Disclaimer

The conclusions in the Report titled 930 – 1010 Somerset Street are Stantec's professional opinion, as of the time of the Report, and concerning the scope described in the Report. The opinions in the document are based on conditions and information existing at the time the scope of work was conducted and do not take into account any subsequent changes. The Report relates solely to the specific project for which Stantec was retained and the stated purpose for which the Report was prepared. The Report is not to be used or relied on for any variation or extension of the project, or for any other project or purpose, and any unauthorized use or reliance is at the recipient's own risk.

Stantec has assumed all information received from a (the "Client") and third parties in the preparation of the Report to be correct. While Stantec has exercised a customary level of judgment or due diligence in the use of such information, Stantec assumes no responsibility for the consequences of any error or omission contained therein.

This Report is intended solely for use by the Client in accordance with Stantec's contract with the Client. While the Report may be provided by the Client to applicable authorities having jurisdiction and to other third parties in connection with the project, Stantec disclaims any legal duty based upon warranty, reliance or any other theory to any third party, and will not be liable to such third party for any damages or losses of any kind that may result.

1 Scoping Report

1.1 Existing And Planned Conditions

1.1.1 Proposed Development

Stantec has been retained by the City of Ottawa (“the City”) to conduct a Transportation Impact Assessment for a proposed mixed-use development in the City’s downtown location, replacing the existing Impark facility at the municipal address of 1010 Somerset Street West. The proposed development will include approximately 150 affordable housing units and 150 market-rate housing units, an elementary school, a recreational and cultural facility, and a 1-hectare public park. The study area is primarily composed of a mix of commercial land uses and low-to-medium density residential uses. The subject site is bounded by Somerset Street West to the north, Oak Street to the south, the O-Train rail (future Trillium Line 2) corridor to the west, and Preston Street to the east.

The subject site is located within the Downtown Core Transect Hub, as designated in Schedule A of the City’s Official Plan. The Downtown Core serves as the centre of the regional public transit system and is a key economic and administrative hub for the greater Ottawa Metropolitan area. The Downtown Core Transect focuses on:

- Preserving and enhancing the urban form by encouraging development that supports 15-minute neighborhoods with mixed uses, high employment density, and cultural assets;
- Prioritizing active transportation, including walking, cycling, and public transit within the Downtown Core;
- Allowing high-rise buildings, especially those over 41 storeys, in Core Hubs; and
- Supporting residential growth in accordance with the Growth Management Framework.¹

The area of the subject site is identified as a **Hub** under Schedule B1 and is part of the **Protected Major Transit Station Area (PMTSA)** under Schedule C1. As a Hub, the area is planned for higher-density development and a mix of land-uses centered around rapid transit, supporting both residential and employment functions. The PMTSA designation further encourages compact, transit-oriented growth, with specific policies to increase density and discourage low-density and auto-oriented uses.

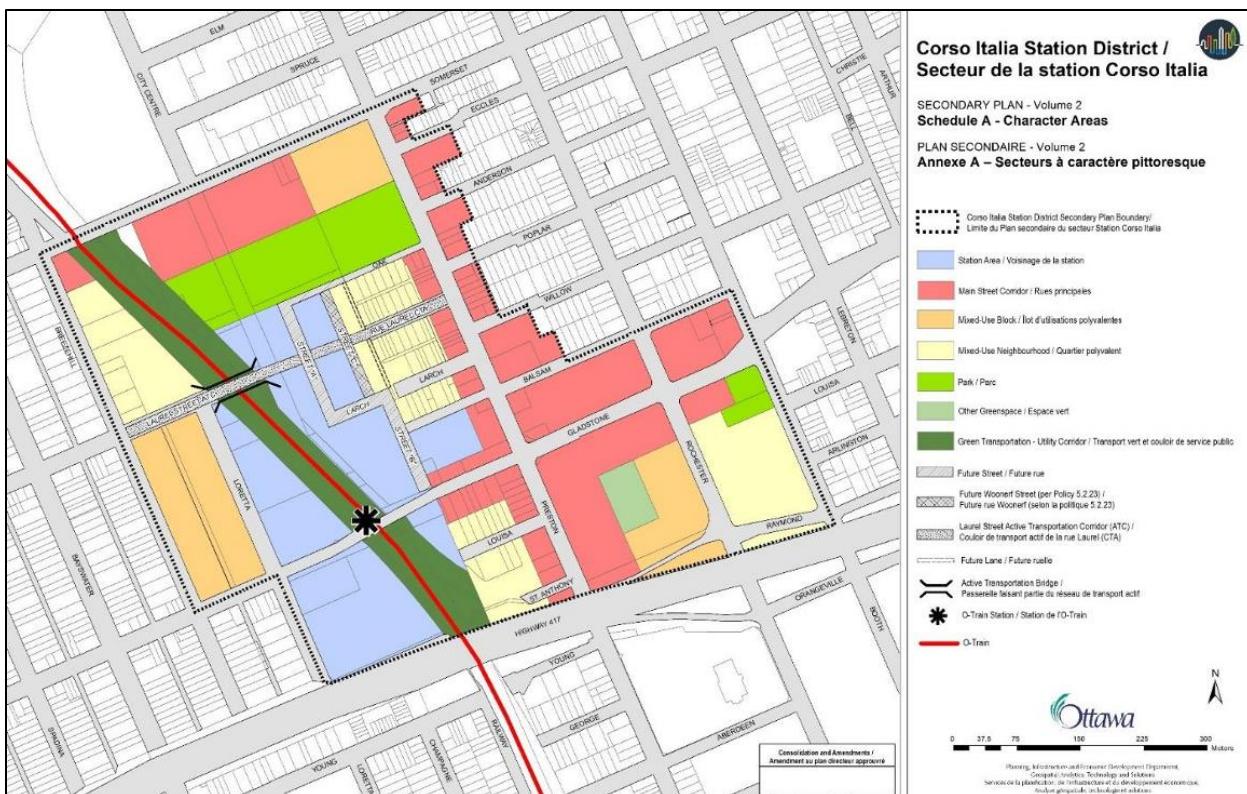

The study area is also part of the **Corso Italia Station Secondary Plan** which was created to direct private development and investments over the next 25 years, aiming to build a livable, sustainable and a transit-oriented community around the planned Corso Italia Station area that will service the future Trillium Line 2. The plan emphasizes sustainable transportation and seeks to integrate transit and active transportation infrastructure throughout the area to support a more accessible and environmentally

¹ City of Ottawa’s Official Plan – Schedule A

conscious neighborhood. The Corso Italia Secondary Plan area is bounded by Somerset Street to the north, Highway 417 to the south, Breezehill Avenue and Loretta Avenue (south of Gladstone Avenue) to the west, and Preston Street (including properties facing Preston Street on its east side) and Booth Street (south of Balsam Street) to the east. See **Figure 1** for the study area.

Figure 1: Corso Italia Station District Study Area

The proposed development comprises the following Institute of Transportation Engineers (ITE) Land Use Codes (LUC):

- Multi-Family Mid-Rise Residential (LUC-221)
- Multi-Family High-Rise Residential (LUC-222)
- Recreation Centre (LUC-495)
- Elementary School (LUC-520)

The development will be constructed in multiple phases, starting with the construction of the elementary school, which is scheduled for completion and occupancy by 2028. This will be followed by the addition of 150 affordable housing units, the public park, the 150 market-rate housing units, and finally, the construction of the recreational and cultural facility. Full build-out and occupancy of the proposed development is anticipated by 2038 and will feature the following access points:

930 – 1010 Somerset Street

1 Scoping Report

- A signalized intersection on Somerset Street West, providing access to the residences and the recreational and cultural facility;
- Shared use of the western access point of the existing Plant Recreation Centre to allow service vehicles access to the recreational and cultural facility, while also accommodating inbound school bus traffic and other school related traffic;
- A new unsignalized access to Oak Street, for outbound school bus traffic only;
- A new pathway along City Centre Avenue, running under Somerset Street West as part of the Corso Italia Station Secondary Plan, providing cyclists and pedestrians access to both the subject site and the future 933 Gladstone Avenue site located to the south.

1.1.2 Existing Conditions

1.1.2.1 Roads and Traffic Control

The roadways and intersections under consideration in the study area are described as follows:

Somerset Street West	Somerset Street West is classified as an urban arterial road with a two-lane cross-section and a posted speed limit of 50 km/h. It serves as a significant east-west route, facilitating the movement of vehicles and providing access to various residential and commercial land-uses. Somerset Street West is also designated as an urban truck route. Somerset Street West also features an overpass west of the subject site that grade separates the road from the O-Train rail tracks. Somerset Street is also part of the transit priority corridor per the Official Plan. Somerset Street West culminates at its intersection with Garland Street and Wellington Street to the west.
Bayswater Avenue	A north-south local road primarily serving residential areas. Bayswater Avenue has a two-lane cross-section with a posted speed limit of 30 km/h and sidewalks on both sides of the road. Bayswater Avenue transitions to Bayview Station Road north of Somerset Street West. For convenience, this road will only be referred to as Bayswater Avenue.
Preston Street	Preston Street is an urban arterial road with a two-lane cross-section and an assumed speed limit of 40 km/h. Preston Street supports a mixed-use environment with restaurants, shops, and residential buildings. Preston Street is also designated as an urban truck route
Rochester Street	Rochester street is a major collector road, connecting local residential streets to the larger arterial roads in Ottawa's core. The road has an unmarked two-lane cross-section with an assumed speed limit of 40 km/h. Rochester Street also provides a connection for traffic to Trans-Canada Highway on the south. Rochester Street is designated as an urban truck route between Preston Street and Carling Avenue.
Oak Street	Oak Street is a local street connecting residences to Preston Street. There is a sidewalk on the south side of and on-street parking on the north side of the road. There are plans for Oak Street extension as part of the new Gladstone Village subdivision proposed west of Preston Street, south of the subject site.

The municipal intersections within the study area are listed in

Table 1, along with their corresponding traffic control measures. The lane configurations at each intersection are depicted in **Figure 2**.

930 – 1010 Somerset Street

1 Scoping Report

Table 1: Study Intersections

Intersection	Traffic Control
Somerset Street West / Bayswater Avenue	Signalized
Somerset Street West / Preston Street	Signalized
Somerset Street West / Rochester Street	Signalized
Preston Street / Oak Street	One-Way Stop Controlled (Oak Street)

Figure 2: Study Area

1.1.2.2 Existing Driveways in the Study Area

There are several existing driveways within 200m of the proposed site driveway, which have been listed below:

- South-west of Somerset Street West / Preston Street:
 - » One driveway providing access to the existing Impark facility (commercial).
 - » One single-vehicle driveway for the restaurant east of the Impark facility (commercial)
 - » Two driveways for Ottawa's Plant Recreation facility, approximately 65m and 110m away from the proposed site driveway (commercial).
- North-west of Somerset Street West / Preston Street:
 - » One driveway directly north of the Impark facility driveway (commercial).
 - » One driveway for a public parking lot, 120m away from the site driveway (commercial).
- South-east of Somerset Street West / Preston Street:
 - » Two driveways for Kal Tire, approximately 180m and 200m away from the site driveway (commercial)
- North-east of Somerset Street West / Preston Street:
 - » One driveway for a residential building, approximately 180m away from the site driveway (residential).
 - » One driveway for a residential parking lot, approximately 200m away from the site driveway (residential)

1.1.2.3 Active Transportation Facilities

Somerset Street West – Sidewalks are present on both sides of the road, supporting east-west pedestrian movements through the corridor. There is a shared bike lane along Somerset Street West with sharrows, which transitions to a separated lane with bollards at the overpass to enhance safety for cyclists crossing the bridge.

Preston Street – Sidewalks are present on both sides of the road, which accommodate both pedestrian flow and outdoor seating for cafes and restaurants. Preston Street does not have any bike routes.

Bayswater Avenue – Sidewalks are present on both sides of the road in addition to an unmarked suggested bike route connecting cyclists to Scott Street on the north and Gladstone Avenue on the south.

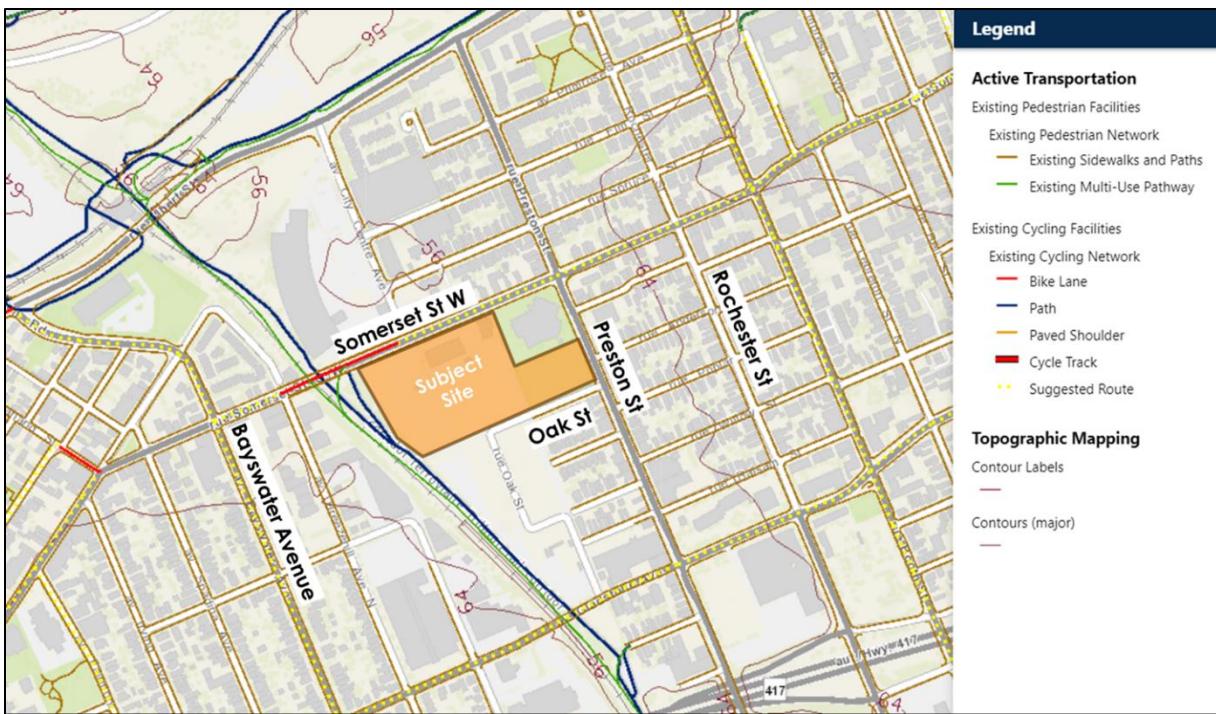

Rochester Street – Sidewalks are present on both sides of the road.

Oak Street – Sidewalks are present on both sides of the road.

