Attention: **Mike Giampa**
Project Manager, Infrastructure Approvals

Dear Mr. Giampa:

Reference: **Kizell Lands – 5618 Hazeldean Road**
Community Transportation Study/Transportation Impact Study
Our File No.: 108195

We are pleased to submit the following revised Community Transportation Study (CTS) and Transportation Impact Study (TIS) in support of the Zoning By-Law Amendment and Draft Plan of Subdivision applications for the lands located at 5618 Hazeldean Road.

A CTS/TIS was submitted in November 2016. This report has been revised to address changes to the proposed draft plan.

A PDF version of this report and copies of the digital Synchro software files are provided on the enclosed disk.

If you have any questions or require anything else during your review, please call.

Yours truly,

NOVATECH

B. Byvelds

TIA Plan Reports

On 14 June 2017, the Council of the City of Ottawa adopted new Transportation Impact Assessment (TIA) Guidelines. In adopting the guidelines, Council established a requirement for those preparing and delivering transportation impact assessments and reports to sign a letter of certification.

Individuals submitting TIA reports will be responsible for all aspects of development-related transportation assessment and reporting, and undertaking such work, in accordance and compliance with the City of Ottawa's Official Plan, the Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines.

By submitting the attached TIA report (and any associated documents) and signing this document, the individual acknowledges that s/he meets the four criteria listed below.

CERTIFICATION

1. I have reviewed and have a sound understanding of the objectives, needs and requirements of the City of Ottawa's Official Plan, Transportation Master Plan and the Transportation Impact Assessment (2017) Guidelines;
2. I have a sound knowledge of industry standard practice with respect to the preparation of transportation impact assessment reports, including multi modal level of service review;
3. I have substantial experience (more than 5 years) in undertaking and delivering transportation impact studies (analysis, reporting and geometric design) with strong background knowledge in transportation planning, engineering or traffic operations; and
4. I am either a licensed[1] or registered[2] professional in good standing, whose field of expertise [check √ appropriate field(s)] is either transportation engineering ☑ or transportation planning ☐.

[1,2] **License of registration body that oversees the profession is required to have a code of conduct and ethics guidelines that will ensure appropriate conduct and representation for transportation planning and/or transportation engineering works.**

EXECUTIVE SUMMARY

This combined Community Transportation Study (CTS) and Transportation Impact Study (TIS) has been prepared in support of Zoning By-Law Amendment and Draft Plan of Subdivision applications for the lands located at 5618 Hazeldean Road and is henceforth referred to as the Kizell Lands.

The Kizell Lands are located in the Fernbank Community Design Plan (CDP) and consist of approximately 86 ha of vacant lands, bound by Hazeldean Road to the north, Abbott Street/residential development to the south, future development to the east and industrial land uses along Iber Road to the west. The subject lands are currently zoned Development Reserve (DR).

The Concept Plan prepared for the subject lands accommodates the following development:

- 288 Single Detached Dwellings
- 469 Townhouse Dwellings
- 878 Multi-Family Housing Dwellings (Low Rise)
- 360 Apartment Units (High Density)
- 760 Apartments and 351,334ft^2 of Retail (Mixed Use)
- 580 Student Elementary School
- 375 Parking Space Parking and Ride

The proposed development will generally be accessed through the extension of Robert Grant Avenue from Abbott Street to Hazeldean Road, as well as internal connections to the adjacent subdivision to the east. Detailed design of the Robert Grant Avenue extension will be completed as part of the detailed design of the subdivision. Auxiliary lane requirements and intersection control types are recommended as part of this study.

Construction is anticipated to commence in 2020, with full build-out and occupancy expected in 2030.

The study area for the report will includes all access intersections as well as the following:

- Robert Grant Avenue/Abbott Street
- Hazeldean Road/Toys R Us Access/Future Robert Grant Avenue (Existing Signal)
- Hazeldean Road/Lowe's Access (west)/Future Mixed-Use Access (Existing Signal)

The selected time periods for the analysis are the weekday AM and PM peak hours. The weekday AM and PM peak hours are considered to represent the 'worst case' combination of site-generated traffic and adjacent street traffic.

The main findings, conclusions and recommendations of this report are as follows:

Development Design, Parking, and Boundary Streets

- The internal road pattern is generally consistent with the Fernbank CDP and will promote the safe and efficient movement of vehicles, cyclists and pedestrians.
- Parking will be provided in the form of driveways accessing a garage/carport located on the same lot for each dwelling unit, as well as on-site parking lots for the multi-family residential units, high density residential, mixed use and elementary school sites.

- On-street visitor parking can be accommodated within the ROW along the major collector roads as required.
- Hazeldean Road adjacent to the proposed subdivision meets all MMLOS targets.

Access Intersection Design

- The spacing of intersections along Robert Grant Avenue is generally consistent with the recommendations of the Fernbank CDP and the constructed portion of Robert Grant Avenue to the south.
- The Robert Grant Avenue/Cranesbill Road/Street 15 intersection will operate under roundabout control during the interim. Once Robert Grant Avenue is widened to accommodate median BRT in the future, this intersection will be signalized.
- The Robert Grant Avenue/Abbott Street intersection currently operates under roundabout control. Once Robert Grant Avenue is widened to accommodate median BRT in the future, this intersection will be signalized.
- Three additional full movement intersections (Streets 3, 8, and 13) are proposed on Robert Grant Avenue in the interim until restriction of the left turn movements is required for safety or capacity reasons (i.e. excessive delays exiting onto Robert Grant Avenue). This approach is consistent with the Robert Grant Avenue/Haliburton Heights intersection to the south, along the constructed portion of Robert Grant Avenue.
- Street 1, 11 and 12 will be accessed via full movement unsignalized intersections along Abbott Street.
- The mixed-use block located along Hazeldean Road will tie into the existing signalized Lowe's access intersection.

Transportation Demand Management, Neighbourhood Traffic Management, and Transit

- The following TDM measures will be implemented as the proposed subdivision is built:
    - Display local area maps with walking/cycling routes and key destinations (at sales centre);
    - Display relevant transit schedules and route maps (at sales centre);
    - Provide multimodal travel option information packages to new residents (at sales centre).
- The proposed street layout conforms to the initiatives identified in the Fernbank CDP. The subject lands are located adjacent to two arterial roadways (i.e. Robert Grant Avenue and Hazeldean Road) and are not anticipated to have any measurable impact on the future residential communities in the site's vicinity.
- The detail design of the Robert Grant Avenue extension should accommodate transit priority measures in accordance with the City's 2031 Affordable plan. Per the City's TMP, at-grade BRT lanes will ultimately be constructed in the median of Robert Grant Avenue in the future.
- The collector roads will be constructed to support future transit service.

Network Concept

- The proposed screenlines are anticipated to operate with a LOS B or better during the AM and PM peak hours under background traffic conditions.
- Abbott Street is anticipated to operate above capacity during the AM peak hour under the future total traffic condition. Although Abbott Street is anticipated to operate above capacity, the overall north-south screenline is anticipated to operate with LOS C or better during the AM and PM peak hours. If traffic congestion is realized along Abbott Street, drivers can use alternative routes to travel east (i.e. Hazeldean Road) to Terry Fox Drive.

Network Intersections – MMLOS Analysis

- The Hazeldean Road/Shoppes at Fairwinds and Hazeldean Road/Grant Crossing intersections currently meet the target TLOS, TkLOS and Auto LOS. The PLOS and BLOS at these intersections do not meet the target for the General Urban Area. The poor PLOS and BLOS at these intersections are attributable to the number of travel lanes along Hazeldean Road.
- All approaches to the Robert Grant Avenue/Hazeldean Road and Hazeldean Road/Grant Crossing/Mixed-Use Access intersections will not meet the target PLOS for the General Urban Area. Improvement of the PLOS at these intersections is limited by the number of travel lanes and turn lanes required along Hazeldean Road and Robert Grant Avenue. Consideration could be given to implementing leading pedestrian intervals and zebra striped or textured crosswalks, subject to meeting warrants, during the detailed design of the intersections.
- The east and west approaches to the Robert Grant Avenue/Hazeldean Road and Hazeldean Road/Grant Crossing/Mixed-Use Access intersections will not meet the target BLOS for the General Urban Area. Consideration could be given to implementing a protected intersection as part of the detailed design of these intersections, to be completed as part of future applications. A protected intersection would improve these intersections to a BLOS A.
- All approaches to the Robert Grant Avenue/Hazeldean Road intersection will not meet the target transit LOS. The ultimate design of Robert Grant Avenue provides a north-south grade separated crossing for the median BRT at the Hazeldean Road/Robert Grant Avenue intersection. This grade separated crossing will improve the TLOS on the north and south approaches to this intersection.

Network Intersections – Scenario One

- When this transit station is developed, the target Auto LOS will be reduced to LOS E.
- All intersections within the study area are anticipated to meet the target Auto LOS E within 600m of a rapid transit station under background and total traffic conditions.

Network Intersections – Scenario Two

- All intersections within the study area are anticipated to meet the target Auto LOS E within 600m of a rapid transit station under background and total traffic conditions.
- With the shift to non-auto modes anticipated as development progresses and the future BRT/LRT extension to this area, the development permitted under the proposed zoning is anticipated be accommodated by the study area intersections.
- The storage length requirements for the future Hazeldean Road/Grant Crossing/Mixed-Use Access will be reviewed during a future Site Plan Control application.
- The recommended storage lengths for the future Hazeldean Road/Robert Grant Avenue intersection are summarized as follows:
    - Eastbound Left: 65m
    - Westbound Left: 50m
    - Westbound Right: 55m
    - Northbound left: 25m
    - Northbound Right: 50m
    - Southbound Left: 75m
    - Southbound Right: 85m

1.0 INTRODUCTION

This combined Community Transportation Study (CTS) and Transportation Impact Study (TIS) has been prepared in support of Zoning By-Law Amendment and Draft Plan of Subdivision applications for the lands located at 5618 Hazeldean Road. The subject lands are shown in **Figures 1** and **2** below and are henceforth referred to as the Kizell Lands.

Figure 1: Local Area Context

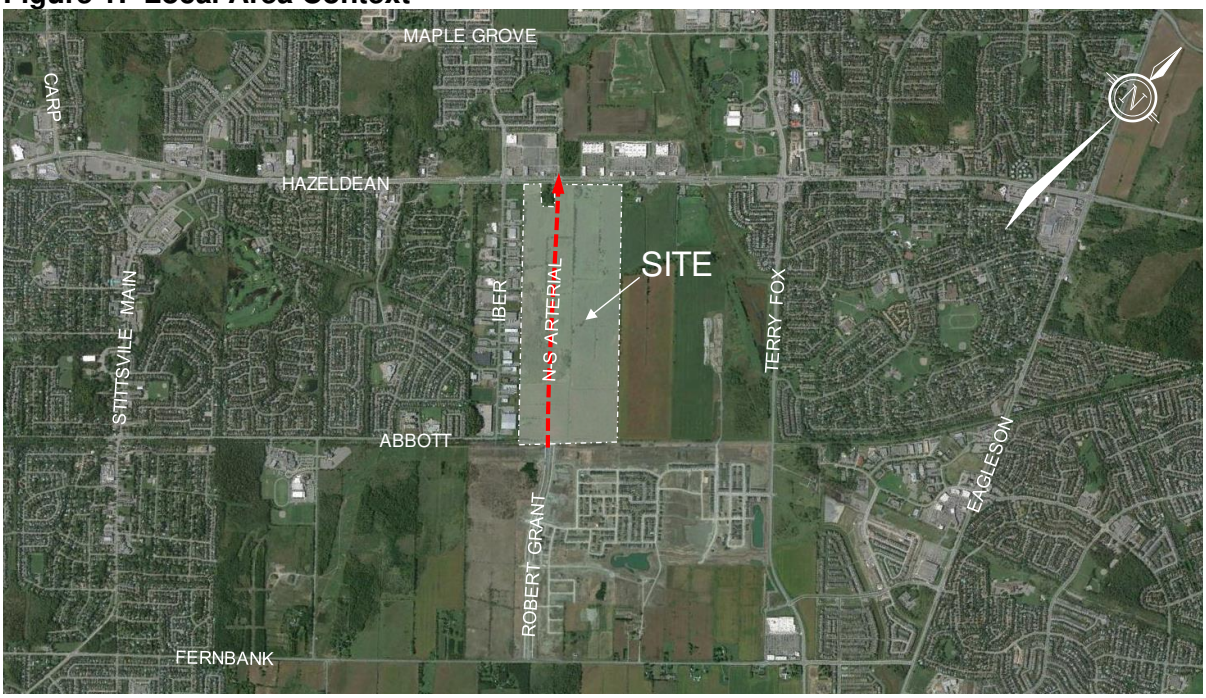

Figure 2: Hazeldean Road Context

The Kizell Lands are located in the Fernbank Community Design Plan (CDP) and consist of approximately 86 ha of vacant lands, bound by Hazeldean Road to the north, Abbott Street/residential development to the south, a draft approved residential subdivision to the east and industrial land uses along Iber Road to the west. The subject lands are currently zoned Development Reserve (DR).

1.1 Proposed Development

The Concept Plan prepared for the subject lands accommodates the following potential development:

- 288 Single Detached Dwellings
- 469 Townhouse Dwellings
- 878 Multi-Family Housing Dwellings (Low Rise)
- 360 Apartment Units (High Density)
- 760 Apartments and 351,334ft^2 of Retail (Mixed Use)
- 580 Student Elementary School
- 375 Parking Space Parking and Ride

The proposed development will generally be accessed through the extension of Robert Grant Avenue from Abbott Street to Hazeldean Road, as well as internal connections to the adjacent subdivision to the east. The road allowance for Robert Grant Avenue will be conveyed to the City through this application, however the detailed design of the roadway will be completed in the future by others. Auxiliary lane requirements and intersection control types are recommended as part of this study.

