APPENDICES

1.0 PROJECT DESCRIPTION

1.1 Purpose

McIntosh Perry (MP) has been retained by Theberge Homes to prepare this Servicing and Stormwater Management Report in support of the Site Plan Control application for phase 1 of the proposed development located at 780 Baseline Road within the City of Ottawa.

The main purpose of this report is to present a servicing design for the development in accordance with the recommendations and guidelines provided by the City of Ottawa (City), the Rideau Valley Conservation Authority (RVCA), and the Ministry of the Environment, Conservation and Parks (MECP). This report will address the water, sanitary and storm sewer servicing for the development, ensuring that existing and available services will adequately service the proposed development.

This report should be read in conjunction with the following drawings:

- CCO-22-0952, C101 – Site Grading and Drainage Plan, and
- CCO-22-0952, C102 – Site Servicing Plan.
- CCO-22-0952, PRE – Pre-Development Drainage Area Plan (Appendix E)
- CCO-22-0952, POST – Post-Development Drainage Area Plan (Appendix F)

1.2 Site Description

The subject property, herein referred to as the site, is located at 780 Baseline Road within the Knoxdale-Merivale Ward. The site covers approximately 1.57 ha and is located at the intersection of Baseline Road and Fisher Avenue. The site is zoned for General Mixed use (GM). See Site Location Plan in Appendix 'A' for more details.

1.3 Proposed Development and Statistics

Phase 1 of the proposed development consists of a high-rise mixed-use building covering approximately 0.48 ha within the site which includes 0.13 Ha of parkland dedication. Building A contains 320 residential units and 711 m^2 of commercial space with access from Fisher Avenue. Underground parking and drive aisles will be provided throughout the site with access Fisher Avenue. Refer to Site Plan prepared by Roderick Lahey Architect Inc (RLA) and included in Appendix B for further details.

1.4 Existing Conditions and Infrastructure

The site is currently developed containing a 1-storey commercial strip mall and asphalt parking areas. The existing appears to be serviced by the 203 mm diameter watermain within Hillard Avenue. There is an existing 375 mm diameter municipal sanitary sewer that passes through the southern portion of the site, from Hillard Avenue to Fisher Avenue.

Sewer and watermain mapping collected from the City of Ottawa indicate that the following services exist across the property frontages within the adjacent municipal rights-of-way(s):

- Fisher Avenue
  - 406 mm diameter PVC watermain,
  - 375-450 mm diameter PVC sanitary sewer tributary to the Cave Creek collector,
  - 1200 mm diameter concrete storm sewer tributary to the Rideau Canal approximately 1 km downstream.

- Baseline Road
  - 406 mm diameter cast iron watermain,
  - 300 mm diameter concrete sanitary sewer tributary to the Cave Creek collector,
  - 1050 mm diameter concrete storm sewer tributary to the Rideau Canal approximately 1 km downstream.

- Hillard Avenue
  - 203 mm diameter PVC watermain,
  - 300 mm diameter PVC sanitary sewer tributary to the Cave Creek collector,
  - 450 mm diameter concrete storm sewer tributary to the Rideau Canal approximately 1.2 km downstream.

1.5 Approvals

The proposed development is subject to the City of Ottawa site plan control process. Site plan control requires the City to review, provided concurrence and approve the engineering design package. Permits to construct can be requested once the City has issued a site plan agreement.

An Environmental Compliance Approval (ECA) through the Ministry of Environment, Conservation and Parks (MECP) is not anticipated to be required for the development since the development is contained a single parcel of land, does not outlet to a combined sewershed, and does not propose industrial usage. As a result, the stormwater management system meets the exemption requirements under O.Reg 525/90.

2.0 BACKROUND STUDIES, STANDARDS, AND REFERENCES

2.1 Background Reports / Reference Information

As-built drawings of existing services, provided by the City of Ottawa Information centre, within the vicinity of the proposed site were reviewed in order to identify infrastructure available to service the contemplated development.

A topographic survey of the site was completed by Farley, Smith & Denis Surveying Ltd., dated April 27, 2022, Revised February 23, 2023 (File No.: 26-23).

An Assessment of Adequacy of Public Services Report was completed by McIntosh Perry, dated October 6th, 2022.

2.2 Applicable Guidelines and Standards

City of Ottawa:

- Ottawa Sewer Design Guidelines, City of Ottawa, SDG002, October 2012. (Ottawa Sewer Guidelines)
  - Technical Bulletin ISTB-2014-01 City of Ottawa, February 2014. (ISTB-2014-01)
  - Technical Bulletin PIEDTB-2016-01 City of Ottawa, September 2016. (PIEDTB-2016-01)
  - Technical Bulletin ISTB-2018-01 City of Ottawa, January 2018. (ISTB-2018-01)
  - Technical Bulletin ISTB-2018-03 City of Ottawa, March 2018. (ISTB-2018-03)
  - Technical Bulletin ISTB-2019-01 City of Ottawa, January 2019. (ISTB-2019-01)
  - Technical Bulletin ISTB-2019-02 City of Ottawa, February 2019. (ISTB-2019-02)
- Ottawa Design Guidelines – Water Distribution City of Ottawa, July 2010. (Ottawa Water Guidelines)
  - Technical Bulletin ISD-2010-2 City of Ottawa, December 15, 2010. (ISD-2010-2)
  - Technical Bulletin ISDTB-2014-02 City of Ottawa, May 2014. (ISDTB-2014-02)
  - Technical Bulletin ISTB-2018-02 City of Ottawa, March 2018. (ISTB-2018-02)

Ministry of Environment, Conservation and Parks:

- Stormwater Planning and Design Manual, Ministry of the Environment, March 2003. (MECP Stormwater Design Manual)
- Design Guidelines for Sewage Works, Ministry of the Environment, 2008. (MECP Sewer Design Guidelines)

Other:

- Water Supply for Public Fire Protection, Fire Underwriters Survey, 2020. (FUS Guidelines)

3.0 PRE-CONSULTATION SUMMARY

A pre-consultation email was provided by City staff on March 20, 2023, regarding the proposed site servicing. The notes from this meeting can be found in Appendix B. Specific design parameters to be incorporated within this design include the following:

- Control post-development flows to the 5-year pre-development storm with a maximum combined C value of 0.50, and calculated time of concentration.
- Flows to the storm sewer in excess of the 5-year storm release rate, up to and including the 100-year storm event, must be detained on site.
- Quality Control to an enhanced level (80% TSS removal).

4.0 WATERMAIN

4.1 Existing Watermain

The site is located within the 2W2C pressure zone, as per the Water Distribution System mapping included in Appendix C. There are three municipal fire hydrants along Fisher Avenue, one along Baseline Road, and one along Sunnycrest Drive available to service the development.