Trillium Pathway – A Multi-Use Pathway (MUP) that runs parallel along the north-south O-Train tracks immediately west of the subject site. The Trillium MUP provides a direct off-road connection for pedestrians and cyclists to the Bayview Station on north and the Corso Italia Station on the south, which serve as key transit hubs. The MUP can be accessed via the Somerset Street West overpass, on the south side of the road

Figure 3: Active Transportation Connections around the Study Area

1.1.2.4 Transit

The transit network around the subject site is robust, with a mix of light rail, bus routes, and multi-modal connections that support both daily commutes and regional travel. The proximity to major transit hubs further strengthens accessibility, making the site a well-connected location within the city's transportation framework. The area benefits from proximity to key transit hubs and multiple bus routes, supported by the City's light rail infrastructure.

The site is conveniently located near two O-Train stations, both accessible via the Trillium Multi-Use Pathway (MUP), facilitating easy access for pedestrians and cyclists:

1. Bayview Station

- Functions as a major transit interchange, serving the Confederation Line (Line 1) and the future Trillium Line (Line 2).
- Provides connections to downtown Ottawa and key areas east and west, in addition to acting as a hub for various bus routes.

2. Corso Italia Station

- Part of the Stage 2 O-Train expansion project, the station will serve Line 2 and the new Line 4.

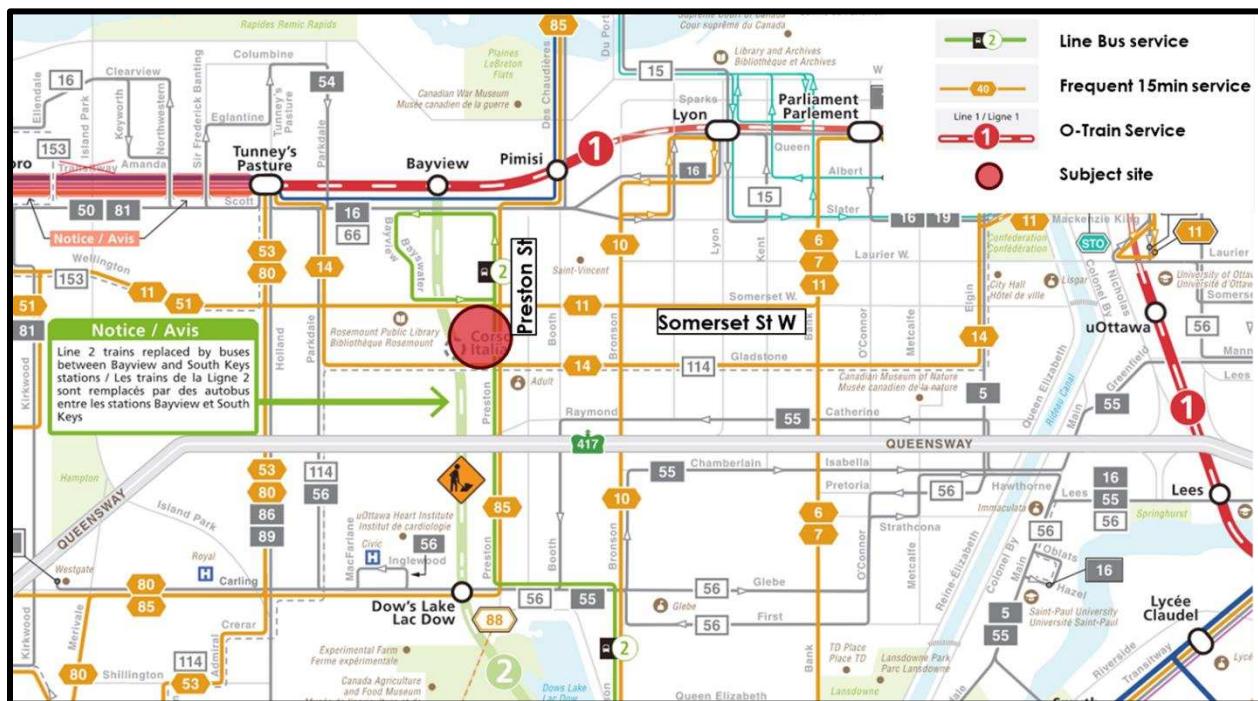

930 – 1010 Somerset Street

1 Scoping Report

- Located north of Gladstone Avenue, it provides access to the Corso Italia neighborhood and surrounding areas such as Dalhousie and Hintonburg.
- The station offers features for cyclists with bike parking spaces and pedestrian-friendly crosswalks.

Several OC Transpo bus routes also serve the area, with **Somerset Street West** being a primary corridor for bus transit. Key routes include:

- **Route 85**, which runs along Preston Street, providing service between Bayshore Station to the west and St. Laurent Station to the east. This route passes through important neighborhoods, including Hintonburg, Centretown, and downtown Ottawa.
- **Route 11**, which operates along Somerset Street West, providing east-west service through the city, connecting key locations such as Bayshore, Lincoln Fields, Westboro, Tunney's Pasture, and Rideau Centre. The **Rideau Centre** and **Tunney's Pasture** are major destinations that are easily accessible from the study area via the O-Train or bus routes. These hubs provide further connections to routes throughout the city and beyond, including intercity transit options.
- **Line 2** bus service (the temporary replacement for the O-Train Trillium Line during construction) which operates along **Preston Street**, providing a key north-south connection between **Bayview Station** and **South Keys Station**.

1.1.2.5 Traffic Management Measures

There are currently no traffic management measures in the vicinity of the subject development.

1.1.2.6 Traffic Volumes

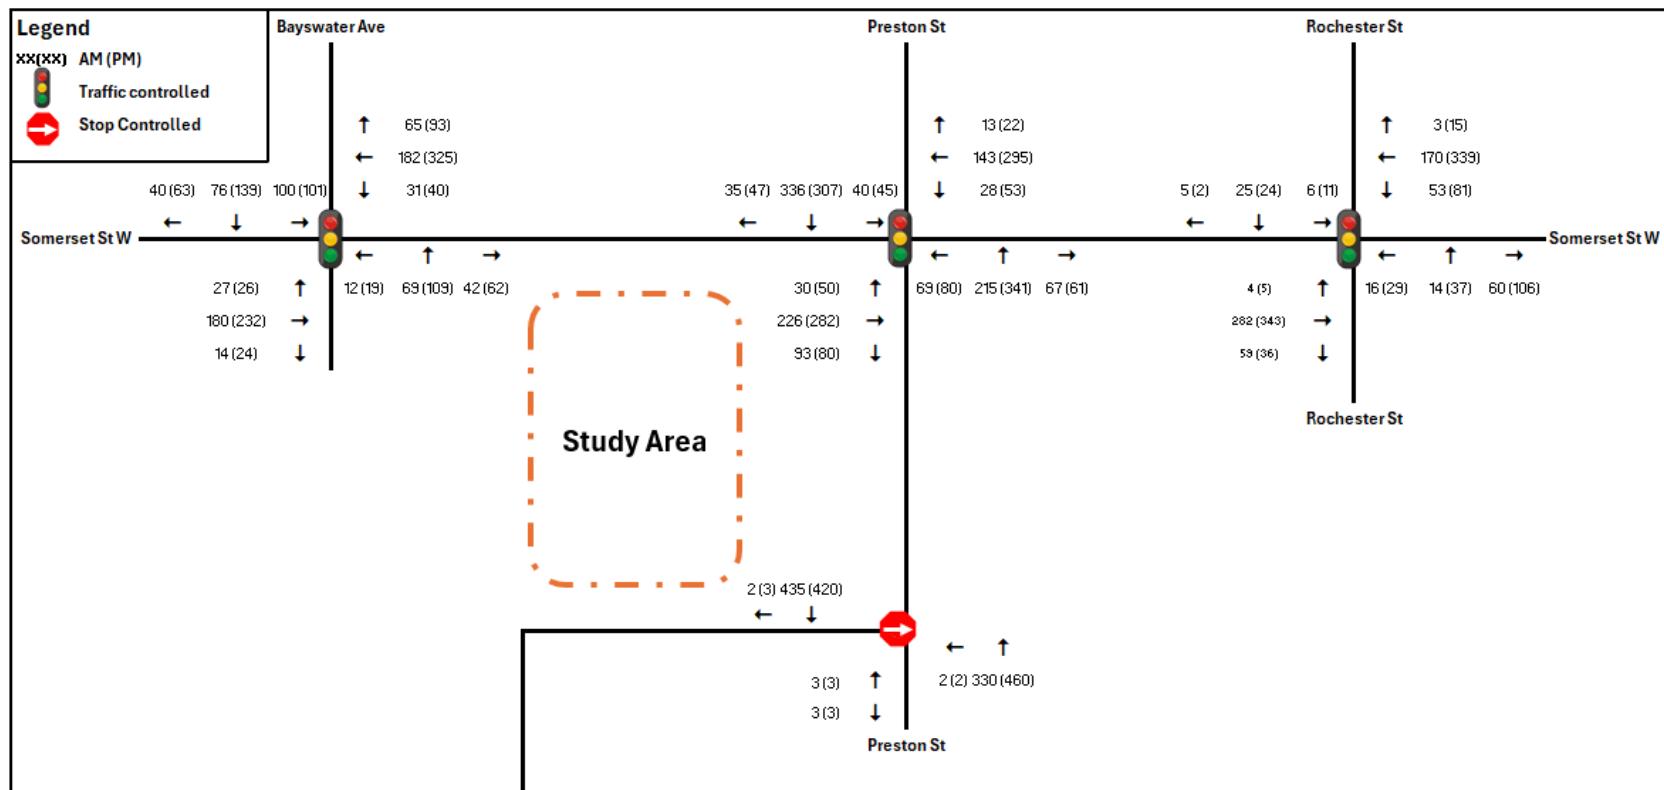

The City provided Traffic Movement Counts (TMC) collected for intersections along Somerset Street West between 2022 and 2023. TMCs for Preston Street at Oak Street were sourced from the Gladstone Village development TIA (2020). No growth rate has been applied to the TMCs to forecast 2024 volumes, as the road network is present in the downtown core, where traffic volumes have been steadily declining due to the well-established transit and active transportation connectivity. A volume balancing exercise was also performed to align TMCs from different years, ensuring accurate reflection of existing and future background conditions. However, some imbalance remains between study intersections due to the presence of residential and commercial driveway accesses in the area.

930 – 1010 Somerset Street

1 Scoping Report

Figure 4: Existing Traffic Volumes

1.1.2.7 Collision History

The City provided collision data for Somerset Street West between Preston Street and Breezehill Avenue for the five-year period from 2018 to 2022. A total of 20 collisions were reported, with 50% resulting in property damage only and the other 50% involving non-fatal injuries. Approximately 25% of the collisions in the studied segment involved motor vehicles and cyclists.

At the intersection of Somerset Street West and Preston Street, 11 collisions were recorded, representing 55% of the total collisions in the study area. Of these, 55% resulted in property damage only, while 45% involved non-fatal injuries. 6 out of 11 (55%) of these collisions involved turning movements. A review of the collision data found that most collisions were due to failure to yield to vehicles with the right-of-way.

8 out of 20 collisions (40%) occurred along the road segment between Preston Street and Breezehill Avenue fronting the northern frontage of the subject site. Of these incidents, 38% resulted in property damage only, while 62% involved non-fatal injuries. 75% of these collisions were associated with turning movements, highlighting turning as a primary factor; multiple driveways and on-street parking can be a contributing factor to the high proportion of collisions along the roadway being related to turning movements. Additionally, 38% of all collisions involved cyclists, indicating that the shared roadway on Somerset Street West likely contributes to increased opportunities for conflicts between cyclists and vehicles.; there are no cycling facilities along this stretch of Somerset Street West. Managing multiple access points, on-street parking, and cycling accommodation will be key considerations for the Traffic Impact Assessment. See **Table 2** and **Table 3** for collision data on Somerset Street West and between different modes.

Table 2: Somerset Street West - Collision Data

1.1.3 Planned Conditions

1.1.3.1 Road Network

The City is currently undertaking Part 2 – Capital Infrastructure Plan of the new TMP, anticipated for release in 2025. A new list of projects in Ottawa's Ultimate Transit and Road Networks will be included as part of this phase and may introduce additional projects around the subject site. According to the Transportation Master Plan's Network Concept and Affordable Network, Preston Street is anticipated to be extended north of Albert Street, where the road may be extended as a bridge, carrying pedestrians and cyclists over the O-Train tracks.

1.1.3.2 Future Active Transportation Network

The following active transportation infrastructure improvement are being considered in the Corso Italia Station Secondary Plan around the study area:

- The City Centre Underpass and Pathway, linking City Centre Avenue to 1010 Somerset Street and the future 933 Gladstone Avenue development, providing the most direct, accessible and convenient route to significant, future redevelopments at City Centre Avenue, Albert Street, LeBreton Flats, and the Bayview O-Train Station and is anticipated to be used as a primary pedestrian and cycling corridor to and from these sites.
- An Active Transportation Corridor (ATC) will extend from the eastern cul-de-sac of Laurel Street to the Trillium Pathway, passing through the planned Gladstone Village development. This corridor will further connect to Laurel Street on the west side of the O-Train Corridor via a pedestrian and cyclist bridge.
- A new north-south MUP west of the O-Train transit corridor, continuing the route from south of the Queensway bridge to Somerset Street.
- The existing Trillium Pathway along the east side of the O-Train transit corridor is anticipated to be enhanced to include more space for both pedestrians and cyclists, create an attractive and safe public realm to support the infrastructure.

1.1.3.3 Future Transit Network

There are several major ongoing transit improvements around the subject site that are anticipated to influence the modal share characteristics in the future. It should be noted that the future improvements should be in operational condition by the time of this TIA's submission. The improvements include:

- The Stage 2 South Extension of Ottawa's Trillium Line, a key part of the city's light rail expansion, which extends the Trillium Line southward by approximately 16 kilometers, connecting it from the existing Greenboro Station to Limebank Road in Riverside South, with a new service (Line 4) directly serving the Ottawa Macdonald-Cartier International Airport. This project aims to create an efficient transit alternative to alleviate road congestion, support growth, and provide better access to the airport and nearby communities.

- The “New Ways to Bus” revised transit network initiatives that focuses on enhancing frequency, providing a better alignment with key O-Train stations (Line 1 and Line 2) and simplified routes to better serve neighbourhoods, facilitating connections across the city.

Table 4 provides further details about the proposed transit network improvements specifically within the study area. See **Figure 5** for Line 2 and Line 4 route illustrations and **Figure 6** for the revised bus network around the subject site.

