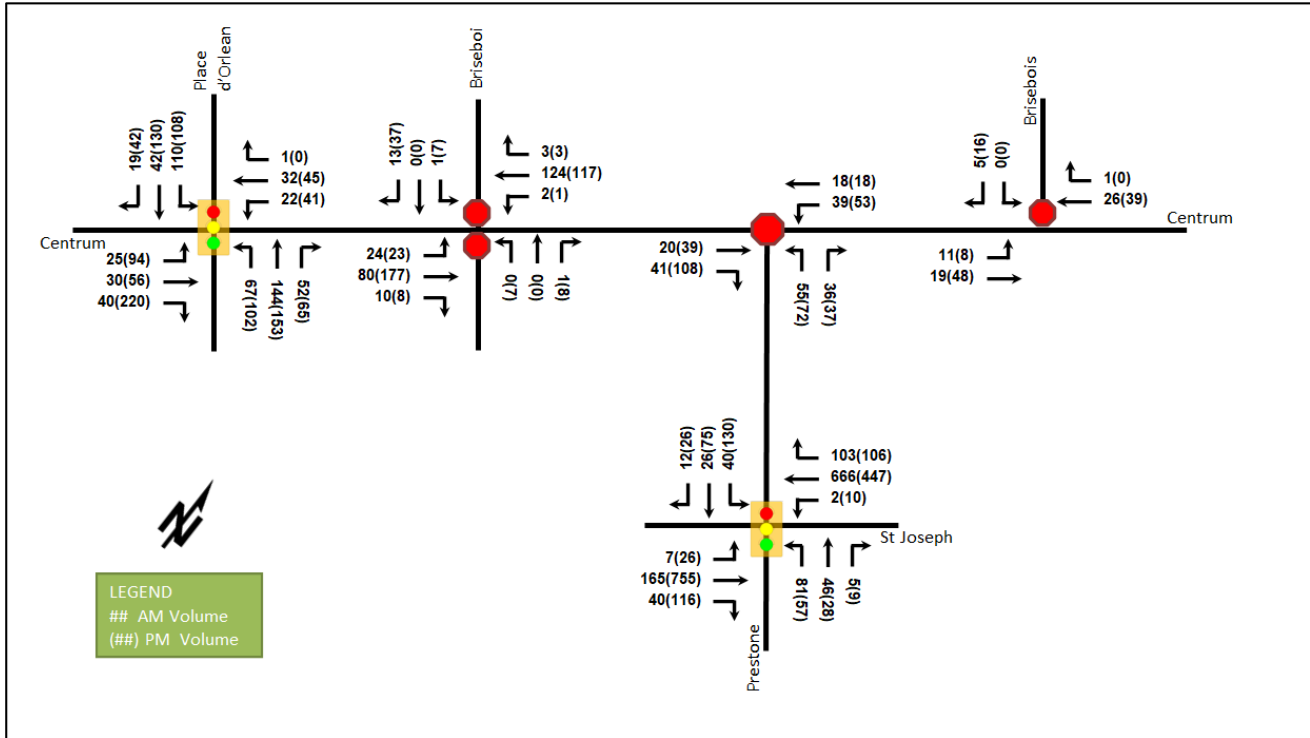

Table 2: Existing Intersection Operations

Intersection	Lane	AM Peak Hour				PM Peak Hour

Notes: Saturation flow rate of 1800 veh/h/lane
Queue is measured in metres
Peak Hour Factor = 0.90

Delay = average vehicle delay in seconds
m = metered queue
= volume for the 95th %ile cycle exceeds capacity

During both the AM and PM peak hours, the study area intersections operate well. No capacity issues are noted.

2.2.8 Collision Analysis

Collision data have been acquired from the City of Ottawa open data website (data.ottawa.ca) for five years prior to the commencement of this TIA for the surrounding study area road network. Table 3 summarizes the collision types and conditions in the study area, Figure 11 illustrates the intersections and segments analyzed, and Table 4 summarizes the total collisions for each of these locations. Collision data are included in Appendix D.

Table 3: Study Area Collision Summary, 2016-2020

		Number	%
Total Collisions		32	100%
Classification	Fatality	0	0%
	Non-Fatal Injury	8	25%
	Property Damage Only	24	75%
Initial Impact Type	Approaching	1	3%
	Angle	13	41%
	Rear end	4	13%
	Sideswipe	2	6%
	Turning Movement	6	19%
	SMV Other	6	19%
Road Surface Condition	Dry	21	66%
	Wet	3	9%
	Loose Snow	6	19%
	Packed Snow	2	6%
Pedestrian Involved		3	9%
Cyclists Involved		0	0%

Figure 11: Study Area Collision Records

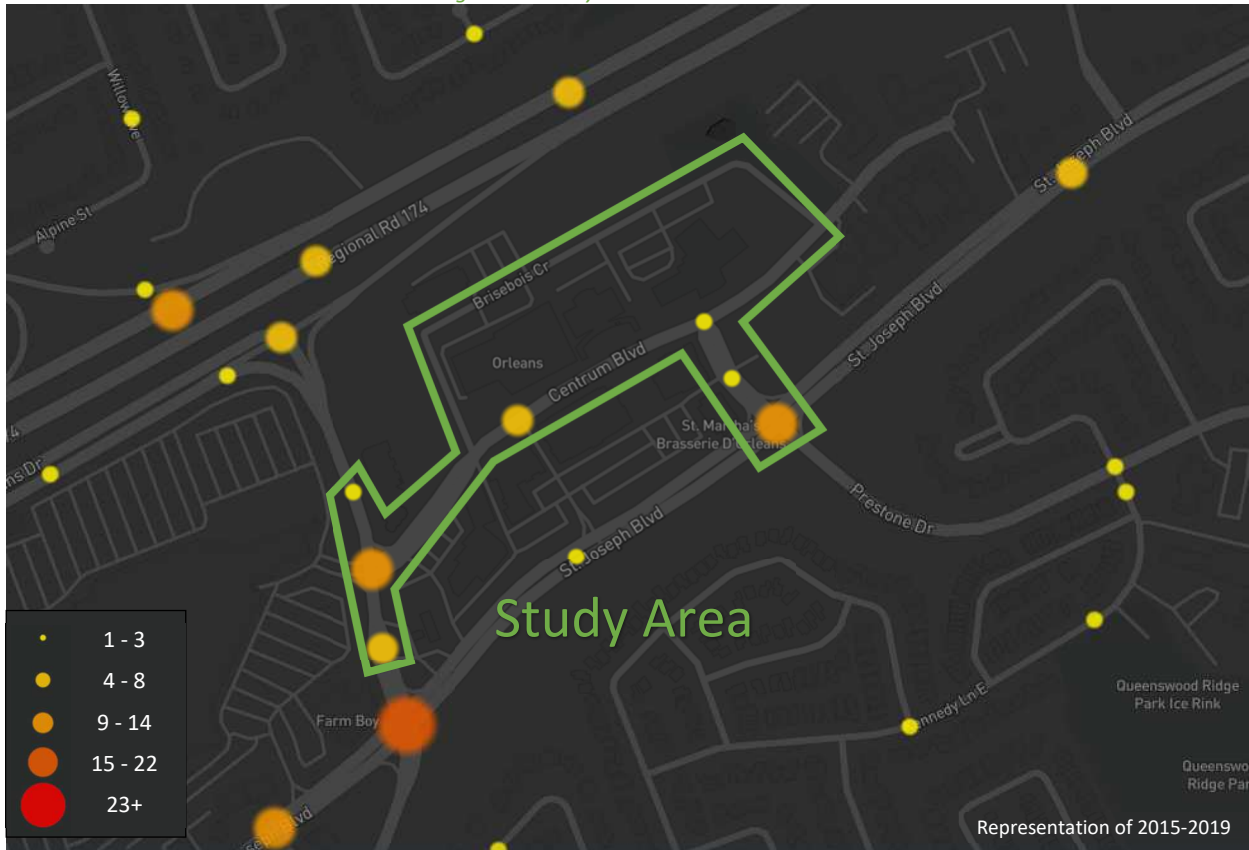

Table 4: Summary of Collision Locations, 2016-2020

Intersections / Segments	Number	%
Intersections / Segments	32	100%
St. Joseph Blvd @ Prestone Dr	11	34%
Place D'orleans Dr btwn Centrum Blvd & St. Joseph Blvd	7	22%
Place D'orleans @ Centrum Blvd/Place D'orleans	6	19%
Centrum Blvd btwn Place D'orleans Dr & Prestone Dr	5	16%
Centrum Blvd @ Prestone Dr	2	6%
Place D'orleans Dr btwn Turn Lane & Centrum Blvd	1	3%

Within the study area, the intersection of St Joseph Boulevard at Prestone Drive is noted to have experienced higher collisions than other locations. Table 5 summarizes the collision types and conditions for the location.

Table 5: St Joseph Boulevard at Prestone Drive Collision Summary

		Number	%
Total Collisions		11	100%
Classification	Fatality	0	0%
	Non-Fatal Injury	4	36%
	Property Damage Only	7	64%
Initial Impact Type	Angle	4	36%
	Rear end	2	18%
	Turning Movement	3	27%
	SMV Other	2	18%
Road Surface Condition	Dry	7	64%
	Wet	2	18%
	Loose Snow	2	18%
Pedestrian Involved		1	9%
Cyclists Involved		0	0%

The St Joseph Boulevard at Prestone Drive intersection had a total of eleven collisions during the 2016-2020 time period, with seven involving property damage only and the remaining four having non-fatal injuries. The collision types are most represented by angle with four collisions, followed by three turning movement collisions, and the remaining collisions split between the rear end and SMV (other). The majority of the collisions (7 of 11) occurred during 2017 and 2018 when there was resurfacing operations occurred through the intersection, which is assumed to be the cause of the elevated collision rate during these two years. Weather conditions do not affect collisions at this location. No further examination is required as part of this study.