4.2 Proposed Watermain

Dual 150mm diameter PVC water services are proposed to service the development, extending from the existing 203mm PVC watermain within Hillard Avenue, complete with water valves located at the property line. In accordance with Section 4.3.1 of the Ottawa Water Guidelines, service areas with a basic day demand greater than 50 m^3/day require a dual connection to the municipal system.

The Fire Underwriters Survey 2020 (FUS) method was utilized to determine the required fire flow for the site. The 'C' factor (type of construction) for the FUS calculation was determined to be 0.8 (non-combustible type). The occupancy type of the building was determined to be limited combustible per page 24 of the FUS guidelines. The total effective floor area ('A' value) for the FUS calculation was determined to be 6,913.8 m^2. The results of the calculations yielded a required fire flow of 9,000 L/min. The detailed calculations for the FUS can be found in Appendix C.

The water demands for the proposed building have been calculated to adhere to the Ottawa Design Guidelines – Water Distribution manual and can be found in Appendix C. The results have been summarized in Table 1, below. In accordance with Section 4.3.1 of the guidelines, service areas with a basic day demand greater than 50 m^3/day require a dual connection to the municipal system. The basic day demand for the development is estimated to be 157 m^3/day, therefore a dual connection is required.

Table 1: Water Supply Design Criteria and Water Demands

Phase 1 Site Area	0.48 ha
Bachelor/1 Bedroom	1.4 L/person/unit
2 Bedroom	2.1 L/person/unit
3 Bedroom	3.1 L/person/unit
Residential Daily Demand	280 L/person/day
Maximum Daily Peaking Factor	2.5 x avg day
Maximum Hour Peaking Factor	2.2 x max day
Commercial	28,000 L/ha/day
Average Day Demand (L/s)	1.82
Maximum Daily Demand (L/s)	4.52
Peak Hourly Demand (L/s)	8.12
FUS Fire Flow Requirement (L/s)	150.00 (9,000 L/min)

Boundary Conditions have been requested from the City however were not available at the time of submission. Once boundary conditions are provided by the City, operating pressures at the proposed connections will be analysed to confirm they adhere to the Ottawa Water Guidelines.

To confirm the adequacy of fire flow to protect the proposed development, public fire hydrants within 150 m of the proposed building were analysed per City of Ottawa ISTB 2018-02 Appendix I Table 1. Based on City guidelines (ISTB-2018-02), the existing hydrants can provide adequate fire protection to the proposed development. The results are summarized in Table 2, below.

Table 2: Fire Protection Confirmation

Building	Fire Flow Demand (L/min.)	Fire Hydrant(s) within 75m*	Fire Hydrant(s) within 150m*	Combined Fire Flow (L/min.)
780 Baseline – Building A	9,000 (FUS)	3	2	24,700

* Fire hydrants within 75 metres contribute 5,700 L/min to fire flow and fire hydrants within 150 meters contribute 3,800 L/min to fire flow, respectively, per ISTB-2018-02.

5.0 SANITARY DESIGN

5.1 Existing Sanitary Sewer

There is an existing 300 mm diameter sanitary sewer within Baseline Road, an existing 450 mm diameter sanitary sewer within Fisher Avenue, and an existing 300 mm diameter sanitary sewer within Sunnycrest Drive/Hillard Avenue fronting the site. The subject site currently contributes wastewater to the Cave Creek trunk sewer.

In addition, there is an existing 375 mm diameter municipal sanitary sewer that crosses through site, from Hillard Avenue to Fisher Avenue.

5.2 Sanitary Sewer Realignment

The existing 375mm diameter AC sanitary crossing through the site and the two 300mm diameter PVC sanitary sewers directly upstream of the 375mm sewer need to be relocated to allow for the construction of the Phase I building.

5.2.1 Pipe Capacity

Based on as built drawings (Contract No. ISB05-2058, DWG No. 2058-03), the existing capacity of the existing 375mm crossing through the site with a 1.57-3.00% slope is 229 L/s. The capacity of the existing 300mm diameter sewer from MHSA 46203 to MHSA46205 at 0.52% is 73 L/s. The existing capacity of the 300mm sewer from MHSA46208 to MHSA46205 at 0.52%-0.57% is 76 L/s. The existing capacity of the 450mm sewer within Fisher Avenue from MHSA50442 to MHSA50433 is 126 L/s.

As show in drawing C102 the existing 375mm sewer within the site is proposed to be realigned with a 375mm diameter sewer at 0.32%. The existing 300mm diameter sewer from MHSA46208 to MHSA46205 is proposed to be realigned with a 375mm diameter sewer at 0.57%. The existing 300mm diameter sewer from MHSA46203 to MHSA46205 is proposed to be realigned with a 300mm diameter sewer at 0.52%.

As demonstrated in the Sanitary Sewer Design Sheet in Appendix D, the capacity of the existing legs of the realigned sanitary sewers within Hillard Avenue match or improve on the capacity of the respective existing sewers. The realigned 375mm sewer within the site has a capacity of 103 L/s. Due to the complexity of the downstream network, the City will need to advise of any downstream constraints.

5.3 Proposed Sanitary Sewer

A new 200 mm diameter gravity sanitary service is proposed be connected to the re-aligned 375mm diameter sanitary sewer within the site. An internal wastewater sampling chamber is proposed to provide monitoring for site sanitary flows per the Ottawa Sewer Design Guidelines and City of Ottawa Sewer-Use By-Law 2003-514 (14).

The peak design flows for the proposed building were calculated using criteria from the Ottawa Sewer Guidelines and are summarized in Table 3, below. Based on the unit occupancy statistics provided by the architect, the proposed site development will generate a flow of 6.21 L/s. See Appendix D of this report for more details.

Table 3: Sanitary Design Criteria

Design Parameter	Value
Site Area	0.48 ha
Residential	280 L/person/day
Commercial/Amenity	2,800 L/(m^2/day)
1 Bedroom Apartment	1.4 persons/unit
2 Bedroom Apartment	2.1 persons/unit
3 Bedroom Apartment	3.1 persons/unit
Bachelor Apartment	1.4 persons/unit
Residential Peaking Factor	3.31
Extraneous Flow Allowance	0.33 L/s/ha

The full flowing capacity of a 200 mm diameter service at a 1% slope is estimated to be 32.8 L/s. Therefore, a 200 mm diameter service would be sufficiently sized to accommodate the contemplated development.

A sanitary flow of 5.41 L/s for Building A was submitted to City staff for a review of the municipal system. It was indicated that there were no concerns with the additional flows. The estimated demand for Building A has increased to 6.21 L/s based on the latest site statistics provided by the architect. Due to the complexity of the downstream network, the City will need to advise of any downstream constraints. Refer to correspondence included in Appendix D for reference.

6.0 STORM SEWER DESIGN

6.1 Existing Storm Sewers

Stormwater runoff from the site is currently tributary to the Rideau River within the Ottawa River West sub-watershed. The site is currently serviced by series of existing catch basins.

