EXECUTIVE SUMMARY

Assessment

A Phase I-Environmental Site Assessment (ESA) was carried out for the properties addressed as 1950 Scott Street, 312 and 314 Clifton Road, in the City of Ottawa, Ontario. The purpose of the Phase I-ESA was to research the past and current use of the site and study area and to identify environmental concerns with the potential to have impacted the subject property.

Based on the available historical information sources, the Phase I Property was first developed for residential purposes as early as 1928. An office building, associated with the Independent Coal and Lumber Company located further north of Scott Street, was constructed on the northern portion of the Phase I Property (1950 Scott Street) as early as 1953. The southern portion of the Phase I Property was developed with an additional residential dwelling in the 1960's.

The adjacent properties to the west and southwest were originally vacant, followed by use for commercial purposes. The property to the east, across Clifton Road, has been occupied by a transformer sub-station since as early as 1957. As noted above, the land further to the north, across Scott Street, was used for industrial purposes (including a Canadian Pacific Rail line), while properties to the south have historically been used for residential purposes.

Paterson filed a record of site condition (RSC) in the MECP's Environmental Site Registry for the residential redevelopment of the adjacent property to the west and was previously responsible for the filing of an RSC for the residential property to the southwest. An RSC has been filed for the property to the east across Clifton Road by another firm. Based on information in our files, these properties are not considered to represent areas of potential environmental concern on the Phase I Property.

Based on recent groundwater levels obtained from monitoring wells installed on the Phase I Property for geotechnical purposes as well as in conjunction with the Phase II ESA, the groundwater flow beneath the site is considered to be in a northwesterly direction. While the Hydro transformer sub-station is considered to be a PCA, it is not considered to represent an APEC on the Phase I Property based on the nature of its operation and the separation distance of approximately 30m across Clifton Road in combination with its cross-gradient orientation with respect to the subject land.

One (1) historical PCA that results in an APEC was identified in the form of a historical automotive service garage previously located on the adjacent property to the west addressed 1960 Scott Street. All other historical PCAs further west and north of the Phase I Property are not considered to result in APECs on the subject land-based excepting on their separation distances and/or orientations with respect to the Phase I Property.

Following the historical review, a site visit was conducted. Based on the findings of the site visit, no on-site PCAs were identified. At the time of the site visit, the current use of the adjacent and neighbouring properties within the Phase I ESA Study Area were observed from publicly accessible areas. No off-site PCAs with the potential to impact the Phase I Property were identified at the time of the site visit.

Fill material was identified through the previous geotechnical subsurface investigation. The presence of the fill material of unknown quality represents a PCA that results in an APEC for the Phase I Property.

Recommendations

Based on the findings of the Phase I-ESA, it is our opinion that **a Phase II-ESA is required for the Phase I Property.**

Based on the ages of the subject structures (1920's through 1960's) potentially asbestos containing materials (ACMs) observed at the time of the site visit include, vinyl floor tiles, hard plaster, decorative and stipple plasters, acoustic ceiling tiles, drywall joint compound and exterior parging. Based on dates of construction, lead-based paints (LBPs) may be present within the structures on older or original painted surfaces beneath newer paints. All building materials and painted surfaces were observed to be in good condition at the time of the site visit and the potential for ACMs and LBPs is not considered to represent an immediate concern.

It is our understanding that the subject structures will be demolished in conjunction with future redevelopment. Prior to any demolition activities, a designated substance survey (DSS) must be conducted for the existing structures, in accordance with Ontario Regulation 490/09 under the Occupational Health and Safety Act.

It is recommended that the wells used for geotechnical purposes be decommissioned in accordance with O.Reg 903 if they are not going to be used in the future. It is anticipated that wells will be decommissioned at the time of future development.

1.0 INTRODUCTION

At the request of 2506100 Ontario Inc. acting on behalf of Colonnade Bridgeport, Paterson Group (Paterson) conducted a Phase I-Environmental Site Assessment (Phase I-ESA) of the properties located at 1950 Scott Street and 312 and 314 Clifton Road, in the City of Ottawa, Ontario. The purpose of this Phase I-ESA was to research the past and current use of the site and study area to identify any environmental concerns with the potential to have impacted the subject property.

This report has been prepared specifically and solely for the above noted project which is described herein. It contains all our findings and results of the environmental conditions at this site.

This Phase I-ESA report has been prepared in general accordance with Ontario Regulation 153/04 as amended by O.Reg. 269/11 (Environmental Protection Act), and also complies with the requirements of CSA Z768-01. The conclusions presented herein are based on information gathered from a limited historical review and field inspection program. The findings of the Phase I-ESA are based on a review of readily available geological, historical, and regulatory information and a cursory review made at the time of the field assessment. The historical research relies on information supplied by others, such as, local, provincial, and federal agencies and was limited within the scope-of-work, time and budget of the project herein.

2.0 PHASE I PROPERTY INFORMATION

Address:	1950 Scott Street and 312 and 314 Clifton Road, Ottawa, Ontario.
Legal Description:	Lots 24 and 25 and Part of Lots 45, 46, 47 and 49, Registered Plan 369, City of Ottawa
Property Identification Numbers:	04021-0239, 04021-0050 and 04021-0049
Location:	The subject site is located at the southwest corner of the intersection of Scott Street and Clifton Road, in the City of Ottawa. The subject site is shown on Figure 1 - Key Plan following the body of this report.
Latitude and Longitude:	45° 23' 12" N, 75° 37' 24" W

Site Description:

Configuration:	Rectangular (approximate)
Site Area:	0.23 ha (approximate)
Zoning:	R5B [1195] H(8) – Residential Fifth Density Zone (1950 Scott Street); and R3R – Residential Third Density Zone (312 and 314 Clifton Road)
Current Use:	The property at 1950 Scott Street is currently occupied by the International Buddhist Progress Society of Ottawa, while the properties at 312 and 314 Clifton Road are occupied by single-family residential dwellings with private garages.
Services:	The Phase I Property is located in a municipally serviced area.

3.0 SCOPE OF INVESTIGATION

The scope of work for this Phase I-Environmental Site Assessment was as follows:

- Determine the historical activities on the subject site and study area by conducting a review of readily available records, reports, photographs, plans, mapping, databases and regulatory agencies;
- Investigate the existing conditions present at the subject site and study area by conducting site reconnaissance;
- Conduct interviews with persons knowledgeable of current and historic operations on the subject property, and if warranted, neighbouring properties;
- Present the results of our findings in a comprehensive report in general accordance with the requirements of Ontario Regulation 269/11 amending O.Reg. 153/04 made under the Environmental Protection Act and in compliance with the requirements of CSA Z768-01;
- Provide a preliminary environmental site evaluation based on our findings;
- Provide preliminary remediation recommendations and further investigative work if contamination is suspected or encountered.

4.0 RECORDS REVIEW

4.1 General

Phase I-ESA Study Area Determination

A radius of approximately 250 m was determined to be appropriate as a Phase I ESA study area for this assignment. Properties outside the 250 m radius are not considered to have impacted the subject land, based on their significant distance from the site.

First Developed Use Determination

The chain of title indicates the entire parcel of land comprising the Phase I Property was owned by private individuals until sold into the three existing lots in 1920. The Clifton Road addresses have always been owned by private individuals indicating residential land use, while the parcel of land addressed 1950 Scott Street was owned by private landowners and/or the Township of Nepean, until purchased by the Independent Coal and Lumber Company in 1948. The property has since been owned by commercial business organizations.

The earliest aerial photograph from 1928 shows the Phase I Property was occupied by the residential dwelling addressed 312 Clifton Road. The existing structures at 1950 Scott Street (Buddhist Progress Society of Ottawa) and 312 Clifton Road (residential dwelling) are noted on a 1957 Fire Insurance Plan (FIP). The office building at 1950 Scott Street is first visible on the Phase I Property in a 1958 aerial photo. The parcel of land addressed 314 Clifton Road was undeveloped according to the 1957 FIP and the existing dwelling was first observed in a 1965 aerial photograph. The Phase I Property is considered to have been first developed in the 1920's for residential purposes, followed by commercial development circa 1957.