1010 Somerset
1 Scoping Report

Table 4: Proposed Transit Network Improvements

Proposed Improvements	Existing Operations	Future Operations	Anticipated Improvements	Anticipated Completion
Stage 2 Trillium Line South Extension – O-Train Line 2	Line 2 of the O-Train is currently out of service due to ongoing construction and upgrades related to its extension. The route is temporarily being serviced by Line 2 buses, which provide connections between Bayview and Southkeys stations.	Will provide a new LRT connection between Bayview Station in Little Italy to Limebank Station in Riverside.	<ul style="list-style-type: none"> • Reduce travel time • Anticipated 60% increase in ridership capacity 	Operational by the time of this TIA submission
Stage 2 Trillium Line South Extension – O-Train Line 4	This is a new route anticipated to be introduced with Line 2 as part of Stage 2.	Will provide a new key connection to the Ottawa International Airport via Southkeys station.	<ul style="list-style-type: none"> • Provide frequent services to the airport. • Encourage transit over private vehicles to travel to/from the airport. 	Operational by the time of this TIA submission
Preston Street Bus Route	Preston Street is currently serviced by Route 85, which runs between Terrasses de la Chaudière in Gatineau and Bayshore Station in Ottawa.	Under the revised bus network, Preston Street will be serviced by a new north-south Route 8, which will run between the Canadian Museum of History in Quebec and Dow's Lake Station along Preston Street. Route 85 will instead run east-west between Bayshore station and University of Ottawa along Carling Avenue.	<ul style="list-style-type: none"> • Provide a more frequent route with less stops • Will service more frequently during summer peak periods. 	Operational by the time of this TIA submission
Somerset Street West Bus Route	Somerset Street West is currently serviced by Route 11, which runs between the University of Ottawa and Bayshore station.	Somerset Street West will continue to be served by Route 11, but the route will now serve Preston St, Scott Street and Bayswater Avenue before returning down to Somerset Street West.	<ul style="list-style-type: none"> • Will serve high-density areas, especially Preston Street and Scott Street. • Will likely provide more local route options to/from Bayview Station 	Operational by the time of this TIA submission

Figure 5: O-Train Line 2 and Line 4 routes

Figure 6: New Ways to Bus - Revised Transit Network

1.1.3.4 Future Background Developments

Table 5 below shows the proposed future background developments that may influence the traffic operations around the study area. **Figure 7** shows the location of the proposed development in reference to the subject site.

Table 5: Future Developments around the Study Area

Key Plan Reference	Location	Description	Build-out Horizon
A	550 Albert St 615 Albert St 825 Albert St	This development is part of the LeBreton Flats redevelopment featuring a mix of high-density residential, office and retail type land uses, as well as approximately 12.7 hectares of parks and open spaces. The LeBreton Flats Concept Master Plan includes an option to host a new major event centre. The redevelopment is anticipated to occur in three (3) phases. The development is anticipated to generate 720 trips in the AM peak hour and 1220 trips in the PM peak hour.	Phase 1 – 2030 Phase 2 – 2040 Phase 3 – 2050
B	951 Gladstone Avenue And 145 Loretta Avenue	The proposed development plan application consists of approximately 872 residential units, 198,524 ft ² of office space and 17,611 ft ² of retail space. The development is anticipated to generate 187 trips in the AM peak hour and 211 trips in the PM peak hour.	2026
C	933 Gladstone Avenue	The proposed development is anticipated to consist of 96 townhouse units and 1,004 high-rise apartment units. The Gladstone village TIA anticipates non-residential land-use of approximately 77,000 ft ² of ground floor retail, commercial and institutional space, as well as 100,000 ft ² of office space. The development is anticipated to generate 105 trips in the AM peak hour and 118 trips in the PM peak hour.	2031
D	818 Gladstone Avenue	The proposed development consisting of approximately 270 residential units (32 stacked townhouses and 238 apartment units) and 5,125 ft ² commercial space. The development is anticipated to generate 35 trips in the AM peak hour and 40 trips in the PM peak hour.	2029
E	930 Carling Avenue and 520 Preston Street	The proposed development is for Ottawa Hospital, anticipated to be built out by 2028. The development is anticipated to generate 1188 trips in the AM peak hour and 1039 trips in the PM peak hour.	2028

1010 Somerset
1 Scoping Report

F	1040-1050 Somerset St	The proposed development 30-storey mixed-use building and will provide 268 units, 141 m ² of commercial/retail floor space, and 191 underground parking spaces.	2025
---	--------------------------	--	------

Figure 7: Background Development around the Study Area

1.2 Study Area and Time Periods

1.2.1 Study Area

The Study area includes the following intersections:

1. Somerset Street West and Bayswater Avenue (signalized)
2. Somerset Street West and Preston Street (signalized)
3. Somerset Street West and Rochester Street (signalized)
4. Preston Street and Oak Street (unsignalized)
5. Proposed site access on Somerset Street West (signalized)
6. Proposed site access for the Recreational and Cultural facility and the elementary school (unsignalized)

1.2.2 Time Periods

The transportation impact assessment includes the following time periods:

- Weekday AM peak hour; and
- Weekday PM peak hour.

1.2.3 Horizon Years

- Horizon year 1 – Phase 1 build-out (elementary school)
- Horizon year 2 – Phase 2 build-out (150 affordable housing)
- Horizon year 3 – Phase 3 build-out (150 high-rise)
- Horizon year 4 – Phase 4 Ultimate build-out (recreational and cultural centre)

1.3 Exemptions Review

Design Review Component			
4.1 Development Design	4.1.2 Circulation and Access	Only required for site plans	Not Exempt
	4.1.3 New Street Networks	Only required for plans of subdivision	Exempt
4.2 Parking	4.2.1 Parking Supply	Only required for site plans	Exempt
Network Impact Component			
4.5 Transportation Demand Management	All Elements	Not required for site plans expected to have fewer than 60 employees and/or students on location at any given time	Not Exempt
4.6 Neighbourhood Traffic Calming	All Elements	Only required when the development relies on local or collector streets for access and total volumes exceed ATM capacity thresholds	Exempt
4.7 Transit	4.7.1 Transit Route Capacity	>75 site transit trips	Not Exempt
	4.7.2 Transit Priority Requirements	>75 site auto trips	Not Exempt
	4.8 Network Concept	Only required when proposed development generates more than 200 person-trips during the peak hour in excess of the equivalent volume permitted by established zoning	Not Exempt
4.9 Intersection Design	4.9.1 Intersection Controls (including site accesses)	>75 site auto trips	Not Exempt
	4.9.2 Intersection Design	>75 site auto trips	Not Exempt

2 Forecasting Report

2.1 Development Generated Travel Demand

2.1.1 Trip Generation

The TRANS Trip Generation Manual (October 2020) was utilized to estimate auto person trip generation for multi-family mid-rise and high-rise residential land uses. The Institute of Transportation Engineers (ITE) Trip Generation Manual (11th Edition) was applied to forecast auto trip generation for the proposed elementary school and recreational community center. Land use codes 221 and 222 (Multi-Unit High-Rise Dwelling from TRANS), 520 (Elementary School from ITE), and 495 (Recreational Community Center from ITE) were considered the most representative of the proposed land uses.

Table 6 below outlines the assumed land uses, and the trip generation rates for each land use.

Table 6: Trip Generation Rates by Land-Use type

Land Use Codes	Size	Weekday AM Peak Hour			Weekday PM Peak Hour		
		In	Out	Rate	In	Out	Rate
221 & 222 - Multi-Family Housing High-Rise Apartment	430 Units	31%	69%	0.80	58%	42%	0.90
520- Elementary School	537 Students	54%	46%	0.74	46%	54%	0.16
495 - Recreational Community Center	110,000 ft ² GFA	66%	34%	1.91	47%	53%	2.50

The auto trip generation rates for the elementary school and recreational community center land uses were converted to person trips using a conversion factor of 1.28, as specified in the City of Ottawa's 2017 TIA Guidelines. For the residential land uses, person trips were standardized by applying a peak period conversion factor for the AM and PM peak periods, as outlined in Table 4 of the TRANS Trip Generation Manual 2020, to adjust the residential trip generation rates from peak period to peak hour. **Table 7** outlines the person trips generated by each land-use in the subject development.

Table 7: Person Trip Generation by Land-Use type

Land Use Codes	Trip Conversion	Weekday AM Peak Hour			Weekday PM Peak Hour		
		In	Out	Total	In	Out	Total
221 & 222 - Multi-Family Housing High-Rise Apartment	Person Trips (Peak Period)	107	237	344	224	163	387
	Person Trips (Peak Hour 0.50 for AM 0.44 for PM)	54	119	173	99	72	171
520- Elementary School	Auto Trips	215	182	397	40	46	86
	Person Trip Factor	1.28					
495 - Recreational Community Center	Person Trips	275	233	508	51	59	110
	Auto Trips	139	71	210	129	146	275
	Person Trip Factor	1.28					
	Person Trips	178	91	269	165	187	352
Total	Person Trips	507	443	950	315	318	633

To reflect local travel characteristics, Person trips were allocated among the four primary modal shares—auto driver, auto passenger, transit, and active modes—using the TRANS Trip Generation 2020 data for the Ottawa Inner Area. This data incorporates the influence of developments near Rapid Transit, applying appropriate reductions to vehicular trips in the modal split. **Table 8** below shows the modal trips for each land-use in the subject development.

Table 8: Multi-Modal Trips per Land-Use type

Land Use Code	Mode	AM Peak Hour			PM Peak Hour				
		Trip Conversion	Entry	Exit	Total	Trip Conversion	Entry	Exit	
221 & 222 - Multi-Unit (High Rise)	Auto Driver	29%	16	35	51	29%	29	21	50
	Auto Passenger	8%	4	10	14	9%	9	6	15
	Transit	25%	14	30	44	19%	19	14	33
	Cycling	7%	4	8	12	7%	7	5	12
520 - Elementary School	Walking	31%	17	37	54	36%	36	26	62
	Auto Driver	22%	61	51	112	22%	11	13	24
	Transit	54%	149	126	274	54%	28	32	59
	Active modes/other	24%	66	56	122	24%	12	14	26
495 - Recreational Community Center	Auto Driver	39%	69	35	105	22%	36	41	77
	Auto Passenger	2%	4	2	5	4%	7	7	14
	Transit	16%	28	15	43	12%	20	22	42
	Cycling	3%	5	3	8	4%	7	7	14
	Walking	40%	71	36	108	58%	96	108	204
	Total Auto Trips		146	121	268		76	75	151

2.1.2 Trip Distribution

The trip distribution of traffic to/from the proposed development was determined based on analysis of the TRANS Committee's 2011 Origin-Destination (O-D) Survey, key trip attractors within the Ottawa Inner Area, and typical travel routes. This included consideration of connections to other districts outside the Ottawa Inner Area. **Table 9** below shows the trip distribution to/from the development.

Table 9: Direction Trip Distribution

Direction	Trip Distribution
East	23%
North	27%
South	32%
West	18%

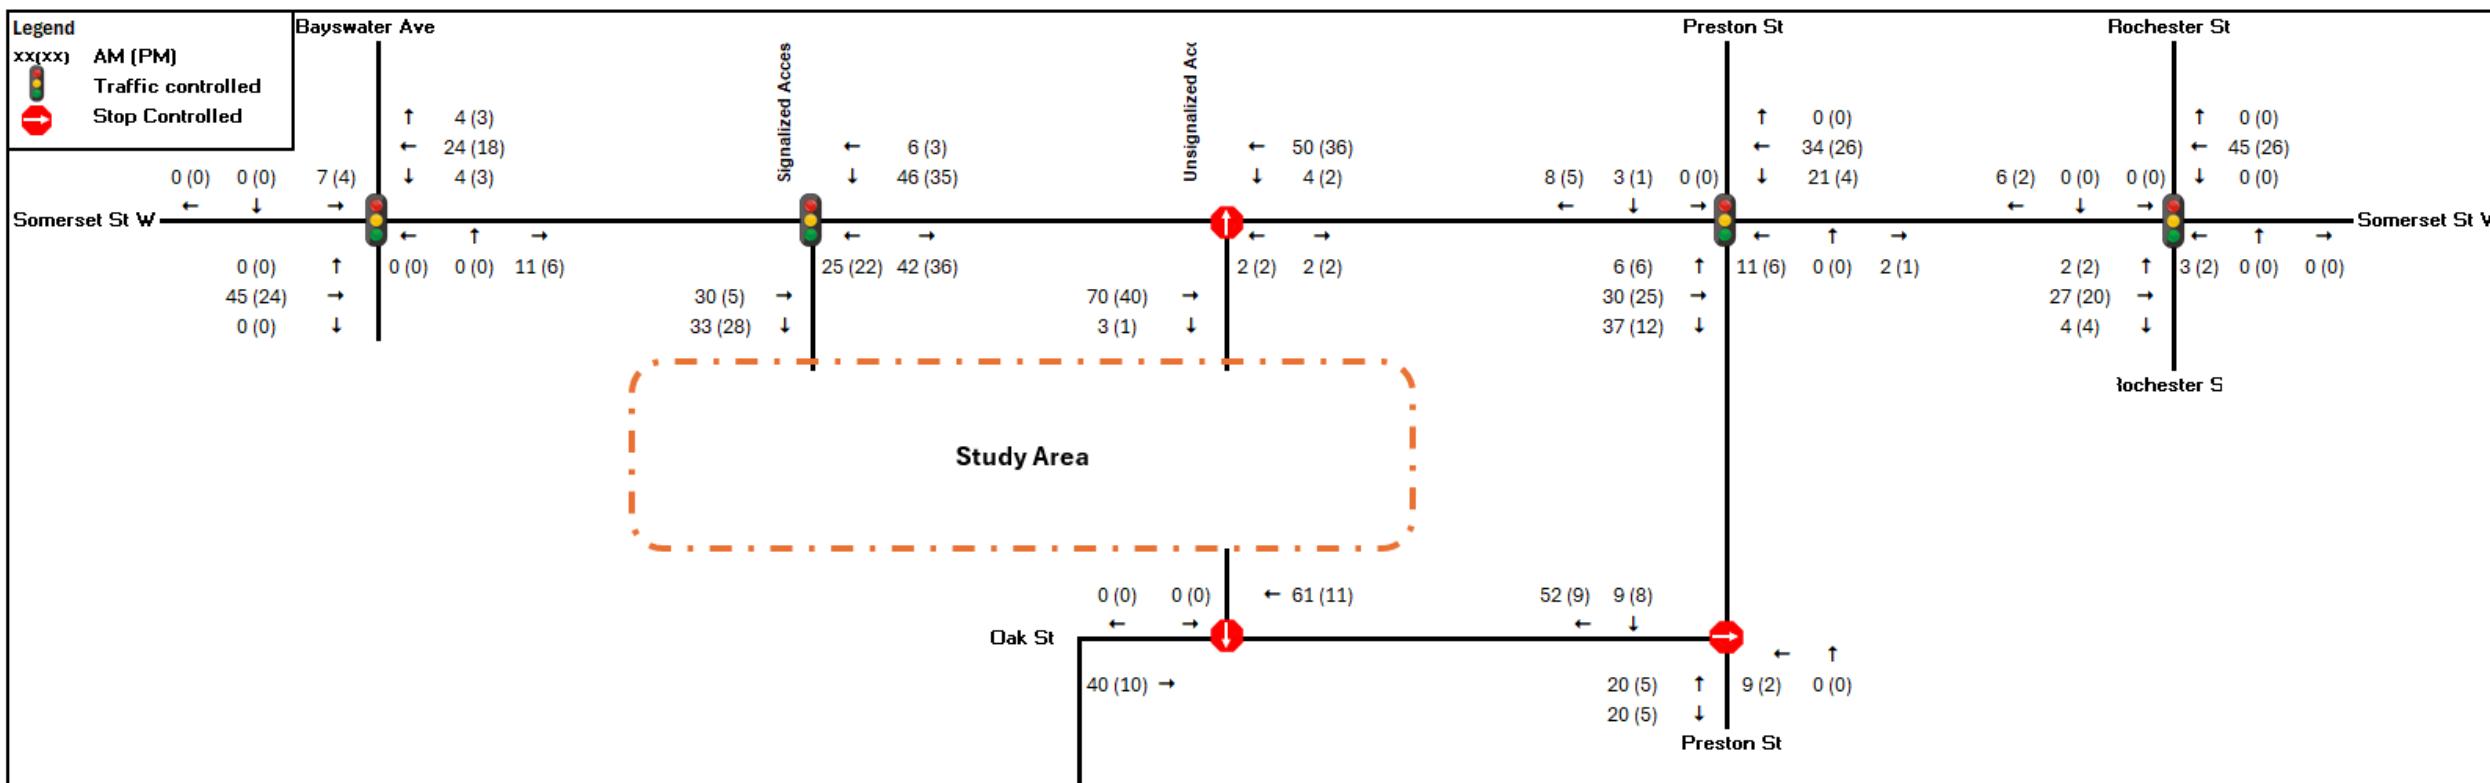

2.1.3 Trip Assignment

Auto trips generated by the site were allocated to the study area road network based on the trip distribution assumptions outlined in **Table 8**. **Figure 8** below depicts the total site-generated trips for the proposed development during the AM and PM peak hours.