There is an existing 450 mm diameter storm sewer within Hillard Avenue and an existing 1200 mm diameter storm sewer within Fisher Avenue available to service the site. The existing sewers are tributary to the Rideau River approximately 1.0-1.2 km downstream.

6.2 Proposed Storm Sewers

A new 250mm PVC storm service will be extended from the existing 450mm diameter storm sewer within Hillard Avenue. The sewer system will provide attenuation for the roof area and drive aisle/entrance area by an internal cistern complete with a Tempest LMF ICD or an approved equivalent. A cistern detail is to be provided by the Mechanical Engineer under separate cover.

Foundation drainage is proposed to be conveyed without flow attenuation via the 250mm diameter storm service downstream of any cistern controls.

0.13 ha of the site is proposed to be conveyed to the City as parkland. A new catchbasin is proposed to provide drainage for the parkland site via a 250mm storm lead extending to the existing 450mm diameter storm sewer within Hillard Avenue.

Two new catch basins are proposed to collect drainage north of the Phase I development. The existing drainage is currently collected by catch basins that are to be removed in order to construct Building A. The proposed catch basins will convey runoff to the existing site storm system.

See CCO-22-0952 - POST include in Appendix F of this report for more details. The Stormwater Management design for the subject property will be outlined in Section 7.0 of this report.

7.0 PROPOSED STORMWATER MANAGEMENT

7.1 Design Criteria and Methodology

Stormwater management for the proposed site will be maintained using an internal cistern and will collect runoff from the at-grade areas within the site. The flow will be directed to the existing 450mm diameter storm sewer within Hillard Avenue.

In summary, the following design criteria have been employed in developing the stormwater management design for the site as directed by the RVCA and City:

Quality Control

- 80% TSS removal is required for the site.

Quantity Control

- Any storm events greater than 5-year, up to 100-year, and including 100-year storm event must be detained on site.
- Post-development to be restricted to the 5-year storm event, based on a calculated time of concentration greater than 10 minutes and a rational method coefficient of 0.50. Refer to Section 7.2 for further details.

7.2 Runoff Calculations

Runoff calculations presented in this report are derived using the Rational Method, given as:

$$Q = 2.78CIA \quad \text{(L/s)}$$

Where: C = Runoff coefficient
I = Rainfall intensity in mm/hr (City of Ottawa IDF curves)
A = Drainage area in hectares

It is recognized that the Rational Method tends to overestimate runoff rates. As a result, the conservative calculation of runoff ensures that any SWM facility sized using this method is expected to function as intended. The following coefficients were used to develop an average C for each area:

Roofs/Concrete/Asphalt	0.90
Undeveloped and Grass	0.20

As per the City of Ottawa - Sewer Design Guidelines, the 5-year balanced 'C' value must be increased by 25% for a 100-year storm event to a maximum of 1.0.

7.3 Pre-Development Drainage

The site currently contains a catch basin system within the parking lot. It has been assumed that the existing development contained no stormwater management controls for flow attenuation. The estimated pre-development peak flows for the 5- and 100-year events are summarized below in Table 5. See CCO-22-0952 - PRE in Appendix G for calculations.

Table 4: Pre-Development Runoff Summary

Drainage Area	Area (ha)	Q (L/s)	
		5-Year	100-Year
A1	*0.34	83.88	160.04

* Phase I Site Area Less Parkland Dedication

7.4 Post-Development Drainage

The proposed site drainage limits are demonstrated on the Post-Development Drainage Area Plan. See CCO-22-0952 - POST in Appendix F of this report for more details. Based on the quantity control criteria discussed in Section 7.1 and a site area of 0.34 ha, post development drainage from the site is to be limited to a maximum release rate of 49.17 L/S. A summary of the Post-Development Runoff Calculations can be found below.

Table 5: Post-Development Runoff Summary

Drainage Area	Area (ha)	5-year Peak Flow (L/s)	100-year Peak Flow (L/s)	100-year Storage Required (m^3)	100-year Storage Available (m^3)
B1	0.25	3.21	6.14	110.00	110.00
B2	0.09	22.60	43.03	-	-
Total	0.34	25.81	49.17	110.00	110.00

Runoff for area B1 will be collected by roof drains (uncontrolled) and surface drains and conveyed to the internal cistern. The 110 m^3 internal cistern is anticipated to convey stormwater to the outlet at a maximum flow rate of 25.81 L/s and 49.17 L/s for the 5 and 100-year storms, respectively. Flows in excess of the 100-year storm event will need to be directed to Hillard Avenue via a cistern overflow. The cistern details are to be provided by the Mechanical Engineer, however, it is anticipated that the cistern will equipped with Tempest LMF ICD for attenuation.

Foundation drainage is proposed to be conveyed without flow attenuation via the 250 mm storm service, downstream of cistern controls.

7.5 Quality Control

Quality control for Area B1 will be provided via the cistern in a settling pit. Cistern details are to be confirmed the Mechanical Engineer. Pumped water will combine with clean roof drainage before discharging to the city sewer.

8.0 EROSION AND SEDIMENT CONTROL

8.1 Temporary Measures

Before construction begins, temporary silt fence, straw bale or rock flow check dams will be installed at all natural runoff outlets from the property. It is crucial that these controls be maintained throughout construction and inspection of sediment and erosion control will be facilitated by the Contractor or Contract Administration staff throughout the construction period.

Silt fences will be installed where shown on the final engineering plans, specifically along the downstream property limits. The Contractor, at their discretion or at the instruction of the City, Conservation Authority or the Contract Administrator shall increase the quantity of sediment and erosion controls on-site to ensure that the site is operating as intended and no additional sediment finds its way off site. The rock flow, straw bale & silt fence check dams and barriers shall be inspected weekly and after rainfall events. Care shall be taken to properly remove sediment from the fences and check dams as required. Fibre roll barriers are to be installed at all existing curb inlet catchbasins and filter fabric is to be placed under the grates of all existing catchbasins and manholes along the frontage of the site and any new structures immediately upon installation. The measures for the existing/proposed structures is to be removed only after all areas have been paved. Care shall be taken at the removal stage to ensure that any silt that has accumulated is properly handled and disposed of. Removal of silt fences without prior removal of the sediments shall not be permitted.

Although not anticipated, work through winter months shall be closely monitored for erosion along sloped areas. Should erosion be noted, the Contractor shall be alerted and shall take all necessary steps to rectify the situation. Should the Contractor's efforts fail at remediating the eroded areas, the Contractor shall contact the City and/or Conservation Authority to review the site conditions and determine the appropriate course of action. As the ground begins to thaw, the Contractor shall place silt fencing at all required locations as soon as ground conditions warrant. Please see the Site Grading, Drainage and Sediment & Erosion Control Plan for additional details regarding the temporary measures to be installed and their appropriate OPSD references.