2.3 Planned Conditions

2.3.1 Changes to the Area Transportation Network

Within the Official Plan, the ultimate transit network diagram shows the O-train along Regional Road 174, with a station located at Place d'Orleans connecting to the existing park and ride/station, and a future station north of the site, currently called 'Orleans Town Centre'. This station is unfunded and will not be considered within this study.

Place d'Orleans station, which is located approximately 800 metres from the site, is identified as one of the east extension stations in the Stage 2 Light Rail Transit (LRT) project and will be converted to accommodate LRT. The completion of the east extension is anticipated by the end of 2024.

The extension of Centrum Boulevard to Vieux Silo Street has been identified in the Orleans Corridor Secondary Plan. No property has been acquired and will not be included within this study.

2.3.2 Other Study Area Developments

280 Eric Czapnik Way

The proposed development application includes a site plan application to include two apartment buildings for a total of 72 dwellings. No TIA is expected to be warranted for this development.

3277 St Joseph Boulevard

The proposed development application includes a site plan application to include two apartment buildings for a total of 274 dwellings. The development is predicted to generate 58 new AM and 60 new PM two-way peak-hour auto trips. The anticipated build-out horizon is 2024. (Novatech, 2021)

3459 & 3479 St Joseph Boulevard

The proposed development application includes a zoning by-law amendment to allow 326 apartment units. The development is predicted to generate 141 new AM and 179 new PM two-way peak-hour auto trips. The build-out horizon is assumed to be 2023. (Novatech, 2021)

360 Kennedy Lane East

The proposed development application includes a zoning by-law amendment and site plan application to include 81 residential dwelling units. No TIA is expected to be warranted for this development.

3 Study Area and Periods

3.1 Study Area

The study area will include the intersections of:

- Centrum Boulevard at:
 - Place d’Orleans Drive
 - Brisebois Crescent West
 - Prestone Drive
 - Brisebois Crescent East
- St Joseph Boulevard at:
 - Prestone Drive

The boundary road will be Brisebois Crescent and Centrum Boulevard, and the SL-45 screenline is located to the west of the Place d’Orleans Mall. The screenline will not be assessed as part of this study.

While within 1 km of the site, other development sites in the area have excluded the intersections along Place d’Orleans Drive at Champlain Street and the Place d’Orleans at Highway 174 offramp. The Place d’Orleans Drive and Highway 174 on-ramp intersection has been reviewed in other area studies and operates well during existing conditions and future projections. This is similar to the existing conditions intersections examined within Section 2.2.7. Therefore, these intersections have been excluded from the scope of this study going forward. If undue impacts are noted at the intersections in proximity to the site, such as Place d’Orleans Drive or Prestone Drive at St Laurent Boulevard, these intersections may be re-incorporated into the study.

3.2 Time Periods

As the proposed development is composed mainly of residential units, the AM and PM peak hours will be examined.

3.3 Horizon Years

The anticipated build-out year is 2028. As a result, the full build-out plus five years horizon year is 2033.

4 Exemption Review

Table 6 summarizes the exemptions for this TIA.

Table 6: Exemption Review

Module	Element	Explanation	Exempt/Required
Design Review Component			
4.1 Development Design	4.1.2 Circulation and Access	Only required for site plans	Required
	4.1.3 New Street Networks	Only required for plans of subdivision	Exempt
4.2 Parking	4.2.1 Parking Supply	Only required for site plans	Required
	4.2.2 Spillover Parking	Only required for site plans where parking supply is 15% below unconstrained demand	Exempt
Network Impact Component			
4.5 Transportation Demand Management	All Elements	Not required for site plans expected to have fewer than 60 employees and/or students on location at any given time	Required
4.6 Neighbourhood Traffic Management	4.6.1 Adjacent Neighbourhoods	Only required when the development relies on local or collector streets for access and total volumes exceed ATM capacity thresholds	Required
4.8 Network Concept		Only required when proposed development generates more than 200 person-trips during the peak hour in excess of equivalent volume permitted by established zoning	Required

4.1 TIA Stepped Process

The removal of the existing YMCA site, and transit-oriented design of the subject site confirmed by the City of Ottawa during the pre-consultation meeting and notes, the expected increase in area trips will be much lower than a typical site on redevelopment land. No operational constraints are noted at the area intersections for the existing conditions, all movements at LOS A or B. Due to the above factors, future Steps 3 and 4 are combined into a single submission.

5 Development-Generated Travel Demand

5.1 Mode Shares

Examining the mode shares recommended in the TRANS Trip Generation Manual (2020) for the subject district, derived from the most recent National Capital Region Origin-Destination survey (OD Survey), the existing average district mode shares by land use for Orleans have been summarized in Table 7.

Table 7: TRANS Trip Generation Manual Recommended Mode Shares – Orleans

Travel Mode	Multi-Unit (High-Rise)		Commercial Generator		Employment Generator
	AM	PM	AM	PM	AM and PM
Auto Driver	54%	61%	77%	71%	71%
Auto Passenger	7%	13%	14%	20%	7%
Transit	29%	21%	3%	2%	13%
Cycling	0%	0%	0%	1%	1%
Walking	10%	6%	6%	5%	8%
Total	100%	100%	100%	100%	100%

It is noted that the future Place d’Orleans LRT station will be located approximately 800 metres from the site, and completion is anticipated by the end of 2024. In addition, transit-oriented design of the subject site is confirmed by the City of Ottawa during the pre-consultation meeting and notes. A 15% shift to transit mode from the auto mode for residential land use and a 10% percent shift to transit mode from the auto mode for commercial and office land use are proposed. The modified mode share targets are summarized in Table 8.

Table 8: Proposed Development Mode Shares

Travel Mode	Multi-Unit (High-Rise)		Commercial Generator		Employment Generator
	AM	PM	AM	PM	AM and PM
Auto Driver	39%	46%	67%	61%	61%
Auto Passenger	7%	13%	14%	20%	7%
Transit	44%	36%	13%	12%	23%
Cycling	0%	0%	0%	1%	1%
Walking	10%	6%	6%	5%	8%
Total	100%	100%	100%	100%	100%

5.2 Trip Generation

This TIA has been prepared using the vehicle and person trip rates for the residential dwellings using the TRANS Trip Generation Manual (2020) and the vehicle trip rates and derived person trip rates for commercial components from the ITE Trip Generation Manual 11th Edition (2021) using the City-prescribed conversion factor of 1.28. Table 9 summarizes the person trip rates for the proposed residential land uses for each peak period and the person trip rates for the non-residential land uses by peak hour.

Table 9: Trip Generation Person Trip Rates

Land Use	Land Use Code	Peak	Peak Period		Peak Hour	
			Vehicle Trip Rate	Person Trip Rates	Vehicle Trip Rate	Person Trip Rates
Multi-Unit (High-Rise)	221 & 222 (TRANS)	AM	-	0.80	-	-
		PM	-	0.90	-	-
General Office Building	710 (ITE)	AM	-	-	1.52	1.95
		PM	-	-	1.44	1.84
Strip Retail Plaza (<40k)	822 (ITE)	AM	-	-	2.36	3.02
		PM	-	-	6.59	8.44

Using the above person trip rates, the total person trip generation has been estimated. Table 10 summarizes the total person trip generation for the residential land uses and for the non-residential land uses.

Table 10: Total Person Trip Generation

Land Use	Units	AM Peak Period			PM Peak Period		
		In	Out	Total	In	Out	Total
Multi-Unit (High-Rise)	1,127	280	622	902	588	426	1014
Land Use	Units / GFA	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
General Office Building	31,570 sq. ft	55	7	62	10	48	58
Strip Retail Plaza (<40k)	8,970 sq. ft	16	10	26	37	39	76

Internal capture rates from the ITE Trip Generation Handbook 3rd Edition have been assigned to the development’s retail and office components for mixed-use developments. The rates summarized in Table 11 represent the percentage of trips to/from retail and office use based on the residential component.

Table 11: Internal Capture Rates

Land Use	AM		PM	
	In	Out	In	Out
Residential to/from Shopping Centre	17%	14%	10%	26%
Residential to/from Office	3%	1%	57%	2%

Pass-by reductions applied to the retail trip generation at a rate of 40% have been included using the recommended value presented in the ITE Trip Generation Manual 11th Edition (2021) for the most similar land use with a recommended rate, “Retail (40k – 150k sq. ft.)”.

Using the above mode share targets for the LRT area, the internal capture and pass-by rates, and the person trip rates, the person trips by mode have been projected. Trip generation by peak hour has been forecasted using the prescribed peak period conversion factors presented in the TRANS Trip Generation Manual (2020) for the residential component. Table 12 summarizes the residential trip generation and the non-residential trip generation by mode and peak hour.

Table 12: Trip Generation by Mode

Travel Mode		AM Peak Hour				PM Peak Hour			
		Mode Share	In	Out	Total	Mode Share	In	Out	Total
Multi-Unit (High-Rise)	Auto Driver	39%	52	117	169	46%	119	86	205
	Auto Passenger	7%	10	21	31	13%	33	24	58
	Transit	44%	68	151	219	36%	100	72	172
	Cycling	0%	0	0	0	0%	0	0	0
	Walking	10%	16	36	52	6%	18	14	32
	Total	100%	146	325	471	100%	270	196	466
General Office Building	Auto Driver	61%	32	4	36	61%	2	29	31
	Auto Passenger	7%	4	0	4	7%	0	3	3
	Transit	23%	12	2	14	23%	1	11	12
	Cycling	1%	1	0	1	1%	0	0	0
	Walking	8%	4	1	5	8%	0	4	4
	Internal Capture	varies	-2	0	-2	varies	-6	-1	-7
Total	100%	53	7	60	100%	3	47	50	

Travel Mode		AM Peak Hour				PM Peak Hour			
		Mode Share	In	Out	Total	Mode Share	In	Out	Total
Strip Retail Plaza (<40k)	Auto Driver	67%	3	2	5	61%	7	5	12
	Auto Passenger	14%	2	1	3	20%	7	7	14
	Transit	13%	2	1	3	12%	4	4	8
	Cycling	0%	0	0	0	1%	0	0	0
	Walking	6%	1	1	2	5%	2	2	4
	Internal Capture	varies	-2	-1	-3	varies	-2	-6	-8
	Pass-by	40%	-6	-4	-10	40%	-15	-16	-31
	Total	100%	8	5	13	100%	20	18	38
Total	Auto Driver	-	87	123	210	-	128	120	248
	Auto Passenger	-	16	22	38	-	40	34	74
	Transit	-	82	154	236	-	105	87	192
	Cycling	-	1	0	1	-	0	0	0
	Walking	-	21	38	59	-	20	20	40
	Internal Capture	varies	-4	-1	-5	varies	-8	-7	-15
	Pass-by	varies	-6	-4	-10	varies	-15	-16	-31
	Total	100%	207	337	544	100%	293	261	554

As shown above, a total of 210 AM and 248 PM new peak hour two-way vehicle trips are projected as a result of the proposed development.