Fire Insurance Plans

Fire insurance plans (FIPs) for the subject site and surrounding lands from 1956 and 1957 cover the majority of the Phase I Study Area. According to the FIPs, the Phase I Property was occupied by an office building at 1950 Scott Street with a residential dwelling and private garage at 312 Clifton Road. The adjacent property to the west was vacant followed by McRae Avenue and several autobody shops and suspected automotive service garages. The properties to the east were occupied by Clifton Road, followed by a transformer sub-station. The adjacent properties to the south were occupied by single-family residential dwellings. To the north, across Scott Street and the Canadian Pacific Railway, now the location of the Transitway, was the Westboro Branch of Independent Coal and Lumber Company.

The review of the FIPs did not identify any on-site potentially contaminating activities (PCAs).

Neighbouring land use in the Phase I Study Area consisted of a combination of residential, commercial and industrial properties. Various off-site PCAs identified during the review of FIPs include: a transformer sub-station, rail lines, coal storage locations, contractor yards, as well as autobody and automotive repair garages.

The locations of all of the PCAs identified in the Phase I-ESA area are depicted on Drawing PE4995-2 - Surrounding Land Use Plan.

City of Ottawa Street Directories

City directories were reviewed in approximately 10-year intervals from 1910 to 2010. The parcel addressed 1950 Scott Street was first listed as Independent Coal and Lumber, from 1953 through 1970. Based on the FIP review, the property was used as office space only; the associated coal and lumber yard was situated further to the north, across Scott Street. This address was also listed as Mahoney & Rich Limited service station in 1960 and Hodgins Brothers Limited heating equipment in 1965. It should be noted that based on the Chain of Title, the Independent Coal and Lumber Company changed their name to Mahoney Holdings between 1948 and 1970. Based on the 1957 FIP and aerial photograph review, 1950 Scott Street is considered to have been occupied only by office space. There is no evidence of a retail fuel outlet at this location. The offices of Triole Investments Ltd. real estate and Univex Canada Ltd. electrical contractors occupied the building in 1975. The current occupant, the International Bhuddist Progress Society, has been listed at 1950 Scott Street since 2002.

The property at 312 Clifton Road was listed as a private residence as early as 1935. The property at 314 Clifton Road was first listed in the 1960's as a private residence.

Neighbouring properties in the Phase I Study Area were listed primarily as residential dwellings, with some land uses of a commercial or industrial nature. Potentially contaminating activities identified from a review of the City Directories are listed below in Table 1.

Table 1: Potentially Contaminating Activities City Directories Review Summary				
Listing	Address	Years Listed	Potentially Contaminating Activity	Represents an Area of Potential Environmental Concern
Gervais Motors	1960 Scott Street	1989	Possible Automotive Service Garage	Yes
Carson's Body Shop Gas Bar/J's Gas Bar	1976 Scott Street	1972-1992	Retail fuel outlet	No
Westboro Motors	1976 Scott Street	2010	Automotive Service Garage	No
Independent Coal and Lumber Co.	317 Clifton Road (know 1950 Scott Street)	1961, 1970	Office Building	No
Independent Coal and Lumber Co.	25 Clifton Road	1941, 1951, 1961	Bulk Coal Storage Facility	No
Carson's Auto Body Shop	320 McRae Avenue	1959-2010	Automotive Service Garage	No
AutoRebex	320 McRae Avenue	1999-2010	Automotive Service Garage	No
Canadian Bank Note Company	145 Richmond Road	1990, 2000	Industrial Printing	No
Canadian General Electric Co.	175 Richmond Road	1955, 1961	Electronics Manufacturer	No
Guillevin International Pro Restaurant Equipment	175 Richmond Road	1980, 1990, 2000	Restaurant Equipment Manufacturers	No
Fuller Construction	199 Richmond Road	1951, 1961, 1970	Contractors Yard	No
Westboro Auto Imports	199 Richmond Road	1989	Automotive Service Garage	No
Sheera Car Care	201 Richmond Road	2000	Automotive Service Garage	No
Otto's Service Centre	225-245 Richmond Road	1961, 1970, 1980, 1989, 2000, 2010	Car Sales Lot and Automotive Service Garage	No
Ken Workman's Shell Service Station	225 Richmond Road	1951, 1961, 1970	Retail Fuel Outlet	No
Les Auto Body Repairs	314 Athlone Avenue	1961, 1970, 1980, 1989, 2000	Commercial Autobody Shop	No
Brebner Manufacturing and Repairs	360 Kirkwood Avenue	2000	Manufacturer Facility	No
Gifford Auto	359 McRae Avenue	1997, 2000	Automotive Service Garage	No
Frappier's Garage	345 Tweedsmuir	1959	Automotive Service Garage	No

The past use of the adjacent property to the west by Gervais Motors Ltd. is considered to be a PCA that results in an APEC for the subject property based on its close proximity.

The remaining off-site PCAs noted above are not considered to represent areas of potential environmental concern (APECs) on the Phase I Property based on their separation distances and/or cross or down gradient orientations with respect to the subject site. The locations of the aforementioned PCAs, are depicted on Drawing PE4995-2 - Surrounding Land Use Plan.

Chain of Title

The entire Phase I Property was owned by various private landowners between 1873 and 1920. The lot addressed 1950 Scott Street was owned by the Independent Coal and Lumber Company from 1948 through 1970, followed by Triole Investments Limited through 1977 and subsequently, the Regional Municipality of Ottawa Carleton through 1999. The property was purchased by the International Buddhist Progress Society, the current property owner, in 1999.

The lots addressed 312 and 314 Clifton Road have always been owned by private landowners and more specifically the Watson family, from 1941 through 2009, when 312 Clifton Road was sold to Mr. Michael O'Neill, the current property owner. The property 314 Clifton Road is currently owned by Mr. David Watson.

No potentially contaminating activities were identified on the Phase I Property, during the review of the chain of title.

Plan of Survey

A Surveyor's Real Property Report prepared by Stantec Geomatics Ltd. and dated March 29, 2018, was reviewed as part of this assessment. The survey plan shows the Phase I Property in its current configuration.

Previous Engineering Reports

Paterson has completed subsurface investigations for the following properties in the immediate vicinity of the Phase I Property: 1960 Scott Street, 319 McRae Avenue and 320 McRae Avenue. Based on the findings of the investigations at 1960 Scott Street and 319 McRae, immediately west and southwest of the Phase I Property, no environmental concerns were identified with regards to the soil located immediately adjacent to the west of the subject land.

Geotechnical Investigation

A Geotechnical Investigation was conducted for the Phase I Property in March of 2018. The investigation consisted of the placement of three (3) boreholes; two (2) boreholes at 1950 Scott Street and one (1) borehole at 312 Clifton Road. Overburden materials consist of a pavement structure (asphaltic concrete) over a shallow layer of fill material comprised of crushed stone with silty sand followed by a glacial till material consisting of brown silty sand with gravel. Bedrock was encountered at depths ranging from approximately 1.6 to 2.1m below grade. Bedrock was cored at each location to depths of 9.9 or 10.2m below grade. The presence of the shallow fill layer identified on the Phase I Property represents a PCA that results in an APEC.

Monitoring wells were installed at each borehole location to access the groundwater table. Stabilized water levels were measured at depths of ranging from approximately 5.9 to 7.8m below ground surface, indicating groundwater flow in a north-westerly direction. Based on other investigations conducted by Paterson Group in the immediate vicinity of the Phase I Property, the groundwater flow in the general vicinity of the Phase I Property is considered to be towards the north. It is anticipated that the groundwater flow beneath the site may be slightly influenced by the recent construction of the multi-storey residential building with two levels of underground parking on the adjacent property to the southwest.