8.2 Permanent Measures

Rip-rap will be placed at all locations that have the potential for concentrated flow. It is crucial that the Contractor ensure that the geotextile is keyed in properly to ensure runoff does not undermine the rip rapped area. Additional rip rap is to be placed at erosion prone locations as identified by the Contractor / Contract Administrator / City or Conservation Authority.

It is expected that the Contractor will promptly ensure that all disturbed areas receive topsoil and seed/sod and that grass be established as soon as possible. Any areas of excess fill shall be removed or levelled as soon as possible and must be located a sufficient distance from any watercourse to ensure that no sediment is washed out into the watercourse. As the vegetation growth within the

site provides a key component to the control of sediment for the site, it must be properly maintained once established. Once the construction is complete, it will be up to the landowner to maintain the vegetation and ensure that the vegetation is not overgrown or impeded by foreign objects.

9.0 SUMMARY

- Phase 1 proposed development consists of a high-rise mixed-use building at 780 Baseline Road.
- Two 150mm diameter water services are proposed to be connected to the existing 203mm diameter within Hillard Avenue.
- The existing sanitary sewer passing through the site is proposed to be re-aligned.
- A new 200 mm diameter sanitary service is proposed, complete with an internal monitoring, to service the development via the realigned sanitary sewer within the site.
- A new 250mm storm service for rooftop, surface, and foundation drainage is proposed to service the development. The storm service will connect to the 450mm diameter storm sewer within Hillard Avenue, tributary to the Rideau River approximately 1.0-1.2 km downstream.
- Storage for the 5- through 100-year storm events will be provided through internal cistern attenuation.
- Quality control will be provided for the development via a settling pit within the cistern.

10.0 RECOMMENDATION

Based on the information presented in this report, we recommend that City of Ottawa approve this Assessment of Adequacy of Public Services report in support of the Site Plan Control application for the proposed development at 780 Baseline Road.

This report is respectfully being submitted for approval.

Regards,

McIntosh Perry Consulting Engineers Ltd.

11.0 STATEMENT OF LIMITATIONS

This report was produced for the exclusive use of Theberge Homes. The purpose of the report is to assess the existing stormwater management system and provide recommendations and designs for the post-construction scenario that are in compliance with the guidelines and standards from the Ministry of the Environment, Parks and Climate Change, City of Ottawa and local approval agencies. McIntosh Perry reviewed the site information and background documents listed in Section 2.0 of this report. While the previous data was reviewed by McIntosh Perry and site visits were performed, no field verification/measures of any information were conducted.

Any use of this review by a third party, or any reliance on decisions made based on it, without a reliance report is the responsibility of such third parties. McIntosh Perry accepts no responsibility for damages, if any, suffered by any third party as a result of decisions or actions made based on this review.

The findings, conclusions and/or recommendations of this report are only valid as of the date of this report. No assurance is made regarding any changes in conditions subsequent to this date. If additional information is discovered or becomes available at a future date, McIntosh Perry should be requested to re-evaluate the conclusions presented in this report, and provide amendments, if required.

Subject: 780 Baseline - Site Plan Control - Submission Requirements

Hello all,

Please see attached for Site Plan submission requirements for the 780 Baseline Avenue - Tower A proposal along Fisher, with retention of the existing commercial Plaza. No formal pre-consultation meeting was held due to the significant conversation we've already been having on the related Zoning By-law Amendment.

In addition to the Required Plans, two comments expressed by staff are provided herein:

- A public sanitary sewer and easement is located on the property; the continued functioning of the sanitary sewer must be demonstrated at the Site Plan Control stage if it is proposed to be re-located.
- Please also see attached the Terms of Reference for the Design Brief submission. A new Design Brief is required for the Site Plan submission. Please note a Planning Rationale is not required, and so all the information must be contained in the design brief.

Thank you,

Ryan Robineau

Sent:	May 15, 2023 11:58 AM
To:	Ryan Robineau
Cc:	Curtis Melanson; Livingstone, Kelly
Subject:	Pre-consultation Notes for SPA - 780 Baseline Road

Hi Ryan,

Please see below, let me know if you have any questions. I have included the standard water boundary condition request comment below but acknowledge that you have already submitted your request.

1. Watermain Infrastructure:
   a) Individual residential facilities with a basic day demand greater than 50 m3/day shall be connected with a minimum of two water services, separated by an isolation valve, to avoid the creation of a vulnerable service area (as per Tech Bulletin 2021-03).
   b) Please submit a boundary condition request for this application:

      Water Boundary condition requests must include the location of the services and the expected loads required by the proposed development. Please provide an email to Julie Candow (Julie.candow@ottawa.ca) with the following information:

      i. Location of services
      ii. Type of development and the amount of fire flow required (as per OBC Section 7.2.11 or FUS for fire flows 9,000 L/min or above – See technical bulletin ISTB 2021-03).
      iii. Average daily demand: ___ l/s.
      iv. Maximum daily demand: ___l/s.
      v. Maximum hourly daily demand: ___ l/s.
2. Sanitary / Storm Infrastructure:
   a) A public sanitary sewer and easement is located on the property; the continued functioning of the sanitary sewer must be demonstrated at the Site Plan Control stage if it is proposed to be re-located.
   b) Municipal storm and sanitary infrastructure is available on Fisher Avenue. Asset Management has no preliminary concerns with the sanitary release rate anticipated from this site (Tower A).
   c) New services must be grouped in a common trench to minimize the number of road cuts.
3. The Stormwater Management Criteria, for the subject site, is to be based on the following:
   a) Meet an allowable release rate based on the pre-development Rational Method Coefficient or a maximum of 0.50, employing the City of Ottawa IDF parameters for a 5-year storm with a calculated time of concentration equal to or greater than 10 minutes;
   b) Attenuate all storms up to and including the City of Ottawa 100-year storm event on site.

c) Quality control to be provided to “Enhanced” level of treatment (80% TSS removal).

4. An MECP Environmental Compliance Approval is not anticipated to be required for this application assuming the proposed development meets the following criteria:

   a) Is designed to service one lot or parcel of land;
   b) Discharges into a storm sewer that is not a combined sewer;
   c) Does not service industrial land or a structure located on industrial land; and
   d) Is not located on industrial land. O.Reg. 525/98, s. 3; O.Reg. 40/15, s. 4.

5. Phase 1 ESAs and Phase 2 ESAs must conform to Ontario Regulation 153/04.

Subject: RE: 780 Baseline Boundary Condition Request

Thank you for the update Julie!

As noted in the attached pdf, no formal pre-consultation meeting was held for the 780 Baseline Tower A - Site Plan Control submission. Would you be able to provide a list of engineering requirements for the Tower A proposal?