5.3 Trip Distribution

To understand the travel patterns of the subject development, the OD Survey has been reviewed to determine the travel for the residential component, and these patterns were applied based on the build-out of Orleans Table 13 below summarizes the distributions.

Table 13: OD Survey Distribution – Orleans

To/From	Residential % of Trips
North	5%
South	30%
East	25%
West	40%
Total	100%

5.4 Trip Assignment

Using the distribution outlined above, turning movement splits, and access to major transportation infrastructure, the trips generated by the site have been assigned to the study area road network. Table 14 summarizes the proportional assignment to the study area roadways. Figure 12 illustrates the new site-generated volumes, and Figure 13 illustrates the pass-by volumes.

Table 14: Trip Assignment

To/From	Via
North	3% St Joseph (E) 2% Place d’Orleans (N)
South	20% Prestone Drive (S) 10% Place d’Orleans (S)
East	25% St Joseph (E)
West	40% St Joseph (W)
Total	100%

Figure 12: New Site Generation Auto Volumes

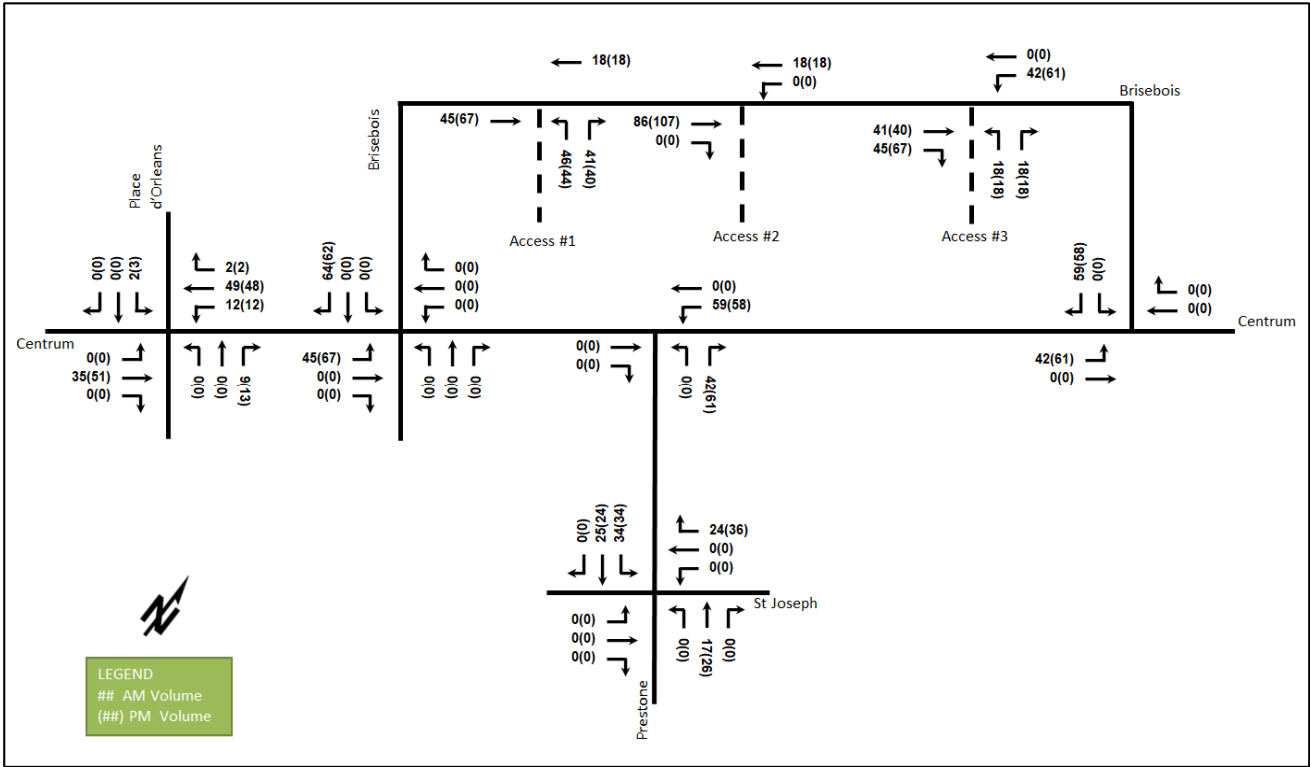

Figure 13: Pass-by Auto Volumes

6 Background Network Travel Demands

6.1 Transportation Network Plans

The transportation network plans were discussed in Section 2.3. The Place d’Orleans station Light Rail Transit (LRT) project is the only confirmed project within the study horizons and has been included.

6.2 Background Growth

A review of the background projections from the City’s TRANS Regional Model for the 2011 and 2031 horizons was completed to determine the background growth for each of the study area roadways. The background TRANS model growth rates are summarized in Table 15 and the TRANS model plots are provided in Appendix E.

Table 15: TRANS Regional Model Projections – Study Area Growth Rates

Street	TRANS Rate		2011 to Existing		Existing to 2031	
	Eastbound	Westbound	Eastbound	Westbound	Eastbound	Westbound
Centrum Blvd	0.21%	0.34%	7.74%	-6.68%	-10.10%	11.89%
St Joseph Blvd	0.17%	3.06%	7.71%	3.27%	-10.17%	2.74%
	Northbound	Southbound	Northbound	Southbound	Northbound	Southbound
Prestone Dr	-0.46%	-0.53%	-8.12%	0.97%	12.25%	-2.73%
Place d’Orleans Dr	3.71%	-0.24%	4.08%	23.91%	3.15%	-27.94%

A comparison of the TRANS volumes and the existing volumes, the eastbound movement along Centrum Boulevard and the southbound moment along Place d’Orleans Drive were underestimated and development has not progressed linearly. Table 16 summarizes the recommended growth rates to be considered within the study area.

Table 16: Recommended Area Growth Rates

Street	AM Peak Hour		PM Peak Hour	
	Eastbound	Westbound	Eastbound	Westbound
Centrum Blvd	0.25%	0.25%	0.25%	0.25%
St Joseph Blvd	0.25%	2.00%	2.00%	0.25%
	Northbound	Southbound	Northbound	Southbound
Prestone Dr	-	-	-	-
Place d’Orleans Dr	2.00%	-	-	2.00%

6.3 Other Developments

The background developments explicitly considered in the background conditions (Section 6.2) include:

- 3277 St Joseph Boulevard
- 3459 & 3479 St Joseph Boulevard

The background development volumes within the study area have been provided in Appendix F.

7 Demand Rationalization

7.1 2028 Future Background Operations

Figure 14 illustrates the 2028 background volumes and Table 17 summarizes the 2028 background intersection operations. The level of service for signalized intersections is based on v/c calculations for individual lane movements and HCM 2000 v/c calculations for the overall intersection, and average delay for unsignalized intersections. The synchro worksheets for the 2028 future background horizon are provided in Appendix G.

Figure 14: 2028 Future Background Volumes

Notes: Saturation flow rate of 1800 veh/h/lane
 Queue is measured in metres
 Peak Hour Factor = 1.00

Delay = average vehicle delay in seconds
 m = metered queue
 # = volume for the 95th %ile cycle exceeds capacity

During both peak hours, the study area intersections operate similar to the 2028 future background condition. No capacity issues are noted.

7.4 2033 Future Total Operations

Figure 17 illustrates the 2033 total volumes and Table 20 summarizes the 2033 total intersection operations. The level of service for signalized intersections is based on v/c calculations for individual lane movements and HCM 2000 v/c calculations for the overall intersection. The synchro worksheets for the 2033 future total horizon are provided in Appendix J.

Notes: Saturation flow rate of 1800 veh/h/lane
Queue is measured in metres
Peak Hour Factor = 1.00

Delay = average vehicle delay in seconds
m = metered queue
= volume for the 95th %ile cycle exceeds capacity

During both peak hours, the study area intersections operate similar to the 2033 future background condition. No capacity issues are noted.

7.5 Modal Share Sensitivity and Demand Rationalization Conclusions

During both peak hours, the study area intersections operate well, and no demand rationalization is required for this TIA.

The network intersection exemptions noted in Section 3.1 are validated in the low impact the development on intersections in close proximity to the site.

8 Development Design

8.1 Design for Sustainable Modes

The proposed development includes two residential towers and a mixed-use tower. The bicycle parking spaces are proposed as accessing the parking garage ramp. The site plan proposes a total of 1,254 bicycle parking spaces with 1,194 bicycle indoor parking spaces and 60 exterior bicycle parking spaces. Hard surface connections are provided between building entrances and a 2.0-meter-wide concrete sidewalk will be provided along the frontage of Brisebois Crescent. Local bus stops are located within 400 metres of the site entrances at Centrum Boulevard and Prestone Drive. Place d'Orléans station is approximately one kilometre walking distance from the site.