Figure 8: Total Site Generated Trips

2.2 Background Network Travel Demand

2.2.1 Transportation Network Plans

As outlined in **Section 2.1.3** of the Screening and Scoping Report, several major transportation infrastructure projects are expected to impact mode share within the study area. These include the southward extension of Ottawa's Trillium Line (Line 2), the introduction of Line 4 providing a connection to Ottawa Macdonald-Cartier International Airport, and the "New Ways to Bus" initiative, designed to enhance transit frequency and improve route integration with the rapid transit system. These initiatives aim to reduce reliance on private vehicles, encouraging transit use and helping to prevent operational capacity concerns on the road network.

2.2.2 General Background Growth

As outlined in section 2.1.2.5 of the Screening and Scoping Report, no annualized growth rate has been applied to the existing volumes, as the road network is located in the downtown core area where traffic volumes have been steadily declining due to the well-established transit and active transportation connectivity. Any forecasted growth in traffic is expected to be a result of specific planned developments in the area, which is discussed further in Section 1.2.3.

2.2.3 Other Area Development

As outlined in **Section 2.3.1** of the Scoping and Screening Report and **Table 10** below, traffic to be generated by several future developments have been considered in the analysis of future development phases. Since the development is being constructed in multiple phases, these background developments were assigned to their respective phases based on the assumed build-out years.

Table 10: Background Developments

Location	Description	Build-out Horizon
550 Albert St 615 Albert St 825 Albert St	This development is part of the LeBreton Flats redevelopment featuring a mix of high-density residential, office and retail type land uses, as well as approximately 12.7 hectares of parks and open spaces. The LeBreton Flats Concept Master Plan includes an option to host a new major event centre. The redevelopment is anticipated to occur in three (3) phases. The development is anticipated to generate 720 trips in the AM peak hour and 1220 trips in the PM peak hour.	Phase 1 – 2030 Phase 2 – 2040 Phase 3 – 2050
951 Gladstone Avenue And 145 Loretta Avenue	The proposed development plan application consists of approximately 872 residential units, 198,524 ft ² of office space and 17,611 ft ² of retail space. The development is anticipated to generate 187 trips in the AM peak hour and 211 trips in the PM peak hour.	2026
933 Gladstone Avenue	The proposed development is anticipated to consist of 96 townhouse units and 1,004 high-rise apartment units. The Gladstone village TIA anticipates non-residential land-use of approximately 77,000 ft ² of ground floor retail, commercial and institutional space, as well as 100,000 ft ² of office space. The development is anticipated to generate 105 trips in the AM peak hour and 118 trips in the PM peak hour.	2031
818 Gladstone Avenue	The proposed development consisting of approximately 270 residential units (32 stacked townhouses and 238 apartment units) and 5,125 ft ² commercial space. The development is anticipated to generate 35 trips in the AM peak hour and 40 trips in the PM peak hour.	2029
930 Carling Avenue and 520 Preston Street	The proposed development is for Ottawa Hospital, anticipated to be built out by 2028. The development is anticipated to generate 1188 trips in the AM peak hour and 1039 trips in the PM peak hour.	2028
1040 Somerset Street	The proposed development 30-storey mixed-use building and will provide 268 units, 141 m ² of commercial/retail floor space, and 191 underground parking spaces.	2025

2.3 Demand Rationalization

Table 11 presents a breakdown of the multiple phases used to analyze future traffic operations. These phases have been defined based on the estimated build-out year for each land-use type of the proposed development.

Table 11: Breakdown of the Analysis Phases

Phases	Road Network Volume	Site Generated Volume Land-use	Background Developments
Phase 1	Background Volumes	<ul style="list-style-type: none"> • Elementary School 	<ul style="list-style-type: none"> • 1040 Somerset • 951 Gladstone Avenue And 145 Loretta Avenue • 930 Carling Avenue and 520 Preston Street (Ottawa Hospital)
Phase 2	Background Volumes	<ul style="list-style-type: none"> • Elementary School • Ottawa Community Housing (60 Units) 	<ul style="list-style-type: none"> • 1040 Somerset • 951 Gladstone Avenue And 145 Loretta Avenue • 930 Carling Avenue and 520 Preston Street (Ottawa Hospital) • LeBreton Flats Phase 1 (2030) • 818 Gladstone Avenue (Gladstone Village)
Phase 3	Background Volumes	<ul style="list-style-type: none"> • Elementary School • Ottawa Community Housing (60 Units) • Market-Rate housing (370 Units) 	<ul style="list-style-type: none"> • 1040 Somerset • 951 Gladstone Avenue And 145 Loretta Avenue • 930 Carling Avenue and 520 Preston Street (Ottawa Hospital) • LeBreton Flats Phase 1 (2030) • 818 Gladstone Avenue (Gladstone Village)
Phase 4	Background Volumes	<ul style="list-style-type: none"> • Elementary School • Ottawa Community Housing (60 Units) • Market-Rate housing (370 Units) • Recreational & Community Centre 	<ul style="list-style-type: none"> • 1040 Somerset • 951 Gladstone Avenue And 145 Loretta Avenue • 930 Carling Avenue and 520 Preston Street (Ottawa Hospital) • LeBreton Flats Phase 1 (2030)

-
- 818 Gladstone Avenue (Gladstone Village)
 - LeBreton Flats Phase 2 (2040)
-

Since no growth rate was applied to the background traffic volumes, the traffic operations for future background conditions will be evaluated for Phase 1, Phase 2 (same as Phase 3) and Phase 4 to understand the impacts of the background developments. This section will, however, focus on the demand for critical intersections for total future traffic operations, which includes future background and the site-generated traffic under each phase.

2.3.1 Future Total Traffic – Phase 1

The intersection movements with the highest delays during phase 1 future total traffic are summarized in **Table 12** for AM and PM peak hours. All intersection movements are anticipated to perform adequately and well under capacity with minor delays.

Figure 9 shows the phase 1 future total traffic volumes.

Table 12: Phase 1 Critical Intersection Movements

Intersection	AM Peak			PM Peak		
	Delay (s)	LOS	Movement	Delay (s)	LOS	Movement
Bayswater Avenue & Somerset St W	16	A	EBLT / WBLT	19	A	WBLT
Preston St & Somerset St W	24	C	NBL / SBTR	48	D	NBTR
Rochester St & Somerset St W	20	B	SBLTR	19	B	SBLTR
Preston St & Oak St	15	A	Eblr	15	A	Eblr
Somerset St W & Signalized Access	14	A	EBTR	15	A	EBTR
Somerset St W & Unsignalized Access	8	A	WBLT	8	A	WBLT
Oak St & Unsignalized Access	9	A	SBLR	9	A	SBLR

2.3.2 Future Total Traffic – Phase 2

The intersection movements with the highest delays during phase 2 future total traffic are summarized in **Table 13** for AM and PM peak hours. The northbound thru/right movement on Preston Street and Somerset Street West experiences delays of more than a minute and operates at capacity (volume-to-capacity ratio of 1.01) with LOS F. **Figure 10** shows the phase 2 future total traffic volumes.

Table 13: Phase 2 Critical Intersection Movements

Intersection	AM Peak			PM Peak		
	Delay (s)	LOS	Movement	Delay (s)	LOS	Movement
Bayswater Avenue & Somerset St W	16	A	EBLT / WBLT	19	A	WBLT
Preston St & Somerset St W	28	C	NBL	70	F	NBTR
Rochester St & Somerset St W	20	B	SBLTR	19	B	SBLTR
Preston St & Oak St	15	A	Eblr	15	A	Eblr
Somerset St W & Signalized Access	19	B	EBTR	20	C	WBT
Somerset St W & Unsignalized Access	8	A	WBLT	8	A	WBLT
Oak St & Unsignalized Access	9	A	SBLR	9	A	SBLR

2.3.3 Future Total Traffic – Phase 3

The intersection movements with the greatest delays during Phase 3 future total traffic conditions are summarized in **Table 14** for both the AM and PM peak hours. The northbound thru/right movement at the Preston Street and Somerset Street West intersection still experiences delays exceeding one minute and operates at capacity, with a volume-to-capacity ratio of 1.01 and a Level of Service (LOS) of F (similar to Phase 2). All other movements within the road network operate within acceptable parameters. Phase 3 future total traffic volumes are illustrated in **Figure 11**.

Table 14: Phase 3 Critical Intersection Movements

Intersection	AM Peak			PM Peak		
	Delay (s)	LOS	Movement	Delay (s)	LOS	Movement
Bayswater Avenue & Somerset St W	16	A	EBLT / WBLT	19	A	WBLT / SBL
Preston St & Somerset St W	28	C	NBL	70	F	NBTR
Rochester St & Somerset St W	20	B	SBLTR	19	B	SBLTR
Preston St & Oak St	17	A	EBLR	17	A	EBLR
Somerset St W & Signalized Access	19	B	EBTR	20	C	WBT
Somerset St W & Unsignalized Access	8	A	WBLT	8	A	WBLT
Oak St & Unsignalized Access	9	A	SBLR	9	A	SBLR

2.3.4 Future Total Traffic – Phase 4

The intersection movements with the highest delays during Phase 4 future total traffic conditions are summarized in **Table 15** for the AM and PM peak hours. At the Preston Street and Somerset Street West intersection, the northbound movements operate at a Level of Service (LOS) F. The left-turn movement experiences delays exceeding two minutes, while the northbound thru/right movement faces delays of over one minute. Although these movements perform below acceptable LOS, they are only slightly over capacity and may be optimized by modifying the Signal Timing Plan. All other movements within the road network operate within acceptable parameters. Phase 4 future total traffic volumes are illustrated in **Figure 12**.

Table 15: Phase 4 Critical Intersection Movements

Intersection	AM Peak			PM Peak		
	Delay (s)	LOS	Movement	Delay (s)	LOS	Movement
Bayswater Avenue & Somerset St W	17	A	EBLT / WBLT	20	A	WBLT
Preston St & Somerset St W	38	B	NB	139	F	NBL
				70	F	NBTR