No visual or olfactory signs of contamination were observed in the soil or groundwater during the Geotechnical Investigation.

4.2 Environmental Source Information

Environment Canada

A search of the National Pollutant Release Inventory (NPRI) was conducted electronically on September 5, 2020.

The subject site was not listed in the NPRI database. One (1) site with NPRI records was identified within the Phase I study area. This site is the Canadian Bank Note Company building located at 145 Richmond Road, approximately 150 m southeast of the Phase I Property.

The Canadian Bank Note Company includes a certificate air contaminant release form that indicates 10.891 tonnes of volatile organic compounds were released as emissions in 2010. Reports of this type appear available for this property for 2003 to 2010, however, no other details or figures were available. Based on its

separation distance from the Phase I Property, this facility is not considered to represent an APEC on the subject land.

PCB Inventory

A search of the national PCB waste storage sites was conducted. No PCB waste storage sites were identified within the Phase I Study Area.

MECP Coal Gasification Plant Inventory

The Ontario Ministry of Environment and Climate Change document titled "Municipal Coal Gasification Plant Site Inventory, 1991" was reviewed to reference the locations of former plants with respect to the site. No coal gasification plants were identified on the subject site or within the Phase I Study Area.

MECP Incident Reports

Requests were submitted to the MECP Freedom of Information office for information with respect to records concerning environmental incidents, orders, offences, spills, discharges of contaminants or inspections maintained by the MECP for the sites comprising the Phase I Property, or adjacent properties. Based on the MECP response, no records were located responsive to the requests. Copies of the MECP responses are provided in Appendix 2.

MECP Waste Management Records

Requests were submitted to the MECP Freedom of Information office for information with respect to waste management records. Based on the MECP responses dated March 22, 2018, no records were located responsive to the requests. Copies of the MECP responses are provided in Appendix 2.

MECP Submissions

Requests were submitted to the MECP Freedom of Information office for information with respect to reports related to environmental conditions that have been submitted to the MECP.

Based on the MECP responses, no records were located responsive to the requests. Copies of the MECP responses are provided in Appendix 2.

MECP Brownfields Environmental Site Registry

A search of the MECP Brownfields Environmental Site Registry (ESR) was conducted as part of this assessment for the site, neighbouring properties and the general area of the site. No Records of Site Condition (RSCs) were filed for the subject site.

Five (5) RSCs were identified for the following properties within the Phase I study area: 309 Athlone Avenue, 305 Clifton Road, 1900 and 1960 Scott Street, and 319 McRae Avenue. Based on the separation distances of the properties at 309 Athlone Avenue, 1900 and 1960 Scott Street with respect to the Phase I Property, in combination with the information in the ESR, these properties are not considered to represent an APEC on the subject land.

The RSC for 319 McRae Avenue, situated immediately southwest of the subject property, was filed by Paterson in December of 2014. As discussed previously, groundwater beneath this property was determined to be clean at the time of the Phase II ESA. No indications of contamination were noted along the southern portion of the subject property at the time of the remediation.

MECP Waste Disposal Site Inventory

The Ontario Ministry of Environment document titled "Waste Disposal Site Inventory in Ontario, 1991" was reviewed as part of the historical research. The MECP document did not identify any landfill sites in the Phase I Study Area.

Areas of Natural Heritage and Significance Interest

A search for areas of natural significance and features within the Phase I study area was conducted on the web site of the Ontario Ministry of Natural Resources (MNR) on March 5, 2018. The search did not identify any provincially significant life sciences or earth sciences areas of natural heritage and scientific interest within the Phase I Study Area.

Technical Standards and Safety Authority (TSSA)

The TSSA, Fuels Safety Branch in Toronto was contacted electronically to inquire about current and former underground storage tanks, spills and incidents for the site and neighbouring properties. No records were identified for the subject site or neighbouring properties,

City of Ottawa Landfill Document

The document entitled "Old Landfill Management Strategy, Phase I-Identification of Sites, City of Ottawa", was reviewed. One landfill site was identified within the Phase I Study Area. The review of the report indicates that the landfill was located on McRae Avenue, between Scott Street and Richmond Road, served the City of Ottawa and was active prior to the 1940s. The report indicates that the waste is domestic, of unknown thickness and the footprint has not been identified.

Based on clean groundwater results beneath the adjacent properties to the west and southwest, in combination with observations made during a test pit program completed on the adjacent property to the west, along the common property line, the reported former landfill is not considered to represent an APEC on the Phase I Property.

City of Ottawa Historical Land Use Inventory (HLUI)

A requisition form was sent to the City of Ottawa to request information from the City’s Historical Land Use Inventory (HLUI 2005) database for the subject property. Based on the response letter from the City of Ottawa, there is one activity associated with the Phase I Property and five (5) activities associated neighbouring properties within the Phase I Study Area. The activities are identified in Table 2 and are further discussed below.

Table 2: Potentially Contaminating Activities HLUI Database				
Activity Number	Address	Years Listed	Potentially Contaminating Activity	Represents an Area of Potential Environmental Concern?
6939	Phase I Property	1940-1970	Independent Coal and Lumber Company (1961) Limited, Petroleum Products wholesale Note that the Phase I Property was used only as offices associated with the aforementioned company.	No
5739	1960 Scott Street	1994	Other motor vehicle services (Generator # ON1041400)	Yes
7597	1960 Scott Street	2001	Photographic Equipment and Musical Instruments and Supplies, Wholesale	No
13661	319 McRae Avenue	1922, 1948-1956	Thomas G. Fuller Limited, Lumber and Building Materials, Wholesale	No
10616	307 Clifton Road	1948-1957	Ottawa Hydro Transformer Substation	No
150026	1946 Scott Street	1960	Racey MacCallum and Associates Ltd. (testing laboratory, consulting engineers)	No

As discussed previously, Activity 6939 was identified on the FIP as an office only, while the Independent Coal and Lumber Company yard was situated further north of the Phase I Property, across Scott Street. This activity is therefore not considered to represent a PCA or an APEC on the Phase I Property.

Situated adjacent to the west of the subject land, Activity 7597 is not considered to be a PCA based on the nature of the activity and therefore not considered to represent an APEC on the Phase I Property.

As discussed previously, activity 5739 was identified in the City Directories and is considered to represent an APEC on the Phase I Property based on its close proximity to the subject land.

The property at 319 McRae Avenue (Activity 13661) was recently developed with a multi-level residential structure subsequent to a remediation program and filing of an RSC with the MECP. Groundwater impacts were not identified on the property and this activity is therefore not considered to be a PCA and does not represent an APEC on the Phase I Property.

The transformer substation on Clifton Road (Activity 10616) is a PCA, however it is not considered to represent an APEC on the Phase I Property based the nature of its operation in combination with the separation distance of approximately 25 to 30m and its orientation cross-gradient with respect to the subject land.

Activity 150026 is not considered to be a PCA based on the nature of the activity.

The City response also indicated that the Phase I Property is within the footprint of the former landfill UR-19 – on McRae Avenue. As discussed above, based on the subsurface information obtained from the western portion of 1960 Scott Street and the findings of our Geotechnical Investigation on the Phase I Property, the former landfill is not considered to represent an APEC on the Phase I Property.