8.2 Circulation and Access

The proposed development will remove two existing accesses on Brisebois Crescent and propose three accesses on Brisebois Crescent. Access #1 will be a two-way access with a connection to the underground parking levels, and a one-way loop will form the inbound Access #2 and outbound Access #3. The one-way loop will permit temporary parking for deliveries, ubers, etc. and internal loading zones will be provided for each building for garbage collection and move-in truck operations. Two-way operation is permitted to the loading zone for Tower A from the one-way loop.

9 Parking

9.1 Parking Supply

The site proposes a total of 516 vehicle parking spaces. A total of 1254 bicycle parking spaces are proposed with 1,194 spaces provided indoor and 60 spaces provided exterior.

From the zoning by-law, the minimum vehicle parking provision for office is 70 parking spaces and for retail is 90 parking spaces. There are no minimum vehicle parking requirements for the residential units.

The site proposes a total of 21 accessible parking spaces, and it meets the requirement of 16 accessible parking spaces for office and retails.

The site meets the minimum vehicle parking, bicycle parking, and accessible parking requirements.

10 Boundary Street Design

Table 21 summarizes the MMLOS analysis for the boundary streets of Brisebois Crescent and Centrum Boulevard. The existing and future conditions for both streets will be the same and are considered in one row. The boundary street analysis is based on the land-use of the “General Urban Area”. The MMLOS worksheets have been provided in Appendix K.

Table 21: Boundary Street MMLOS Analysis

Segment	Pedestrian LOS		Bicycle LOS		Transit LOS		Truck LOS	
	PLOS	Target	BLOS	Target	TLOS	Target	TrLOS	Target
Brisebois Crescent (Existing)	F	B	D	D	N/A	N/A	N/A	N/A
Brisebois Crescent (Future)	C	B	D	D	N/A	N/A	N/A	N/A
Centrum Boulevard	B	B	B	D	N/A	N/A	N/A	N/A

The pedestrian LOS will not be met along the segment of Brisebois Crescent. A 2.0-meter-wide sidewalk will be provided along the boundary street of Brisebois Crescent, and it will improve the PLOS from F to C. To meet the theoretical pedestrian LOS targets, the boulevards would need to be at least 0.5 metres or the operating speed would need to be less than 50 km/h along boundary street of Brisebois Crescent.

Brisebois Crescent will have sidewalks on both sides of the roadway and will meet local road standards for the cross-section. No further improvements are required to meet the PLOS targets, although the City may look at reducing the speed limit to help improve the PLOS results (e.g. 40 km/h would become PLOS B).

11 Access Intersections Design

11.1 Location and Design of Access

The development proposed three accesses to Brisebois Crescent and is in compliance with the private approach bylaw for number and operation of the permitted accesses. The Access #1 is a two-way access with a 6.7 metre

width and connects to the ground level parking and underground garage. The Access #2 and Access #3 are one-way access are 6.0 metres wide, operating as an one-way loop, inbound on Access #2 and outbound on Access #3. The throat length for each access meets the private approach bylaw requirements.

11.2 Intersection Control

Based upon the projected volumes, Accesses #1 and #3 will have stop-control each on the minor approach and Access #2 will have no control as it is inbound only.

11.3 Access Intersection Design

11.3.1 Future Access Intersection Operations

The operations are noted in Section 7.4 and no mitigation is required for the development.

11.3.2 Access Intersection MMLOS

All accesses are unsignalized and do not require MMLOS review.

11.3.3 Recommended Design Elements

The Brisebois Crescent frontage will be formalized to a local road standard with the perpendicular parking being removed and replaced by a 2.0-meter-wide sidewalk and grass boulevard. The sidewalk will tie into the existing sidewalk at the corner of Brisebois Crescent as it bends towards Centrum Boulevard. The proposed accesses will be constructed to comply with the City standard SC7.1.

12 Transportation Demand Management

12.1 Context for TDM

The subject site has been assumed to rely predominantly on auto driver and transit mode shares due to the conversion of the Place d'Orleans LRT station. The convenience of the transit station should provide the opportunity to reach the forecast transit mode share.

12.2 Need and Opportunity

The subject site has been assumed to rely predominantly on auto and transit travel, and those assumptions have been carried through the analysis. As the unmodified district mode shares have been applied, risks to other network users from failing to meet mode share targets are low.

12.3 TDM Program

The “suite of post occupancy TDM measures” has been summarized in the TDM checklists for the residential land uses. The checklist is provided in Appendix L. Transit-oriented design of the subject site is confirmed by the City of Ottawa during the pre-consultation meeting, and the key TDM measures recommended include:

- Designate an internal coordinator, or contract with an external coordinator
- Display local area maps with walking/cycling access routes and key destinations at major entrances
- Display relevant transit schedules and route maps at entrances
- Provide online links to OC Transpo and STO information
- Provide a dedicated ridematching portal at OttawaRideMatch.com
- Provide a multimodal travel option information package to new/relocating employees, students, and new residents
- Unbundle parking costs from lease rates at multi-tenant sites, purchase or rental costs
- Offer personalized trip planning to new/relocating employees

13 Neighbourhood Traffic Management

The proposed development will connect to the arterial network via Brisebois Crescent (a local road), Centrum Boulevard (a collector road), and Prestone Drive (a collector road). The TIA guidelines have outlined thresholds for two-way traffic on local and collector roads and have been found to be too low for the purposes of this analysis. City Staff have noted that these thresholds are under review and will be updated in the future.

In general, Brisebois Crescent is anticipated to convey between 105 to 153 vehicles during the peak hours, Centrum Boulevard will range between 137 to 336 vehicles west of Prestone Drive and 28 to 252 vehicles east of Prestone Drive during the peak hours. Prestone Drive is anticipated to convey between 280 to 415 vehicles north of St. Joseph Boulevard during the peak hours. No changes to the roadway classifications or proposed road network are required to support the site.

14 Transit

14.1 Route Capacity

In Section 5.1 the trip generation by mode was estimated, including an estimate of the number of transit trips that will be generated by the proposed development. Table 22 summarizes the transit trip generation.

Table 22: Trip Generation by Transit Mode

Travel Mode	Mode Share	AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Transit	varies	82	154	236	105	87	192

The proposed development is anticipated to generate an additional 236 AM and 192 PM peak hour two-way transit trips. From the trip distribution found in section 5.3, these values can be further broken down. Table 23 summarizes forecasted site-generated transit ridership trips by direction and the equivalent bus loads.

Table 23: Forecasted Site-Generated Transit Ridership

Direction	AM Peak Hour		PM Peak Hour		Service Type	Approximate Equivalent Peak Hour/Direction Bus Loads
	In	Out	In	Out		
North	4	8	5	4	Bus	Negligible
South	25	46	32	26	Bus	Half of a standard bus
East	21	39	26	22	Bus, LRT	Half of a standard bus
West	32	61	42	35	Bus, LRT	A standard bus

14.2 Transit Priority

Examining the study area intersection delays, negligible impacts are noted on the transit movements at the study area intersections. No change in transit LOS is noted throughout the study area. No specific transit priority measures were considered as part of this development.

15 Network Concept

The background and forecasted site trips do not exceed the anticipated lane capacities on the boundary road network. The transit modal share is likely to be achieved and the site has negligible impact on the road network. No future network changes are required to support the subject development.

16 Network Intersection Design

16.1 Network Intersection Control

No change to the existing signalized control is recommended for the network intersections.

16.2 Network Intersection Design

16.2.1 2028 & 2033 Future Total Network Intersection Operations

The operations are noted in Section 7.4 and no mitigation of conditions is required for the subject site traffic.

16.2.2 Network Intersection MMLoS

Table 24 summarizes the MMLoS analysis for the network intersections of Centrum Boulevard at Place d’Orleans Drive and St Joseph Boulevard at Prestone Drive. The existing and future conditions for both intersections will be the same and are considered in one row. The intersection analysis is based on the land-use of the “Mixed Use Centre” for existing condition and “Within 600m of a rapid transit station” for future conditions. The MMLoS worksheets have been provided in Appendix K.

Table 24: Study Area Intersection MMLoS Analysis

Intersection	Pedestrian LOS		Bicycle LOS		Transit LOS		Truck LOS		Auto LOS	
	PLOS	Target (Ex/Fu)	BLOS	Target (Ex/Fu)	TLOS	Target (Ex/Fu)	TrLOS	Target (Ex/Fu)	ALOS	Target (Ex/Fu)
Centrum Boulevard at Place d’Orleans Drive	F	C/A	F	A/A	N/A	N/A	N/A	N/A	A	D/D
St Joseph Boulevard at Prestone Drive	F	C/A	F	B/B	N/A	N/A	N/A	N/A	A	D/D

The pedestrian LOS targets will not be met at the study area intersections. As typical for arterial roads, the crossing distance does not permit the targets to be met. To meet pedestrian LOS targets, the maximum crossing distance on all pedestrian crossings would need to be reduced to three lane-widths.

Pedestrian delay LOS is not considered in the PLOS calculation as it is not a suitable metric for the assessment of pedestrian LOS as formulated. This exclusion is consistent with City direction since 2015, and no alternative methodology has been provided for its assessment.

The bicycle LOS targets will not be met at the study area intersections, and two-stage left turns or left-turn boxes would be required to meet LOS targets on all below-target approaches.

The City of Ottawa will be responsible for exploring options to address the area PLOS and BLOS deficiencies, given they are arterial road intersections and may require greater network improvements beyond the localized intersection upgrades.

16.2.3 Recommended Design Elements

No study area intersection design elements are proposed as part of this study.