The Draft Plan of Subdivision is included in **Appendix A**. Construction is anticipated to commence in 2020, with full build-out and occupancy expected in 2030.

2.0 EXISTING AND PLANNED CONDITIONS

2.1 Existing Roadways

Hazeldean Road, is an east-west arterial roadway that extends from Spruce Ridge Road in the west to Eagleson Road in the east, where it continues east as Robertson Road. Within the vicinity of the subject development, Hazeldean Road is a four-lane divided roadway with a posted speed limit of 60 km/h. The City's *Official Plan* (OP) protects a right-of-way (ROW) width of 44.5m between Fringewood Drive and Terry Fox Drive.

Abbott Street, is an east-west major collector roadway that extends from West Ridge Drive in the west to Terry Fox Drive in the east. Within the vicinity of the subject development, Abbott Street is a two-lane undivided roadway with a posted speed limit of 40 km/hr.

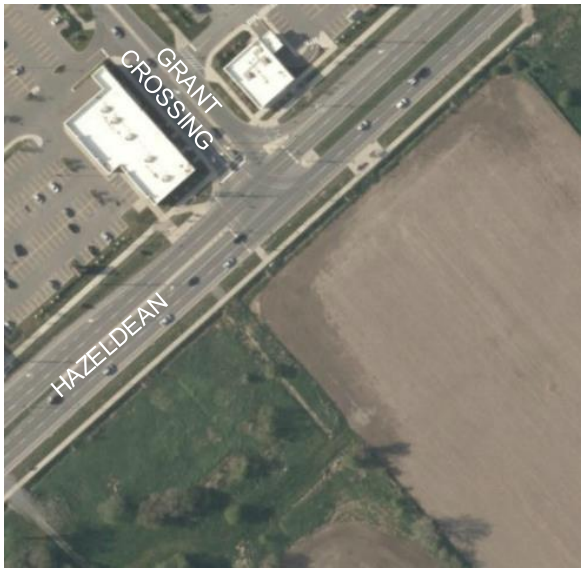
Robert Grant Avenue, is a recently constructed north-south arterial roadway that extends from Fernbank Road to Abbott Street. In the vicinity of the subject development, Robert Grant Avenue has a two-lane undivided urban cross section with a posted speed limit of 60 km/hr.

2.2 Existing Intersections

The lane configurations and traffic control at each of the study area intersections can be summarized as follows:

Hazeldean/The Shoppes at Fairwinds SC (330m East of Iber)

- Southbound – One left turn lane and one right turn lane
- Eastbound – Two through lanes and one left turn lane
- Westbound – Two through lanes and one channelized right turn lane



Hazeldean/Grant Crossing (630m East of Iber)

- Southbound – Two left turn lanes and one right turn lane
- Eastbound – Two through lanes and one left turn lane
- Westbound – Two through lanes and one channelized right turn lane
- The westbound U-Turn movement is restricted

2.3 Existing Driveways

Three existing driveways are provided along Abbott Street west of Robert Grant Avenue. These driveways serve Paul-Desmarais Catholic High School at 5315 Abbott Street.

Two right-in right-out driveways and one signalized access are provided along Hazeldean Road west of the future Robert Grant Avenue. These driveways serve the Shoppes at Fairwinds retail development at 5705 Hazeldean Road. The signalized access will be converted to the future Hazeldean Road/Robert Grant Avenue intersection once Robert Grant Avenue is extended north to Palladium Drive.

One right-in right-out driveway and one signalized access are provided along Hazeldean Road east of the future Robert Grant Avenue. These driveways serve the Grant Crossing retail development at 5527, 5577, and 5617 Hazeldean Road.

2.4 Existing Pedestrian and Bicycle Facilities

Hazeldean Road has sidewalks and bicycle lanes on both sides of the roadway in the vicinity of the subject site. Robert Grant Avenue has sidewalks and raised cycle tracks along both sides of the roadway. Both Hazeldean Road and Robert Grant Avenue are identified as spine cycling routes in the City's Ultimate Cycling Network. The Trans Canada Trail extends along the south side of Abbott Street between West Ridge Drive and Robert Grant Avenue, where it continues east towards Terry Fox Drive. The existing pedestrian and cycling network in the vicinity of the subject development is shown in **Figure 3** below.

2.5 Existing Area Traffic Management Measures

There are no Area Traffic Management (ATM) studies that have been completed or are currently in progress within the study area. There are no traffic calming measures in place along the study area roadways.

2.6 Existing Transit Facilities

OC Transpo bus stops #1154 and #1155 are currently located along Hazeldean Road just west of the Shoppes at Fairwinds signalized intersection. OC Transpo bus stops #0774 and #0775 are located along Hazeldean Road in the northwest and southeast corners of the Grant Crossing signalized intersection. These bus stops provide service to OC Transpo Route 61, which travels between the Goulbourn Recreation Complex (Stittsville) and the Tunney's Pasture Transit Station. During the peak hour, this route is extended across the Chaudiere Bridge to Gatineau.

2.7 Existing Traffic Volumes

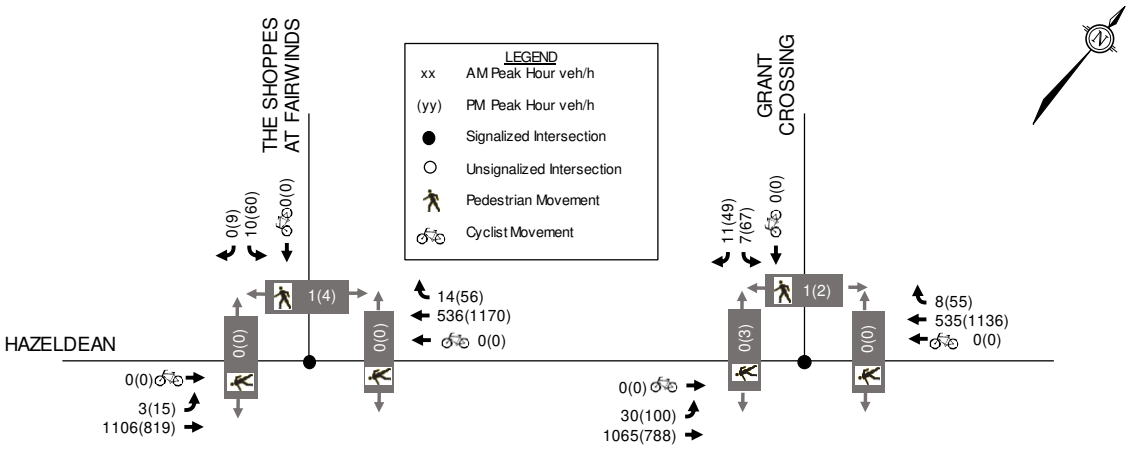
Eight-hour traffic counts were completed by the City of Ottawa at the Hazeldean Road/Shoppes at Fairwinds and Hazeldean Road/Grant Crossing signalized intersections on January 19th, 2016. All other study area intersections are to be constructed as part of the subject development. Peak hour summary sheets of the aforementioned traffic counts are included in **Appendix B**.

Existing traffic volumes at the Hazeldean Road/Shoppes at Fairwinds and Hazeldean Road/Grant Crossing signalized intersections are shown in **Figure 4**.

Figure 3: Existing Pedestrian and Cycling Network

Source: http://maps.ottawa.ca/geoOttawa/

Figure 4: Existing Traffic Volumes



2.8 Collision Records

Historical collision data from the last five years was obtained from the City's Public Works and Service Department for the study area intersections. Copies of the collision summary reports are included in **Appendix C**.

The collision data has been evaluated to determine if there are any identifiable collision patterns. The number of collisions at each intersection from January 1, 2014 to December 31, 2018 is summarized in the following table.

Table 1: Reported Collisions

Intersection	Number of Reported Collisions
Hazeldean Road/Shoppes at Fairwinds	0
Hazeldean Road/Grant Crossing	5

No collisions were reported at the Hazeldean Road/Shoppes at Fairwinds signalized intersection over the last five years.

A total of five collisions were reported at the Hazeldean Road/Grant Crossing signalized intersection over the last five years. Three of the reported collisions were turning movement impacts involving eastbound left turning vehicles. One of the reported collisions was an angle impact between a vehicle and a cyclist. One of the reported collisions was a sideswipe impact involving eastbound vehicles.

None of the above noted collisions meet the City's criteria for further analysis with respect to patterns or total number of collisions.

2.9 Planned Conditions

2.9.1 Planned Roadway Improvements

The Kizell Lands form a part of a larger area that is to become the Fernbank Community, and is subject to the objectives and recommendations of the Fernbank Community Design Plan (CDP).

One of the major supporting documents for the CDP is the Fernbank Transportation Master Plan (TMP). This document outlines the projects and initiatives that will be required to meet the specific transportation needs to fully build-out the Fernbank Community, and help to service future growth of the West Urban Community.

A major element of this transportation plan is Robert Grant Avenue, which will bisect the Fernbank Community and provide it with links to the existing major arterial links in the area. The Fernbank TMP concludes that a two-lane cross-section will be required for Robert Grant Avenue to accommodate estimated future transport. A ROW of 45.5m is identified to ensure that this road can be widened to a divided four lane roadway when the traffic volumes warrant it in the years beyond 2031. The road allowance for Robert Grant Avenue will be conveyed to the City through this application, however the detailed design of the roadway will be completed in the future by others. Based on discussions with City staff, it is understood that the extension of Robert Grant Avenue from Hazeldean Road to Palladium Drive is scheduled for 2027-2028.

2.9.2 Planned Transit Improvements

The City's TMP identifies transit signal priority and queue jump lanes at select intersections along Robert Grant Avenue between Fernbank Road and Palladium Drive in its 2031 Affordable Rapid Transit and Transit Priority (RTTP) Network. Transit signal priority and queue jump lanes are also identified at select intersections along Hazeldean Road between Stittsville Main Street and Eagleson Road in the 2031 Affordable Network.

The TMP's 2031 RTTP Network Concept identifies exclusive Bus Rapid Transit between Fernbank Road and Eagleson station as part of the West Transitway Extension. Between Fernbank Road and Hazeldean Road the BRT facility will be constructed in the median of Robert Grant Avenue with at grade crossings. North of Hazeldean the BRT will follow its own alignment independent of the Stittsville North-South Arterial (Robert Grant Avenue) with grade separated crossings. The extension will include new transit stations at Didsbury, Carp, Campeau, Canadian Tire Center, Maple Grove, Hazeldean (Park and Ride), Abbott (Park and Ride), and Fernbank (Park and Ride). The Hazeldean Park and Ride is anticipated to contain two parking lots containing 325 spaces each in the northeast and southeast corners of the Robert Grant Avenue/Hazeldean Road intersection.

The Kanata Light Rail Transit (LRT) Planning and Environmental Assessment Study was prepared in January 2019. The Kanata LRT facility will convert a portion of the aforementioned West Transitway Extension to LRT. This facility will extend LRT from the Moodie Transit Station (terminus of Stage 2 LRT) to the future Hazeldean Transit Station. New LRT stations will be developed at March, Kanata Town Centre, Didsbury, Campeau, Palladium (Canadian Tire Centre), Maple Grove, and Hazeldean.

Based on the foregoing transit improvements in this area, the transit modal split (TMS) for the Kizell Lands may be quite low initially, but is anticipated to increase over time as the extent and quality of public transit service improves in line with the overall development of the Fernbank Community. The Kizell Lands are anticipated to be well served by the transit facilities following the completion of the overall Fernbank Community due to the proximity to improved transit facilities along Robert Grant Avenue and Hazeldean Road.

2.9.3 Planned Pedestrian and Cycling Projects

Robert Grant Avenue between Abbott Street and Hazeldean Road is identified as spine cycling route, and Cranesbill Road is identified as a local cycling route in the City's Ultimate Cycling Network. Cycle tracks will be constructed as part of Robert Grant Avenue between Abbott Street and Hazeldean Road. Future off-road major pathways include the hydro corridor between Robert Grant Avenue and the Trans Canada Trail, and a corridor along the Carp River, east of the Fernbank CDP lands.

No other pedestrian or cycling projects are identified for the subject study area roadways as part of the City's 2031 Affordable Plan.

2.9.4 Other Area Developments

In proximity of the proposed development, there are multiple other developments that are under construction, approved, or in the approval process. The other area developments included in this analysis are summarized below. An aerial photo showing the location of other area developments is provided in **Figure 5**.

A TIS dated September 2013 was prepared by Stantec in support of Draft Plan of Subdivision application for 590 Hazeldean Road (Richcraft subdivision) immediately east of the subject lands. This development consists of 227 single family detached dwellings and 518 townhouse dwellings. Construction of preliminary phases of this development is currently ongoing.

A Transportation Brief dated March 2013 was prepared by Stantec in support of Draft Plan of Subdivision application for 570 Hazeldean Road (Mattamy subdivision) east of the subject lands and adjacent to the Carp river. This development consists of approximately 600 residential units. Construction of this development is currently ongoing.

Figure 5: Other Area Developments

Phases 1-3 of the Abbott-Fernbank subdivision are generally built-out. Construction of Phase 4 and 5 of the subdivision is currently ongoing and is anticipated to be built-out by 2021. The Abbott-Fernbank subdivision is located north of Fernbank Road, between Robert Grant Avenue and Phase 5 of the Blackstone subdivision. A TIA dated March 2019 was prepared by Novatech in support of Site Plan Control application for 360 Haliburton Heights within the Phase 3 of the Fernbank Crossing subdivision. The development consists of 58 residential units.