Regards,

Ryan Robineau, EIT
Civil Engineering Technologist

CCO-22-0952 - 780 Baseline Road - Building A - Fire Underwriters Survey

Project:	780 Baseline Road - Building A
Project No.:	CCO-22-0952
Designed By:	RRR
Checked By:	CJM
Date:	June 2, 2023

From the Fire Underwriters Survey (2020)

From Part II – Guide for Determination of Required Fire Flow Copyright I.S.O.:
City of Ottawa Technical Bulletin ISTB-2018-02 Applied Where Applicable

A. BASE REQUIREMENT (Rounded to the nearest 1000 L/min)

F = 220 x C x √A Where: F = Required fire flow in liters per minute
C = Coefficient related to the type of construction.
A = The total floor area in square meters (including all storey's, but excluding basements at least 50 percent below grade) in the building being considered.

Construction Type: Non-Combustible Construction

C: 0.8 A: 18,898.2 m^2

Total Floor Area (per the 2020 FUS Page 20 - Total Effective Area): 6,913.8 m^2 Protected Vertical Openings Assumed

Calculated Fire Flow	14,634.3 L/min
	15,000.0 L/min

B. REDUCTION FOR OCCUPANCY TYPE (No Rounding)

From Page 24 of the Fire Underwriters Survey:

Limited Combustible	-15%
Fire Flow	12,750.0 L/min

C. REDUCTION FOR SPRINKLER TYPE (No Rounding)

Fully Supervised Sprinklered	-50%
Reduction	-6,375.0 L/min

D. INCREASE FOR EXPOSURE (No Rounding)

	Separation Distance (m)	Cons.of Exposed Wall	Length Exposed Adjacent Wall (m)	Height (Stories)	Length-Height Factor	
Exposure 1	3.1 to 10	Fire Resistive - Non Combustible (Unprotected Openings)	21.3	1	26.0	7%
Exposure 2	Over 30 m	Wood frame	7	2	14.0	0%
Exposure 3	3.1 to 10	Wood frame	12.5	1	12.5	15%
Exposure 4	20.1 to 30	Wood frame	15	1	15.0	0%
					%Increase*	22%