17 Summary of Improvements Indicated and Modifications Options

The following summarizes the analysis and results presented in this TIA report:

Proposed Site and Screening

- The proposed site includes 1,127 residential units, 8,970 sq. ft retail space, and 31,570 sq. ft office space
- The preliminary accesses are proposed to include three along Brisebois Crescent, and the existing two accesses on Brisebois Crescent will be removed
- The development is proposed to be completed as a single phase by 2028
- The Trip Generation and safety triggers were met for the TIA Screening

Existing Conditions

- Place d'Orleans Drive and St Joseph Boulevard are arterial roads, and Centrum Boulevard and Prestone Drive are collector roads in the study area
- Sidewalks are provided on both sides of Place d'Orleans Drive, St Joseph Boulevard, Centrum Boulevard, and Prestone Drive, and one side of Brisebois Crescent
- St Joseph Boulevard is a cross-town bikeway, and Place d'Orleans Drive and Prestone Drive south of St Joseph Boulevard are local routes
- Within the study area, the intersection of St Joseph Boulevard at Prestone Drive is noted to have experienced higher collisions than other locations (11 of 32)
- The majority of the collisions (7 of 11) occurred during 2017 and 2018 at the intersection of St Joseph Boulevard at Prestone Drive when there was resurfacing operations occurred through the intersection, which is assumed to be the cause of the elevated collision rate during these two years

Development Generated Travel Demand

- A 15% shift to transit mode from the auto mode for residential land use and a 10% shift to transit mode from the auto mode for commercial land use are proposed because of the conversion of the future Place d'Orleans LRT station and being design priority area with good access to transit
- The proposed development is forecasted to produce 544 two-way people trips during the AM peak hour and 554 two-way people trips during the PM peak hour
- Of the forecasted people trips, 210 two-way trips will be vehicle trips during the AM peak hour and 248 two-way trips will be vehicle trips during the PM peak hour
- Of the forecasted trips, 5 % are anticipated to travel north, 30% to the south, 25% to the east, and 40 % to the west

Background Conditions

- The background developments were explicitly included in the background conditions, along with background growths per annum applied along the mainline directions/volumes on Centrum Boulevard, St Joseph Boulevard, and Place d'Orleans Drive
- The study area intersections at the 2028 and 2033 background conditions will operate similar to the existing conditions
- Place d'Orleans station, which is located approximately 800 metres from the site, will be converted to accommodate LRT by the end of 2024

Development Design

- The site plan proposes a total of 1,254 bicycle parking spaces with 1,194 bicycle indoor parking spaces and 60 exterior bicycle parking spaces
- Hard surface connections are provided between building entrances and a 2.0m wide concrete sidewalk will be provided along the frontage of Brisebois Crescent
- Local bus stops are located within 400 metres of the site entrances and the Place d'Orléans station is approximately one kilometre walking distance from the site
- Access #1 will be a two-way access with a connection to the underground parking levels, and a one-way loop will form the inbound Access #2 and outbound Access #3
- The one-way loop will permit temporary parking for deliveries, ubers, etc. and internal loading zones will be provided for each building for garbage collection and move-in truck operations
- Two-way operation is permitted to the loading zone for Tower A from the one-way loop

Parking

- The site plan proposes a total of 516 vehicle parking spaces
- A total of 1,254 bicycle parking spaces are proposed with 1,194 spaces provided indoor and 60 spaces provided exterior
- The site proposes a total of 21 accessible parking spaces
- The site meets the minimum vehicle parking, bicycle parking, and accessible parking requirements
- There are no minimum vehicle parking requirements for the residential units

Boundary Street Design

- The pedestrian LOS will not be met along the segment of Brisebois Crescent, and at least 0.5 metres of boulevards or less than 50 km/h of operating speed would need to meet the target
- A 2.0-meter-wide sidewalk will be provided along the boundary road of Brisebois Crescent, and it will improve the PLOS from F to C
- No further improvements are required to meet the PLOS targets, although the City may look at reducing the speed limit to help improve the PLOS results

Access Intersections Design

- The Access #1 is a two-way access with a 6.7 metre width and connects to the ground level parking and underground garage
- The Access #2 and Access #3 are one-way access are 6.0 metres wide, operating as an one-way loop, inbound on Access #2 and outbound on Access #3
- The throat length for each access meets the private approach bylaw requirements
- Accesses #1 and #3 will have stop-control each on the minor approach and Access #2 will have no control as it is inbound only
- The Brisebois Crescent frontage will be formalized to a local road standard with the perpendicular parking being removed and replaced by a 2.0-meter-wide sidewalk and grass boulevard

TDM

- Supportive TDM measures to be included within the proposed development should include:
 - Designate an internal coordinator, or contract with an external coordinator

- Display local area maps with walking/cycling access routes and key destinations at major entrances
- Display relevant transit schedules and route maps at entrances
- Provide online links to OC Transpo and STO information
- Provide a dedicated ridematching portal at OttawaRideMatch.com
- Provide a multimodal travel option information package to new/relocating employees, students, and new residents
- Unbundle parking costs from lease rates at multi-tenant sites, purchase or rental costs
- Offer personalized trip planning to new/relocating employees

NTM

- The proposed development will connect to the arterial network via Brisebois Crescent (a local road), Centrum Boulevard (a collector road), and Prestone Drive (a collector road)
- No changes to the roadway classifications or proposed road network are required to support the site

Transit

- The forecasted transit trips will include 236 two-way trips during the AM peak and 192 two-way trips during the PM peak
- Peak hour increases in transit ridership resulting from the site equate to half of a standard bus load southerly and easterly of the site, a standard bus load westerly of the site, and negligible impact northerly of the site
- Negligible impacts are noted on the transit movements at the study area intersections
- No specific transit priority measures were considered as part of this development

Network Concept

- The transit modal share is likely to be achieved and the site has negligible impact on the road network
- No future network changes are required to support the subject development

Network Intersection Design

- No change to the existing signalized control is recommended for the network intersections
- Generally, the network intersections will operate similar to the background conditions
- The pedestrian LOS targets will not be met at the study area intersections, and the maximum crossing distance on all pedestrian crossings are required to be reduced to three lane-widths
- The bicycle LOS targets will not be met at the study area intersections, and two-stage left turns or left-turn boxes would be required to meet LOS targets on all below-target approaches
- The City of Ottawa will be responsible for exploring options to address the area PLOS and BLOS deficiencies, given they are arterial road intersections and may require greater network improvements beyond the localized intersection upgrades

18 Conclusion

It is recommended that, from a transportation perspective, the proposed development applications proceed.

Appendix A

TIA Screening Form and PM Certification Form

City of Ottawa 2017 TIA Guidelines
Step 1 - Screening Form

Date: 23-Mar-23
Project Number: 2023-013
Project Reference: 265 Centrum

1.1 Description of Proposed Development	
Municipal Address	265 Centrum Boulevard
Description of Location	Existing YMCA site. Bounded by Centrum Boulevard to the south, Brisebois Crescent to the north and east, and the Shenkman Arts Centre to the west
Land Use Classification	Mixed-Use Centre Zone (MC14[1520] S152)
Development Size	Three (3) towers with a total of 1,127 residential units, 8,970 sq. ft retail space, and 31,570 sq. ft office space
Accesses	Three accesses on Brisebois Crescent
Phase of Development	Single
Buildout Year	2028
TIA Requirement	Full TIA Required

1.2 Trip Generation Trigger	
Land Use Type	Townhomes or apartments
Development Size	1093 Units
Trip Generation Trigger	Yes

1.3 Location Triggers	
Does the development propose a new driveway to a boundary street that is designated as part of the City's Transit Priority, Rapid Transit or Spine Bicycle Networks?	No
Is the development in a Design Priority Area (DPA) or Transit-oriented Development (TOD) zone?	No Heart of Orleans BIA
Location Trigger	No

1.4. Safety Triggers	
Are posted speed limits on a boundary street 80 km/hr or greater?	No
Are there any horizontal/vertical curvatures on a boundary street limits sight lines at a proposed driveway?	Yes Brisebois curvature. It's a local with low volumes. No issue.
Is the proposed driveway within the area of influence of an adjacent traffic signal or roundabout (i.e. within 300 m of intersection in rural conditions, or within 150 m of intersection in urban/ suburban conditions)?	No
Is the proposed driveway within auxiliary lanes of an intersection?	No
Does the proposed driveway make use of an existing median break that serves an existing site?	No
Is there is a documented history of traffic operations or safety concerns on the boundary streets within 500 m of the development?	No
Does the development include a drive-thru facility?	No
Safety Trigger	Yes

TIA Plan Reports

On 14 June 2017, the Council of the City of Ottawa adopted new Transportation Impact Assessment (TIA) Guidelines. In adopting the guidelines, Council established a requirement for those preparing and delivering transportation impact assessments and reports to sign a letter of certification.

Individuals submitting TIA reports will be responsible for all aspects of development-related transportation assessment and reporting, and undertaking such work, in accordance and compliance with the City of Ottawa's Official Plan, the Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines.

By submitting the attached TIA report (and any associated documents) and signing this document, the individual acknowledges that s/he meets the four criteria listed below.

CERTIFICATION

1. I have reviewed and have a sound understanding of the objectives, needs and requirements of the City of Ottawa's Official Plan, Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines;
2. I have a sound knowledge of industry standard practice with respect to the preparation of transportation impact assessment reports, including multi modal level of service review;
3. I have substantial experience (more than 5 years) in undertaking and delivering transportation impact studies (analysis, reporting and geometric design) with strong background knowledge in transportation planning, engineering or traffic operations; and
4. I am either a licensed¹ or registered² professional in good standing, whose field of expertise [check appropriate field(s)] is either transportation engineering or transportation planning .

1,2 License of registration body that oversees the profession is required to have a code of conduct and ethics guidelines that will ensure appropriate conduct and representation for transportation planning and/or transportation engineering works.

Note
The values in the summary table below and the flow diagram represent the number of pedestrian crossings, **NOT** the number of individual pedestrian crossings. For example, some pedestrians will cross one approach, then another to reach their destination. Accordingly, one pedestrian crossing two approaches will be recorded as two crossings.