Phases 1-3 of the Blackstone subdivision are generally built-out. A TIS dated May 2017 and Addendum dated February 2018 were prepared by Parsons in support of a Draft Plan of Subdivision application for 5505 Fernbank Road, also known as Blackstone Phases 4-8. The development consists of 219 townhouse units, 241 single detached dwelling units, a condominium block containing 156 units, an elementary school accommodating 650 students (the subject site), and a high school accommodating 1916 students. A subsequent TIA dated May 2019 was prepared by Parsons in support of a Site Plan Control application for the condominium block within the aforementioned subdivision.

A Transportation Letter dated January 2011 was prepared by IBI Group in support of Draft Plan of Subdivision applications for 5786 Fernbank Road, also known as the CRT Lands Phases 1-2. The development consists of 510 single family detached dwellings, 364 townhouses, an elementary school, and a high school. Construction of Phase 1 of the CRT Lands is currently ongoing. A TIA dated July 2019 was prepared Parsons in support of a Site Plan Control application for 700 Cope Drive, which forms part of the CRT lands. The proposed development consists of a High School (Grades 7-12) with a capacity of 1800 students.

A TIA dated June 2019 was prepared by Parsons in support of a Zoning By-law Amendment application for 1000 Robert Grant Avenue. The proposed development consists of three residential towers with a total of 566 units.

A TIA dated August 2019 was prepared by D.J. Halpenny & Associates Ltd. In support of a Site Plan Control application for 5705 Hazeldean Road. The proposed development consists of a 47,710ft^2 expansion to the existing retail development.

2.10 Study Area and Time Periods

The study area for the report will includes all access intersections as well as the following:

- Robert Grant Avenue/Abbott Street
- Hazeldean Road/Shoppes at Fairwinds/Future Robert Grant Avenue (Existing Signal)
- Hazeldean Road/Grant Crossing/Future Mixed-Use Access (Existing Signal)

The selected time periods for the analysis are the weekday AM and PM peak hours. The weekday AM and PM peak hours are considered to represent the 'worst case' combination of site-generated traffic and adjacent street traffic. For the purposes of this analysis, two scenarios have been reviewed.

The first scenario assumes the subdivision adheres to the Fernbank CDP density requirements and is fully built-out by 2028. Due to the extended development period, a five-year period beyond build-out has not been analyzed for this scenario. This scenario assumes the following development for the subject lands.

- 288 Single Detached Dwellings
- 469 Townhouse Dwellings
- 878 Multi-Family Housing Dwellings (Low Rise)
- 297 Apartment Units (High Density)
- 191 Apartments and 140,910ft^2 of Retail (Mixed Use)
- 580 Student Elementary School
- 375 Parking Space Parking and Ride

However, the proposed development intends to subdivide the property and rezone the respective lots and blocks to facilitate development that aligns with the direction of the Fernbank CDP, and to address the introduction of a future LRT station at the northern end of the property, which was not accounted for in the preparation of the CDP. This is achieved by providing transit supportive uses within a 600 metre walking distance of the LRT station in accordance with the City of Ottawa's Transit Oriented Development (TOD) Guidelines.

Blocks 318 and 319 will accommodate high density development, with approximately 360 apartment units. Blocks 315 to 317 will accommodate mixed-use development, with approximately 760 apartment units and 351,334ft^2 of retail development, and will surround and be integrated with the planned Hazeldean transit station and park and ride. Due to the higher density, these blocks are anticipated to be developed in line with the future BRT or LRT extension to this area. As the timing for the BRT/LRT extension is unknown at this point in time, a future scenario has been developed to review the impacts of the development permitted under the proposed zoning once the BRT/LRT is extended.

3.0 FORECASTING

3.1 Development Generated Travel Demand

3.1.1 Trip Generation

Trips generated by the residential portion of the proposed development have been estimated using relevant rates for the suburban area in Table 3.18 of the *2009 TRANS Trip Generation Study Report*. Trips generated by the proposed retail, school, and park and ride developments have been estimated using the relevant peak hour rates identified in the Institute of Transportation Engineers (ITE) *Trip Generation Manual,10th Edition*. The trips generated by the proposed development during the weekday AM and PM peak hours for each scenario are summarized in **Table 2** below.

Table 2: ITE Trip Generation – Scenario One

Land Use	Code	Units/ GFA (ft^2)	AM Peak			PM Peak		
			In	Out	Total	In	Out	Total
Scenario One								
Single Detached Dwellings	210	288	59	143	202	163	96	259
Townhouse Dwellings	224	469	94	159	253	210	123	333
Multi-Family Dwellings	232	878	125	279	404	226	178	404
High Density	223	297	21	65	86	68	42	110
Mixed-Use (Residential)	222	191	13	42	55	43	26	69
Mixed-Use (Retail)	820	140,910	138	84	222	336	364	700
Elementary School	520	580	210	179	389	47	52	99
Park and Ride	090	325	100	27	127	38	114	152
Scenario Two								
Single Detached Dwellings	210	288	59	143	202	163	96	259
Townhouse Dwellings	224	94	159	253	210	123	333	234

High Density	223	360	25	79	104	82	51	133
Mixed-Use (Residential)	222	760	53	167	220	170	104	274
Mixed-Use (Retail)	820	351,334	203	124	327	661	716	1,377
Elementary School	520	580	210	179	389	47	52	99
Park and Ride	090	325	100	27	127	38	114	152

Trips generated using the TRANS rates have been converted to person trips using the modal shares presented in Table 3.13 of the TRANS report. Trips generated using the ITE rates have been converted to person trips using a factor of 1.28, consistent the City's 2017 Transportation Impact Assessment Guidelines. It is noteworthy that the trips generated by the elementary school and park and ride have not been converted to person trips due to the nature of the land uses. Person trips generated by the proposed residential and retail developments are summarized in **Table 3** below.

Table 3: Person Trip Generation – Scenario One

Total	**1,008**	**1,919**	**2,927**	**2,526**	**2,022**	**4,548**

As the high-density blocks are located in close proximity to the mixed-use developments, a portion of the person trips generated by the high density and mixed-use blocks will be internally captured and will not show up at the area intersections. Internal capture rates identified in the ITE Trip Generation Handbook, 3rd Edition were applied to the person trips generated by the development of Blocks 315 to 319 to determine the number of trips to be internally captured. Internal capture summary sheets are included in **Appendix D**. A summary of the person trips that are internally captured between Blocks 315 to 319 is provided in **Table 4**.

Table 4: Internally Captured Person Trips (Blocks 315 to 319)

Land Use	AM Peak			PM Peak		
	In	Out	Total	In	Out	Total
Scenario One						
Residential	2	2	4	116	43	159
Retail	2	2	4	43	116	159
Scenario Two						
Residential	4	6	10	238	85	323
Retail	6	4	10	85	238	323

A review of the modal share data in the City's TRANS O-D Survey report has been conducted. A review of trips from/within the district during the AM peak and to/within the district during the PM peak has been conducted to understand the modal shares for residential developments within the Kanata/Stittsville District. The following modal shares have been derived from the TRANS report:

- 60% Auto Driver
- 20% Auto Passenger
- 10% Transit
- 10% Non-Auto

The approved Fernbank Community Design Plan (CDP) Transportation Master Plan (TMP) identifies a minimum target transit modal share of 20% within the Fernbank Community. As such, the TRANS modal shares have been adjusted to reflect the target 20% transit modal share. The following modal shares adjust the above Auto Driver and Auto Passenger modal shares down by 5% to increase the Transit modal share by 10%.

- 55% Auto Driver
- 15% Auto Passenger
- 20% Transit
- 10% Non-Auto

Table 5 below summarizes the person trips by modal share for scenario one.

Table 5: Person Trips by Modal Share – Scenario One

When the future BRT/LRT is extended to this area, the development within 600m of the future Hazeldean Road LRT/BRT station will be located within a Transit Oriented Development (TOD) zone. For the purposes of scenario two, all developments north of Cranesbill Road/Street 15 have been assumed to be located within the future TOD zone. The modal shares associated with developments within the TOD zone reflect a higher transit modal share, and reduced auto modal share. However, as the proposed development is located in a suburban context, the City's TOD modal shares have been adjusted to reflect a higher auto modal share associated with the Kanata/Stittsville District.

For the purposes of scenario two, the adjusted TOD modal shares have been applied to all residential development north of Cranesbill Road/Street 15, while the modal shares presented in

scenario one have been applied to all other residential development. Although the retail uses are located in close proximity to the future Hazeldean BRT/LRT station, the modal shares are anticipated to be generally consistent with the Kanata/Stittsville area. As such, the modal shares used for the retail development in scenario one have been maintained.

Table 6 below summarizes the person trips by modal share for scenario two.

Table 6: Person Trips by Modal Share – Scenario Two

The commercial land uses are expected to generate two types of external peak hour trips: primary and pass-by trips. Primary trips are made for the specific purpose of visiting the site and pass-by trips are made as intermediate stops on the way to another destination. Peak hour pass-by trips have been estimated based on a pass-by rate of 34%. The *ITE Trip Generation Handbook, 10th*

Edition identifies this percentage as an average rate for the Shopping Centre land use. The pass-by trips generated by the retail development are part of the observed background traffic and do not constitute 'new' trips on the adjacent road network. The primary and pass-by trip generation for the retail development is summarized in the following table.

Table 7: Retail Primary and Pass-by Trips

Trip Type	AM Peak			PM Peak		
	In	Out	Total	In	Out	Total
Scenario One						
Total Auto Trips	*140*	*85*	*225*	*419*	*373*	*792*
Pass-by Trips	39	39	78	135	135	270
Primary Trips	101	46	147	284	238	522
Scenario Two						
Total Auto Trips	*76*	*47*	*123*	*228*	*204*	*432*
Pass-by Trips	21	21	42	74	74	148
Primary Trips	55	26	81	154	130	284

3.1.2 Trip Distribution

The projected distribution of vehicular trips generated by the proposed development has been derived with appropriate consideration given to several key factors, including:

- The size and nature of the proposed development
- The location of the subdivision access roadways with respect to the adjacent roadway system
- The principles of logical trip routing

Trips generated by the proposed residential, commercial, park and ride and elementary school have been distributed differently due to the nature of the land uses.

Residential Trips
The distribution of trips generated by the residential development is consistent with the Fernbank TMP as well as similar development applications within the Fernbank CDP lands. Residential trips generated by the proposed development were distributed to the road network as follows:

- 35% to/from the north via Robert Grant Avenue
- 55% to/from the east via Abbott Street/Hazeldean Road/Street 3
- 5% to/from the south via Robert Grant Avenue
- 5% to/from the west via Abbott Street/Hazeldean Road

The proposed residential dwellings will be accessed via the proposed local and collector road network. The Robert Grant Avenue/Cranesbill Road/Street 15 and Robert Grant Avenue/Abbott Street intersections will be full movement roundabouts. The Mixed-Use Block 317 will be accessed via a signalized intersection along Hazeldean Road. The Abbott Street/Street 1 intersection will provide full movement access. The Street 3, Street 8, Street 13, and Street 16 intersections along Robert Grant Avenue are anticipated to be restricted to right-in right-out by build-out due to safety and capacity reasons (i.e. excessive delays exiting onto Robert Grant Avenue).

Residential trips generated by the proposed development were assigned to the access roadways based on density location and principles of logical trip routing. All trips to/from the north, south, and west are assumed to arrive and depart the subject lands using the intersections along Robert Grant Avenue. A portion of the trips from the residential dwellings east of Robert Grant Avenue, who are destined to/from the east are assumed to travel through the adjacent subdivision to Hazeldean Road. The remainder of trips to/from the east will use Robert Grant Avenue to connect to Hazeldean Road, or travel east through the Fernbank CDP lands via Abbott Street.

Commercial Trips

The proposed retail developments have been assumed to serve the overall Fernbank Community. The Fernbank Community was split into zones based on the existing/future road network. Trips were then distributed to/from each zone within the Fernbank Community based on the size of the zone. Retail trips generated by the proposed development were distributed to the road network as follows:

- 35% to/from the west via Hazeldean Road and Abbott Street
- 40% to/from the south via Robert Grant Avenue
- 15% to/from the east via Hazeldean Road and Cranesbill Road
- 10% to/from the subject development via intersections along Robert Grant Avenue

Pass-by trips generated by the commercial development have been distributed to the commercial accesses based on the background traffic projections.

Park and Ride Trips

The proposed park and ride has been assumed to serve the Fernbank Community north of Abbott Street. The proposed park and ride is assumed to have right-in right-out access along Hazeldean Road. Similar to the commercial distribution, the Fernbank Community north of Abbott Street was split into zones based on the existing/future road network. Trips were then distributed to/from each zone within the Fernbank Community north of Abbott Street based on the size of the zone. A high-level concept of the park and ride was obtained from City staff, and is included in **Appendix E**. Due to the proximity to adjacent signalized intersections along Hazeldean Road, and consistent with the high-level concept, the park and ride is assumed to only have right-in right-out access on Hazeldean Road. As access is assumed to be limited to right-in right-out on Hazeldean Road, the arrival and departure distributions will be different. Park and ride trips generated by the proposed development were distributed to the road network as follows:

Arrival

- 55% from the west via Hazeldean Road and Abbott Street
- 20% from the east via Abbott Street and Cranesbill Road
- 25% from the subject development via intersections along Robert Grant Avenue

Departure

- All trips will depart the study area to the east via Hazeldean Road

Elementary School Trips

For the purposes of this analysis, the proposed elementary school has been assumed to serve the subject lands, as well as the 570 Hazeldean Road (Mattamy) and 590 Hazeldean Road (Richcraft) lands to the east. Based on the overall unit counts for the three subdivisions, approximately 75% of the trips to/from the elementary school will be internally captured within the

local road network and will not appear at the study area intersections. The remaining 25% have been assumed to cross Robert Grant Avenue to the western portion of the subject subdivision.

