Further to your request, Paterson Group (Paterson) have prepared a fee estimate to undertake a Landfill Impact Assessment Study for the subject site to support the municipal site plan control application.

Landfill Impact Assessment Study

The landfill impact assessment study will consist of the following:

- Paterson will request from the municipality, the most recent groundwater sampling reports prepared for Trail Road Landfill, for our review. Available landfill reports from previous years will be reviewed in the interim.
- Based on a review of available landfill monitoring reports and a desktop review of the subject site, a letter report will be prepared summarizing our assessment of potential for adverse effects from the Trail Road landfill on the subject land.
- The letter report will be provided within approximately 4 working days, as discussed. If the most recent landfill monitoring report is not readily available, our letter report will be updated once the current landfill monitoring report is received and reviewed.
- The fee estimate will be based on the methodology outlined above and will be **\$1,500** (excluding HST and disbursements). Meetings and consultations, if required, will be billed at unit rates.

We trust this satisfies your current needs. If you have any questions, please let me know.

Regards,
Paterson Group Inc.

Karyn Munch, P.Eng, QP_{esa}