4.3 Physical Setting Sources

Aerial Photographs

Historical air photos from the National Air Photo Library were reviewed in approximate 10-year intervals. The review period dates back to the first available air photos for the site. Based on the review, the following observations have been made:

- 1928 The Phase I Property appears to be occupied with the existing dwelling addressed 312 Clifton Road. The remainder of the subject land is undeveloped and partially treed. The adjacent property to the west appears vacant, with a small path crossing the property and suspected fill piles near the current location of McRae Avenue. Scott Street appears to be a path along the south side of the rail line, at the current location of the Transitway, with apparent industrial operations further to the north. Clifton Road is present to the east followed by vacant, undeveloped land. The adjacent property to the south also consists of vacant, undeveloped land.
- 1953 The Phase I Property has been developed with the existing commercial structure at 1950 Scott Street, while the remainder of the subject land appears to remain unchanged. Scott Street appears in its current configuration. Larger industrial structures remain present to the north of the Phase I Property, across the rail line. Residential development has occurred east and south of the subject land along both sides of Clifton Road.
- 1958 The Phase I Property appears to remain unchanged from the previous photograph. Commercial or industrial activity appears to be present on the property further southwest and northwest of the subject land. Otherwise, the surrounding land use is generally unchanged.
- 1976 The existing dwelling at 314 Clifton Road is now present on the southern portion of the Phase I Property. No other changes appear to have been made to the subject land. The present-day transformer sub-station east of the Phase I Property can be seen. The rail line which was at the location of the present-day Transitway has been removed. To the north of Scott Street, the large industrial complex is no longer present. Further to the northwest, across Scott Street, large additions have been made to an office complex.
- 1984 The Phase I Property remains unchanged from the previous photograph. The adjacent property to the west now has what appears to be shipping containers on it. No other significant changes appear to have been made to the neighbouring properties.

- 1989 No significant changes appear to have been made to the Phase I Property. The adjacent property to the west appears to now be occupied with smaller containers over the eastern portion of the land, with what appears to be a small commercial building on the south-eastern portion of the land. There appears to have been additional residential development east of the site, along Clifton Road, south of the transformer sub-station. No other significant changes appear to have occurred on the adjacent and neighbouring properties.
- 1993 The Phase I Property remains unchanged from the previous photograph. The adjacent property to the west has been redeveloped with a new commercial building. Otherwise, no significant changes appear to have been made to the neighbouring properties.
- 2002 (City of Ottawa website) No significant changes appear to have been made to the Phase I Property or adjacent and neighbouring properties.
- 2008 (City of Ottawa website) The Phase I Property remains unchanged from the previous photograph. Residential development has occurred further east of the subject land. Otherwise, no significant changes have been made to the adjacent and neighbouring properties.
- 2014 (City of Ottawa website) The Phase I Property, adjacent and neighbouring properties appear to remain unchanged from the previous photograph.

Laser copies of selected aerial photographs reviewed are included in Appendix 1.

Topographic Maps

Topographic maps were obtained from Natural Resources Canada – The Atlas of Canada website and from the City of Ottawa website. The topographic maps indicate that the regional topography generally slopes down towards the Ottawa River to the north. The topographic map depicts the Hydro corridor on the east side of McRae Avenue and a substation on the north side of Scott Street. Based on the topographic maps, the closest body of water to the subject site is the Ottawa River, the closest point of which is located approximately 880m northwest of the Phase I Property. An illustration of the referenced topographic map is presented on Figure 2 – Topographic Map, appended to this report.

Physiographic Maps

The Ontario Geological Survey publication 'The Physiography of Southern Ontario, Third Edition' was reviewed as a part of this assessment. According to the publication and attached mapping, the site is situated within the Ottawa Valley Clay Plains physiographic region, described as "clay plains interrupted by ridges of rock or sand". Mapping shows the subject site as situated in an area of limestone and till plains.

Geological Maps

The Geological Survey of Canada website on the Urban Geology of the National Capital Area was consulted as part of this assessment. Based on this information, the bedrock in the area of the subject site consists of interbedded limestone and dolostone of the Gull River Formation. Overburden soils are shown as glacial till, with a drift thickness on the order of 2 to 5 m. The findings of the Geotechnical Investigation confirm the reported subsurface conditions.

Water Well Records

The online interactive well record mapping system was accessed on September 5, 2020. A total of 16 well records were identified within the Phase I Study Area. With the exception of two (2) domestic wells installed in 1948 and 1951, all of the wells in the area of the Phase I Property were utilized as test holes or groundwater monitoring wells.

Three monitoring wells were installed on the Phase I Property during a recent Geotechnical Investigation conducted by Paterson Group. The monitoring wells were installed within the limestone bedrock at depths of approximately 9.9 and 10.2m below ground surface.

Monitoring well records were identified for the properties addressed 1960 Scott Street, 309 Athlone Avenue, 145 Richmond Road, 160 Lanark Avenue (Mahoney Park) and further to the east along Scott Street. As previously discussed, the groundwater beneath 1960 Scott Street is clean based on information in our files. The remaining monitoring wells are not considered to represent a concern to the Phase I Property based on their separation distances of over 100m from the subject land.

Water Bodies and Areas of Natural Significance

No water bodies or Areas of Natural Significance are present on the Phase I Property. The closest water body is the Ottawa River, located approximately 880m northwest of the subject site. No areas of natural significance are known to exist within the Phase I Study Area.

5.0 INTERVIEWS

Mr. Michael O'Neill, the previous property owner of 312 Clifton Road, was interviewed at the time of the site visit. Mr. O'Neill indicated that 314 Clifton Road was originally part of the 312 Clifton Road property. The family of Mr. David Watson, the current owner of 314 Clifton Road, originally owned both parcels of land. According to Mr. O'Neill, 314 Clifton Road was built in the late 1960's or early 1970's and has always been heated with electricity. Large-scale interior renovations were reported to have been completed on the second storey of 314 Clifton Road within the past 10 years.

Mr. O'Neill indicated the property at 312 Clifton Road has been heated with natural gas during his ownership, while the dwelling was likely originally heated with coal fired equipment. He indicated that to his knowledge, no major interior renovations have been completed. Mr. O'Neill also reported that the insulation in the attic is fibreglass. Mr. O'Neill is unaware of any potential environmental concerns with regards to the subject dwellings and the adjacent and neighbouring properties.

A member of the International Buddhist Progressive Society of Ottawa was also interviewed at the time of the site visit. She indicated that she had been at the 1950 Scott Street location for the past 10 years and that during this time, there have been no significant changes made to the property. She was unfamiliar with the history of the site; however, she was unaware of any potential environmental concerns with regards to the current use of the site and neighbouring properties.

A Hydro Ottawa representative was contacted regarding the transformer sub-station at 305 Clifton Road, east of the Phase I Property. The representative was unaware of any spills or leaks from the on-site transformers.

The information obtained in these interviews is consistent with site information obtained from other sources and is considered to be valid.

6.0 SITE RECONNAISSANCE

6.1 General Requirements

Personnel from the Environmental Department of Paterson Group conducted the site visit on September 4, 2020. Weather conditions were sunny, with a temperature of approximately 13° C. In addition to the site, the uses of neighbouring properties within the Phase I-ESA study area were also assessed at the time of the site visit, from publicly accessible areas.

6.2 Specific Observations at Phase I Property

Buildings and Structures

The parcel of the Phase I Property addressed 1950 Scott Street, is occupied by the International Buddhist Progress Society of Ottawa. The building structure has one storey with a basement level and is constructed with a poured concrete foundation and concrete walls. The exterior is finished with parging and a flat, tar and gravel style roof. The building, constructed as early as 1953, is currently heated with electricity.

A residential dwelling, private garage and two (2) storage sheds occupy the property addressed 312 Clifton Road. The dwelling is constructed with a stone and mortar foundation and is finished on the exterior with brick and a peaked roof covered with asphaltic shingles. The dwelling is currently heated with natural gas-fired equipment. The private garage is a wood frame structure with a poured slab-on-grade foundation, finished on the exterior with vinyl siding and parging with a peaked roof covered with asphaltic shingles. The storage sheds are temporary metal frame structures. The dwelling and private garage are considered to have been constructed as early as 1928.

A residential dwelling and private garage occupy 314 Clifton Road. The dwelling is constructed with a poured concrete foundation and is finished on the exterior with brick and a peaked roof covered with asphaltic shingles. The building is currently heated with electricity. The private garage is a wood frame structure with a poured slab-on-grade foundation and finished on the exterior with vinyl siding and a peaked roof covered with asphaltic shingles. Both structures are considered to have been constructed in the 1960's.