Traffic volumes generated by the proposed development under scenario one are shown in **Figure 6**. Traffic volumes generated by the proposed development under scenario two are shown in **Figure 7**.

3.2 Background Network Travel Demand

3.2.1 Transportation Network Plans

3.2.2 Background Growth

The 590 Hazeldean Road Transportation Impact Study (September 2013) prepared for the Richcraft Homes subdivision, assessed 2020 traffic projections for Richcraft's buildout year, as well as a 2025 five-year horizon. The 2025 analysis included the Hazeldean Road/North-South Arterial (Robert Grant Avenue) intersection and reflected the future extension of the North-South Arterial (Robert Grant Avenue) to Palladium Drive. An excerpt from the 590 Hazeldean Road TIS showing the approved 2025 traffic projections is included in **Appendix F**.

For the purpose of this study, a 2% annual growth rate has been applied to the 2025 traffic projections identified in the 590 Hazeldean Road TIS for the following movements at the Hazeldean Road/existing Toys R Us access/future North-South Arterial intersection in order to estimate 2030 background traffic volumes:

- eastbound and westbound through movements, and
- eastbound left and southbound right turn movements.

This 2% growth rate is consistent with the Fernbank TMP and other recent transportation studies prepared for development parcels within the Fernbank Community.

The Fernbank TMP estimated through traffic growth along the North-South Arterial (Robert Grant Avenue) from Hazeldean Road to Fernbank Road and along Abbott Street from Iber Road to Terry Fox Drive. The Fernbank TMP's screenline analysis indicated that during the 2031 PM peak hour, the North-South Arterial (Robert Grant Avenue) is expected to carry a southbound 'through' traffic volume of 200 vehicles from Hazeldean Road to Fernbank Road, functioning as a bypass for traffic to and from Stittsville that would otherwise use Stittsville Main Street. The corresponding northbound 'through' traffic volume is assumed to be 110 vehicles, which results in a 65/35 split in favour of southbound traffic. This split was a previous assumption of the TMP's screenline analysis and is carried forward for the purpose of this study.

Similarly, Abbott Street is expected to carry a westbound traffic volume of 200 vehicles during the 2031 PM peak hour. Based on the aforementioned assumption of a 65/35 split, Abbott Street is expected to carry an eastbound PM peak traffic volume of 110 vehicles.

The above assumptions regarding through traffic on the North-South Arterial and Abbott Street were developed as part of an addendum to the Transportation Brief (October 2012) prepared in support of the Abbott-Fernbank subdivision. The Abbott-Fernbank subdivision included the construction of Robert Grant Avenue between Abbott Street and Fernbank Road. These assumptions are carried forward for the purpose of this study.

Figure 6: Site Generated Traffic Volumes – Scenario One

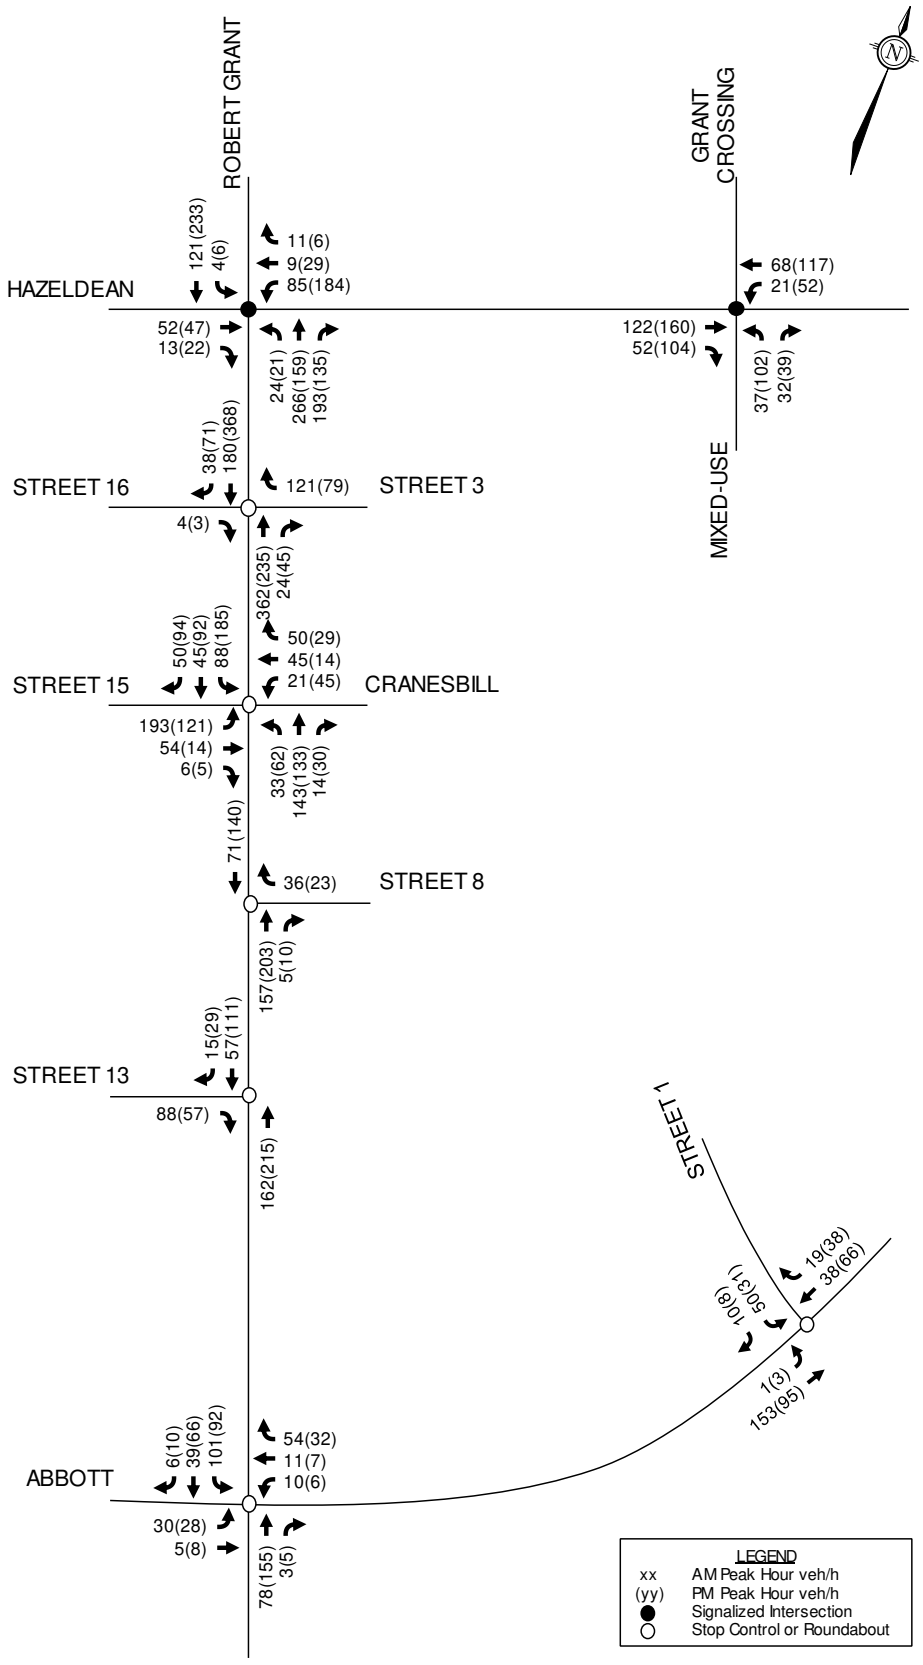

Figure 7: Site Generated Traffic – Scenario Two

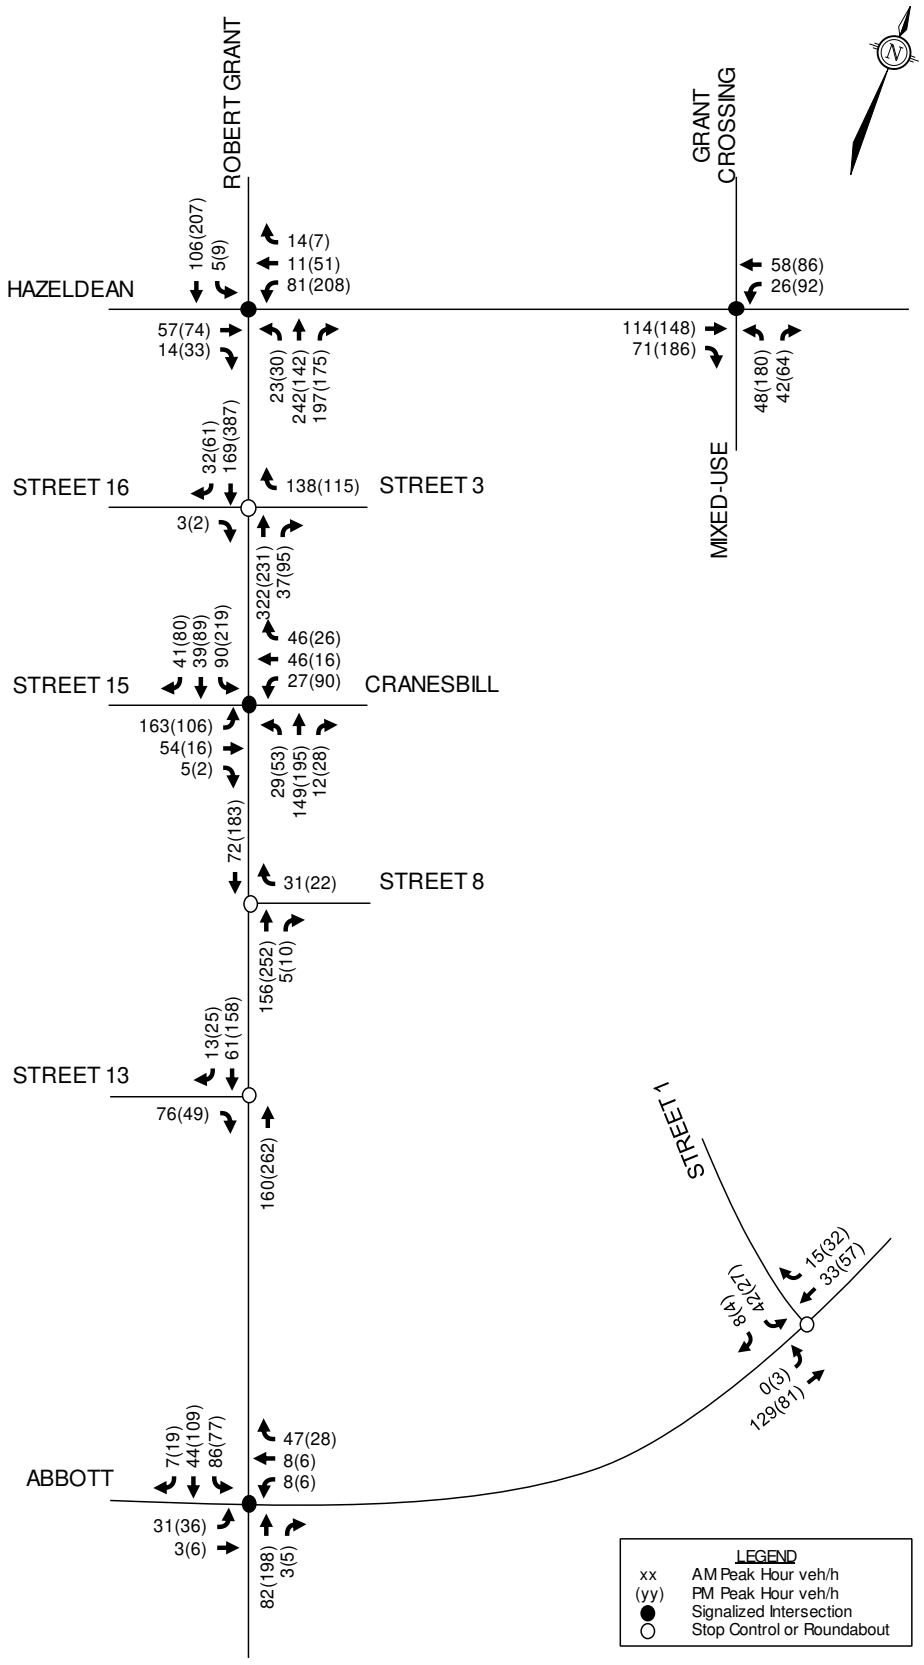

As described in the next section, it is estimated that development within the Fernbank Community will be approximately 80% complete by 2030. Similarly, it is estimated that the 2030 background through traffic on the North-South Arterial (Robert Grant Avenue) south of Hazeldean Road and on Abbott Street east of Iber Road will be approximately 80% of the projected 2031 background through volumes.

3.2.3 Other Developments

The Fernbank TMP assumed a development rate of 500 units/year within the Fernbank Community, starting in 2015 and continuing until full build-out. This rate of development has been carried forward in other recent transportation studies prepared for development within the Fernbank Community, including the following:

- 590 Hazeldean Road TIS, prepared in September 2013 for Richcraft Homes
- 570 Hazeldean Road Transportation Brief, prepared in March 2013 for Mattamy Homes

Based on a development rate of 500 units/year, it is estimated that 80% of other developments within the Fernbank CDP will be completed by the assumed 2030 buildout year of the subject development.