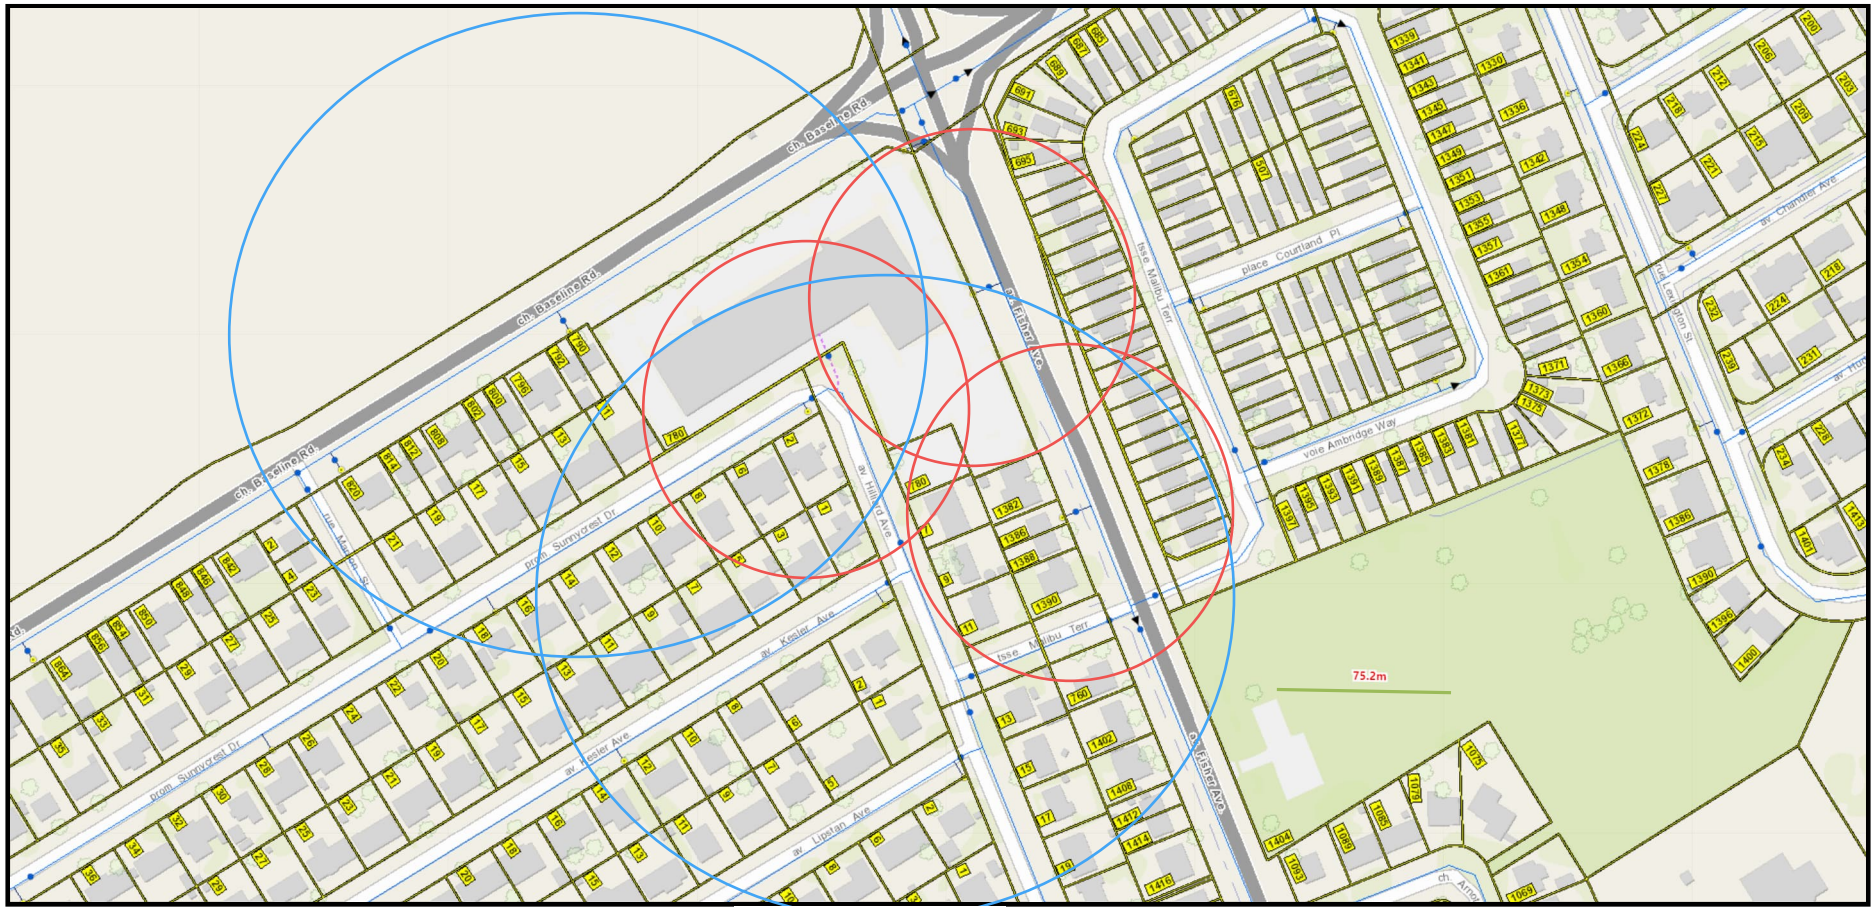
Increase*	2,805.0 L/min

E. Total Fire Flow (Rounded to the Nearest 1000 L/min)

Fire Flow	9,180.0 L/min
Fire Flow Required**	9,000.0 L/min

* In accordance with Part II, Section 4, the Increase for separation distance is not to exceed 75%
** In accordance with Section 4 the Fire flow is not to exceed 45,000 L/min or be less than 2,000 L/min

780 Baseline - Phase 1
Hydrant Coverage Figure



Hydrants within 75m = 3

Hydrants within 150m = 2

Hi Alison, I have passed on your request to Asset Management Branch for their confirmation.

I will follow up once I hear from them.

Thank you,

Julie Candow, P.Eng

To: Candow, Julie <julie.candow@ottawa.ca>
Subject: FW: 22-4516 - 780 Baseline - Sanitary Capacity

Good morning Julie,

There have been some site statistic changes to the contemplated design for 780 Baseline. The changes will be reflected in a revised Assessment of Adequacy of Public Services report for the ZBLA application. Can the City please review the sanitary flows below and advise us of any concerns?

- Building A is anticipated to be serviced via the municipal sanitary sewer that crosses through the site, tributary to the 450mm sanitary sewer within Fisher Ave.
- Building B is anticipated to be serviced via the 300mm sanitary sewer within Baseline Rd.
- Building C is anticipated to be serviced via either the municipal sanitary sewer that crosses through the site or the 300mm sanitary sewer within Baseline Rd.

	Building A	Building B	Building C	Total
Average Dry Weather Flow	1.81	2.06	2.11	5.98
Peak Dry Weather Flow	6.01	6.74	6.93	18.21
Peak Wet Weather Flow	6.14	6.87	7.06	18.61

Please let me know if you have any questions.

Thank you,

Alison Gosling, P.Eng.

Subject: 22-4516 - 780 Baseline - Sanitary Capacity

Hi Jessica,

As discussed, can the City please assess the capacity of the local sanitary sewers for the contemplated development at 780 Baseline Road?

- Building A is anticipated to be serviced via the municipal sanitary sewer that crosses through the site, tributary to the 450mm sanitary sewer within Fisher Ave.
- Building B is anticipated to be serviced via either the municipal sanitary sewer that crosses through the site or the 300mm sanitary sewer within Baseline Rd.
- Building C is anticipated to be serviced via the 300mm sanitary sewer within Baseline Rd.

	Building A	Building B	Building C	Total
Average Dry Weather Flow	1.57	1.91	1.77	5.24
Peak Dry Weather Flow	5.28	6.28	5.79	16.12
Peak Wet Weather Flow	5.41	6.40	5.92	16.50

Please let me know if you have any questions.

Thank you,

GENERAL NOTES

1. THE ORIGINAL TOPOGRAPHY, GROUND ELEVATION AND SURVEY DATA SHOWN ARE SUPPLIED FOR INFORMATION PURPOSES ONLY, AND IMPLY NO GUARANTEE OF ACCURACY. IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO VERIFY ALL INFORMATION SHOWN.
2. THIS PLAN IS NOT A CADASTRAL SURVEY SHOWING LEGAL PROPERTY BOUNDARIES AND EASEMENTS. THE PROPERTY BOUNDARIES SHOWN HEREON HAVE BEEN DERIVED INFORMATION SUPPLIED BY FARLEY, SMITH AND DENIS SURVEYING LTD. (FILE No.26-23) AND CANNOT BE RELIED UPON TO BE ACCURATE OR COMPLETE. THE PRECISE LOCATION OF THE CURRENT PROPERTY BOUNDARIES AND EASEMENTS CAN ONLY BE DETERMINED BY AN UP-TO-DATE LAND TITLES SEARCH AND A SUBSEQUENT CADASTRAL SURVEY PERFORMED AND CERTIFIED BY AN ONTARIO LAND SURVEYOR.
3. THE CONTRACTOR IS TO OBTAIN AND PAY FOR ALL NECESSARY PERMITS AND APPROVALS FROM THE CITY BEFORE COMMENCING CONSTRUCTION.
4. THE CONTRACTOR IS RESPONSIBLE FOR ALL LAYOUT.
5. THE CONTRACTOR IS TO DETERMINE THE EXACT LOCATION, SIZE, MATERIAL AND ELEVATION OF ALL EXISTING UTILITIES PRIOR TO COMMENCING CONSTRUCTION. PROTECT AND ASSUME ALL RESPONSIBILITY FOR EXISTING UTILITIES WHETHER OR NOT SHOWN ON THESE DRAWINGS. IF THERE IS ANY DISCREPANCY THE CONTRACTOR IS TO NOTIFY THE ENGINEER PROMPTLY.
6. RESTORE ALL TRENCHES AND SURFACES OF PUBLIC ROAD ALLOWANCES TO CONDITION EQUAL OR BETTER THAN ORIGINAL CONDITION AND TO THE SATISFACTION OF THE CITY AUTHORITIES.
7. EXCAVATE AND DISPOSE OF ALL EXCESS EXCAVATED MATERIAL, SUCH AS ASPHALT, CURBING AND DEBRIS, OFF SITE AS DIRECTED BY THE ENGINEER AND THE CITY.
8. TOPSOIL TO BE STRIPPED AND STOCKPILED FOR REHABILITATION. CLEAN FILL TO BE PLACED IN FILL AREAS AND COMPACTED TO 95% STANDARD PROCTOR DENSITY.
9. ALL DISTURBED AREAS TO BE RESTORED TO ORIGINAL CONDITION OR BETTER UNLESS OTHERWISE SPECIFIED.
10. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ALL TRAFFIC CONTROL AND SAFETY MEASURES DURING THE CONSTRUCTION PERIOD, INCLUDING THE SUPPLY, INSTALLATION, AND REMOVAL OF ALL NECESSARY SIGNAGE, DELINEATORS, MARKERS AND BARRIERS.
11. DO NOT ALTER GRADING OF THE SITE WITHOUT PRIOR APPROVAL OF THE ENGINEER/CITY.
12. ALL ROADWAY, PARKING LOT, AND GRADING WORKS TO BE UNDERTAKEN IN ACCORDANCE WITH CITY STANDARDS AND SPECIFICATIONS. THE CONTRACTOR IS TO PROVIDE POSITIVE DRAINAGE AWAY FROM THE BUILDING.
13. CONTACT THE CITY FOR INSPECTION OF ROUGH GRADING OF PARKING LOTS, ROADWAYS AND LANDSCAPED AREAS PRIOR TO PLACEMENT OF ASPHALT AND TOPSOIL. ALL DEFICIENCIES NOTED SHALL BE RECTIFIED TO THE CITY'S SATISFACTION PRIOR TO PLACEMENT OF ANY ASPHALT, TOPSOIL, SEED & MULCH AND/OR SOD.
14. ALL DIMENSIONS AND INVERTS MUST BE VERIFIED PRIOR TO CONSTRUCTION, IF THERE IS ANY DISCREPANCY THE CONTRACTOR IS TO NOTIFY THE ENGINEER PROMPTLY.
15. ELECTRICAL, GAS, TELEPHONE AND TELEVISION SERVICE LOCATIONS ARE SUBJECT TO THE INDIVIDUAL AGENCY:
    - ELECTRICAL SERVICE - HYDRO OTTAWA,
    - GAS SERVICE - ENBRIDGE,
    - TELEPHONE SERVICE - BELL CANADA,
    - TELEVISION SERVICE - ROGERS.
16. INSTALLATION TO BE IN ACCORDANCE WITH CURRENT CODES AND STANDARDS OF APPROVAL AGENCIES HYDRO ONE, BELL AND THE CITY.
17. CONTRACTOR TO ENSURE ALL APPLICABLE OPS SPECIFICATIONS ARE FOLLOWED DURING CONSTRUCTION
18. ALL PROPOSED CURB TO BE CONCRETE BARRIER CURB UNLESS OTHERWISE SPECIFIED.
19. THIS PLAN MUST BE READ IN CONJUNCTION WITH THE GEOTECHNICAL INVESTIGATION COMPLETED BY PATERSON GROUP, DATED DECEMBER 12, 2022.