TRANS Plot

TRANS Regional Model

Version 2.15 - Assigned June 16, 2020

AM Peak Hour Total Traffic Volume

265 Centrum Boulevard

2011 Model - Basecase

N/A

User Initials: TIMW

Plot Prepared: January, 2023

EMME Scenario: 21713

Legend

AM Peak Hour Total Traffic Volume

Distance (m)

The TRANS model is continuously refined & maintained, and all information is provided in good faith. However, model outputs are provided "as is", and no warranty or guarantee is provided as to the accuracy, reliability or reasonableness of the results. In using this data, you agree to accept any and all risks arising from any incorrect, incomplete, or misleading information.

Recipients are required to use caution and professional judgement in using and interpreting model outputs. In particular, caution should be used when focusing on a geographically limited area (such as a single road or intersection), as the model is primarily designed to simulate regional-scale phenomena and has been calibrated at a regional level.

As general good practice, it is recommended that the user confirm the network coding within the area of interest, and compare base year forecasts against traffic count data to assess the extent to which the model may be over- or under-estimating the travel demand.

TDM Checklist

TDM Measures Checklist:
Non-Residential Developments (office, institutional, retail or industrial)

Legend	
BASIC	The measure is generally feasible and effective, and in most cases would benefit the development and its users
BETTER	The measure could maximize support for users of sustainable modes, and optimize development performance
★	The measure is one of the most dependably effective tools to encourage the use of sustainable modes

TDM measures: <i>Non-residential developments</i>		Check if proposed & add descriptions
1. TDM PROGRAM MANAGEMENT		
1.1 Program coordinator		
BASIC	★	1.1.1 Designate an internal coordinator, or contract with an external coordinator <input checked="" type="checkbox"/>
1.2 Travel surveys		
BETTER		1.2.1 Conduct periodic surveys to identify travel-related behaviours, attitudes, challenges and solutions, and to track progress <input type="checkbox"/>
2. WALKING AND CYCLING		
2.1 Information on walking/cycling routes & destinations		
BASIC		2.1.1 Display local area maps with walking/cycling access routes and key destinations at major entrances <input checked="" type="checkbox"/>
2.2 Bicycle skills training		
<i>Commuter travel</i>		
BETTER	★	2.2.1 Offer on-site cycling courses for commuters, or subsidize off-site courses <input type="checkbox"/>
2.3 Valet bike parking		
<i>Visitor travel</i>		
BETTER		2.3.1 Offer secure valet bike parking during public events when demand exceeds fixed supply (e.g. for festivals, concerts, games) <input type="checkbox"/>

TDM measures: <i>Non-residential developments</i>		Check if proposed & add descriptions
3. TRANSIT		
3.1 Transit information		
BASIC		3.1.1 Display relevant transit schedules and route maps at entrances <input checked="" type="checkbox"/>
BASIC		3.1.2 Provide online links to OC Transpo and STO information <input checked="" type="checkbox"/>
BETTER		3.1.3 Provide real-time arrival information display at entrances <input type="checkbox"/>
3.2 Transit fare incentives		
<i>Commuter travel</i>		
BETTER		3.2.1 Offer preloaded PRESTO cards to encourage commuters to use transit <input type="checkbox"/>
BETTER	★	3.2.2 Subsidize or reimburse monthly transit pass purchases by employees <input type="checkbox"/>
<i>Visitor travel</i>		
BETTER		3.2.3 Arrange inclusion of same-day transit fare in price of tickets (e.g. for festivals, concerts, games) <input type="checkbox"/>
3.3 Enhanced public transit service		
<i>Commuter travel</i>		
BETTER		3.3.1 Contract with OC Transpo to provide enhanced transit services (e.g. for shift changes, weekends) <input type="checkbox"/>
<i>Visitor travel</i>		
BETTER		3.3.2 Contract with OC Transpo to provide enhanced transit services (e.g. for festivals, concerts, games) <input type="checkbox"/>
3.4 Private transit service		
<i>Commuter travel</i>		
BETTER		3.4.1 Provide shuttle service when OC Transpo cannot offer sufficient quality or capacity to serve demand (e.g. for shift changes, weekends) <input type="checkbox"/>
<i>Visitor travel</i>		
BETTER		3.4.2 Provide shuttle service when OC Transpo cannot offer sufficient quality or capacity to serve demand (e.g. for festivals, concerts, games) <input type="checkbox"/>

TDM measures: <i>Non-residential developments</i>		Check if proposed & add descriptions
4. RIDESHARING		
4.1 Ridematching service		
<i>Commuter travel</i>		
BASIC ★	4.1.1 Provide a dedicated ridematching portal at OttawaRideMatch.com	<input checked="" type="checkbox"/>
4.2 Carpool parking price incentives		
<i>Commuter travel</i>		
BETTER	4.2.1 Provide discounts on parking costs for registered carpools	<input type="checkbox"/>
4.3 Vanpool service		
<i>Commuter travel</i>		
BETTER	4.3.1 Provide a vanpooling service for long-distance commuters	<input type="checkbox"/>
5. CARSHARING & BIKESHARING		
5.1 Bikeshare stations & memberships		
BETTER	5.1.1 Contract with provider to install on-site bikeshare station for use by commuters and visitors	<input type="checkbox"/>
<i>Commuter travel</i>		
BETTER	5.1.2 Provide employees with bikeshare memberships for local business travel	<input type="checkbox"/>
5.2 Carshare vehicles & memberships		
<i>Commuter travel</i>		
BETTER	5.2.1 Contract with provider to install on-site carshare vehicles and promote their use by tenants	<input type="checkbox"/>
BETTER	5.2.2 Provide employees with carshare memberships for local business travel	<input type="checkbox"/>
6. PARKING		
6.1 Priced parking		
<i>Commuter travel</i>		
BASIC ★	6.1.1 Charge for long-term parking (daily, weekly, monthly)	<input type="checkbox"/>
BASIC	6.1.2 Unbundle parking cost from lease rates at multi-tenant sites	<input checked="" type="checkbox"/>
<i>Visitor travel</i>		
BETTER	6.1.3 Charge for short-term parking (hourly)	<input type="checkbox"/>

TDM measures: <i>Non-residential developments</i>		Check if proposed & add descriptions
7. TDM MARKETING & COMMUNICATIONS		
7.1 Multimodal travel information		
<i>Commuter travel</i>		
BASIC ★	7.1.1 Provide a multimodal travel option information package to new/relocating employees and students	<input checked="" type="checkbox"/>
<i>Visitor travel</i>		
BETTER ★	7.1.2 Include multimodal travel option information in invitations or advertising that attract visitors or customers (e.g. for festivals, concerts, games)	<input type="checkbox"/>
7.2 Personalized trip planning		
<i>Commuter travel</i>		
BETTER ★	7.2.1 Offer personalized trip planning to new/relocating employees	<input checked="" type="checkbox"/>
7.3 Promotions		
<i>Commuter travel</i>		
BETTER	7.3.1 Deliver promotions and incentives to maintain awareness, build understanding, and encourage trial of sustainable modes	<input type="checkbox"/>
8. OTHER INCENTIVES & AMENITIES		
8.1 Emergency ride home		
<i>Commuter travel</i>		
BETTER ★	8.1.1 Provide emergency ride home service to non-driving commuters	<input type="checkbox"/>
8.2 Alternative work arrangements		
<i>Commuter travel</i>		
BASIC ★	8.2.1 Encourage flexible work hours	<input type="checkbox"/>
BETTER	8.2.2 Encourage compressed workweeks	<input checked="" type="checkbox"/>
BETTER ★	8.2.3 Encourage telework	<input type="checkbox"/>
8.3 Local business travel options		
<i>Commuter travel</i>		
BASIC ★	8.3.1 Provide local business travel options that minimize the need for employees to bring a personal car to work	<input type="checkbox"/>
8.4 Commuter incentives		
<i>Commuter travel</i>		
BETTER	8.4.1 Offer employees a taxable, mode-neutral commuting allowance	<input type="checkbox"/>
8.5 On-site amenities		
<i>Commuter travel</i>		
BETTER	8.5.1 Provide on-site amenities/services to minimize mid-day or mid-commute errands	<input type="checkbox"/>

TDM Measures Checklist:
Residential Developments (multi-family, condominium or subdivision)

Legend	
	BASIC The measure is generally feasible and effective, and in most cases would benefit the development and its users
	BETTER The measure could maximize support for users of sustainable modes, and optimize development performance
★	The measure is one of the most dependably effective tools to encourage the use of sustainable modes

TDM measures: Residential developments		Check if proposed & add descriptions
1. TDM PROGRAM MANAGEMENT		
1.1 Program coordinator		
BASIC	★	1.1.1 Designate an internal coordinator, or contract with an external coordinator <input checked="" type="checkbox"/>
1.2 Travel surveys		
BETTER		1.2.1 Conduct periodic surveys to identify travel-related behaviours, attitudes, challenges and solutions, and to track progress <input type="checkbox"/>
2. WALKING AND CYCLING		
2.1 Information on walking/cycling routes & destinations		
BASIC		2.1.1 Display local area maps with walking/cycling access routes and key destinations at major entrances (<i>multi-family, condominium</i>) <input checked="" type="checkbox"/>
2.2 Bicycle skills training		
BETTER		2.2.1 Offer on-site cycling courses for residents, or subsidize off-site courses <input type="checkbox"/>