As part of the transportation reports prepared for 570 Hazeldean Road (Mattamy) and 590 Hazeldean Road (Richcraft), a model of the Fernbank Community was developed with the future community divided into several traffic zones that followed a logical pattern of physical features (i.e. hydro corridor), primary roads (i.e. planned arterials and collectors) and proposed intersections along the boundary road network. An excerpt from the 590 Hazeldean Road TIS showing the 11 distinct traffic zones established as part of the transportation model is included in **Appendix F**. A summary of the traffic generated by the Fernbank Community by traffic zone, including the subject Kizell lands identified as zones N7 and N8, is also provided in **Appendix F**.

The 2025 traffic projections identified in the 590 Hazeldean Road TIS represent 50% buildout within the Fernbank CDP. Traffic generated by the subject lands (traffic zones N7 and N8) was deducted from the 2025 traffic projections so that the subject site traffic could be accounted for separately. The adjusted 2025 traffic projections were pro-rated to estimate 2030 development traffic at the Hazeldean Road/North-South Arterial intersection, with the exception of the following movements which were already accounted for as background through traffic:

- eastbound and westbound through movements, and
- eastbound left and southbound right turn movements.

Development traffic at the Robert Grant Avenue/Abbott Street intersection was estimated using 80% of the 2031 traffic projections identified in the October 2012 Abbott-Fernbank Transportation Brief addendum, less the through traffic already accounted for along Robert Grant Avenue and Abbott Street.

The northbound traffic projections for Robert Grant Avenue between Hazeldean Road and Abbott Street were balanced by assuming the higher volume between the two studies for each peak hour, i.e. AM peak northbound traffic is based on the 590 Hazeldean Road TIS projections, and PM peak northbound traffic is based on the Abbott-Fernbank Transportation Brief addendum. Balancing was not required for the southbound traffic projections.

The Fernbank TMP assumed that, overall, 90% of trips would have origins or destinations to/from to the north/east while 10% would have origins or destinations to/from the south/west. With the extension of Robert Grant Avenue from Abbott Street to Hazeldean Road, it was assumed that 10% of trips from the Richcraft Homes and Mattamy developments to the east would use the Robert Grant Avenue/Abbott Street intersection for travel to and from the south/west.

Traffic generated by the 5705 Hazeldean Road expansion were further added to the background traffic projections based on the projections presented in the TIA dated August 2019.

Background and total traffic for the 2030 buildout year of scenario one are shown in **Figures 8** and **9** for the weekday AM and PM peaks.

3.2.4 Future Background Traffic – Scenario Two

Scenario two is intended to reflect a build-out of the development permitted under the proposed zoning once the BRT/LRT is extended to this area. The availability of rapid transit in this area is anticipated to increase transit usage and reduce the overall traffic volumes along the area roadways.

Exhibit 2.13 in the City of Ottawa's 2013 Transportation Master Plan identifies suggests the transit modal share within the Kanata/Stittsville area will increase from 15% to 21% prior to 2031. For the purposes of this analysis, the increased transit modal share is anticipated to be achieved once rapid transit is extended to the study area. For scenario two, the 2031 background traffic projections presented above have been reduced to reflect the anticipated 21% transit modal share.

The projected background and total traffic for scenario two is shown in **Figure 10** and **11** for the weekday AM and PM peaks.

Figure 8: 2030 Background Traffic (Scenario One)

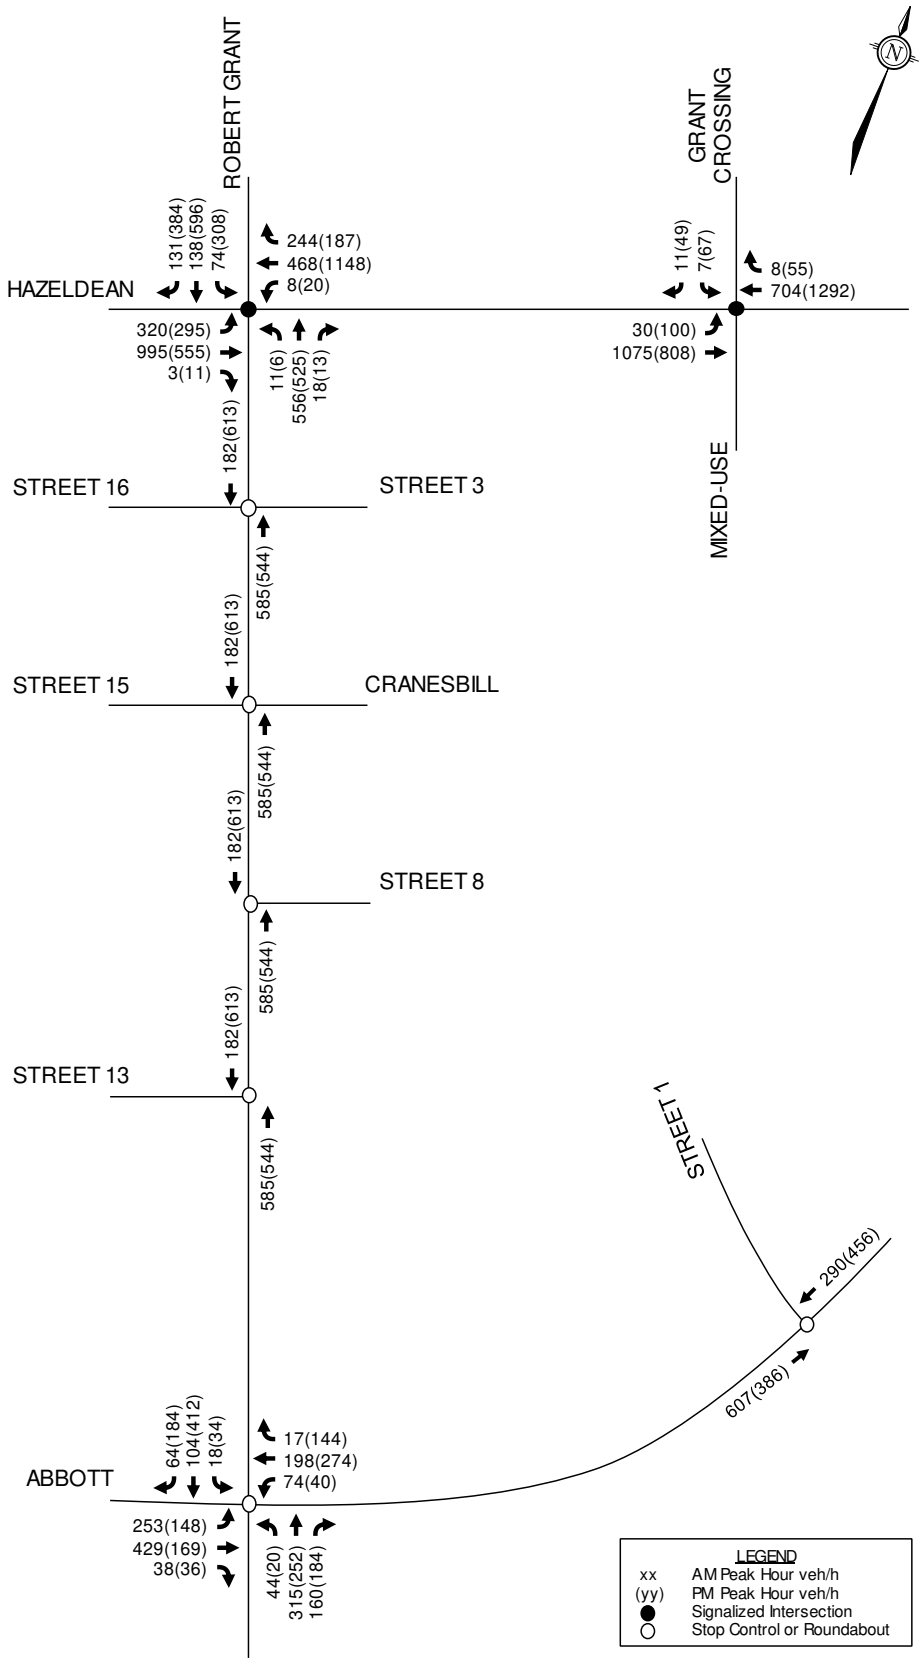

Figure 9: 2030 Total Traffic Volumes (Scenario One)

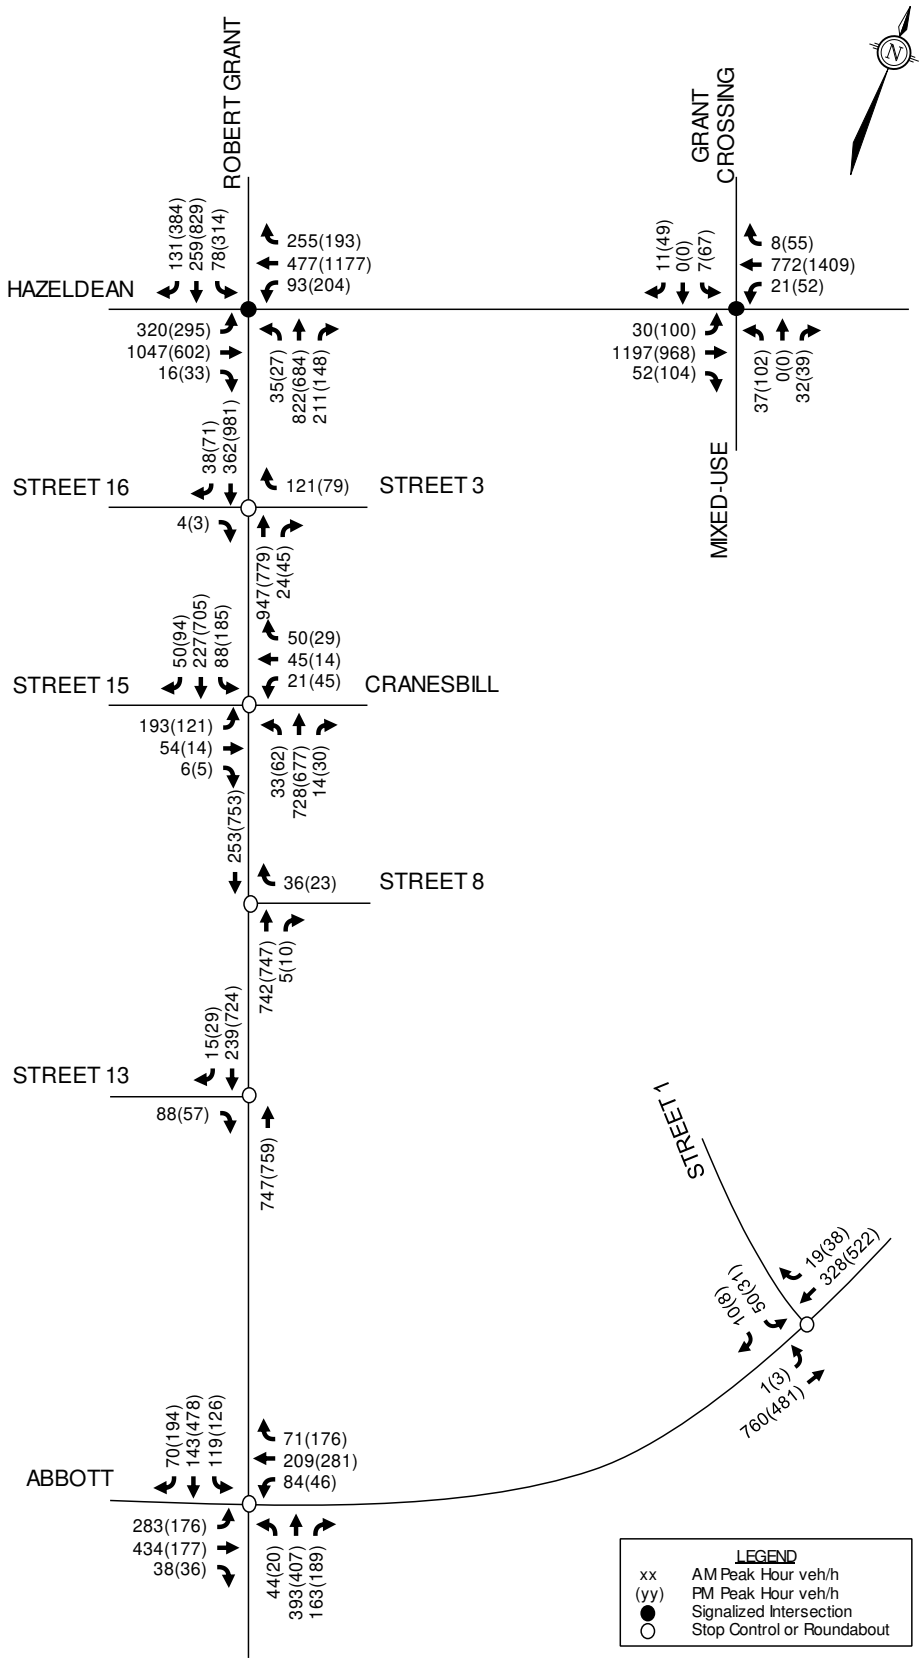

Figure 10: Future Background Traffic (Scenario Two)