City of Ottawa

4. Development Servicing Study Checklist

The following section describes the checklist of the required content of servicing studies. It is expected that the proponent will address each one of the following items for the study to be deemed complete and ready for review by City of Ottawa Infrastructure Approvals staff.

The level of required detail in the Servicing Study will increase depending on the type of application. For example, for Official Plan amendments and re-zoning applications, the main issues will be to determine the capacity requirements for the proposed change in land use and confirm this against the existing capacity constraint, and to define the solutions, phasing of works and the financing of works to address the capacity constraint. For subdivisions and site plans, the above will be required with additional detailed information supporting the servicing within the development boundary.

4.1 General Content

☐ Executive Summary (for larger reports only).	N/A
☐ Date and revision number of the report.	On Cover
☐ Location map and plan showing municipal address, boundary, and layout of proposed development.	Appendix A
☐ Plan showing the site and location of all existing services.	N/A
☐ Development statistics, land use, density, adherence to zoning and official plan, and reference to applicable subwatershed and watershed plans that provide context to which individual developments must adhere.	1.1 Purpose 1.2 Site Description 6.0 Stormwater Management
☐ Summary of pre-consultation meetings with City and other approval agencies.	Appendix B
☐ Reference and confirm conformance to higher level studies and reports (Master Servicing Studies, Environmental Assessments, Community Design Plans), or in the case where it is not in conformance, the proponent must provide justification and develop a defendable design criteria.	1.1 Purpose 1.2 Site Description 6.0 Stormwater Management
☐ Statement of objectives and servicing criteria.	3.0 Pre-Consultation Summary

☐ Identification of existing and proposed infrastructure available in the immediate area.	N/A
☐ Identification of Environmentally Significant Areas, watercourses and Municipal Drains potentially impacted by the proposed development (Reference can be made to the Natural Heritage Studies, if available).	N/A
☐ Concept level master grading plan to confirm existing and proposed grades in the development. This is required to confirm the feasibility of proposed stormwater management and drainage, soil removal and fill constraints, and potential impacts to neighbouring properties. This is also required to confirm that the proposed grading will not impede existing major system flow paths.	N/A
☐ Identification of potential impacts of proposed piped services on private services (such as wells and septic fields on adjacent lands) and mitigation required to address potential impacts.	N/A
☐ Proposed phasing of the development, if applicable.	N/A
☐ Reference to geotechnical studies and recommendations concerning servicing.	Section 2.0 Background Studies, Standards and References
☐ All preliminary and formal site plan submissions should have the following information: ○ Metric scale ○ North arrow (including construction North) ○ Key plan ○ Name and contact information of applicant and property owner ○ Property limits including bearings and dimensions ○ Existing and proposed structures and parking areas ○ Easements, road widening and rights-of-way ○ Adjacent street names	N/A

4.2 Development Servicing Report: Water

Criteria	Location (if applicable)
☐ Confirm consistency with Master Servicing Study, if available	N/A
☐ Availability of public infrastructure to service proposed development	N/A
☐ Identification of system constraints	N/A
☐ Identify boundary conditions	Appendix C
☐ Confirmation of adequate domestic supply and pressure	N/A
☐ Confirmation of adequate fire flow protection and confirmation that fire flow is calculated as per the Fire Underwriter's Survey. Output should show available fire flow at locations throughout the development.	Appendix C
☐ Provide a check of high pressures. If pressure is found to be high, an assessment is required to confirm the application of pressure reducing valves.	N/A
☐ Definition of phasing constraints. Hydraulic modeling is required to confirm servicing for all defined phases of the project including the ultimate design	N/A
☐ Address reliability requirements such as appropriate location of shut-off valves	N/A
☐ Check on the necessity of a pressure zone boundary modification.	N/A
☐ Reference to water supply analysis to show that major infrastructure is capable of delivering sufficient water for the proposed land use. This includes data that shows that the expected demands under average day, peak hour and fire flow conditions provide water within the required pressure range	Appendix C, Section 4.2

☐ Description of the proposed water distribution network, including locations of proposed connections to the existing system, provisions for necessary looping, and appurtenances (valves, pressure reducing valves, valve chambers, and fire hydrants) including special metering provisions.	N/A
☐ Description of off-site required feedermains, booster pumping stations, and other water infrastructure that will be ultimately required to service proposed development, including financing, interim facilities, and timing of implementation.	N/A
☐ Confirmation that water demands are calculated based on the City of Ottawa Design Guidelines.	Appendix C
☐ Provision of a model schematic showing the boundary conditions locations, streets, parcels, and building locations for reference.	N/A