Underground Utilities

Underground service locates were completed as part of a Geotechnical Investigation carried out at the Phase I Property. On-site buried services consist of municipal water and sanitary sewers and natural gas, which enter the Phase I Property from Scott Street or Clifton Road.

Site Features

The ground surface on the residential properties largely consists of grass and trees, with asphaltic concrete laneways and parking areas. The ground surface at 1950 Scott Street mainly consists of asphaltic concrete parking areas, with a small landscaped area north of the building. Site topography is generally flat, sloping slightly downwards to the north and east. Site drainage consists primarily of sheet flow to catch basins along Scott Street and Clifton Road, with some infiltration occurring in areas of permeable ground surface, such as the landscaped areas.

What appeared to be a former coal chute, was observed on the west exterior wall of 1950 Scott Street, near the chimney. The presence of the coal chute and chimney suggest the building was originally heated with coal fired equipment. No exterior aboveground storage tanks (ASTs) or evidence of exterior underground storage tanks (USTs) were observed at the time of the site visit. No spills, staining, stressed vegetation, or visual or olfactory evidence of contamination was noted on the exterior of the subject site during the Phase I site visit.

With the exception of buried services discussed above, no other underground structures, drains, pits, or sumps were observed on the exterior of the Phase I Property during the site visit. No monitoring wells, potable wells or private sewage systems were observed onsite, nor are any expected to be present, as the site is located in a municipally serviced area.

Waste generated on site consists of domestic waste and recycling generated from each of the subject buildings. Waste and recycling is collected at the curbside and is collected by the municipality on a weekly basis.

No evidence of recent excavation was observed on the exterior of the subject property. No evidence of current or former railway or spur lines on the subject land were observed at the time of the site visit. There were no unidentified substances observed on the exterior of the Phase I Property.

The above-noted site features are shown on Drawing PE4995-1 - Site Plan.

Interior Assessment

A general description of the interior of each property is provided below:

1950 Scott Street

- Floor materials consist of vinyl tile, hardwood and poured concrete.
- Wall materials consist of ceramic tile, gypsum board, wood panelling and concrete block.
- Ceiling materials consist of acoustic ceiling tiles and gypsum board.
- Lighting throughout the building is provided by incandescent and fluorescent fixtures.

The building is heated with electric space heaters; electric hot water tanks heat the domestic water.

Based on the date of construction (as early as 1953), potentially asbestos-containing materials (ACMs) observed at the time of the site visit include vinyl floor tiles, acoustic ceiling tiles, drywall joint compound and parging (interior and exterior). Lead-based paints may also be present on older or original painted surfaces beneath newer lead-free paints. Building materials and painted surfaces were observed to be in good condition at the time of the site visit.

Several floor drains were observed throughout the basement level, within the kitchen and washroom areas. The drains appeared to be dry. No other drains, or sumps were observed.

Chemical storage was limited to small quantities of commercially available cleaning products and paint. All chemicals were properly stored in their original containers, with no evidence of spills or staining observed at the time of the site visit. No concerns associated with chemical storage were identified at the subject site.

No ASTs or evidence of USTs, spills, or staining were observed on the interior of the building.

312 Clifton Road

- Floor materials consist of vinyl tile, hardwood, carpet, ceramic tile and poured concrete.
- Wall materials consist of lath and plater, gypsum board, parging, and poured concrete.
- Ceiling materials consist of lath and plaster and gypsum board, several of which are finished with stipple or decorative plaster, acoustic ceiling tile, particle board and concrete.
- Lighting throughout the building is provided by incandescent and fluorescent fixtures.

The interior of the private garage is not finished.

Based on the date of construction of the dwelling (as early as 1928), potentially asbestos-containing materials (ACMs) observed at the time of the site visit include vinyl floor tiles, acoustic ceiling tiles, drywall joint compound and parging (interior and exterior). Lead-based paints may also be present on older or original painted surfaces beneath newer lead-free paints. Building materials and painted surfaces were observed to be in good condition at the time of the site visit.

No floor drains or sumps were observed within the subject structures at the time of the site visit.

The building is currently heated with natural gas-fired equipment. Based on the age of the building in combination with observations made at the time of the site visit, it is considered likely that the building was originally heated with coal and possibly fuel-oil, prior to conversion to natural gas. It should be noted however, that no evidence of ASTs or USTs, spills, or staining were observed on the interior of the residential dwelling. The private garage is not heated.

Chemical storage was limited to small quantities of commercially available cleaning products and paint. Small quantities of lubricant and fuel were noted in the private garage. All chemicals were properly stored in their original containers, with no evidence of spills or staining observed at the time of the site visit. No concerns associated with chemical storage were identified on this portion of the Phase I Property.

314 Clifton Road

- Floor materials consist of ceramic tile, carpet and poured concrete.
- Wall materials consist of gypsum board.
- Ceiling materials gypsum board and stipple plaster finishes.
- Lighting throughout the building is provided by fluorescent fixtures.

As noted previously, interior renovations were reportedly completed within the past 10 years.

The interior of the private garage was not accessible at the time of the site visit. According to a photograph provided by the client, the interior of the private garage is not finished.

Based on the date of construction of the dwelling (1960's), potentially asbestos-containing materials (ACMs) observed at the time of the site visit include drywall joint compound and stipple plaster. Although renovations were reportedly completed, the removal of all original building materials could not be confirmed at the time of the site visit. Lead-based paints may also be present on older or original painted surfaces beneath newer lead-free paints. Building materials and painted surfaces were observed to be in good condition at the time of the site visit.

A sump pit was present in the basement of the dwelling. Based on the proximity of the water heater and stored items, the sump pit could not be accessed at the time of the site visit.

The building is currently heated with electric baseboard heaters and reportedly heated as such since its construction. An electric hot water heater heats domestic hot water. No ASTs or evidence of USTs, spills, or staining were observed on the interior of the residential dwelling. The private garage is not heated.

Chemical storage within the dwelling was limited to small quantities of commercially available cleaning products and paint. As noted previously, access to the private garage was not available; the garage is reportedly used for the storage of classic cars and motorcycles only. All chemicals were properly stored in their original containers, with no evidence of spills or staining observed at the time of the site visit. No concerns associated with chemical storage were identified on this portion of the Phase I Property.

Neighbouring Properties

An inspection of neighbouring properties was conducted from publicly accessible roadways at the time of the site inspection. Land use adjacent to the subject site was as follows:

- North - Scott Street, followed by the OC Transpo Transit Way.
- East - Clifton Road followed by Hydro Ottawa transformer sub-station.
- South - Residential.
- West - Multi-storey residential building.

The use of the property at 305 Clifton Road as a transformer sub-station is considered to be a PCA. Based on observations from aerial photographs in combination with observations made at the time of the site visit, the transformers are situated above-grade on concrete slabs and are secured within a walled enclosure. Due to the nature of the operation, in combination with the separation distance and orientation with respect to the Phase I Property, the transformer sub-station is not considered to represent an APEC on the subject land.

Current land use and potentially contaminating activities in the Phase I Study Area are illustrated on Drawing PE4995-2 – Surrounding Land Use Plan in the Figures section of this report, following the text.

7.0 REVIEW AND EVALUATION OF INFORMATION

7.1 Land Use History

The following table indicates the current and past uses of the site as well as associated potentially contaminating activities dating back to the first developed use of the site.