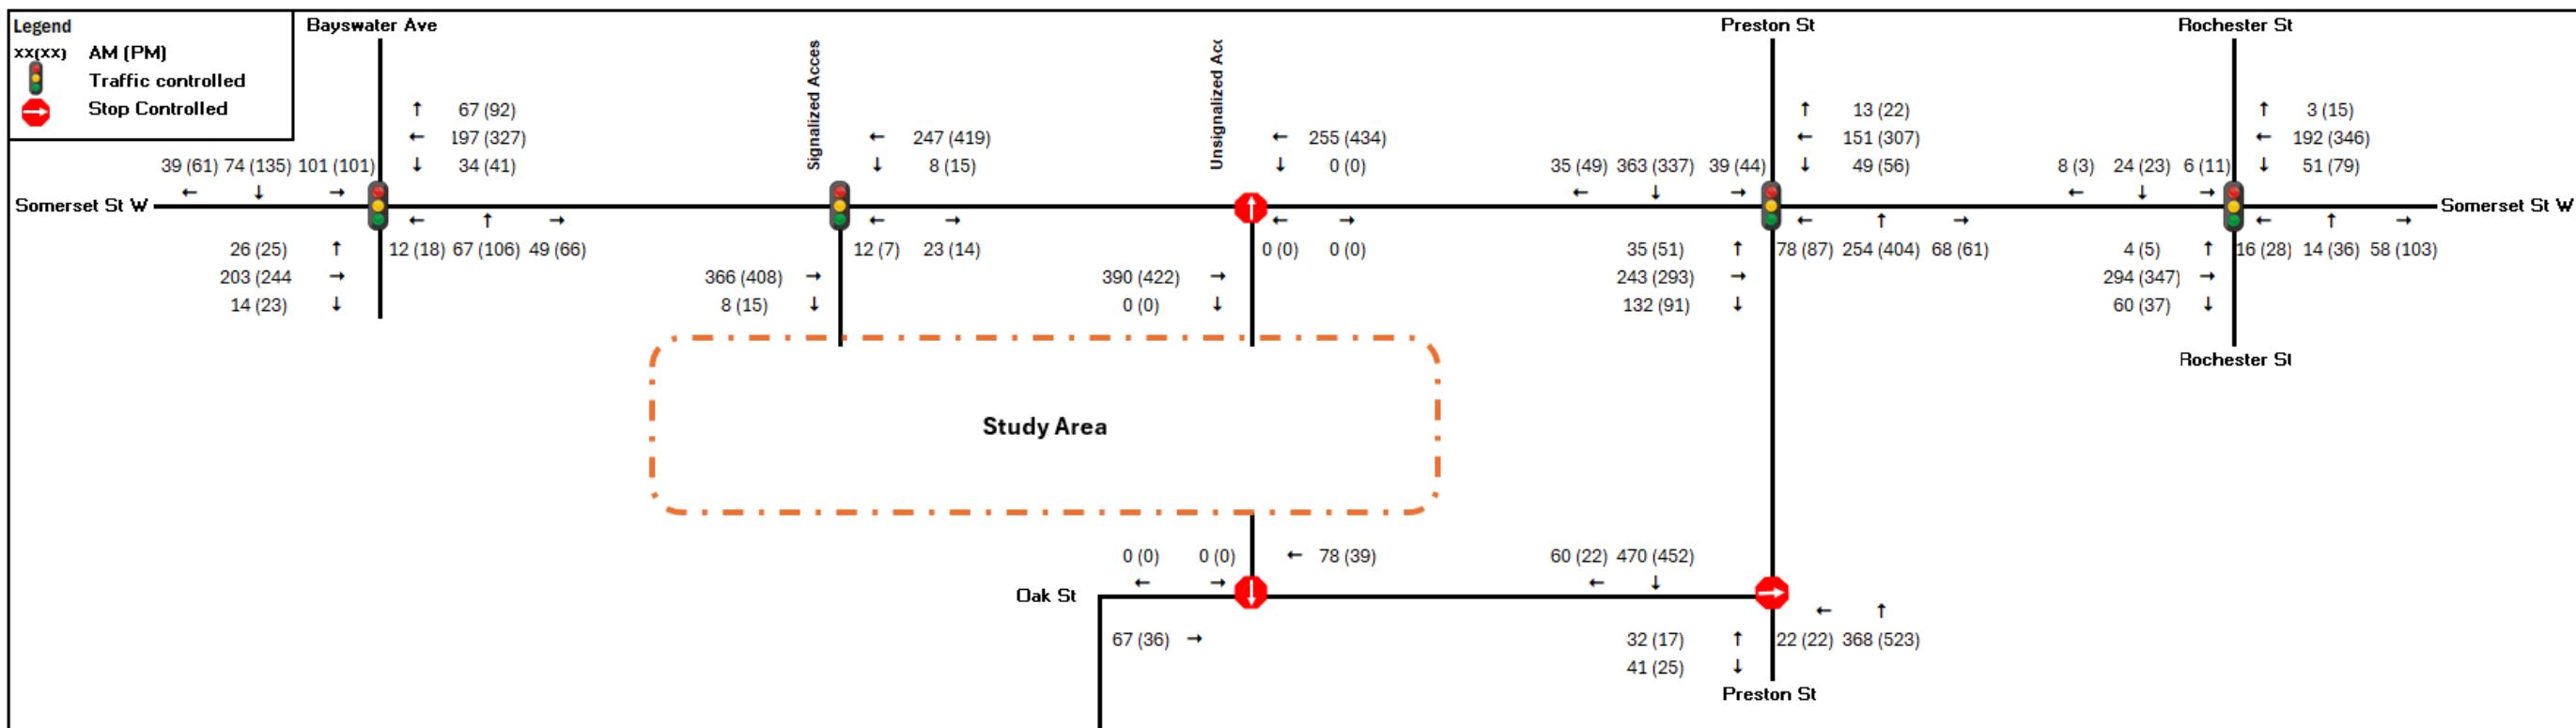

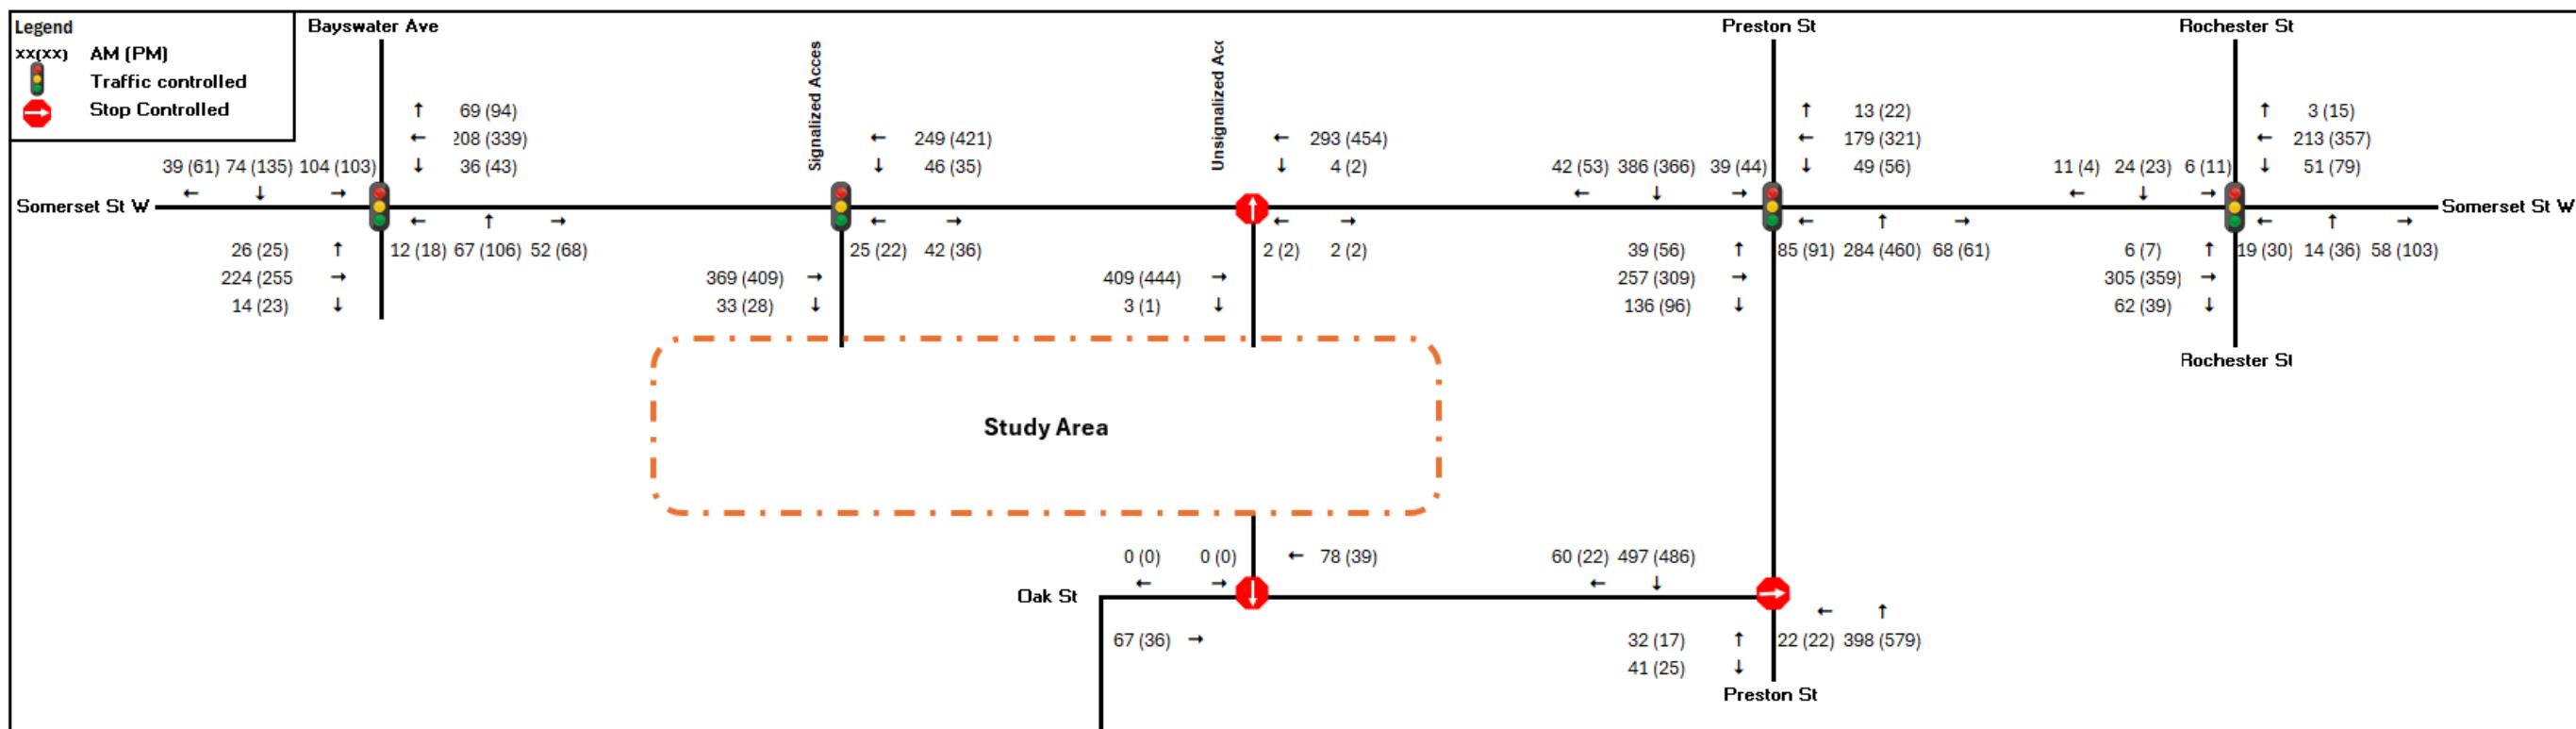

Figure 12: Phase 4 Future Total Traffic

3 Strategy Report

3.1 Development Design

3.1.1 Design for Sustainable Modes

The design of the proposed development will align with the City of Ottawa's *Planning and Design Guidelines*, ensuring support for sustainable modes of transportation. The multi-modal transportation infrastructure internal to the development will be planned and designed to seamlessly integrate with existing and future planned multi-modal transportation infrastructure surrounding the property. **Figure 13** illustrates existing transportation infrastructure external to the development which are supportive of sustainable modes of transportation and are further described in Section 2 (Parking), Section 3 (Boundary Street Design), and Section 5 (Transit).

Figure 13: Design for Sustainable Modes - Existing infrastructure

Key features of the site and surrounding area which will be supportive of sustainable modes are briefly described as follows:

- **Bicycle Parking Areas (see Section 2):**
 - » Public bicycle parking (i.e. bike rings) are available along Somerset Street West and Preston West near the subject site.
 - » Secure Bike lockers are available at Bayview Station.
 - » Short-term bicycle parking (i.e., bike racks/rings) and long-term bicycle parking (i.e., lockers, storage rooms) will be provided for each component (land use type) of the site, in adherence to applicable by-law requirements. Specific facility types, designs, placement, and quantity will be confirmed at Site Plan Application (SPA) stage for each respective land use internal to the development lands.
- **Pedestrian Routes and Facilities (see Section 3):**
 - » The site will be designed with an internal pedestrian pathway network that provides direct, safe, and accessible connections to the boundary sidewalk network, transit stops, and surrounding amenities.
 - » Enhanced features internal to the development such as pedestrian crosswalks, wide sidewalks, traffic calming devices, various surface treatments, lighting, and clear wayfinding and warning signage can be implemented to maximize user experience of the various facilities and safe mobility throughout the site.
- **TDM-Supportive Design Opportunities (see Section 4):**
 - » The development will include measures from the City of Ottawa's *TDM-Supportive Development Design and Infrastructure Checklist*, including on-site secure bike parking, bikeshare facilities, safer walking and cycling routes especially to/from transit stops in the study area.
- **Transit Amenities (see Section 5):**
 - » Multiple transit stops with numerous interconnection options to other municipal transit routes are located in proximity to the site and are easily accessible by walking from the subject site.
 - » Approximate walking distances to several nearby bus stops include:
 - **100 metres (approximately 1.5-minute walk)** from the northeast corner of the site to multiple transit stops at the signalized intersection of Somerset Street West at Preston Street.
 - **200 metres (approximately 3-minute walk)** from the northwest corner of the site to multiple transit stops at the signalized intersection of Somerset Street West at Bayswater Avenue.
 - **100 metres (approximately 1.5-minute walk)** across the length of Plouffe Park (via proposed sidewalk) to the transit stops along Preston Street near Oak Street and Anderson Street.
 - **580 metres (approximately 8-minute walk)** from the site to Bayview Station along the City Centre Avenue path.

3.1.2 Circulation and Access

3.1.2.1 Vehicular Access Points

The proposed development is planned to include the following three (3) vehicular access points to the boundary road network:

- **A new signalized access on Somerset Street West**, approximately 190 metres west of the existing signal at Preston Street, and approximately 350 metres east of the existing signal at Bayswater Avenue. This access will function as the general vehicular entry/exit point for the future residential development and the future recreation and cultural facility.
- **Use of the existing westernmost unsignalized access for the City of Ottawa Plant Recreation Centre**. This access will continue to function as one-of-two general vehicular entry/exit points for the Plant Recreation Centre but will also provide access for service vehicles for the future recreation and cultural facility and general vehicular access for the future school.
- **A new unsignalized access on Oak Street**, approximately 100 metres west of Preston Street. This access will function as the general vehicular entry/exit point for the future school.

3.1.2.2 Vehicular Circulation

All roads internal to the development will permit two-way travel, with one-lane per direction. Detailed cross-section designs (i.e., pavement width, curb-gutter design, intersection geometry) will be confirmed at Site Plan Application (SPA). However, all roads will be designed in accordance with Fire Route requirements as per the Ontario Building Code (OBC).

Servicing will function as follows:

- Service vehicles for the future residential development site will access the site via the proposed signalized access on Somerset Street West.
- Service vehicles for the future recreation and cultural facility will access the site via the existing unsignalized access on Somerset Street West.
- Service vehicles for the future school site may access the site via any of the proposed three (3) access points.

School bus traffic is currently planned to enter the site via the existing unsignalized access on Somerset Street West and exit via the proposed unsignalized access on Oak Street, which permits lay-by along the frontage of the future school site with the bus doors facing the school as desired.

Pavement marking and signage plans will be prepared for the development, with required regulatory signage, warning signage, wayfinding signage, and pavement markings in accordance with the Ontario Traffic Manual (OTM), at Site Plan Application (SPA).

3.1.2.3 Active Transportation Connections

The proposed development is planned to include the following seven (7) active transportation connections to the boundary active transportation network:

- At Trillium Trail at the west frontage of the site;
- At City Centre Avenue under Somerset Street West at the north frontage of the site;
- At Somerset Street West at the proposed signalized access at the north frontage of site;
- At Somerset Street West at the existing Plant Centre access at the north frontage of site;
- At Preston Street along the north side of Plouffe Park at the east frontage of site;
- At Oak Street at the proposed unsignalized access at the south frontage of site; and
- At Oak Street along the west side of the proposed school at the south frontage of site.

3.1.2.4 Active Transportation Circulation

The concept plan is currently conceptual, and more detailed design information for the internal active transportation network will be detailed at the Site Plan Application (SPA) stage for each individual land use application (i.e., intersection corner radii, crosswalk facilities and controls, traffic calming devices, surface treatments, pavement marking and signage plans, etc.).

Internal circulation will prioritize safe and efficient movement for active transportation (i.e., pedestrians and cyclists) and vulnerable road users (i.e., children) over vehicular traffic, through the design of an accessible and traffic-calmed multi-modal transportation network and implementation of traffic regulations (i.e., reduced speed zone, school zone, etc.). Traffic calming options internal to the development may include the following:

- Speed humps
- Raised crosswalks
- Crossrides
- Raised intersections
- Curb extensions
- Reduced road width
- Textured road surface treatments
- School zone and warning signage
- Reduced regulatory speed zone signage

Aggressive traffic calming features will also be considered for the proposed north-south road internal to the development connecting Somerset Street West to Oak Street, to reduce prevalence of traffic infiltration across the site.

3.2 Parking

Schedule 1A of the City of Ottawa's Zoning By-Law designates the study area as Area Z, which has reduced parking requirements due to its proximity to a major LRT station. **Table 16** outlines the required and proposed vehicle parking for the proposed development.

Table 16: Minimum Vehicle Parking Requirements

Land Use	Rate	Units/GFA	Parking Requirements	Proposed Parking
Residential	Residents: None Required Visitors: 0.1 per dwelling unit	430	43	180
Recreation Centre	None Required	110,000 ft ² (10219 m ²)	0	150
Elementary School	None Required	60,060 ft ² (5579 m ²)	0	-
Total			43	330

The proposed vehicle parking supply exceeds the minimum parking requirement established by the City's By-Law. It should be noted that 43 of the 180 residential spaces should be allocated as visitor parking, as required by Section 101 of the City's Zoning By-Law. Bicycle parking should also be provided per Section 111 of the Zoning By-Law to accommodate the needs of the residential development, recreational and cultural centre, and elementary school, with a total of approximately 278 spaces allocated across the three land-uses. See **Table 17** for bike parking requirement for each land-use. Allocations for bike parking will be determined during the Site Plan Application stage of the development.