4.3 Development Servicing Report: Wastewater

Criteria	Location (if applicable)
☐ Summary of proposed design criteria (Note: Wet-weather flow criteria should not deviate from the City of Ottawa Sewer Design Guidelines. Monitored flow data from relatively new infrastructure cannot be used to justify capacity requirements for proposed infrastructure).	N/A
☐ Confirm consistency with Master Servicing Study and/or justifications for deviations.	N/A
☐ Consideration of local conditions that may contribute to extraneous flows that are higher than the recommended flows in the guidelines. This includes groundwater and soil conditions, and age and condition of sewers.	N/A
☐ Description of existing sanitary sewer available for discharge of wastewater from proposed development.	Section 5.2 Proposed Sanitary Sewer

☐ Verify available capacity in downstream sanitary sewer and/or identification of upgrades necessary to service the proposed development. (Reference can be made to previously completed Master Servicing Study if applicable)	Section 5.3 Proposed Sanitary Design
☐ Calculations related to dry-weather and wet-weather flow rates from the development in standard MOE sanitary sewer design table (Appendix 'C') format.	N/A
☐ Description of proposed sewer network including sewers, pumping stations, and forcemains.	Section 5.2 Proposed Sanitary Sewer
☐ Discussion of previously identified environmental constraints and impact on servicing (environmental constraints are related to limitations imposed on the development in order to preserve the physical condition of watercourses, vegetation, soil cover, as well as protecting against water quantity and quality).	N/A
☐ Pumping stations: impacts of proposed development on existing pumping stations or requirements for new pumping station to service development.	N/A
☐ Forcemain capacity in terms of operational redundancy, surge pressure and maximum flow velocity.	N/A
☐ Identification and implementation of the emergency overflow from sanitary pumping stations in relation to the hydraulic grade line to protect against basement flooding.	N/A
☐ Special considerations such as contamination, corrosive environment etc.	N/A

4.4 Development Servicing Report: Stormwater Checklist

Criteria	Location (if applicable)
☐ Description of drainage outlets and downstream constraints including legality of outlets (i.e. municipal drain, right-of-way, watercourse, or private property)	Section 6.0 Stormwater Sewer Design & Section 7.0 Proposed Stormwater Management
☐ Analysis of available capacity in existing public infrastructure.	N/A
☐ A drawing showing the subject lands, its surroundings, the receiving watercourse, existing drainage patterns, and proposed drainage pattern.	N/A
☐ Water quantity control objective (e.g. controlling post-development peak flows to pre-development level for storm events ranging from the 2 or 5-year event (dependent on the receiving sewer design) to 100-year return period); if other objectives are being applied, a rationale must be included with reference to hydrologic analyses of the potentially affected subwatersheds, taking into account long-term cumulative effects.	Section 6.0 Stormwater Sewer Design & Section 7.0 Proposed Stormwater Management
☐ Water Quality control objective (basic, normal or enhanced level of protection based on the sensitivities of the receiving watercourse) and storage requirements.	Section 6.0 Stormwater Sewer Design & Section 7.0 Proposed Stormwater Management
☐ Description of the stormwater management concept with facility locations and descriptions with references and supporting information.	Section 6.0 Stormwater Sewer Design & Section 7.0 Proposed Stormwater Management
☐ Set-back from private sewage disposal systems.	N/A
☐ Watercourse and hazard lands setbacks.	N/A
☐ Record of pre-consultation with the Ontario Ministry of Environment and the Conservation Authority that has jurisdiction on the affected watershed.	N/A
☐ Confirm consistency with sub-watershed and Master Servicing Study, if applicable study exists.	N/A
☐ Storage requirements (complete with calculations) and conveyance capacity for minor events (1:5-year return period) and major events (1:100-year return period).	Appendix G

☐ Identification of watercourses within the proposed development and how watercourses will be protected, or, if necessary, altered by the proposed development with applicable approvals.	N/A
☐ Calculate pre-and post development peak flow rates including a description of existing site conditions and proposed impervious areas and drainage catchments in comparison to existing conditions.	Section 7.0 Proposed Stormwater Management Appendix G
☐ Any proposed diversion of drainage catchment areas from one outlet to another.	Section 6.0 Stormwater Sewer Design & Section 7.0 Proposed Stormwater Management
☐ Proposed minor and major systems including locations and sizes of stormwater trunk sewers, and stormwater management facilities.	Section 6.0 Stormwater Sewer Design & Section 7.0 Proposed Stormwater Management
☐ If quantity control is not proposed, demonstration that downstream system has adequate capacity for the post-development flows up to and including the 100-year return period storm event.	N/A
☐ Identification of potential impacts to receiving watercourses	N/A
☐ Identification of municipal drains and related approval requirements.	N/A
☐ Descriptions of how the conveyance and storage capacity will be achieved for the development.	Section 6.0 Stormwater Sewer Design & Section 7.0 Proposed Stormwater Management
☐ 100-year flood levels and major flow routing to protect proposed development from flooding for establishing minimum building elevations (MBE) and overall grading.	N/A
☐ Inclusion of hydraulic analysis including hydraulic grade line elevations.	N/A

☐ Description of approach to erosion and sediment control during construction for the protection of receiving watercourse or drainage corridors.	N/A
☐ Identification of floodplains – proponent to obtain relevant floodplain information from the appropriate Conservation Authority. The proponent may be required to delineate floodplain elevations to the satisfaction of the Conservation Authority if such information is not available or if information does not match current conditions.	N/A
☐ Identification of fill constraints related to floodplain and geotechnical investigation.	N/A

4.5 Approval and Permit Requirements: Checklist

The Servicing Study shall provide a list of applicable permits and regulatory approvals necessary for the proposed development as well as the relevant issues affecting each approval. The approval and permitting shall include but not be limited to the following:

Criteria	Location (if applicable)
☐ Conservation Authority as the designated approval agency for modification of floodplain, potential impact on fish habitat, proposed works in or adjacent to a watercourse, cut/fill permits and Approval under Lakes and Rivers Improvement Act. The Conservation Authority is not the approval authority for the Lakes and Rivers Improvement Act. Where there are Conservation Authority regulations in place, approval under the Lakes and Rivers Improvement Act is not required, except in cases of dams as defined in the Act.	N/A
☐ Application for Certificate of Approval (CofA) under the Ontario Water Resources Act.	N/A
☐ Changes to Municipal Drains.	N/A
☐ Other permits (National Capital Commission, Parks Canada, Public Works and Government Services Canada, Ministry of Transportation etc.)	N/A

4.6 Conclusion Checklist

Criteria	Location (if applicable)
☐ Clearly stated conclusions and recommendations	Section 8.0 Summary Section 9.0 Recommendations
☐ Comments received from review agencies including the City of Ottawa and information on how the comments were addressed. Final sign-off from the responsible reviewing agency.	All are stamped
☐ All draft and final reports shall be signed and stamped by a professional Engineer registered in Ontario	All are stamped