Table 3 Land Use History				
Year	Name of Owner	Property Use	Description of Property Use	Other Observations from Aerial Photos, FIPs, etc.
Entire Property				
1873 to 1889	John Elliott	Unknown	Agricultural or Other	No information from this time period.
1889 to 1890	Andrew Cohan Foster	Unknown	Agricultural or Other	No information from this time period.
1890 to 1898	E.J.Godwin	Unknown	Agricultural or Other	No information from this time period.
1898 to 1906	Rosa Spittal	Unknown	Agricultural or Other	No information from this time period.
1906 to 1909	Henry Bersey	Unknown	Agricultural or Other	No information from this time period.
1909-1920	William Ross	Unknown	Agricultural or Other	No information from this time period.
1950 Scott Street (PIN 0239)				
1920 to 1946	John M. Ross and Charles W. Ross	Vacant, unused land	Agricultural or Other	1928 aerial photograph shows this portion of the Phase I Property as vacant, treed land.
Mar. 1946 to Oct. 1946	The Corporation of the Township of Nepean	Vacant, unused land	Agricultural or Other	No information from this time period obtainable through FIPs or aerial photographs; not listed in City Directories.
1946 to 1948	Edward Sherwood	Vacant, unused land	Agricultural or Other	No information from this time period obtainable through FIPs or aerial photographs; not listed in City Directories.
1948 to 1970	Independent Coal and Lumber Company (later Mahoney Holdings's Limited)	Commercial office building	Commercial	1953, 1958 and 1965 aerials show existing subject structure at 1950 Scott Street; 1957 FIP indicates subject structure occupied by offices.
1970 to 1977	Triole Investments Limited	Commercial office space	Commercial	1976 aerial photograph does not indicate any changes to this portion of the Phase I Property.

Table 3 Continued Land Use History				
Year	Name of Owner	Property Use	Description of Property Use	Other Observations from Aerial Photos, FIPs, etc.
1950 Scott Street (PIN 0239) Continued				
1977 to 1999	The Regional Municipality of Ottawa-Carleton	Municipal offices	Commercial	Based on 1989 and 1993 aerial photographs, no change in land use on this portion of Phase I Property; 1950 Scott Street not listed in City Directories in 1980 and 1990.
1999 to present	International Buddhist Progress Society, Ottawa Chapter	Church, not for profit organization	Community	No change in land use based on 2014 aerial photographs. 1950 Scott Street listed as International Buddhist Progress Society as early as 2002. Current use of 1950 Scott Street at time of site visit.
312 Clifton Road (PIN 0050)				
1920 to 1922	John M. Ross and Charles W. Ross	Unknown	Agricultural or Other	No information from this time period.
1922 to 1932	Elizabeth Edge	Residential dwelling	Residential	Existing dwelling at 312 Clifton Road can be seen in 1928 aerial photograph.
1932 to 1941	John H. Mackenzie	Residential dwelling	Residential	Listed in 1935 City Directory as John Mackenzie.
1941 to 1993	Alice E. Watson	Residential dwelling	Residential	This parcel of Phase I Property remains unchanged in 1953, 1958, 1965, 1976, 1989 and 1993 aerial photographs. Existing dwelling present on 1957 FIP. Listed as private individuals in City Directories (1941 through 1990).
1993 to 2009	David Owen Watson	Residential dwelling	Residential	No change to land use noted in 2002, 2008 aerals. Property listed as David Watson in City Directories during this time frame.
2009 to present	Michael O'Neill	Residential dwelling	Residential	No apparent changes to this portion of the Phase I Property noted in 2014 aerial. Property used for residential purposes during 2018 site visit.
314 Clifton Road (PIN 0049)				
1920 to 1941	John M. Ross and Charles W. Ross	Vacant, unused land (formed part of residential property at 312 Clifton Road)	Residential	This portion of Phase I Property appeared to be vacant, partially treed land in 1928 aerial photograph.

Table 3 Continued Land Use History				
Year	Name of Owner	Property Use	Description of Property Use	Other Observations from Aerial Photos, FIPs, etc.
1941 to 1965	Alice E. Watson	Vacant, unused land followed by residential dwelling circa 1965	Residential	This parcel of Phase I Property appears to remain unchanged in 1953 aerial photograph. Property vacant on 1957 FIP. Existing dwelling observed in 1965 aerial photograph.
1965 to 2007	Raymond Watson and Alice E. Watson	Residential dwelling	Residential	No change to land use noted in 1976, 1989, 1993 or 2002 aerial photographs.
2007 to present	David Owen Watson	Residential dwelling	Residential	No apparent changes to this portion of the Phase I Property noted in 2014 aerial. Property used for residential purposes during 2018 site visit.

Potentially Contaminating Activities (PCAs)

One (1) PCA was identified on the Phase I Property and pertains to fill material of unknown quality identified throughout the subject site. The identified PCA results in an APEC for the subject site.

Off-site PCAs were identified within the Phase I Study Area as a result of historical automotive service garages, industrial uses, retail fuel outlets, manufacturers, and printers. The off-site PCAs are depicted on Drawing PE4995-2- Surrounding Land Use Plan in the Figures section of this report, following the text. Based on their separation distances and/or orientations with respect to the subject land as well as previous work completed by Paterson Group, only the historical automotive service garage previously addressed 1960 Scott results in an APEC for the subject site.

Areas of Potential Environmental Concern (APECs)

Two (2) APECs were identified on the Phase I Property resulting from the identification of fill material of unknown quality throughout the subject site as well as a historical automotive service garage previously located on the adjacent property to the west addressed 1960 Scott Street.

Contaminants of Potential Concern (CPCs)

CPCs on the Phase I Property include:

- Metals including Hg and Chromium VI
- Polycyclic Aromatic Hydrocarbons (PAHs)
- PHCs (F₁-F₄) + BTEX
- VOCs

7.2 Conceptual Site Model

Geological and Hydrogeological Setting

The Geological Survey of Canada website on the Urban Geology of the National Capital Area was consulted as part of this assessment. Based on this information, the bedrock in the area of the subject site consists of interbedded limestone and dolostone of the Gull River Formation. Overburden soils are shown as glacial till, with a drift thickness on the order of 2 to 5 m. The findings of the Geotechnical Investigation confirm the reported subsurface conditions.

Based on the Geotechnical Investigation conducted on the Phase I Property and other investigations completed by Paterson at sites in the immediate vicinity of the subject land, the long-term groundwater table is interpreted to be present in the bedrock layer. Based on the groundwater levels measured at the on-site monitoring well locations, the groundwater flow beneath the Phase I Property is in a northwesterly direction. It is anticipated, however, that groundwater flow in the general vicinity of the Phase I Property is to the north and that the groundwater flow beneath the site may be slightly influenced by the recent construction of the multi-storey residential building with two levels of underground parking on the adjacent property to the southwest.

Buildings and Structures

The subject site is currently occupied by two residential dwellings and associated private garages at 312 and 314 Clifton Road, and a Buddhist temple at 1950 Scott Street. The buildings are considered to have been constructed between the 1920's and the 1960's.

In addition to the aforementioned buildings, two small, steel frame storage sheds are also present at 312 Clifton Road. No other buildings or structures are present on the Phase I Property

Water Bodies

There are no water bodies on the subject site or within the Phase I Study Area. The nearest water body is the Ottawa River, located approximately 880m to the northwest of the Phase I Property.

Areas of Natural Significance

No areas of natural significance were identified on the site or in the Phase I ESA Study Area.

Drinking Water Wells

The online interactive well record mapping system was accessed on March 5, 2018. No potable well records were identified for the Phase I Property. Two records of domestic wells, dated 1948 and 1951, were identified for properties within the Phase I Study Area. These wells are no longer considered to be in operation as the Phase I Property and surrounding properties are municipally serviced.

Monitoring Well Records

Three monitoring wells were installed on the Phase I Property during a Geotechnical Investigation conducted by Paterson Group in March of 2018. The monitoring wells were installed within the limestone bedrock at depths of approximately 9.9 and 10.2m below ground surface.

A total of 14 well records for test holes or groundwater monitoring wells were identified for other properties within the Phase I Study Area. Monitoring well records were identified for the properties addressed 1960 Scott Street, 309 Athlone Avenue, 145 Richmond Road, 160 Lanark Avenue (Mahoney Park) and further to the east along Scott Street. As previously discussed, the groundwater beneath 1960 Scott Street is clean based on information in our files. The remaining monitoring wells are not considered to represent a concern to the Phase I Property based on their separation distances of over 100m from the subject land.