Table 17: Minimum Bike Parking Requirement

Land Use	Rate	Units/GFA	Minimum Parking Requirements
Residential	0.50 per dwelling unit	430	215
Recreation Centre	1 per 1500 m ² of gross floor area	110,000 ft ² (10219 m ²)	7
Elementary School	1 per 100 m ² of gross floor area	60,060 ft ² (5579 m ²)	56
Total			278

3.3 Boundary Street Design

A Multi-Modal Level of Service (MMLOS) evaluation was conducted for Somerset Street West between Rochester Street and Bayview Station Road, and Preston Street between Somerset Street West and Oak Street, in their current configurations. This evaluation was carried out in accordance with the City's MMLOS guidelines to identify opportunities to improve multi-modal mobility and accessibility along the boundary road network in accordance with the City's MMLOS objectives.

The subject site is located within 600 metres of Bayview Station and 300m of Devonshire Public School, therefore the Pedestrian Level of Service (PLOS), Bicycle Level of Service (BLOS), Transit Level of Service (TLOS) and Truck Level of Service (TkLOS) are based on established targets for roadways within 600m of a Rapid Transit Station and 300m of a school, per Exhibit 22 of the MMLOS guidelines. **Table 18** shows the MMLOS results for Somerset Street West and Preston Street.

Table 18: MMLOS Segment Analysis

Segment	PLOS		BLOS		TLOS		TkLOS	
	Actual	Target	Actual	Target	Actual	Target	Actual	Target
Somerset Street West	C	A	D	C	D	D	C	D
Preston Street	B	A	-	-	D	D	C	D

Somerset Street West currently does not meet the PLOS and BLOS targets. PLOS is influenced by factors such as sidewalk and boulevard width, AADT volumes, speed limit, and the availability of on-street parking. To improve PLOS on Somerset Street West and Preston Street, the following measures could be considered:

- Widening sidewalks where feasible to provide more comfortable walking space.
- Enhancing sidewalk buffers with street trees or low-profile planters to improve pedestrian comfort without reducing parking.
- Reducing the posted speed limit in this segment of Somerset Street West.

Bicycle Level of Service (BLOS) in the study area could be improved with the implementation of dedicated cycling infrastructure. Somerset Street West functions as a connector route and does not currently have dedicated cycling infrastructure along the broader corridor. As such, proposing dedicated bike infrastructure on Somerset Street West in the vicinity of the subject property may have limited benefit without broader corridor or network connectivity. On-street bike lanes could be considered on Somerset Street West as part of a broader corridor improvement project initiated by the City.

Preston Street also falls short of achieving a target PLOS A which could be achieved by further separating sidewalks from traffic with the addition of grassy boulevards or on-street parking. These measures would enhance the safety and comfort of pedestrians and cyclists, while promoting a more balanced multimodal use of the roadway.

3.4 Transportation Demand Management

The Transportation Demand Management (TDM) plan for the subject site presents post-occupancy measures designed to reduce auto-dependency. Located within a Protected Major Transit Station Area (PMTSA), the site benefits from its strategic location near transit hubs and active transportation networks, which form the foundation of the TDM strategy.

3.4.1 Context for Post-Occupancy TDM Measures

The modal targets for the subject site align with the Ottawa Inner Area (430) Traffic Analysis Zone (TAZ) averages for work, school, and residential trip purposes. Existing developments in similar zones serve as benchmarks for sustainable travel mode share expectations.

3.4.2 Need and Opportunities for TDM Measures

Nearby residential, institutional, and recreational land uses could experience negative impacts if the development fails to meet sustainable mode share targets. Potential negative impacts could include:

- Increased congestion and reduced accessibility.
- Strain on shared infrastructure and decreased efficiency.
- Elevated vehicle volumes leading to delays on the transportation network.

Post-occupancy TDM measures provide opportunities to:

- Improve the likelihood of achieving sustainable mode share targets.
- Mitigate risks associated with increased traffic volumes.
- Leverage the site's PMTSA location to maximize transit and active mode accessibility.

3.4.3 TDM Program Measures

A variety of post-occupancy TDM measures are proposed to enable and encourage sustainable travel, such as:

- **Active Transportation:**
 - » Implement bicycle parking and repair stations in proximity to the subject site.
 - » Develop safe pedestrian connections to transit hubs and local amenities.
 - » Provide wayfinding signage for cycling and walking routes.
- **Public Transit Integration:**
 - » Offer subsidized transit passes to residents and employees.
 - » Coordinate with OC Transpo to enhance transit stop infrastructure near the site.
 - » Provide real-time transit updates in communal spaces.
- **Vehicle Trip Reduction:**

- » Promote carpooling through a dedicated platform and incentives.
- » Limit parking for single-occupancy vehicles and prioritize shared-use spaces.
- » Establish partnerships with ride-share services to offer discounts.
- **Electric and Low-Emission Vehicles:**
 - » Install EV charging stations in parking areas.
 - » Incentivize the use of green vehicles through preferred parking.
- **Community Engagement:**
 - » Host sustainable travel workshops and events.
 - » Introduce shared mobility options such as bike-sharing stations.
- **Monitoring and Evaluation:**
 - » Conduct periodic surveys to track travel behavior.
 - » Install traffic counters to measure mode shares and volumes.
 - » Regularly review and adjust the TDM measures to meet performance targets.

3.4.4 Implementation Plan

The implementation plan can include but is not limited to:

- Collaboration with the City and transit authorities.
- **Funding and resources** through development agreements and management funds.
- Monitoring of the traffic operations during and after occupancy of the subject site.
- **Annual** reporting on TDM program effectiveness.

3.5 Transit

This section reviews potential impacts from development-generated demand to transit service, and the necessity of transit priority measures. The MMLOS analysis evaluates the transit level of service within the study area.

3.5.1 Future Site Generated Transit Demand

Based on the estimation of site-generated person trips from the proposed development and the assumed modal splits from the TRANS Trip Generation Manual for the Ottawa Inner Area, the site is anticipated to generate 318 and 92 transit trips in the AM and PM peak hours, respectively.

3.5.2 Transit Impacts

The anticipated increase in transit ridership, particularly during the AM peak hour, may result in higher passenger volumes at key stops and additional demand on existing transit routes. However, the impact of

the additional demand will depend on the current capacity of transit services. If sufficient excess capacity exists, the increased ridership could be accommodated without adjustments to service.

The City has plans to improve the transit infrastructure in the area, which are expected to enhance capacity and service reliability. These planned upgrades may further mitigate any potential impacts of increased ridership and ensure that transit services remain effective and accessible with additional demand from the proposed development.

3.5.3 Transit Priority Measures

The addition of site-generated vehicle and transit trips, as well as new access driveways along Somerset Street West and Preston Street, has the potential to influence transit travel times, particularly during peak hours. However, as discussed in section 2.1.3.3 of the screening and scoping report, OC Transpo is proposing significant planned network upgrades in the area which will improve the transit system's capacity, supporting the accommodation of additional site-generated transit trips.

Additional measures that can further improve transit operations include:

- Improving Signal Timing Plans (STP) at the study intersections to reduce delays for buses and improve travel time reliability.
- Collaborating with OC Transpo to monitor service levels and implement frequency adjustments or route modifications as necessary to accommodate long-term demand.
- Assessing the feasibility of short, isolated transit priority lanes near key access points to offset bus delays caused by turning vehicles.

3.6 Intersection Design

3.6.1 Access Intersections

The proposed locations, configurations and phasing of private vehicular accesses for the development at 930 - 1010 Somerset Street is described as follows:

Phase 1 (Elementary School)

- **Use of the existing westernmost unsignalized access** for the City of Ottawa Plant Recreation Centre.
 - This access will continue to function as one-of-two general vehicular entry/exit points for the Plant Recreation Centre but will also provide access for service vehicles for the future recreation and cultural facility and bus access for the future school.
 - Auxiliary turn lanes are not proposed at this access intersection, with one inbound lane and one outbound lane within the driveway, and no auxiliary turn lanes on Somerset Street West, as consistent with existing conditions.
- **A new unsignalized access on Oak Street**, approximately 100 metres west of Preston Street.

- This access will function as the entry/exit point for the future school, specifically for school buses.
- Auxiliary turn lanes are not proposed at this access intersection, with one inbound lane and one outbound lane within the driveway, and no auxiliary turn lanes on Oak Street as consistent with existing conditions.

Phase 2 (Affordable Housing)

- **A new signalized access on Somerset Street West**, approximately 190 metres west of the existing signal at Preston Street, and approximately 350 metres east of the existing signal at Bayswater Avenue.
 - This access will function as the general vehicular entry/exit point for the future residential development and the future recreation and cultural facility.
 - An auxiliary left-turn lane with a storage length of 15 metres is recommended for the westbound left-turn movement.
 - An auxiliary left-turn lane with a storage length of 15 metres is recommended for the northbound left-turn movement.

Phase 3 (Market-Rate Housing)

- No additional changes to the site's access arrangement are required at Phase 3.

Phase 4 (Culture and Recreation Centre)

- No additional changes to the site's access arrangement are required at Phase 4.

All proposed private accesses will undergo further evaluation during the Site Plan Application (SPA) stage to confirm compliance with Ottawa's Private Approach Guidelines and TAC standards, as well as sufficient geometry to ensure adequate turning movement for vehicles turning into and out of the approaches. Specific considerations, such as access widths (maximum of 9m), spacing from property lines (minimum of 3m), clear throat dimensions, and corner radii will be addressed at the SPA.

3.6.2 Intersection Capacity Analysis Methodology

The Intersection Capacity Analysis (“ICA”) utilized the City of Ottawa’s Traffic Impact Assessment (TIA) guidelines to measure how well key intersections can manage traffic, using the HCM 2000 methodology and Synchro Studio 11 software. Measures of effectiveness (MOEs) such as level of service (LOS), volume-to-capacity ratio (v/c ratio), and 95th percentile queuing was reported, and are defined below:

- Average vehicle control delay (in seconds / vehicle) quantifies the variations in travel time.
- V/c ratio quantifies the degree to which the capacity of a lane group is utilized. This will be used to determine the LOS per Ottawa’s TIA guidelines (**Table 19**).
- 95th percentile queue is the queue length which is expected to be exceeded only 5% of the time; it is common practice to identify preferred storage length requirements for auxiliary turn lanes at signalized intersections based on estimated peak hour 95th percentile queueing.

Table 19: Level of Service Threshold

Level of Service (LOS) Rating	Volume to Capacity Ratio
A	0 to 0.60
B	0.61 to 0.70
C	0.71 to 0.80
D	0.81 to 0.90
E	0.91 to 1.00
F	>1.00

Traffic operations will be analyzed for the future background and future total volumes for each of the four (4) phases.

3.6.3 Existing Intersection Controls

The intersections of Somerset Street West at Bayswater Avenue and Somerset Street West at Preston Street are signalized, whereas the intersection of Preston Street at Oak Street is unsignalized. The existing intersection configurations were maintained throughout the analysis up to the ultimate future horizon year, with any recommended intersection improvements identified as “improved” scenarios in the capacity analysis.

3.6.4 Existing Conditions

3.6.4.1 MMLOS Analysis

An MMLOS analysis was conducted to evaluate the current performance of various transportation modes at each study intersection under existing conditions. The vehicle analysis conducted using Synchro instead of MMLOS, will be discussed in the subsequent sections. **Table 20** presents the results of the MMLOS for pedestrians, cyclists, transit, and trucks at the existing study intersections.

Table 20: Study Intersection MMLOS – Existing Conditions

Intersections	Level of Service (LOS)			
	Pedestrian (PLOS)	Bike (BLOS)	Transit (TLOS)	Truck (TkLOS)
Somerset Street West and Bayswater Avenue	Actual	C	D	C
	Target	A	B	D
Somerset Street West and Preston Street	Actual	C	D	F
	Target	A	B	D
Somerset Street West and Rochester Street	Actual	D	D	C
	Target	A	B	D

3.6.4.1.1 *Somerset Street West and Bayswater Avenue*

Pedestrian Level of Service (PLOS)

Pedestrians cross three (3) lanes at the north, east and west approach and two (2) lanes at the south approach of the intersection. Left turns are permissive, and there is a standard right-turn channel without a receiving lane with corner radii of 5-10 metres. The intersection has a PLOS of C due to delays experienced by pedestrians while crossing from all approaches except south. The average Pedestrian Exposure to Traffic at Signalized Intersections (PETSI) score at the intersection is 74, which aligns with a PLOS of C.

Bike Level of Service (BLOS)

Somerset Street West and Bayswater Avenue feature a mixed-traffic bike path, assessed under Ottawa's MMLOS guidelines for Level of Traffic Stress (LTS). Based on the analysis, the intersection received an

LTS 3, indicating that it is primarily suitable for experienced adult cyclists. This rating reflects the mixed-traffic design, which creates conflicts between cyclists and motor vehicles, indicating a BLOS of D.

Transit Level of Service (TLOS)

Somerset Street West and Bayswater Avenue experiences a TLOS of C, which is below its target LOS of D. Bus operate well along Somerset Street West, with average delay of 20s or less.

Truck Level of Service (TkLOS)

Somerset Street West is designated as an urban truck route with one (1) receiving lane on departure from the intersection and effective corner radii of less than 10m. Therefore, Somerset Street West and Bayswater Avenue experience a TkLOS of F.

3.6.4.1.2 Somerset Street West and Preston Street

Pedestrian Level of Service (PLOS)

Pedestrians cross two (2) lanes at each approach of the intersection. Left turns are permissive and corner radii of 5-10 metres. The intersection has a PLOS of C due to delays experienced by pedestrians while crossing from the east approach. The average PETSI score at the intersection has been calculated at 75, corresponding with PLOS of B.

Bike Level of Service (BLOS)

Mixed-traffic bike path is only present east-west on Somerset Street West at the intersection. Preston Street currently lacks a cycling infrastructure. Based on the analysis, the intersection received an LTS 3, indicating a BLOS of D.

Transit Level of Service (TLOS)

Somerset Street West and Preston Street experiences a TLOS of F due to delay of more than 40s on the north approach. The TLOS at this intersection can be addressed by optimizing the Signal Timing Plan at the intersection.

Truck Level of Service (TkLOS)

Preston Street is also a designated urban truck route in addition to Somerset Street West. The intersection has one receiving lane on departure at each approach and effective corner radii of less than 10m. As a result, the intersection experiences a Truck Level of Service (TkLOS) rating of F.

3.6.4.1.3 Somerset Street West and Rochester Street

Pedestrian Level of Service (PLOS)

Pedestrians cross two (2) lanes at each approach of the intersection. Left turns are permissive and corner radii of 5-10 metres. The intersection has a PLOS of D due to delays experienced by pedestrians on the

east and west approach. The average PETSI score at the intersection has been calculated at 86, corresponding with PLOS of B.

Bike Level of Service (BLOS)

Mixed-traffic bike path is only present east-west on Somerset Street West at the intersection. Rochester Street currently lacks a cycling infrastructure. Based on the analysis, the intersection received an LTS 3, indicating a BLOS of D.

Transit Level of Service (TLOS)

Somerset Street West and Rochester Street experiences a TLOS of F due to delays of more than 20s on the north and south approach. The TLOS at this intersection can be addressed by optimizing the Signal Timing Plan at the intersection.