TDM measures: Residential developments		Check if proposed & add descriptions
3. TRANSIT		
3.1 Transit information		
BASIC		3.1.1 Display relevant transit schedules and route maps at entrances (<i>multi-family, condominium</i>) <input checked="" type="checkbox"/>
BETTER		3.1.2 Provide real-time arrival information display at entrances (<i>multi-family, condominium</i>) <input type="checkbox"/>
3.2 Transit fare incentives		
BASIC	★	3.2.1 Offer PRESTO cards preloaded with one monthly transit pass on residence purchase/move-in, to encourage residents to use transit <input type="checkbox"/>
BETTER		3.2.2 Offer at least one year of free monthly transit passes on residence purchase/move-in <input type="checkbox"/>
3.3 Enhanced public transit service		
BETTER	★	3.3.1 Contract with OC Transpo to provide early transit services until regular services are warranted by occupancy levels (<i>subdivision</i>) <input type="checkbox"/>
3.4 Private transit service		
BETTER		3.4.1 Provide shuttle service for seniors homes or lifestyle communities (e.g. scheduled mall or supermarket runs) <input type="checkbox"/>
4. CARSHARING & BIKESHARING		
4.1 Bikeshare stations & memberships		
BETTER		4.1.1 Contract with provider to install on-site bikeshare station (<i>multi-family</i>) <input type="checkbox"/>
BETTER		4.1.2 Provide residents with bikeshare memberships, either free or subsidized (<i>multi-family</i>) <input type="checkbox"/>
4.2 Carshare vehicles & memberships		
BETTER		4.2.1 Contract with provider to install on-site carshare vehicles and promote their use by residents <input type="checkbox"/>
BETTER		4.2.2 Provide residents with carshare memberships, either free or subsidized <input type="checkbox"/>
5. PARKING		
5.1 Priced parking		
BASIC	★	5.1.1 Unbundle parking cost from purchase price (<i>condominium</i>) <input checked="" type="checkbox"/>
BASIC	★	5.1.2 Unbundle parking cost from monthly rent (<i>multi-family</i>) <input checked="" type="checkbox"/>

TDM measures: Residential developments		Check if proposed & add descriptions
6. TDM MARKETING & COMMUNICATIONS		
6.1 Multimodal travel information		
BASIC ★	6.1.1 Provide a multimodal travel option information package to new residents	<input checked="" type="checkbox"/>
6.2 Personalized trip planning		
BETTER ★	6.2.1 Offer personalized trip planning to new residents	<input type="checkbox"/>

TDM-Supportive Development Design and Infrastructure Checklist:
Non-Residential Developments (office, institutional, retail or industrial)

Legend	
REQUIRED	The Official Plan or Zoning By-law provides related guidance that must be followed
BASIC	The measure is generally feasible and effective, and in most cases would benefit the development and its users
BETTER	The measure could maximize support for users of sustainable modes, and optimize development performance

TDM-supportive design & infrastructure measures: Non-residential developments		Check if completed & add descriptions, explanations or plan/drawing references
1. WALKING & CYCLING: ROUTES		
1.1 Building location & access points		
BASIC	1.1.1 Locate building close to the street, and do not locate parking areas between the street and building entrances	<input checked="" type="checkbox"/>
BASIC	1.1.2 Locate building entrances in order to minimize walking distances to sidewalks and transit stops/stations	<input checked="" type="checkbox"/>
BASIC	1.1.3 Locate building doors and windows to ensure visibility of pedestrians from the building, for their security and comfort	<input checked="" type="checkbox"/>
1.2 Facilities for walking & cycling		
REQUIRED	1.2.1 Provide convenient, direct access to stations or major stops along rapid transit routes within 600 metres; minimize walking distances from buildings to rapid transit; provide pedestrian-friendly, weather-protected (where possible) environment between rapid transit accesses and building entrances; ensure quality linkages from sidewalks through building entrances to integrated stops/stations (see Official Plan policy 4.3.3)	<input checked="" type="checkbox"/>
REQUIRED	1.2.2 Provide safe, direct and attractive pedestrian access from public sidewalks to building entrances through such measures as: reducing distances between public sidewalks and major building entrances; providing walkways from public streets to major building entrances; within a site, providing walkways along the front of adjoining buildings, between adjacent buildings, and connecting areas where people may congregate, such as courtyards and transit stops; and providing weather protection through canopies, colonnades, and other design elements wherever possible (see Official Plan policy 4.3.12)	<input checked="" type="checkbox"/>

TDM-supportive design & infrastructure measures: <i>Non-residential developments</i>		Check if completed & add descriptions, explanations or plan/drawing references
REQUIRED	1.2.3 Provide sidewalks of smooth, well-drained walking surfaces of contrasting materials or treatments to differentiate pedestrian areas from vehicle areas, and provide marked pedestrian crosswalks at intersection sidewalks (see <i>Official Plan policy 4.3.10</i>)	<input checked="" type="checkbox"/>
REQUIRED	1.2.4 Make sidewalks and open space areas easily accessible through features such as gradual grade transition, depressed curbs at street corners and convenient access to extra-wide parking spaces and ramps (see <i>Official Plan policy 4.3.10</i>)	<input checked="" type="checkbox"/>
REQUIRED	1.2.5 Include adequately spaced inter-block/street cycling and pedestrian connections to facilitate travel by active transportation. Provide links to the existing or planned network of public sidewalks, multi-use pathways and on-road cycle routes. Where public sidewalks and multi-use pathways intersect with roads, consider providing traffic control devices to give priority to cyclists and pedestrians (see <i>Official Plan policy 4.3.11</i>)	<input checked="" type="checkbox"/>
BASIC	1.2.6 Provide safe, direct and attractive walking routes from building entrances to nearby transit stops	<input type="checkbox"/>
BASIC	1.2.7 Ensure that walking routes to transit stops are secure, visible, lighted, shaded and wind-protected wherever possible	<input type="checkbox"/>
BASIC	1.2.8 Design roads used for access or circulation by cyclists using a target operating speed of no more than 30 km/h, or provide a separated cycling facility	<input type="checkbox"/>
1.3 Amenities for walking & cycling		
BASIC	1.3.1 Provide lighting, landscaping and benches along walking and cycling routes between building entrances and streets, sidewalks and trails	<input type="checkbox"/>
BASIC	1.3.2 Provide wayfinding signage for site access (where required, e.g. when multiple buildings or entrances exist) and egress (where warranted, such as when directions to reach transit stops/stations, trails or other common destinations are not obvious)	<input type="checkbox"/>

TDM-supportive design & infrastructure measures: <i>Non-residential developments</i>		Check if completed & add descriptions, explanations or plan/drawing references
2. WALKING & CYCLING: END-OF-TRIP FACILITIES		
2.1 Bicycle parking		
REQUIRED	2.1.1 Provide bicycle parking in highly visible and lighted areas, sheltered from the weather wherever possible (see <i>Official Plan policy 4.3.6</i>)	<input checked="" type="checkbox"/>
REQUIRED	2.1.2 Provide the number of bicycle parking spaces specified for various land uses in different parts of Ottawa; provide convenient access to main entrances or well-used areas (see <i>Zoning By-law Section 111</i>)	<input checked="" type="checkbox"/>
REQUIRED	2.1.3 Ensure that bicycle parking spaces and access aisles meet minimum dimensions; that no more than 50% of spaces are vertical spaces; and that parking racks are securely anchored (see <i>Zoning By-law Section 111</i>)	<input checked="" type="checkbox"/>
BASIC	2.1.4 Provide bicycle parking spaces equivalent to the expected number of commuter cyclists (assuming the cycling mode share target is met), plus the expected peak number of customer/visitor cyclists	<input type="checkbox"/>
BETTER	2.1.5 Provide bicycle parking spaces equivalent to the expected number of commuter and customer/visitor cyclists, plus an additional buffer (e.g. 25 percent extra) to encourage other cyclists and ensure adequate capacity in peak cycling season	<input type="checkbox"/>
2.2 Secure bicycle parking		
REQUIRED	2.2.1 Where more than 50 bicycle parking spaces are provided for a single office building, locate at least 25% of spaces within a building/structure, a secure area (e.g. supervised parking lot or enclosure) or bicycle lockers (see <i>Zoning By-law Section 111</i>)	<input checked="" type="checkbox"/>
BETTER	2.2.2 Provide secure bicycle parking spaces equivalent to the expected number of commuter cyclists (assuming the cycling mode share target is met)	<input type="checkbox"/>
2.3 Shower & change facilities		
BASIC	2.3.1 Provide shower and change facilities for the use of active commuters	<input type="checkbox"/>
BETTER	2.3.2 In addition to shower and change facilities, provide dedicated lockers, grooming stations, drying racks and laundry facilities for the use of active commuters	<input type="checkbox"/>
2.4 Bicycle repair station		
BETTER	2.4.1 Provide a permanent bike repair station, with commonly used tools and an air pump, adjacent to the main bicycle parking area (or secure bicycle parking area, if provided)	<input type="checkbox"/>

TDM-supportive design & infrastructure measures: <i>Non-residential developments</i>		Check if completed & add descriptions, explanations or plan/drawing references
3. TRANSIT		
3.1 Customer amenities		
BASIC	3.1.1 Provide shelters, lighting and benches at any on-site transit stops	<input type="checkbox"/>
BASIC	3.1.2 Where the site abuts an off-site transit stop and insufficient space exists for a transit shelter in the public right-of-way, protect land for a shelter and/or install a shelter	<input type="checkbox"/>
BETTER	3.1.3 Provide a secure and comfortable interior waiting area by integrating any on-site transit stops into the building	<input type="checkbox"/>
4. RIDESHARING		
4.1 Pick-up & drop-off facilities		
BASIC	4.1.1 Provide a designated area for carpool drivers (plus taxis and ride-hailing services) to drop off or pick up passengers without using fire lanes or other no-stopping zones	<input type="checkbox"/>
4.2 Carpool parking		
BASIC	4.2.1 Provide signed parking spaces for carpools in a priority location close to a major building entrance, sufficient in number to accommodate the mode share target for carpools	<input type="checkbox"/>
BETTER	4.2.2 At large developments, provide spaces for carpools in a separate, access-controlled parking area to simplify enforcement	<input type="checkbox"/>
5. CARSHARING & BIKESHARING		
5.1 Carshare parking spaces		
BETTER	5.1.1 Provide carshare parking spaces in permitted non-residential zones, occupying either required or provided parking spaces (<i>see Zoning By-law Section 94</i>)	<input type="checkbox"/>
5.2 Bikeshare station location		
BETTER	5.2.1 Provide a designated bikeshare station area near a major building entrance, preferably lighted and sheltered with a direct walkway connection	<input type="checkbox"/>