Neighbouring Land Use

Neighbouring land use in the Phase I Study Area is primarily residential with some commercial land use.

Potentially Contaminating Activities (PCAs)

Two (2) PCAs resulting in APECs were identified on the Phase I Property and within the Phase I-Study Area and consisted of fill material of unknown quality across the site and the historical automotive service garage previously located on the adjacent lot to the west. As noted previously, based on the findings of investigative work conducted by Paterson on the adjacent properties to the southwest, previously occupied by automotive service garages and/or contractor yards, these properties are not considered to be PCAs. A transformer sub-station situated to the east of the Phase I Property, across Clifton Road is a PCA. Based on the nature of its operation in combination with its cross-gradient orientation and separation distance of approximately 30m, the substation is not considered to represent an APEC on the Phase I Property.

Other historical or existing off-site PCAs identified within the Phase I-ESA study area are presented on Drawing PE4995-2 – Surrounding Land Use Plan. Based on their separation distances and/or orientations with respect to the Phase I Property, the PCAs are not considered to represent APECs on the Phase I Property.

Areas of Potential Environmental Concern (APECs)

Two (2) APECs were identified on the Phase I Property and with the Phase I Study Area as a result of the identification of fill material of unknown quality across the entire site and the historical automotive service garage previously located on the adjacent lot to the west.

Contaminants of Potential Concern (CPCs)

CPCs on the Phase I Property include:

- Metals including Hg and Chromium VI
- Polycyclic Aromatic Hydrocarbons (PAHs)
- PHCs (F₁-F₄) + BTEX
- VOCs

Assessment of Uncertainty and/or Absence of Information

The information available for review as part of the preparation of this Phase I-ESA is considered to be sufficient to conclude that there are two (2) PCAs on the Phase I Property and within the Phase I Study Area which result in APECs for the subject site. The presence of PCAs was confirmed by a variety of independent sources, and as such, the conclusions of this report are not affected by uncertainty which may be present with respect to the individual sources.

8.0 CONCLUSIONS

Assessment

A Phase I-Environmental Site Assessment (ESA) was carried out for the properties addressed as 1950 Scott Street, 312 and 314 Clifton Road, in the City of Ottawa, Ontario. The purpose of the Phase I-ESA was to research the past and current use of the site and study area and to identify environmental concerns with the potential to have impacted the subject property.

Based on the available historical information sources, the Phase I Property was first developed for residential purposes as early as 1928. An office building, associated with the Independent Coal and Lumber Company located further north of Scott Street, was constructed on the northern portion of the Phase I Property (1950 Scott Street) as early as 1953. The southern portion of the Phase I Property was developed with an additional residential dwelling in the 1960's.

The adjacent properties to the west and southwest were originally vacant, followed by use for commercial purposes. The property to the east, across Clifton Road, has been occupied by a transformer sub-station since as early as 1957. As noted above, the land further to the north, across Scott Street, was used for industrial purposes (including a Canadian Pacific Rail line), while properties to the south have historically been used for residential purposes.

Paterson filed a record of site condition (RSC) in the MECP's Environmental Site Registry for the residential redevelopment of the adjacent property to the west and was previously responsible for the filing of an RSC for the residential property to the southwest. An RSC has been filed for the property to the east across Clifton Road by another firm. Based on information in our files, these properties are not considered to represent areas of potential environmental concern on the Phase I Property.

Based on recent groundwater levels obtained from monitoring wells installed on the Phase I Property for geotechnical purposes as well as in conjunction with the Phase II ESA, the groundwater flow beneath the site is considered to be in a northwesterly direction. While the Hydro transformer sub-station is considered to be a PCA, it is not considered to represent an APEC on the Phase I Property based on the nature of its operation and the separation distance of approximately 30m across Clifton Road in combination with its cross-gradient orientation with respect to the subject land.

One (1) historical PCA that results in an APEC was identified in the form of a historical automotive service garage previously located on the adjacent property to the west addressed 1960 Scott Street. All other historical PCAs further west and north of the Phase I Property are not considered to result in APECs on the subject land-based excepting on their separation distances and/or orientations with respect to the Phase I Property.

Following the historical review, a site visit was conducted. Based on the findings of the site visit, no on-site PCAs were identified. At the time of the site visit, the current use of the adjacent and neighbouring properties within the Phase I ESA Study Area were observed from publicly accessible areas. No off-site PCAs with the potential to impact the Phase I Property were identified at the time of the site visit.

Fill material was identified through the previous geotechnical subsurface investigation. The presence of the fill material of unknown quality represents a PCA that results in an APEC for the Phase I Property.

Recommendations

Based on the findings of the Phase I-ESA, it is our opinion that **a Phase II-ESA is required for the Phase I Property.**

Based on the ages of the subject structures (1920's through 1960's) potentially asbestos containing materials (ACMs) observed at the time of the site visit include, vinyl floor tiles, hard plaster, decorative and stipple plasters, acoustic ceiling tiles, drywall joint compound and exterior parging. Based on dates of construction, lead-based paints (LBPs) may be present within the structures on older or original painted surfaces beneath newer paints. All building materials and painted surfaces were observed to be in good condition at the time of the site visit and the potential for ACMs and LBPs is not considered to represent an immediate concern.

It is our understanding that the subject structures will be demolished in conjunction with future redevelopment. Prior to any demolition activities, a designated substance survey (DSS) must be conducted for the existing structures, in accordance with Ontario Regulation 490/09 under the Occupational Health and Safety Act.

It is recommended that the wells used for geotechnical purposes be decommissioned in accordance with O.Reg 903 if they are not going to be used in the future. It is anticipated that wells will be decommissioned at the time of future development.

9.0 STATEMENT OF LIMITATIONS

This Phase I-Environmental Site Assessment (ESA) report has been prepared in general accordance with O.Reg. 153/04 as amended by O.Reg. 269/11 and meets the requirements of CSA Z768-01. The conclusions presented herein are based on information gathered from a limited historical review and field inspection program. The findings of the Phase I-ESA are based on a review of readily available geological, historical, and regulatory information and a cursory review made at the time of the field assessment. The historical research relies on information supplied by others, such as, local, provincial, and federal agencies and was limited within the scope-of-work, time and budget of the project herein.

Should any conditions be encountered at the subject site and/or historical information that differ from our findings, we request that we be notified immediately in order to allow for a reassessment.

This report was prepared for the sole use of 2506100 Ontario Inc. and Colonnade Bridgeport. Permission and notification from 2506100 Ontario Inc. and Colonnade Bridgeport and Paterson will be required to release this report to any other party.

Paterson Group Inc.

SURVEYOR'S REAL PROPERTY REPORT
PART 1 - PLAN OF SURVEY

**LOTS 24 AND 25
AND PART OF LOTS 45, 46, 47 AND 48**
REGISTERED PLAN 369
CITY OF OTTAWA

Scale 1:200
5 0 5 15 METRES

METRIC CONVERSION
DISTANCES AND COORDINATES SHOWN ON THIS PLAN ARE IN METRES AND CAN BE CONVERTED TO FEET BY DIVIDING BY 0.3048

BEARING NOTE
BEARINGS ARE ASTRONOMIC AND ARE REFERRED TO THE WESTERLY LIMIT OF CLIFTON ROAD AS SHOWN ON PLAN SR-14769, HAVING A BEARING OF N26°29'40"W.

ELEVATION NOTE
ELEVATIONS SHOWN HEREON ARE GEODETIC (CGVD-1928:1978) AND ARE DERIVED FROM THE CAN-NET VRS NETWORK MONUMENT: OTTAWA ELEVATION=95.230.