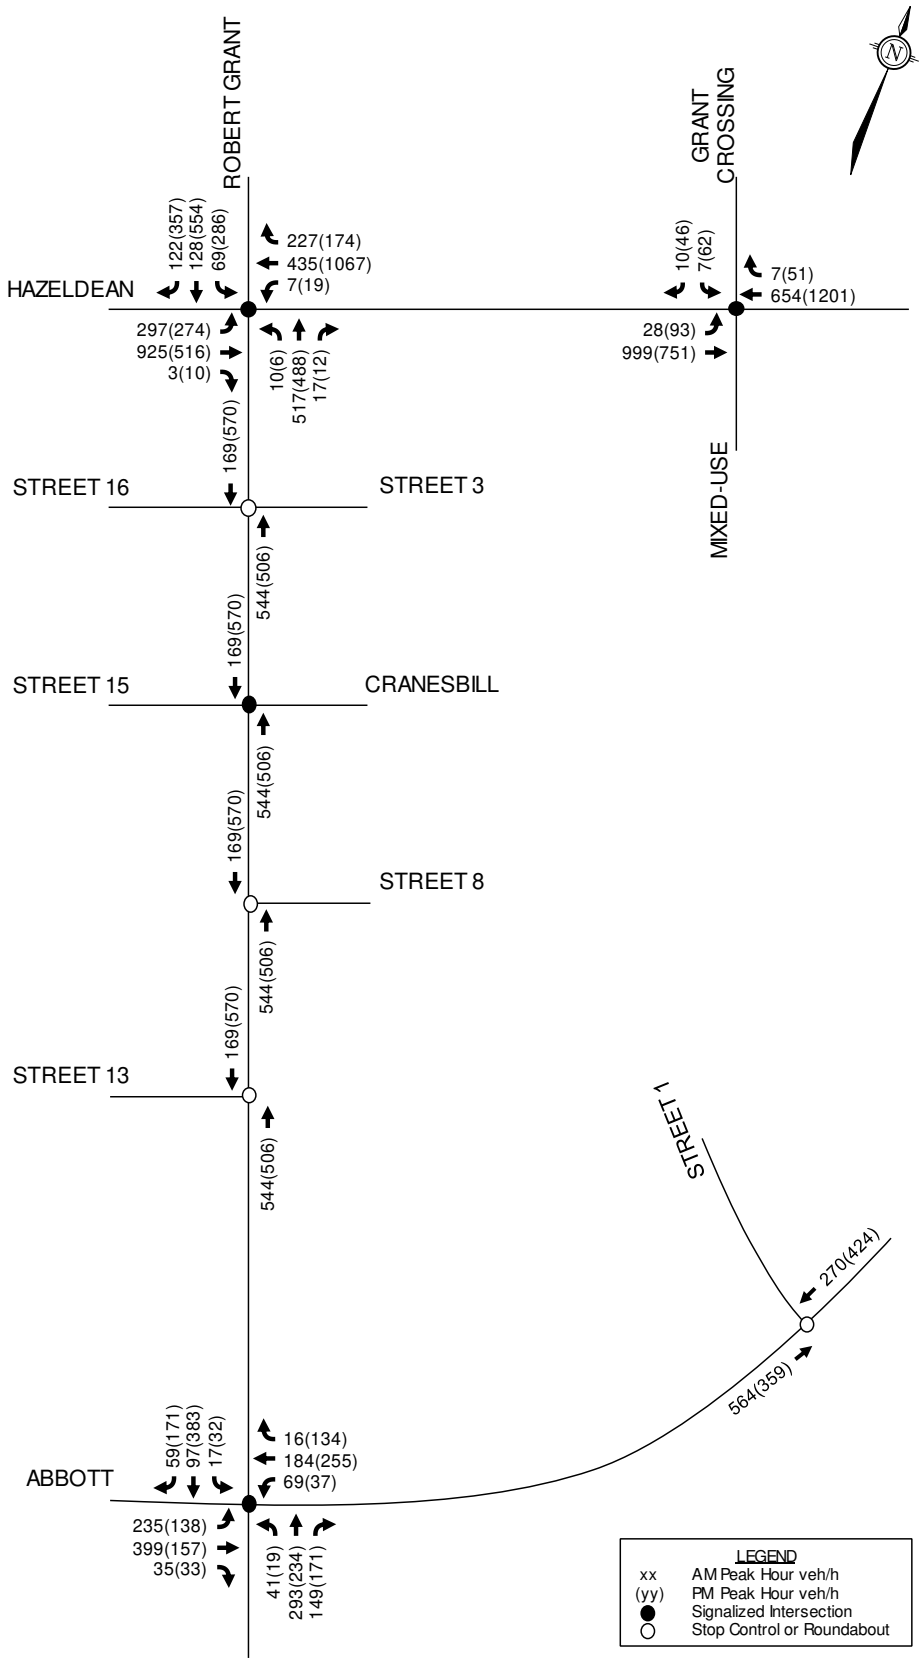

Figure 11: Future Total Traffic (Scenario Two)

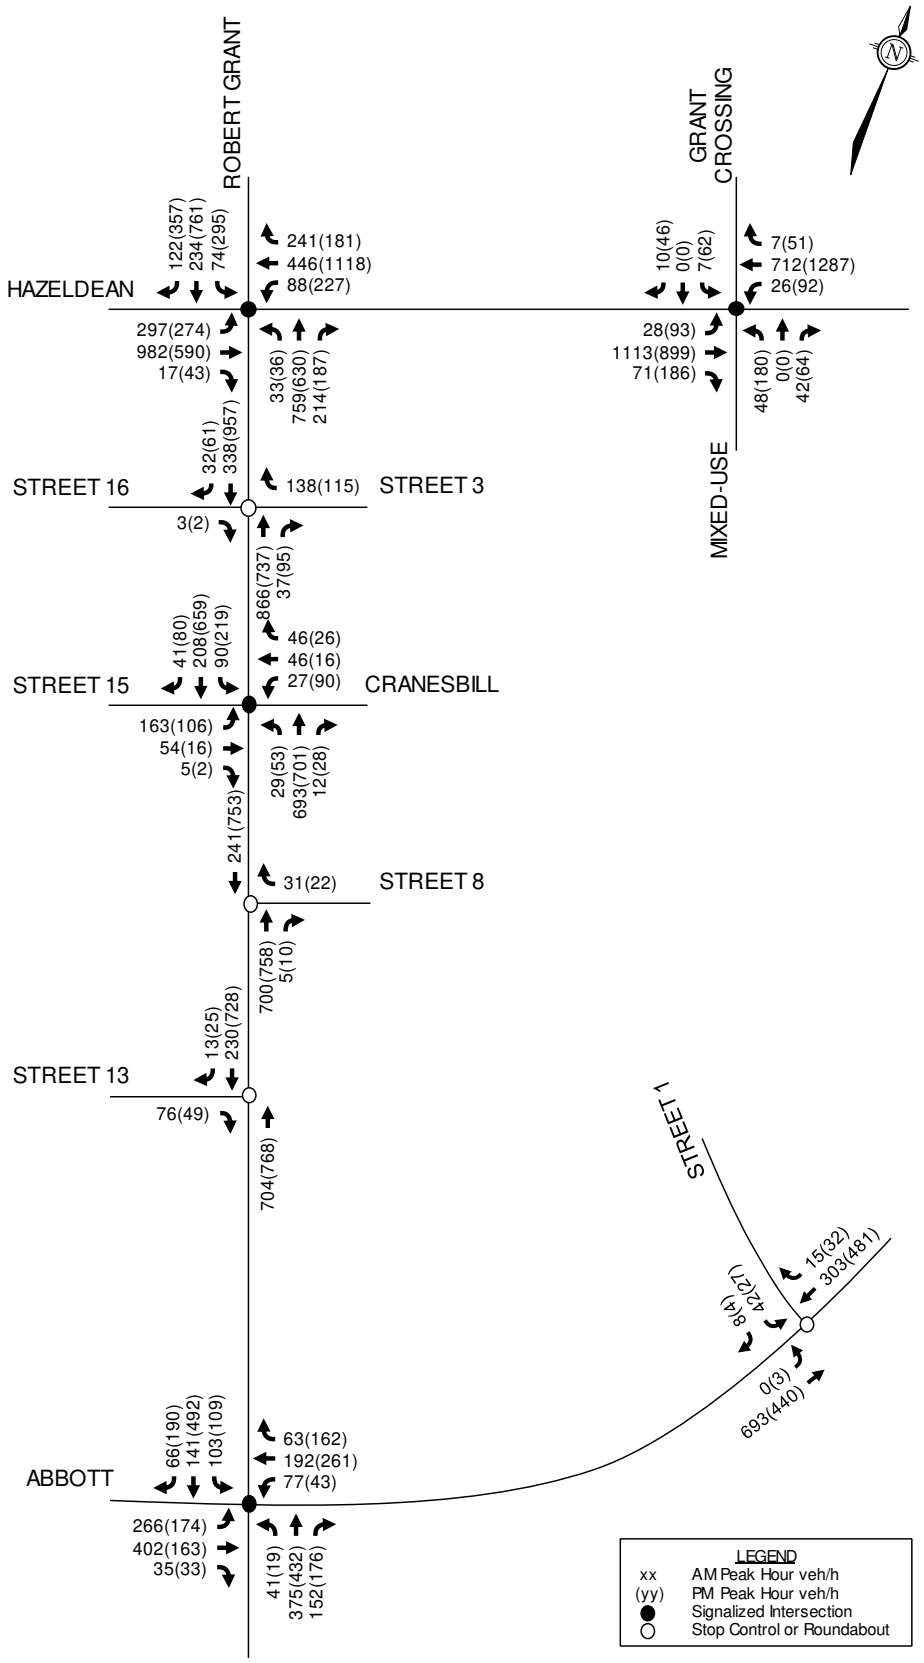

4.0 ANALYSIS

4.1 Development Design

Robert Grant Avenue is a north-south arterial road that will extend through the subdivision with a Right-of-Way (ROW) width of 45.5m. A paved surface of 8m with sidewalks and cycle tracks will be provided initially, consistent with constructed portion between Abbott Street and Fernbank Road to the south.

The subdivision will include two east-west major collector roads including the Abbott Street extension to the south, and Cranesbill Road which is approximately midblock. The two major collector roads will have ROW widths of 26m. Abbott Street is currently under construction and will have a 1.8m sidewalk and 1.5m cycle track on both sides of the roadway. The design of Cranesbill Road will be consistent with the adjacent subdivision to the east and will consist of an 11m road platform with sidewalks on both sides of the roadway.

Street 1 will be a minor collector road with a ROW of 22m and will provide north-south access between Cranesbill Road and Abbott Street in the south half of the development. Street 3 will have also have a ROW of 22m and provide east-west access through the north half of the development. Street 1 and Street 3 will be designed to City of Ottawa standards.

All other streets will be classified as local roadways and will have an 18m ROW widths. All local roadways will be designed to City of Ottawa standards.

Sidewalks will be provided on some local roads to provide critical connections to destinations or locations of higher pedestrian traffic. A pathways plan showing the proposed sidewalk locations is provided in **Appendix G**.

The internal road pattern is generally consistent with the Fernbank CDP and will promote the safe and efficient movement of vehicles, cyclists and pedestrians. An off-road pathway will also be constructed along the hydro corridor extending from Robert Grant Avenue to the east limit of the site, consistent with the Fernbank CDP.

4.2 Parking

Parking will be provided in the form of driveways accessing a garage/carport located on the same lot for each dwelling unit, as well as on-site parking lots for the multi-family residential units, high density residential, mixed use and elementary school sites. On-street visitor parking can be accommodated within the ROW along the major collector roads as required.

4.3 Boundary Streets

The MMLOS guidelines produced by IBI Group in October 2015 were used to evaluate the LOS of all roadway segments for each mode of transportation. Schedule B of the City of Ottawa's *Official Plan* indicates that the study area roadway segments are located in the General Urban Policy Area.

A summary of the segment MMLOS analysis is provided in **Table 8** below. Detailed MMLOS calculations are provided in **Appendix H**.

Table 8: Segment MMLOS

Segment	PLOS	BLOS	TLOS	TkLOS	Auto LOS
Hazeldean Road	C	C	D	A	A
Target	**C**	**C**	**D**	**D**	**D**

Based on the foregoing, Hazeldean Road adjacent to the proposed subdivision meets all MMLOS targets.

4.4 Access Intersections

Along Robert Grant Avenue, an intersection spacing of approximately 930m will be provided between Abbott Street and the proposed roundabout at Cranesbill Road, and approximately 650m between Hazeldean Road and the proposed roundabout at Cranesbill Road. This spacing is generally consistent with the recommendations of the Fernbank CDP and the constructed portion of Robert Grant Avenue to the south.

A review of traffic signalization warrants was conducted at the Robert Grant Avenue/Cranesbill Road/Street 15 intersection and are included in **Appendix I**. Based on the traffic projections for Scenario One, signalization warrants are 94% met at this intersection. Intersection analysis has been conducted in Section 4.9.4 for both side street stop and roundabout control at this intersection. Based on the findings of the intersection analysis, it is proposed that the Robert Grant Avenue/Cranesbill Road/Street 15 intersection will operate under roundabout control during the interim. For scenario one, it has been assumed that this roundabout will have an inscribed circle diameter of 40m, consistent with roundabouts constructed along Robert Grant Avenue south of Abbott Street. Once Robert Grant Avenue is widened to accommodate median BRT in the future, this intersection will be signalized. For the future scenario two, the lane configuration at this intersection have been assumed as follows:

- Northbound/Southbound – One through lane, one shared through/right turn lane and one left turn lane
- Eastbound/Westbound – One shared through/right turn lane and one left turn lane

The Robert Grant Avenue/Abbott Street intersection currently operates under roundabout control. Once Robert Grant Avenue is widened to accommodate median BRT in the future, this intersection will be signalized. For the future scenario two, the lane configuration at this intersection have been assumed as follows:

- Northbound/Southbound – Two through lane, one right turn lane and one left turn lane
- Eastbound/Westbound – One shared through/right turn lane and one left turn lane

Three additional full movement intersections are proposed on Robert Grant Avenue in the interim until restriction of the left turn movements is required for safety or capacity reasons (i.e. excessive delays exiting onto Robert Grant Avenue). These intersections would operate under side street stop control and are described as follows:

- Street 3 and 16, 280m south of Hazeldean and 370m north of Cranesbill Road
- Street 8, 240m south of Cranesbill Road and 120m north of Street 13

- Street 13, 120m south of Street 8 and 580m north of Abbott Street

These intersections would be restricted to right-in right-out operation only when required. This approach is consistent with the Robert Grant Avenue/Haliburton Heights intersection to the south, along the constructed portion of Robert Grant Avenue.