Truck Level of Service (TkLOS)

The intersection has one receiving lane on departure at each approach and effective corner radii of less than 10m. As a result, the intersection experiences a Truck Level of Service (TkLOS) rating of F.

3.6.4.1.4 *Preston street and Oak Street*

MMLOS guidelines do not assess stop-controlled intersections directly and instead depend on segment analysis for evaluation. The immediate segments around the study area have been evaluated in **Section 1.3**. The VLOS for Preston And Oak Street was evaluated in the subsequent section using Synchro.

3.6.4.2 Existing Capacity Analysis

Table 21 presents the findings for movement capacity and operations at the study intersections under existing traffic volumes during the AM and PM peak hours. The results indicate that all intersection movements within the study area operate efficiently, remaining below capacity. LOS B or better is achieved during the AM peak hour, while LOS D or better is maintained during the PM peak hour, with no delay concerns identified.

3.6.4.3 Recommended Intersection Improvements

- Although opportunities to improve multi-modal LOS are identified under existing conditions, recommendations to achieve the City's LOS targets will be made for the study's ultimate future horizon year based on the multi-modal LOS scores upon full build-out of the subject site.
- No intersection improvements are recommended to maintain an acceptable level of service under existing conditions.

3.6.5 Phase 1 (Elementary School)

3.6.5.1 MMLOS Analysis

The MMLOS at the study intersections under Phase 1 future conditions is expected to be similar to existing conditions, with a slight increase in average delays at intersection movements that do not affect the overall TLOS. **Table 22** shows the MMLOS results for phase 1 future conditions. It is important to note that the MMLOS for the proposed unsignalized access has not been assessed due to the one-way stop-controlled configuration of the intersection. The VLOS for the unsignalized has been evaluated in the subsequent section.

Table 22: Study Intersections MMLOS – Phase 1 Future Conditions

3.6.5.4 Recommended Intersection Improvements

- No intersection improvements are recommended to maintain an acceptable level of service upon build-out of Phase 1.

3.6.6 Phase 2 (Affordable Housing)

3.6.6.1 MMLOS Analysis

Table 25 shows the MMLOS results at the study intersections under the phase 2 future conditions volumes. MMLOS at all intersections are similar to phase 1 future conditions as there are no multi-modal infrastructure changes proposed in the area. However, the TLOS at Somerset Street West and Signalized Access changes from D to E due to the increase in traffic delays at the east and west approaches, exceeding the target of LOS D here.

Table 25: Study Intersections MMLOS – Phase 2 Future Conditions

Intersections	Level of Service (LOS)			
	Pedestrian (PLOS)	Bike (BLOS)	Transit (TLOS)	Truck (TkLOS)
Somerset Street West and Bayswater Avenue	Actual	C	D	C
	Target	A	B	D
Somerset Street West and Preston Street	Actual	C	D	F
	Target	A	B	D
Somerset Street West and Rochester Street	Actual	D	D	C
	Target	A	B	D
Somerset Street West and Signalized Access	Actual	D	D	E
	Target	A	B	D

3.6.6.1.1 Somerset Street West and Signalized Access

Pedestrian Level of Service (PLOS)

Pedestrians are anticipated to cross three (two thru and one left turn) lanes in the east, two in the west and south approach of the intersection. The eastbound left turn movement is anticipated to be permissive

and corner radii at the intersection are assumed to be 5-10m. The intersection has a PLOS of D due to delays experienced by pedestrians on the east and west approach. The average PETSI score at the intersection has been calculated at 86, corresponding with PLOS of B.

Bike Level of Service (BLOS)

Cyclists will operate as mixed-traffic in the east-west direction along Somerset Street West. Based on the analysis, the intersection received an LTS 3, representing BLOS of D.

Transit Level of Service (TLOS)

Somerset Street West and Preston Street experiences a TLOS of C due to delay of more than 10s on the east and west approach. The TLOS at this intersection can be addressed by optimizing the Signal Timing Plan at the intersection.

Truck Level of Service (TkLOS)

Preston Street is also a designated urban truck route in addition to Somerset Street West. The intersection has one receiving lane on departure at each approach and effective corner radii of less than 10m. As a result, the intersection experiences a TkLOS rating of F.

3.6.6.2 Future Background Capacity Analysis

Table 26 shows the movement operations at the study intersections under phase 2 future background volumes. The northbound thru/right movement at Somerset Street West and Preston Street slightly exceeds capacity, operating at LOS F during the PM peak hour. The movement experiences delays of over a minute. All other intersection movements operate within capacity at LOS C or better during the AM peak hour and LOS D or better during the PM peak hour.

Table 26: Intersection Turning Movement Operations - Phase 2 Background Conditions

Intersections	Movements	Delay (s) AM (PM)	v/c Ratio AM (PM)	LOS AM (PM)	95th Queue (m) AM (PM)

3.6.6.4 Recommended Intersection Improvements

- Optimize signal timings for the intersection of Preston Street at Somerset Street West, to provide additional needed capacity for the northbound shared through/right-turn movement during the p.m. peak hour. See Section 6.8.4 for updated performance results with signal timing optimizations implemented, upon full build-out of the subject site.
- Introduce a signalized access on Somerset Street to serve Phases 2, 3 and 4.

3.6.7 Phase 3 (Market-Rate Housing)

3.6.7.1 MMLOS Analysis

Table 28 shows the MMLOS results at the study intersections under the phase 3 future conditions volumes. MMLOS at all intersections are similar to phase 2 future conditions.

Table 28: Study Intersections MMLOS – Phase 3 Future Conditions

Intersections	Level of Service (LOS)			
	Pedestrian (PLOS)	Bike (BLOS)	Transit (TLOS)	Truck (TkLOS)
Somerset Street West and Bayswater Avenue	Actual	C	D	C
	Target	A	B	D
Somerset Street West and Preston Street	Actual	C	D	F
	Target	A	B	D
Somerset Street West and Rochester Street	Actual	D	D	C
	Target	A	B	D
Somerset Street West and Signalized Access	Actual	D	D	E
	Target	A	B	D

3.6.7.2 Future Background Capacity Analysis

Since the Phase 3 future background volumes are identical to those in Phase 2, the background results for Phase 3 are the same as those for Phase 2.

3.6.7.3 Future Total Capacity Analysis

Table 29 shows the intersection movement operations under the phase 3 future conditions volumes. All intersection movements are anticipated to operate similar to phase 2 future conditions.

3.6.7.4 Recommended Intersection Improvements

- Optimize signal timings for the intersection of Preston Street at Somerset Street West, to provide additional needed capacity for the northbound shared through/right-turn movement during the p.m. peak hour. See Section 6.8.4 for updated performance results with signal timing optimizations implemented, upon full build-out of the subject site.

3.6.8 Phase 4 (Recreational and Cultural Centre)

3.6.8.1 MMLOS Analysis

MMLOS results under the phase 4 future volumes are consistent with the results from the phase 2 future conditions.

3.6.8.2 Future Background Capacity Analysis

Table 30 presents the intersection movement operations under phase 4 future background volumes. The northbound thru/right movement at Somerset Street West and Preston Street is anticipated to worsen, experiencing delays of more than a minute and LOS F during the PM peak hour. All other intersection movements perform within capacity during the AM and PM peak hours.

Table 30: Intersection Turning Movement Operations - Phase 4 Background Conditions

3.6.8.3 Future Total Capacity Analysis

Table 31 presents the intersection movement operations under phase future total volumes. The northbound thru/right movement at Somerset Street West and Preston Street continues to operate overcapacity with delays of more than a minute and LOS F during the PM peak hour. The northbound left movement at the same intersection performs over capacity with more than two (2) minutes of delay and LOS F during the PM peak hour. All other intersection movements perform at acceptable during the AM and PM peak hours.

Table 31: Intersection Turning Movement Operations - Phase 4 Future Conditions

Intersections	Movements	Delay (s) AM (PM)	v/c Ratio AM (PM)	LOS AM (PM)	95th Queue (m) AM (PM)

3.6.8.4 Recommended Intersection Improvements

- Optimize signal timings for the intersection of Preston Street at Somerset Street West, to provide additional needed capacity for the northbound shared through/right-turn movement during the p.m. peak hour. See **Table 32** below for the results from the capacity analysis with the optimized timings, indicating all movements operating with an acceptable level of service.

Table 32: Intersection operations with optimized STP

Intersections	Movements	Delay (s)	v/c Ratio	v/c LOS	95th Queue (m)
Preston St & Somerset St W (Optimized STP)	EBL	12 (25)	0.12 (0.34)	A (A)	7 (15)
	EBTR	17 (42)	0.53 (0.87)	A (D)	60 (104)

	SBL	18 (36)	0.23 (0.49)	A (A)	9 (15)
	SBTR	28 (27)	0.74 (0.71)	C (C)	88 (88)

3.7 Summary of Findings

- Transit network analysis highlights an anticipated increase in ridership, during the AM and PM peak hours, may require scheduling and frequency adjustments.
- TDM measures play a critical role in reducing single-occupancy vehicle trips and should promote sustainable travel modes, including enhanced bicycle parking, subsidized transit passes, and carpooling programs
- **Existing conditions,**
 - » The Transit Level of Service (TLOS) fails to meet the desired target at Somerset Street West and Preston Street.
 - » The Truck Level of Service (TkLOS) fails to meet the desired target at intersections along Somerset Street West at Bayswater Avenue, Preston Street, and Rochester Street.
 - » All study intersections are currently operating acceptably at peak hours, maintaining an acceptable level of service.
- **Phase 1,**
 - » The Transit Level of Service (TLOS) fails to meet the desired target at Somerset Street West and Preston Street.
 - » The Truck Level of Service (TkLOS) fails to meet the desired target at intersections along Somerset Street West at Bayswater Avenue, Preston Street, and Rochester Street.
 - » All study intersections are currently operating acceptably at peak hours, maintaining an acceptable level of service.
- **Phase 2,**
 - » The Transit Level of Service (TLOS) fails to meet the desired target at Somerset Street West and Preston Street.
 - » The Truck Level of Service (TkLOS) fails to meet the desired target at intersections along Somerset Street West at Bayswater Avenue, Preston Street, and Rochester Street.
 - » The northbound thru/right at Somerset Street West and Preston Street is anticipated to operate overcapacity at LOS F during the PM peak hour under the future background volumes. All other intersection movements operate acceptably at LOS B or better during AM peak hour and LOS D or better during PM peak hour
 - » It is recommended that the Signal Timing Plan (STP) be update at Somerset Street West and Preston Street during the PM peak period to allocate more green time to the northbound movement, allowing the movement to operate within capacity at acceptable LOS.
- **Phase 3,**
 - » The northbound thru/right at Somerset Street West and Preston Street continue to operate overcapacity at LOS F. All other movements continue to operate under capacity at LOS B or better during AM peak hour and LOS D or better during PM peak hour under the future total volumes.

- **Phase 4,**
 - » The northbound left and thru/right movements are anticipated to operate overcapacity at LOS F. All other intersection movements perform within capacity at LOS B or better during AM peak hour and LOS D or better during PM peak hour under the future total volumes

3.8 Recommendations

The recommendations are as follows:

- Develop internal pedestrian pathways to connect directly to boundary sidewalks, nearby transit stops, and local amenities.
- Include pedestrian safety features such as raised crosswalks, traffic calming measures, and clear wayfinding signage to enhance accessibility and mobility within the site.
- 215 bicycle parking spaces for residential, 7 for the recreational and cultural centre, and 56 for the elementary school should be provided in compliance with the City's Zoning By-Law.
- While a dedicated cycling infrastructure would improve the Bike Level of Service (BLOS) along Somerset Street West, its implementation is not recommended due to the lack of connectivity to the broader dedicated cycling infrastructure in the area.
- Although OC Transpo has planned transit improvements in the study area to accommodate increasing demands, it is recommended that the transit service levels be monitored under the potential ridership increase and implement adjustments such as frequency changes or route modifications, as necessary.
- Continue to monitor intersection operations at the intersection of Somerset Street West at Preston Street. Should the northbound shared through/right-turn lane experience operational concerns over time as traffic volumes in the area increase (potentially), optimize the intersection's signal timings to provide additional needed capacity (if required).

Phase 1 (Elementary School)

- Use of the existing westernmost unsignalized access for the City of Ottawa Plant Recreation Centre.
 - » This access will continue to function as one-of-two general vehicular entry/exit points for the Plant Recreation Centre but will also provide access for service vehicles for the future recreation and cultural facility and bus access for the future school.
 - » Auxiliary turn lanes are not proposed at this access intersection, with one inbound lane and one outbound lane within the driveway, and no auxiliary turn lanes on Somerset Street West, as consistent with existing conditions.
- **A new unsignalized access on Oak Street**, approximately 100 metres west of Preston Street.
 - » This access will function as the entry/exit point for the future school, specifically for school buses.

- » Auxiliary turn lanes are not proposed at this access intersection, with one inbound lane and one outbound lane within the driveway, and no auxiliary turn lanes on Oak Street as consistent with existing conditions.

Phase 2 (Affordable Housing)

- **A new signalized access on Somerset Street West**, approximately 190 metres west of the existing signal at Preston Street, and approximately 350 metres east of the existing signal at Bayswater Avenue.
 - » This access will function as the general vehicular entry/exit point for the future residential development and the future recreation and cultural facility.
 - » An auxiliary left-turn lane with a storage length of 15 metres is recommended for the westbound left-turn movement.
 - » An auxiliary left-turn lane with a storage length of 15 metres is recommended for the northbound left-turn movement.

Phase 3 (Market-Rate Housing)

- No additional changes to the site's access arrangement are required at Phase 3.

Phase 4 (Culture and Recreation Centre)

- No additional changes to the site's access arrangement are required at Phase 4.

Appendix A TIA Screening Form

Summary of Development

Municipal Address	1010 Somerset St W
Description of Location	Southwest of Somerset St W and Preston St.
Land Use Classification	Residential, Elementary School, Community Centre, Park space
Development Size (units)	Proposed 300 residential units (150 affordable housing units, 150 market-rate housing units) Existing: Impark facility (~267,000 ft ²), restaurants (~8370 ft ²) Proposed community centre: 10,219 m ² (110,000 ft ²) Proposed elementary school: 60,060 ft ² (approximately 449 students and 89 children in childcare) Park Space: 1 Acre
Development Size (m²)	One existing unsignalized access on Somerset St W (two other accesses at adjacent Plan Rec Centre property). Proposed signalized access on Somerset St W and proposed unsignalized access on Oak Street; maintain two existing accesses for Plant Rec Centre property.
Number of Accesses and Locations	
Phase of Development	4 phases
Buildout Year	Assumed build-out and occupancy by 2038

If available, please attach a sketch of the development or site plan to this form.

Trip Generation Trigger

Considering the Development's Land Use type and Size (as filled out in the previous section), please refer to the Trip Generation Trigger checks below.

Land Use Type	Minimum Development Size	Triggered
Single-family homes	40 units	✗
Townhomes or apartments	90 units	✓
Office	3,500 m ²	✗
Industrial	5,000 m ²	✗
Fast-food restaurant or coffee shop	100 m ²	✗
Destination retail	1,000 m ²	✗
Gas station or convenience market	75 m ²	✗

* If the development has a land use type other than what is presented in the table above, estimates of person-trip generation may be made based on average trip generation characteristics represented in the current edition of the Institute of Transportation Engineers (ITE) Trip Generation Manual.