UTILITY NOTE
LOCATION OF UNDERGROUND SERVICES ARE APPROXIMATE AND ARE PER THE CITY OF OTTAWA UCC SHEET No. 5-E-05-01 AND E-05-02 AND PLAN & PROFILE DRAWING No.1246 (SHEETS 1&2) AND MUST BE VERIFIED PRIOR TO CONSTRUCTION.

NOTE
THIS PLAN OF SURVEY IS TO BE READ IN CONJUNCTION WITH THE REPORT SUMMARY NOTED AS PART 2 HEREOF.
THIS REPORT CAN ONLY BE UPDATED BY THIS OFFICE. NO ADDITIONAL PRINTS OF THIS ORIGINAL REPORT WILL BE ISSUED SUBSEQUENT TO THE DATE OF CERTIFICATION.
ALL TIES ARE MINIMUM UNLESS OTHERWISE NOTED.
ALL TIES TO CURVED BOUNDARY ARE RADIAL TO ARC.
RISK OF UNDERGROUND SERVICES, MONUMENTATION PLANTED ACCORDINGLY.

PART 2
This Report was prepared for E.B.C. Inc. and the undersigned accepts no responsibility for the use by other parties.

- REGISTERED RIGHTS-OF-WAY/EASEMENTS
No rights-of-way or easements were found to be registered against the subject property.
- PROPERTY IMPROVEMENTS
See Part 1 (Plan of Survey) for details.
- COMPLIANCE WITH MUNICIPAL ZONING BYLAWS
Compliance is not certified by this report.
- ADDITIONAL REMARKS

Dear Karyn Munch:

RE: ***Freedom of Information and Protection of Privacy Act Request***
Our File # A-2018-01414, Your Reference PE4239

This letter is in response to your request made pursuant to the *Freedom of Information and Protection of Privacy Act* relating to 1950 Scott Street, Ottawa.

After a thorough search through the files of the Ministry's Ottawa District Office, Investigations and Enforcement Branch, Environmental Assessment and Permissions Branch, Environmental Monitoring and Reporting Branch, Sector Compliance Branch and Safe Drinking Water Branch, no records were located responsive to your request. To provide you with this response and in accordance with Section 57 of the *Freedom of Information and Protection of Privacy Act*, the fee owed is \$30.00 for 1 hour of search time @ \$30.00 per hour. **We have applied the \$30.00 for this request from your initial payment. This file is now closed.**

You may request a review of my decision by contacting the Information and Privacy Commissioner/Ontario, 2 Bloor Street East, Suite 1400, Toronto, ON M4W 1A8 (800-387-0073 or 416-326-3333). Please note that there is a \$25.00 fee and you only have 30 days from receipt of this letter to request a review.

If you have any questions regarding this matter, please contact Moliann Weir at Moliann.Weir4@ontario.ca.

Yours truly,

Janet Dadufalza

March 22, 2018

Paterson Group
154 Colonnade Road South
Ottawa ON
K2E 7J5

Sent via email [kmunch@patersongroup.ca]

Dear Paterson Group,

**Re: Information Request
312 and 314 Clifton Road, 1950 Scott Street, Ottawa, Ontario (“Subject Property”)**

Internal Department Circulation

The Planning, Infrastructure and Economic Development Department has the following information in response to your request for information regarding the Subject Property:

- Disposals and Environmental Remediation: The subject properties are within the footprint of former landfill Ur-19 – McRae Avenue. The City has no information regarding the current environmental conditions of this former landfill as the site is under private ownership.

Search of Historical Land Use Inventory

This acknowledges receipt of the signed Disclaimer regarding your request for information from the City’s Historical Land Use Inventory (HLUI 2005) database for the Subject Property.

A search of the HLUI database revealed the following information:

- There is one (1) activity associated with the Subject Property: Activity Number 6939.

The HLUI database was also searched for activity associated with properties located within 50m of the Subject Property. The search revealed the following:

*Shaping our future together
Ensemble, formons notre avenir*

City of Ottawa
Planning, Infrastructure and Economic
Development Department

110 Laurier Avenue West, 4th Floor
Ottawa, ON K1P 1J1
Tel: (613) 580-2424 ext. 14743
Fax: (613) 560-6006
www.ottawa.ca

Ville d'Ottawa
Services de la planification, de l'infrastructure et
du développement économique

110, avenue Laurier Ouest, 4e étage
Ottawa (Ontario) K1P 1J1
Tél.: (613) 580-2424 ext. 14743
Télééc: (613) 560-6006
www.ottawa.ca

- There are five (5) activities associated with properties located within 50m of the Subject Property: Activity Numbers 13661, 5739, 7597, 15026 and 10616.

Please note that Activity Numbers 13661 and 10616 have a PIN Certainty of “2”. This identifier acknowledges that there is some uncertainty about the exact location of the land use activity and that the activity may or may not have been located on the Subject Property. All database entries with a PIN Certainty of “2” require independent verification as to their precise location.

A site map has been included to show the location of the Subject Property as well as the location of all the activities noted above, including the HLUI database’s location of the Activity Numbers with a PIN Certainty of “2”.

Additional information may be obtained by contacting:

Ontario’s Environmental Registry

The Environmental Registry found at <http://www.ebr.gov.on.ca/ERS-WEB-External/> contains "public notices" about environmental matters being proposed by all government ministries covered by the Environmental Bill of Rights. The public notices may contain information about proposed new laws, regulations, policies and programs or about proposals to change or eliminate existing ones. By using key words i.e. name of proponent/owner and the address one can ascertain if there is any information on the proponent and address under the following categories: Ministry, keywords, notice types, Notice Status, Acts, Instruments and published date (all years).

The Ontario Land Registry Office

Registration of real property is recorded in the Ontario Land Registry Office through the Land Titles Act or the Registry Act. Documents relating to title and other agreements that may affect your property are available to the public for a fee. It is recommended that a property search at the Land Registry Office be included in any investigation as to the historic use of your property. The City of Ottawa cannot comment on any documents to which it is not a party.

Court House
161 Elgin Street 4th Floor
Ottawa ON K2P 2K1
Tel: (613) 239-1230
Fax: (613) 239-1422

Please note, as per the HLUI Disclaimer, that the information contained in the HLUI database has been compiled from publicly available records and other sources of information. The HLUI may contain erroneous information given that the records used as sources of information may be flawed. For instance, changes in municipal addresses over time may introduce error. Accordingly, all information from the HLUI database is provided on an “as is” basis with no

representation or warranty by the City with respect to the information's accuracy or exhaustiveness in responding to the request.

Furthermore, the HLUI database and the results of this search in no way confirm the presence or absence of contamination or pollution of any kind. This information is provided on the assumption that it will not be relied upon by any person for any purpose whatsoever. The City of Ottawa denies all liability to any persons attempting to rely on any information provided from the HLUI database.

Please note that in responding to your request, the City of Ottawa does not guarantee or comment on the environmental condition of the Subject Property. You may wish to contact the Ontario Ministry of Environment and Climate Change for additional information.

If you have any further questions or comments, please contact Justin Marr at 613-580-2424 ext. 14743 or HLUI@ottawa.ca

Sincerely,

A handwritten signature in cursive script that reads "Justin Marr".

To: Samuel Berube
Subject: RE: PE4995 - TSSA Request

Thank you for your request for confirmation of public information.

We confirm that there are no records in our database of any fuel storage tanks, elevating devices and boilers/pressure vessels at the subject address.

For a further search in our archives please complete our release of public information form found at <https://www.tssa.org/en/about-tssa/release-of-public-information.aspx?mid=392> and email the completed form to publicinformationsservices@tssa.org along the appropriate fee. TSSA's fee schedule can be found at: https://www.tssa.org/en/about-tssa/resources/Documents/Public-Information-Fee-Schedule_Jan_2018.pdf. Fees are payable with a credit card (Visa or MasterCard).

Although TSSA believes the information provided pursuant to your request is accurate, please note that TSSA does not warrant this information in any way whatsoever.

Kind regards,

Roxana