TDM-supportive design & infrastructure measures: <i>Non-residential developments</i>		Check if completed & add descriptions, explanations or plan/drawing references
6. PARKING		
6.1 Number of parking spaces		
REQUIRED	6.1.1 Do not provide more parking than permitted by zoning, nor less than required by zoning, unless a variance is being applied for	<input checked="" type="checkbox"/>
BASIC	6.1.2 Provide parking for long-term and short-term users that is consistent with mode share targets, considering the potential for visitors to use off-site public parking	<input type="checkbox"/>
BASIC	6.1.3 Where a site features more than one use, provide shared parking and reduce the cumulative number of parking spaces accordingly (<i>see Zoning By-law Section 104</i>)	<input type="checkbox"/>
BETTER	6.1.4 Reduce the minimum number of parking spaces required by zoning by one space for each 13 square metres of gross floor area provided as shower rooms, change rooms, locker rooms and other facilities for cyclists in conjunction with bicycle parking (<i>see Zoning By-law Section 111</i>)	<input type="checkbox"/>
6.2 Separate long-term & short-term parking areas		
BETTER	6.2.1 Separate short-term and long-term parking areas using signage or physical barriers, to permit access controls and simplify enforcement (i.e. to discourage employees from parking in visitor spaces, and vice versa)	<input type="checkbox"/>
7. OTHER		
7.1 On-site amenities to minimize off-site trips		
BETTER	7.1.1 Provide on-site amenities to minimize mid-day or mid-commute errands	<input type="checkbox"/>

TDM-Supportive Development Design and Infrastructure Checklist:
Residential Developments (multi-family or condominium)

Legend	
REQUIRED	The Official Plan or Zoning By-law provides related guidance that must be followed
BASIC	The measure is generally feasible and effective, and in most cases would benefit the development and its users
BETTER	The measure could maximize support for users of sustainable modes, and optimize development performance

TDM-supportive design & infrastructure measures: <i>Residential developments</i>		Check if completed & add descriptions, explanations or plan/drawing references
1. WALKING & CYCLING: ROUTES		
1.1 Building location & access points		
BASIC	1.1.1 Locate building close to the street, and do not locate parking areas between the street and building entrances	<input checked="" type="checkbox"/>
BASIC	1.1.2 Locate building entrances in order to minimize walking distances to sidewalks and transit stops/stations	<input checked="" type="checkbox"/>
BASIC	1.1.3 Locate building doors and windows to ensure visibility of pedestrians from the building, for their security and comfort	<input checked="" type="checkbox"/>
1.2 Facilities for walking & cycling		
REQUIRED	1.2.1 Provide convenient, direct access to stations or major stops along rapid transit routes within 600 metres; minimize walking distances from buildings to rapid transit; provide pedestrian-friendly, weather-protected (where possible) environment between rapid transit accesses and building entrances; ensure quality linkages from sidewalks through building entrances to integrated stops/stations (see <i>Official Plan policy 4.3.3</i>)	<input checked="" type="checkbox"/>
REQUIRED	1.2.2 Provide safe, direct and attractive pedestrian access from public sidewalks to building entrances through such measures as: reducing distances between public sidewalks and major building entrances; providing walkways from public streets to major building entrances; within a site, providing walkways along the front of adjoining buildings, between adjacent buildings, and connecting areas where people may congregate, such as courtyards and transit stops; and providing weather protection through canopies, colonnades, and other design elements wherever possible (see <i>Official Plan policy 4.3.12</i>)	<input checked="" type="checkbox"/>

TDM-supportive design & infrastructure measures: <i>Residential developments</i>		Check if completed & add descriptions, explanations or plan/drawing references
REQUIRED	1.2.3 Provide sidewalks of smooth, well-drained walking surfaces of contrasting materials or treatments to differentiate pedestrian areas from vehicle areas, and provide marked pedestrian crosswalks at intersection sidewalks (see <i>Official Plan policy 4.3.10</i>)	<input checked="" type="checkbox"/>
REQUIRED	1.2.4 Make sidewalks and open space areas easily accessible through features such as gradual grade transition, depressed curbs at street corners and convenient access to extra-wide parking spaces and ramps (see <i>Official Plan policy 4.3.10</i>)	<input checked="" type="checkbox"/>
REQUIRED	1.2.5 Include adequately spaced inter-block/street cycling and pedestrian connections to facilitate travel by active transportation. Provide links to the existing or planned network of public sidewalks, multi-use pathways and on-road cycle routes. Where public sidewalks and multi-use pathways intersect with roads, consider providing traffic control devices to give priority to cyclists and pedestrians (see <i>Official Plan policy 4.3.11</i>)	<input checked="" type="checkbox"/>
BASIC	1.2.6 Provide safe, direct and attractive walking routes from building entrances to nearby transit stops	<input type="checkbox"/>
BASIC	1.2.7 Ensure that walking routes to transit stops are secure, visible, lighted, shaded and wind-protected wherever possible	<input type="checkbox"/>
BASIC	1.2.8 Design roads used for access or circulation by cyclists using a target operating speed of no more than 30 km/h, or provide a separated cycling facility	<input type="checkbox"/>
1.3 Amenities for walking & cycling		
BASIC	1.3.1 Provide lighting, landscaping and benches along walking and cycling routes between building entrances and streets, sidewalks and trails	<input type="checkbox"/>
BASIC	1.3.2 Provide wayfinding signage for site access (where required, e.g. when multiple buildings or entrances exist) and egress (where warranted, such as when directions to reach transit stops/stations, trails or other common destinations are not obvious)	<input type="checkbox"/>

TDM-supportive design & infrastructure measures: <i>Residential developments</i>		Check if completed & add descriptions, explanations or plan/drawing references
2. WALKING & CYCLING: END-OF-TRIP FACILITIES		
2.1 Bicycle parking		
REQUIRED	2.1.1 Provide bicycle parking in highly visible and lighted areas, sheltered from the weather wherever possible (see <i>Official Plan policy 4.3.6</i>)	<input checked="" type="checkbox"/>
REQUIRED	2.1.2 Provide the number of bicycle parking spaces specified for various land uses in different parts of Ottawa; provide convenient access to main entrances or well-used areas (see <i>Zoning By-law Section 111</i>)	<input checked="" type="checkbox"/>
REQUIRED	2.1.3 Ensure that bicycle parking spaces and access aisles meet minimum dimensions; that no more than 50% of spaces are vertical spaces; and that parking racks are securely anchored (see <i>Zoning By-law Section 111</i>)	<input checked="" type="checkbox"/>
BASIC	2.1.4 Provide bicycle parking spaces equivalent to the expected number of resident-owned bicycles, plus the expected peak number of visitor cyclists	<input type="checkbox"/>
2.2 Secure bicycle parking		
REQUIRED	2.2.1 Where more than 50 bicycle parking spaces are provided for a single residential building, locate at least 25% of spaces within a building/structure, a secure area (e.g. supervised parking lot or enclosure) or bicycle lockers (see <i>Zoning By-law Section 111</i>)	<input checked="" type="checkbox"/>
BETTER	2.2.2 Provide secure bicycle parking spaces equivalent to at least the number of units at condominiums or multi-family residential developments	<input type="checkbox"/>
2.3 Bicycle repair station		
BETTER	2.3.1 Provide a permanent bike repair station, with commonly used tools and an air pump, adjacent to the main bicycle parking area (or secure bicycle parking area, if provided)	<input type="checkbox"/>
3. TRANSIT		
3.1 Customer amenities		
BASIC	3.1.1 Provide shelters, lighting and benches at any on-site transit stops	<input type="checkbox"/>
BASIC	3.1.2 Where the site abuts an off-site transit stop and insufficient space exists for a transit shelter in the public right-of-way, protect land for a shelter and/or install a shelter	<input type="checkbox"/>
BETTER	3.1.3 Provide a secure and comfortable interior waiting area by integrating any on-site transit stops into the building	<input type="checkbox"/>

TDM-supportive design & infrastructure measures: <i>Residential developments</i>		Check if completed & add descriptions, explanations or plan/drawing references
4. RIDESHARING		
4.1 Pick-up & drop-off facilities		
BASIC	4.1.1 Provide a designated area for carpool drivers (plus taxis and ride-hailing services) to drop off or pick up passengers without using fire lanes or other no-stopping zones	<input type="checkbox"/>
5. CARSHARING & BIKESHARING		
5.1 Carshare parking spaces		
BETTER	5.1.1 Provide up to three carshare parking spaces in an R3, R4 or R5 Zone for specified residential uses (see <i>Zoning By-law Section 94</i>)	<input type="checkbox"/>
5.2 Bikeshare station location		
BETTER	5.2.1 Provide a designated bikeshare station area near a major building entrance, preferably lighted and sheltered with a direct walkway connection	<input type="checkbox"/>
6. PARKING		
6.1 Number of parking spaces		
REQUIRED	6.1.1 Do not provide more parking than permitted by zoning, nor less than required by zoning, unless a variance is being applied for	<input checked="" type="checkbox"/>
BASIC	6.1.2 Provide parking for long-term and short-term users that is consistent with mode share targets, considering the potential for visitors to use off-site public parking	<input type="checkbox"/>
BASIC	6.1.3 Where a site features more than one use, provide shared parking and reduce the cumulative number of parking spaces accordingly (see <i>Zoning By-law Section 104</i>)	<input type="checkbox"/>
BETTER	6.1.4 Reduce the minimum number of parking spaces required by zoning by one space for each 13 square metres of gross floor area provided as shower rooms, change rooms, locker rooms and other facilities for cyclists in conjunction with bicycle parking (see <i>Zoning By-law Section 111</i>)	<input type="checkbox"/>
6.2 Separate long-term & short-term parking areas		
BETTER	6.2.1 Provide separate areas for short-term and long-term parking (using signage or physical barriers) to permit access controls and simplify enforcement (i.e. to discourage residents from parking in visitor spaces, and vice versa)	<input type="checkbox"/>