Street 1, 11 and 12 will be accessed via full movement unsignalized intersections along Abbott Street. Transportation Association of Canada (TAC) Geometric Design Guidelines identify a minimum spacing of 60m for intersections along collector roadways. The Street 11 and 12 intersections along Abbott Street are located a minimum of spacing 80m between adjacent intersections, measured centreline to centreline.

The mixed-use block located along Hazeldean Road will tie into the existing signalized Grant Crossing intersection. The lane configurations at the Hazeldean Road/Grant Crossing Access/Mixed-Use Access intersection will reviewed as part of a future Site Plan Control application. For the purposes of this report, the future lane configurations at this intersection have been assumed as follows:

- Northbound – One left turn lane and one through/right turn lane
- Southbound – Dual left turn lanes and one through/right turn lane
- Eastbound – One left turn lane, one through lane and one through/right turn lane
- Westbound – One left turn lane, two through lanes and one right turn lane

4.5 Transportation Demand Management

A review of the TDM Measures Checklist was conducted, and can be found in **Appendix J**.

The following measures will be implemented as the proposed subdivision is built:

- Display local area maps with walking/cycling routes and key destinations (at sales centre);
- Display relevant transit schedules and route maps (at sales centre);
- Provide multimodal travel option information packages to new residents (at sales centre).

4.6 Neighbourhood Traffic Management

The proposed street layout conforms to the initiatives identified in the Fernbank CDP. The subject lands are located adjacent to two arterial roadways (i.e. Robert Grant Avenue and Hazeldean Road) and are not anticipated to have any measurable impact on the future residential communities in the site's vicinity.

Parking provisions are anticipated to meet the requirements of the City's Zoning By-Law. Parking will be provided in the form of driveways accessing a garage/carport located on the same lot for each dwelling unit, as well as on-site parking lots for the multi-family residential units, high density residential, mixed use and elementary school sites. On-street visitor parking can be accommodated within the ROW along the major collector roads as required. Parking infiltration into the surrounding communities is not anticipated.

4.7 Transit

OC Transpo bus service is currently provided along Hazeldean Road at the existing stops located at the signalized Shoppes at Fairwinds and Grant Crossing intersections.

The detail design of the Robert Grant Avenue extension should accommodate transit priority measures in accordance with the City's 2031 Affordable plan. Per the City's 2013 TMP, at-grade BRT lanes will ultimately be constructed in the median of Robert Grant Avenue in the future.

The collector roads will be constructed to support future transit service.

4.8 Network Concept

As the proposed development is anticipated to generate more than 200 peak hour person trips more than the established zoning, a review of the network concept has been conducted. For the purposes of this analysis, an east-west screenline has been developed north of the study area and a north-south screenline has been developed east of the study area. The east-west screenline is crossed by Robert Grant Avenue, while the north-south screenline is crossed by Hazeldean Road and Abbott Street.

Typical lane capacities are established based on roadway classification and general characteristics (i.e. suburban with limited access, urban with on-street parking, etc.). The typical lane capacities used in this study are based on the City's guidelines for the TRANS Long-Range Transportation Model.

4.8.1 Future Background – Scenario Two Screenline Analysis

A summary of the future background screenline analysis is provided in the following table.

Table 9: Future Background Screenline Analysis

Roadway	Directional Capacity	AM Peak			PM Peak		
		Vol.	V/C Ratio	LOS	Vol.	V/C Ratio	LOS
East-West Screenline							
Robert Grant Avenue (North of Hazeldean Road)							
Northbound	2,000	1,041	0.52	A	936	0.47	A
Southbound	2,000	319	0.16	A	1,197	0.60	A
Total							
Northbound	**2,000**	**1,041**	**0.52**	**A**	**936**	**0.47**	**A**
Southbound	**2,000**	**319**	**0.16**	**A**	**1,197**	**0.60**	**A**
North-South Screenline							
Hazeldean Road (East of Lowe's Access)							
Eastbound	2,000	1006	0.50	A	813	0.41	A
Westbound	2,000	661	0.33	A	1,252	0.63	B
Abbott Street (East of Street 1)							
Eastbound	600	564	0.94	E	359	0.60	A
Westbound	600	270	0.45	A	424	0.71	C
Total							
Eastbound	**2,600**	**1,570**	**0.60**	**A**	**1,172**	**0.45**	**A**
Westbound	**2,600**	**931**	**0.36**	**A**	**1,676**	**0.64**	**B**

Based on the foregoing, the proposed screenlines are anticipated to operate with a LOS B or better during the AM and PM peak hours under background traffic conditions.

4.8.2 Future Total – Scenario Two Screenline Analysis

A summary of the future total screenline analysis is provided in the following table.

Table 10: Future Total Traffic – Screenline Analysis

Roadway	Directional Capacity	AM Peak			PM Peak		
		Vol.	V/C Ratio	LOS	Vol.	V/C Ratio	LOS
East-West Screenline							
Robert Grant Avenue (North of Hazeldean Road)							
Northbound	2,000	1,297	0.65	B	1,085	0.54	A
Southbound	2,000	430	0.22	A	1,413	0.71	C
Total							
Northbound	**2,000**	**1,297**	**0.65**	**B**	**1,085**	**0.54**	**A**
Southbound	**2,000**	**430**	**0.22**	**A**	**1,413**	**0.71**	**C**
North-South Screenline							
Hazeldean Road (East of Lowe's Access)							
Eastbound	2,000	1,162	0.56	A	1,025	0.50	A
Westbound	2,000	745	0.36	A	1,430	0.71	C
Abbott Street (East of Street 1)							
Eastbound	600	735	1.23	F	467	0.78	C
Westbound	600	318	0.53	A	513	0.86	D
Total							
Eastbound	**2,600**	**1,897**	**0.73**	**C**	**1,492**	**0.57**	**A**
Westbound	**2,600**	**1,063**	**0.41**	**A**	**1,943**	**0.75**	**C**

Based on the foregoing, Abbott Street is anticipated to operate above capacity during the AM peak hour. Although Abbott Street is anticipated to operate above capacity, the overall north-south screenline is anticipated to operate with LOS C or better during the AM and PM peak hours. If traffic congestion is realized along Abbott Street, drivers can use alternative routes to travel east (i.e. Hazeldean Road) to Terry Fox Drive.

4.9 Network Intersections

4.9.1 Existing MMLOS Analysis

This section provides a review of the existing signalized study area intersections using complete streets principles. The MMLOS guidelines produced by IBI Group in October 2015 were used to evaluate the LOS of all study area intersections for each mode of transportation. Schedule B of the City of Ottawa's Official Plan indicates the study area intersections are located within the General Urban policy area.

Aerial photos of the study area intersections are provided in Section 4.1.2. The following table summarizes the findings of the MMLOS intersection analysis. Detailed intersection MMLOS calculations are included in **Appendix K**.

Table 11: Intersection MMLOS Summary

Segment	PLOS	BLOS	TLOS	TkLOS	Auto LOS
Hazeldean Road/ Shoppes at Fairwinds	**F**	**F**	A	C	A
Target	**C**	**C**	**D**	**D**	**D**
Hazeldean Road/ Grant Crossing	**F**	**F**	A	C	A
Target	**C**	**C**	**D**	**D**	**D**

Based on the foregoing, the Hazeldean Road/Shoppes at Fairwinds and Hazeldean Road/Grant Crossing intersections meet the target TLOS, TkLOS and Auto LOS. The PLOS and BLOS at these intersections do not meet the target for the General Urban Area. The poor PLOS and BLOS at these intersections are attributable to the number of travel lanes along Hazeldean Road.

The geometry of the existing study area intersections will change as the subject lands are developed. As such, improvements have not been identified to improve the PLOS and BLOS at these intersections.

4.9.2 2030 Background Traffic – Scenario One

Intersection capacity analysis has been completed for the 2030 background traffic condition for scenario one. The analysis is based on the future roadway lane configurations within the study area. A two-lane cross section has been assumed for Robert Grant Avenue south of Hazeldean Road. A four-lane cross section has been assumed for Robert Grant Avenue north of Hazeldean Road and on the south leg approach to the intersection.

The traffic signal timing plan for the Hazeldean Road/Robert Grant Avenue intersection has been developed using methodology presented in Ontario Traffic Manual (OTM) Book 12 and optimized to show the capacity of the intersection. The lane configurations at this intersection have been assumed as follows:

- Southbound and westbound – Dual left turn lanes, two through lanes and one channelized right turn lane
- Northbound – One left turn lane, two through lanes and one channelized right turn lane
- Eastbound – Dual left turn lanes, one through lane and one through/right turn lane

The design of the roundabout at the Robert Grant Avenue/Abbott Street intersection is included in **Appendix L**.

The results of the analysis are summarized in the following table for the weekday AM and PM peak hours. Detailed reports are included in **Appendix M**.

Table 12: Intersection Capacity Analysis – 2030 Background Traffic (Scenario One)

Intersection	AM Peak			PM Peak		
	Max V/C or Delay	LOS	Mvmt	Max V/C or Delay	LOS	Mvmt
Hazeldean Road/ Robert Grant Avenue[1]	0.75	C	NBT	0.96	E	SBL
Hazeldean Road/ Grant Crossing[1]	0.37	A	EBT	0.51	A	WBT
Robert Grant Avenue/ Abbott Street[2]	0.60	A	NB	0.59	A	SB

1. Signalized Intersection
2. Roundabout Intersection

As described in Section 2.9.2, a new transit station and park and ride lot will be provided in the southeast corner of the Hazeldean Road/Robert Grant Avenue intersection. When this transit station is developed, the target Auto LOS will be reduced to LOS E. Once the Hazeldean transit station and park and ride lot is developed, all intersections within the study area are anticipated to meet the target Auto LOS E within 600m of a rapid transit station.

4.9.3 Future Background Traffic – Scenario Two

Intersection capacity analysis has been completed for the future background traffic condition for scenario two. The analysis is based on the future roadway lane configurations within the study area. A four-lane cross section has been assumed for Robert Grant Avenue south of Hazeldean Road. This analysis assumes that the Robert Grant Avenue/Abbott Street intersection will be signalized once the median BRT is constructed along Robert Grant Avenue.

The results of the analysis are summarized in the following table for the weekday AM and PM peak hours. Detailed reports are included in **Appendix K**.

Table 13: Intersection Capacity Analysis – Future Background Traffic (Scenario Two)

Intersection	AM Peak			PM Peak		
	Max V/C or Delay	LOS	Mvmt	Max V/C or Delay	LOS	Mvmt
Hazeldean Road/ Robert Grant Avenue[1]	0.73	C	NBT	0.88	D	SBL
Hazeldean Road/ Grant Crossing[1]	0.35	A	EBT	0.48	A	WBT
Robert Grant Avenue/ Abbott Street[1]	0.60	A	EBT/R	0.81	D	WBT/R

1. Signalized Intersection

The reduction in traffic volumes associated with the availability of improved transit facilities is anticipated to improve the operations at the Hazeldean Road/Robert Grant Avenue intersection to a critical LOS D or better during the AM and PM peak hours. All other intersections within the study area are anticipated to meet the target Auto LOS E within 600m of a rapid transit station.

4.9.4 2030 Total Traffic – Scenario One

Intersection capacity analysis has been completed for the 2030 total traffic conditions for scenario one. The intersection control and lane configurations at the Robert Grant Avenue/Hazeldean Road and Robert Grant Avenue/Abbott Street intersections are consistent with the background traffic conditions. The intersection control and lane configurations at all access intersections is described in Section 4.4. For the purposes of this analysis, the Robert Grant Avenue/Cranesbill Road/Street 15 intersection has been analyzed as both side street stop (including northbound and southbound left turn lanes on Robert Grant Avenue) and roundabout control.

The results of the analysis are summarized in the following table for the weekday AM and PM peak hours. Detailed reports are included in **Appendix M**.

Table 14: Intersection Capacity Analysis – 2030 Total (Scenario One)

Intersection	AM Peak			PM Peak		
	Max V/C or Delay	LOS	Mvmt	Max V/C or Delay	LOS	Mvmt
Hazeldean Road/ Robert Grant Avenue[1]	0.87	D	EBT/R	0.98	E	SBL
Hazeldean Road/ Grant Crossing/ Mixed-Use Access[1]	0.47	A	EBT	0.81	D	NBL
Robert Grant Avenue/ Street 3/ Street 16[3]	24 sec	C	WBR	19 sec	C	EBR
Robert Grant Avenue/ Cranesbill Road/ Street 15[2]	0.79	C	NB	0.84	D	NB
Robert Grant Avenue/ Cranesbill Road/ Street 15[3]	**863 sec**	**F**	**EB**	**Error V/C=4.76**	**F**	**EB**
	55 sec	**F**	**WB**	**555 sec**	**F**	**WB**
Robert Grant Avenue/ Street 8[3]	15 sec	B	WBR	14 sec	B	WBR
Robert Grant Avenue/ Street 13[3]	10 sec	B	EBR	15 sec	B	EBR
Robert Grant Avenue/ Abbott Street[2]	0.75	C	NB	0.75	C	SB
Abbott Street/ Street 1[3]	22 sec	C	SB	20 sec	C	SB

1. Signalized Intersection
2. Roundabout Intersection
3. Stop Controlled Intersection

As the Robert Grant Avenue/Cranesbill Road/Street 15 intersection is anticipated to operate with a LOS F during the AM and PM peak hours under side street stop control, roundabout control is recommended for this intersection. Under roundabout control, this intersection is anticipated to operate with a LOS D or better during the AM and PM peak hours.

All other intersections within the study area are anticipated to meet the target Auto LOS E within 600m of a rapid transit station.