If the proposed development size is greater than the sizes identified above, the Trip Generation Trigger is satisfied.

Location Triggers

	Yes	No
Does the development propose a new driveway to a boundary street that is designated as part of the City's Transit Priority, Rapid Transit or Spine Bicycle Networks?	✓	
Is the development in a Design Priority Area (DPA) or Transit-oriented Development (TOD) zone? *	✓	

*DPA and TOD are identified in the City of Ottawa Official Plan (DPA in Section 2.5.1 and Schedules A and B; TOD in Annex 6). See Chapter 4 for a list of City of Ottawa Planning and Engineering documents that support the completion of TIA).

If any of the above questions were answered with 'Yes,' the Location Trigger is satisfied.

Safety Triggers

	Yes	No
Are posted speed limits on a boundary street are 80 km/hr or greater?		✗
Are there any horizontal/vertical curvatures on a boundary street limits sight lines at a proposed driveway?	✓	
Is the proposed driveway within the area of influence of an adjacent traffic signal or roundabout (i.e., within 300 m of intersection in rural conditions, or within 150 m of intersection in urban/ suburban conditions)?	✓	
Is the proposed driveway within auxiliary lanes of an intersection?		✗
Does the proposed driveway make use of an existing median break that serves an existing site?		✗
Is there a documented history of traffic operations or safety concerns on the boundary streets within 500 m of the development?		✗
Does the development include a drive-thru facility?		✗

If any of the above questions were answered with 'Yes,' the Safety Trigger is satisfied.

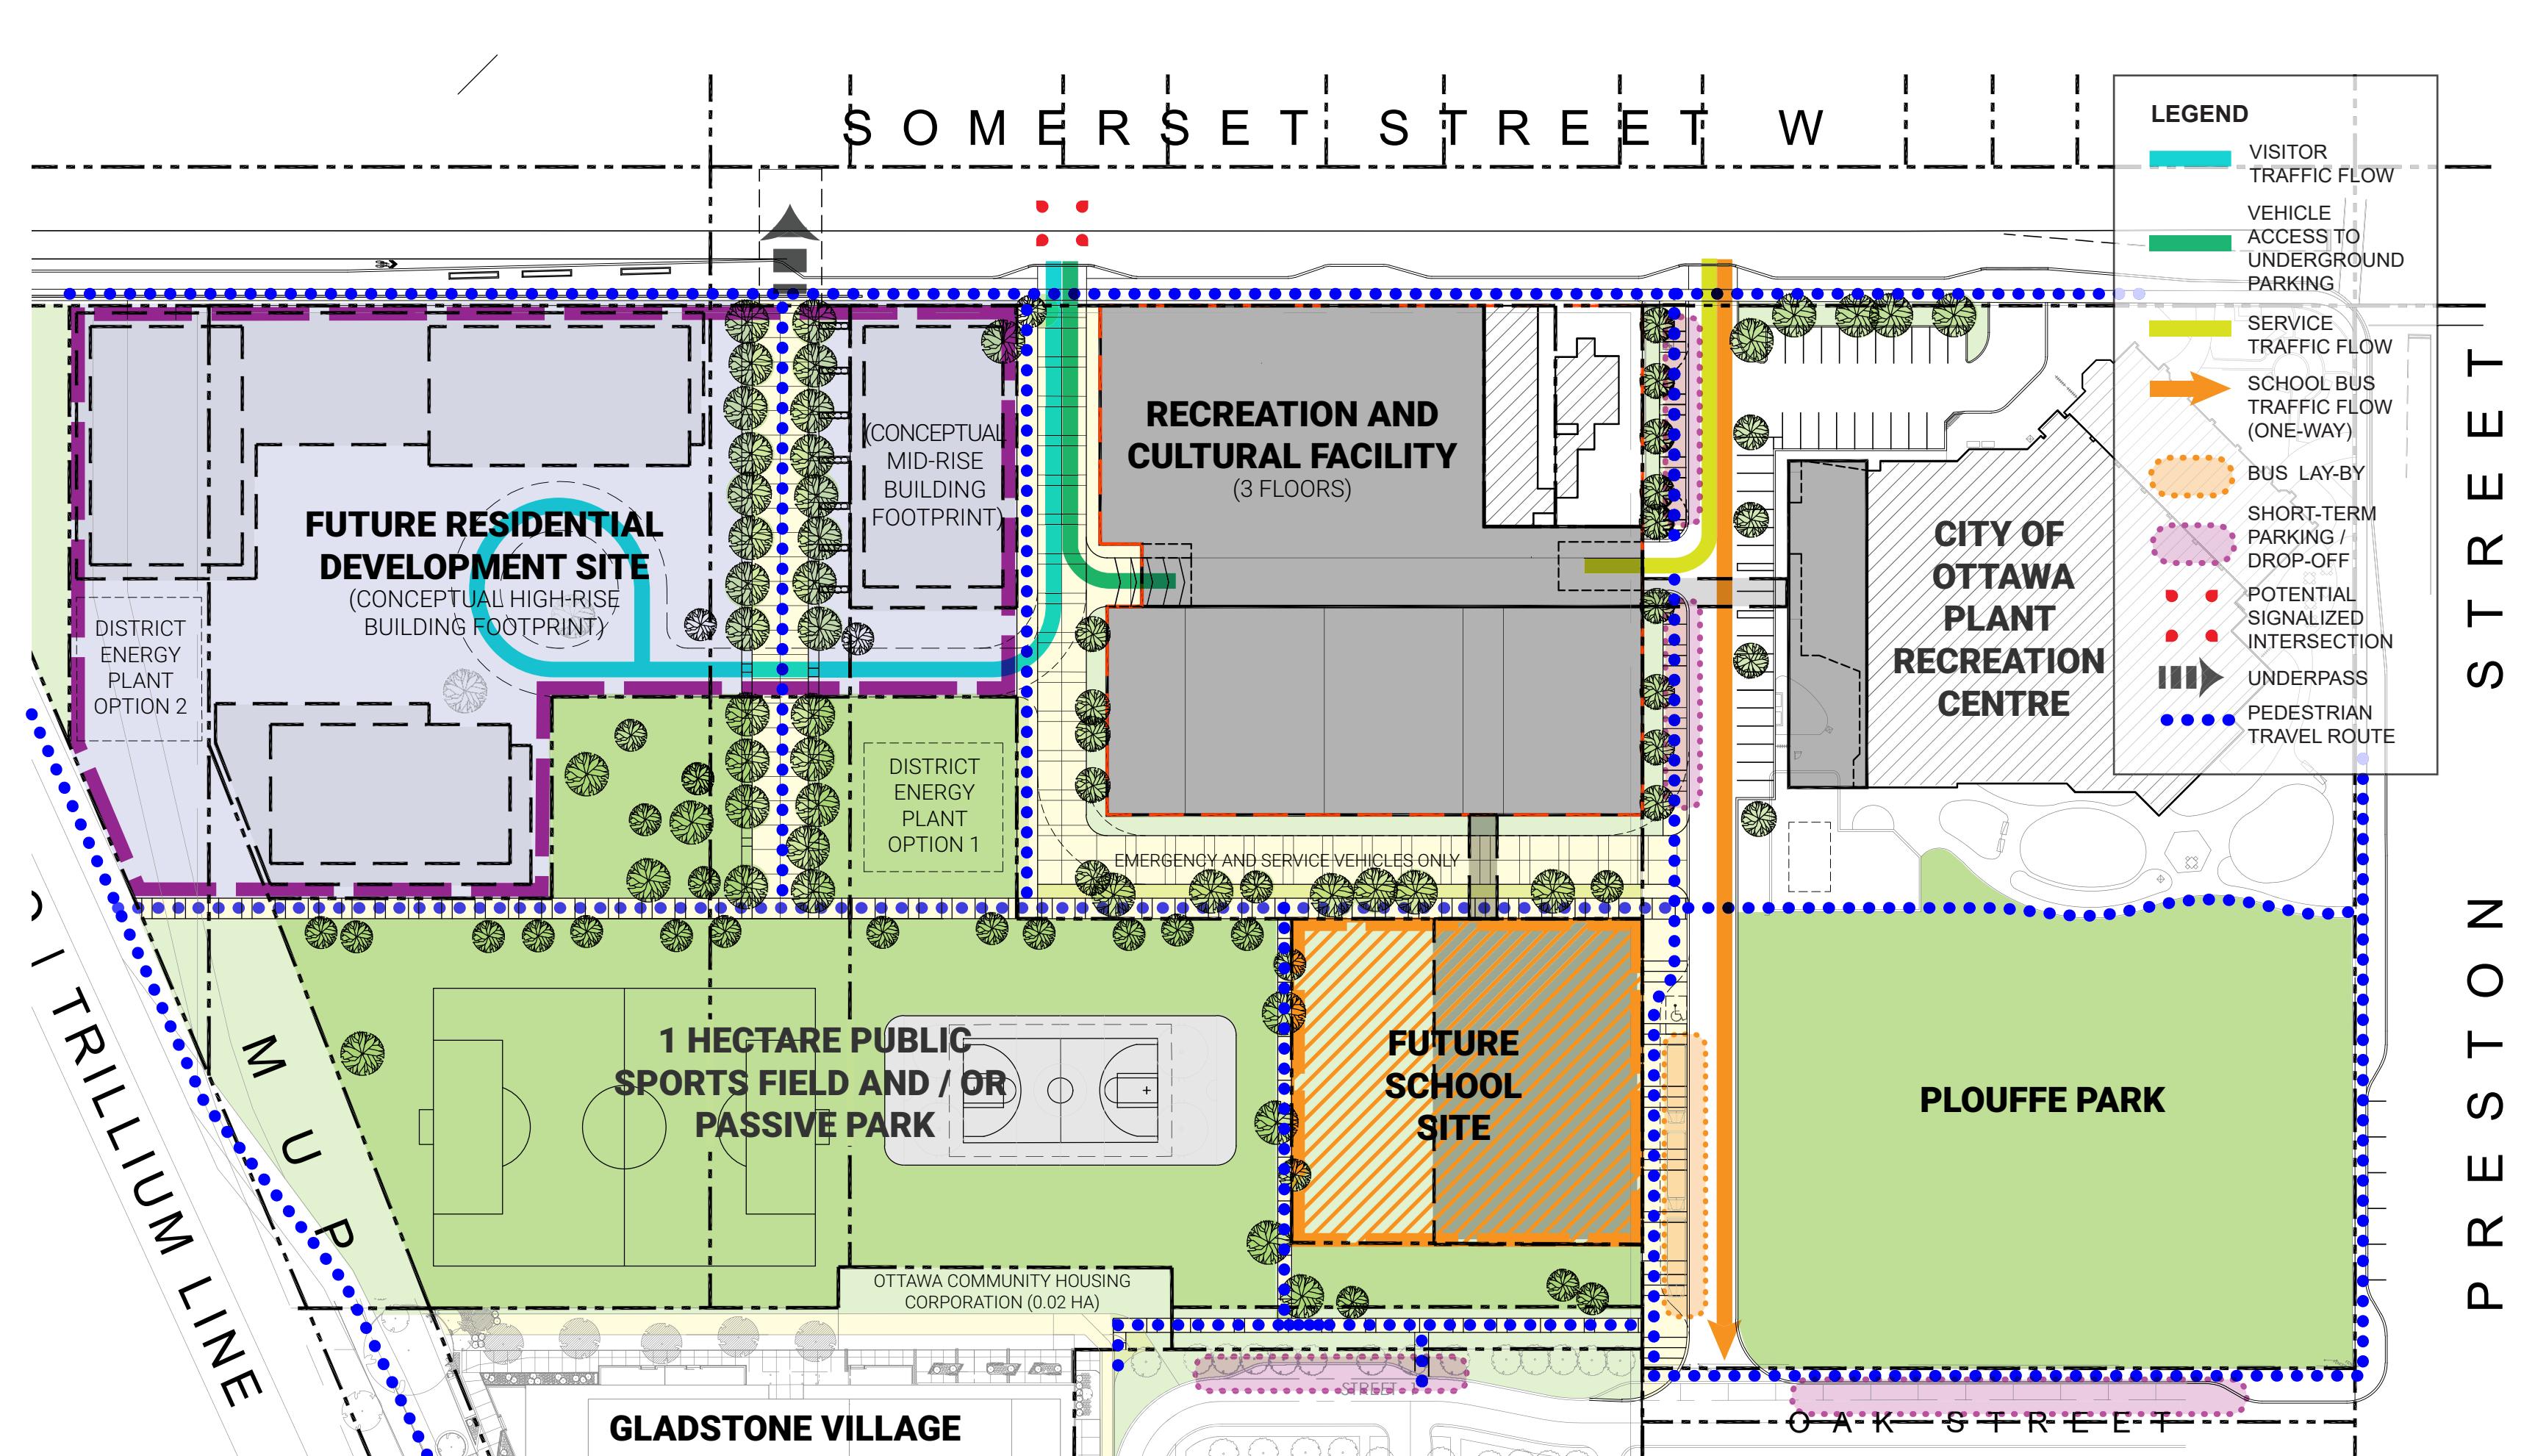

Summary

	Yes	No

Does the development satisfy the Trip Generation Trigger?	✓	
Does the development satisfy the Location Trigger?	✓	
Does the development satisfy the Safety Trigger?	✓	

If none of the triggers are satisfied, the TIA Study is complete. If one or more of the triggers is satisfied, the TIA Study must continue into the next stage (Screening and Scoping).

Note: These values are calculated by multiplying the totals by the appropriate expansion factor.

1.39

Note: These volumes are calculated by multiplying the Equivalent 12 hr. totals by the AADT factor.

.90

Note: These volumes are calculated by multiplying the Average Daily 12 hr. totals by 12 to 24 expansion factor.

1.31

Note: U-Turns provided for approach totals. Refer to 'U-Turn' Report for specific breakdown.

Note: These values are calculated by multiplying the totals by the appropriate expansion factor.

1.39

Note: These volumes are calculated by multiplying the Equivalent 12 hr. totals by the AADT factor.

1.30

Note: These volumes are calculated by multiplying the Average Daily 12 hr. totals by 12 to 24 expansion factor.

1.31

Note: U-Turns provided for approach totals. Refer to 'U-Turn' Report for specific breakdown.

Note: These values are calculated by multiplying the totals by the appropriate expansion factor.

1.39

Note: These volumes are calculated by multiplying the Equivalent 12 hr. totals by the AADT factor.

.90

Note: These volumes are calculated by multiplying the Average Daily 12 hr. totals by 12 to 24 expansion factor.

1.31

Note: U-Turns provided for approach totals. Refer to 'U-Turn' Report for specific breakdown.

Stantec is a global leader in sustainable architecture, engineering, and environmental consulting. The diverse perspectives of our partners and interested parties drive us to think beyond what's previously been done on critical issues like climate change, digital transformation, and future-proofing our cities and infrastructure. We innovate at the intersection of community, creativity, and client relationships to advance communities everywhere, so that together we can redefine what's possible.