As the existing signalized intersections within the study area will be altered as part of the proposed development, the MMLOS analysis has also been completed for the future condition. When the Hazeldean Park and Ride is developed, the MMLOS targets for the study area intersections are anticipated to be altered. The MMLOS targets for the study area intersections are based on the targets within 600m of a rapid transit station. The following table summarizes the findings of the MMLOS intersection analysis. Detailed intersection MMLOS calculations are included in **Appendix K**.

Table 15: Intersection MMLOS Summary

Segment	PLOS	BLOS	TLOS	TkLOS	Auto LOS
Hazeldean Road/ Robert Grant Avenue	**F**	**F**	**F**	B	E
Target	**A**	**C**	**D**	**D**	**E**
Hazeldean Road/ Grant Crossing/ Mixed-Use Access	**F**	**F**	D	C	D
Target	**A**	**C**	**D**	**D**	**E**

All approaches to the Hazeldean Road/Robert Grant Avenue and Hazeldean Road/Grant Crossing/Mixed-Use Access intersections do not meet the target PLOS. Improvement of the PLOS at these intersections is limited by the number of travel lanes and turn lanes required. Consideration could be given to implementing leading pedestrian intervals and zebra striped or textured crosswalks, subject to meeting warrants, during the detailed design of the intersections.

The east and west approaches to the Hazeldean Road/Robert Grant Avenue and Hazeldean Road/Grant Crossing/Mixed-Use access intersections do not meet the target BLOS. Consideration could be given to implementing a protected intersection design as part of the detailed design of the intersections. A protected intersection design would improve this intersection to a BLOS A.

All approaches to the Hazeldean Road/Robert Grant Avenue intersections will not meet the target TLOS. As identified above, the City's TMP identifies a median BRT system along Robert Grant Avenue between Hazeldean Road and Fernbank Road. The ultimate design of Robert Grant Avenue provides a north-south grade separated crossing for the median BRT at the Hazeldean Road/Robert Grant Avenue intersection. This grade separated crossing will improve the TLOS on the north and south approaches to this intersection.

As described in Section 2.9.1, the detailed design of the Hazeldean Road/Robert Grant Avenue intersection will be completed as part of Robert Grant Avenue, to be constructed by others. The detailed design of the Hazeldean Road/Grant Crossing/Mixed-Use Access intersection will be completed as part of a future Site Plan Control application for the Block 318. A further review of the MMLOS at these intersections will be completed as part of the future applications.

4.9.5 Future Total Traffic – Scenario Two

Intersection capacity analysis has been completed for the future total traffic conditions for scenario two. The intersection control and lane configurations at the Robert Grant Avenue/Hazeldean Road and Robert Grant Avenue/Abbott Street intersections are consistent with the background traffic

conditions. The intersection control and lane configurations at all access intersections is described in Section 4.4.

The results of the analysis are summarized in the following table for the weekday AM and PM peak hours. Detailed reports are included in **Appendix M**.

Table 16: Intersection Capacity Analysis – Future Total (Scenario Two)

Intersection	AM Peak			PM Peak		
	Max V/C or Delay	LOS	Mvmt	Max V/C or Delay	LOS	Mvmt
Hazeldean Road/ Robert Grant Avenue[1]	0.82	D	EBT	0.93	E	WBT
Hazeldean Road/ Grant Crossing/ Mixed-Use Access[1]	0.47	A	EBT	0.91	E	NBL
Robert Grant Avenue/ Street 3/ Street 16[2]	11 sec	B	WBR	10 sec	A	WBR
Robert Grant Avenue/ Cranesbill Road/ Street 15[1]	0.62	B	SBL	0.80	C	SBL
Robert Grant Avenue/ Street 8[2]	11 sec	B	WBR	11 sec	B	WBR
Robert Grant Avenue/ Street 13[2]	9 sec	A	EBR	10 sec	A	EBR
Robert Grant Avenue/ Abbott Street[1]	0.70	B	WBT/R	0.88	D	WBT/R
Abbott Street/ Street 1[2]	20 sec	C	SB	18 sec	C	SB

1. Signalized Intersection
2. Stop Controlled Intersection

Based on the foregoing, all intersections within the study area are anticipated to meet the target Auto LOS E within 600m of a rapid transit station. With the shift to non-auto modes anticipated as development progresses and the future BRT/LRT extension to this area, the development permitted under the proposed zoning is anticipated be accommodated by the study area intersections.

The storage length for the proposed turn lanes at the Hazeldean Road/Robert Grant Avenue intersection have been taken as the higher of either the 95th percentile queue length from the Synchro analysis or the calculated storage using the future total traffic volumes and the TAC Geometric Design Guidelines. The storage length requirements for the future Hazeldean Road/Grant Crossing/Mixed-Use Access will be reviewed during a future Site Plan Control application. The recommended storage lengths for the future Hazeldean Road/Robert Grant Avenue intersection are summarized as follows:

- Eastbound Left: 65m
- Westbound Left: 50m
- Westbound Right: 55m
- Northbound left: 25m
- Northbound Right: 50m
- Southbound Left: 75m
- Southbound Right: 85m

5.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the results of the foregoing analysis, the main conclusions and recommendations of this report are as follows:

Development Design, Parking, and Boundary Streets

- The internal road pattern is generally consistent with the Fernbank CDP and will promote the safe and efficient movement of vehicles, cyclists and pedestrians.
- Parking will be provided in the form of driveways accessing a garage/carport located on the same lot for each dwelling unit, as well as on-site parking lots for the multi-family residential units, high density residential, mixed use and elementary school sites.
- On-street visitor parking can be accommodated within the ROW along the major collector roads as required.
- Hazeldean Road adjacent to the proposed subdivision meets all MMLOS targets.

Access Intersection Design

- The spacing of intersections along Robert Grant Avenue is generally consistent with the recommendations of the Fernbank CDP and the constructed portion of Robert Grant Avenue to the south.
- The Robert Grant Avenue/Cranesbill Road/Street 15 intersection will operate under roundabout control during the interim. Once Robert Grant Avenue is widened to accommodate median BRT in the future, this intersection will be signalized.
- The Robert Grant Avenue/Abbott Street intersection currently operates under roundabout control. Once Robert Grant Avenue is widened to accommodate median BRT in the future, this intersection will be signalized.
- Three additional full movement intersections (Streets 3, 8, and 13) are proposed on Robert Grant Avenue in the interim until restriction of the left turn movements is required for safety or capacity reasons (i.e. excessive delays exiting onto Robert Grant Avenue). This approach is consistent with the Robert Grant Avenue/Haliburton Heights intersection to the south, along the constructed portion of Robert Grant Avenue.
- Street 1, 11 and 12 will be accessed via full movement unsignalized intersections along Abbott Street.
- The mixed-use block located along Hazeldean Road will tie into the existing signalized Lowe's access intersection.

Transportation Demand Management, Neighbourhood Traffic Management, and Transit

- The following TDM measures will be implemented as the proposed subdivision is built:
    - Display local area maps with walking/cycling routes and key destinations (at sales centre);
    - Display relevant transit schedules and route maps (at sales centre);
    - Provide multimodal travel option information packages to new residents (at sales centre).
- The proposed street layout conforms to the initiatives identified in the Fernbank CDP. The subject lands are located adjacent to two arterial roadways (i.e. Robert Grant Avenue and Hazeldean Road) and are not anticipated to have any measurable impact on the future residential communities in the site's vicinity.
- The detail design of the Robert Grant Avenue extension should accommodate transit priority measures in accordance with the City's 2031 Affordable plan. Per the City's TMP, at-grade BRT lanes will ultimately be constructed in the median of Robert Grant Avenue in the future.

- The collector roads will be constructed to support future transit service.

Network Concept

- The proposed screenlines are anticipated to operate with a LOS B or better during the AM and PM peak hours under background traffic conditions.
- Abbott Street is anticipated to operate above capacity during the AM peak hour under the future total traffic condition. Although Abbott Street is anticipated to operate above capacity, the overall north-south screenline is anticipated to operate with LOS C or better during the AM and PM peak hours. If traffic congestion is realized along Abbott Street, drivers can use alternative routes to travel east (i.e. Hazeldean Road) to Terry Fox Drive.

Network Intersections – MMLOS Analysis

- The Hazeldean Road/Shoppes at Fairwinds and Hazeldean Road/Grant Crossing intersections currently meet the target TLOS, TkLOS and Auto LOS. The PLOS and BLOS at these intersections do not meet the target for the General Urban Area. The poor PLOS and BLOS at these intersections are attributable to the number of travel lanes along Hazeldean Road.
- All approaches to the Robert Grant Avenue/Hazeldean Road and Hazeldean Road/Grant Crossing/Mixed-Use Access intersections will not meet the target PLOS for the General Urban Area. Improvement of the PLOS at these intersections is limited by the number of travel lanes and turn lanes required along Hazeldean Road and Robert Grant Avenue. Consideration could be given to implementing leading pedestrian intervals and zebra striped or textured crosswalks, subject to meeting warrants, during the detailed design of the intersections.
- The east and west approaches to the Robert Grant Avenue/Hazeldean Road and Hazeldean Road/Grant Crossing/Mixed-Use Access intersections will not meet the target BLOS for the General Urban Area. Consideration could be given to implementing a protected intersection as part of the detailed design of these intersections, to be completed as part of future applications. A protected intersection would improve these intersections to a BLOS A.
- All approaches to the Robert Grant Avenue/Hazeldean Road intersection will not meet the target transit LOS. The ultimate design of Robert Grant Avenue provides a north-south grade separated crossing for the median BRT at the Hazeldean Road/Robert Grant Avenue intersection. This grade separated crossing will improve the TLOS on the north and south approaches to this intersection.

Network Intersections – Scenario One

- When Hazeldean BRT/LRT transit station is developed, the target Auto LOS will be reduced to LOS E.
- As the Robert Grant Avenue/Cranesbill Road/Street 15 intersection is anticipated to operate with a LOS F during the AM and PM peak hours under side street stop control, roundabout control is recommended for this intersection. Under roundabout control, this intersection is anticipated to operate with a LOS D or better during the AM and PM peak hours.
- All other intersections within the study area are anticipated to meet the target Auto LOS E within 600m of a rapid transit station.

Network Intersections – Scenario Two

- All intersections within the study area are anticipated to meet the target Auto LOS E within 600m of a rapid transit station under background and total traffic conditions.

- With the shift to non-auto modes anticipated as development progresses and the future BRT/LRT extension to this area, the development permitted under the proposed zoning is anticipated be accommodated by the study area intersections.
- The storage length requirements for the future Hazeldean Road/Grant Crossing/Mixed-Use Access will be reviewed during a future Site Plan Control application.
- The recommended storage lengths for the future Hazeldean Road/Robert Grant Avenue intersection are summarized as follows:
    - Eastbound Left: 65m
    - Westbound Left: 50m
    - Westbound Right: 55m
    - Northbound left: 25m
    - Northbound Right: 50m
    - Southbound Left: 75m
    - Southbound Right: 85m

ADDITIONAL INFORMATION REQUIRED UNDER SECTION 51 (17) OF THE PLANNING ACT.

A) The boundaries of the land proposed to be subdivided, certified by an Ontario land Surveyor;
As shown on Draft Plan

B) The locations, widths & names of the proposed highways within the proposed subdivision & of existing highways on which the proposed subdivision abuts;
As shown on Draft Plan

C) On a small keyplan, on a scale of not less than 1cm to 100m, all of the land adjacent to the proposed subdivision that is owned by the applicant or in which the applicant has an interest, every subdivision adjacent to the proposed subdivision & the relationship of the boundaries of the land to be subdivided to the boundaries of the township lot of other original grant of which the land forms the whole part;
As Shown on Draft Plan

D) The purpose for which the proposed lots are to be used;
Residential, Mixed Use, Institutional, Stormwater Management Facility, Commercial, Open Space, Park and Park & Ride shown on Draft Plan

E) The existing uses of all adjoining lands;
Residential, Light Industrial, Mixed Use, Park, Open Space, and Commercial shown on Draft Plan

F) The approximate dimensions & layout of the proposed lots;
As shown on Draft Plan

G) Natural & artificial features such as buildings or other structures or installations, railways, highways, watercources, drainage ditches, wetlands & wooded areas within or adjacent to the land proposed to be subdivided;
As shown on Draft Plan

H) The availability and nature of domestic water supplies;
Development will be supplied with full municipal piped water service

I) The nature & porosity of the soil;
Silty Clay, Clayey Silt, Glacial till, Sandy Silt, Silt, Silty Sand

J) Existing contours or elevations as may be required to determine the grade of the highways and the drainage of the land proposed to be subdivided;
Contours shown at 0.25 metre intervals on Draft Plan

K) The municipal services available or to be available to the land proposed to be subdivided;
Development will be supplied with full sanitary and storm water sewer services.

L) The nature & extent of any restrictions affecting the land proposed to be subdivided, including restrictive covenants or easements. 1994, c. 23, s. 30; 1996, c. 4, s. 28 (3).;
Part 3 on 4R-24157 as in GB10262 & GB10307; Part 1 on 4R-24668 OC1151234; Part 1 on 4R-24157 NS12819, OC810339; and Parts 4,5,6 on 4R-24073 OC1151233..

Subject: RE: Request for Collision Data
Attachments: 635 E of Hazeldean_Iber - Collision Details Report - Public Version 2014-2018.pdf

Good morning Brad,

Attached is the data as requested. Please note that in the last 5 years, there have been no reportable collisions at the intersection of 325 E of Huntmar Dr/Iber Rd @ Hazeldean Rd.

Thank you,

Caitlin Conley
Coord, Collision Data Systems & Analytics

Subject: Request for Collision Data

Hello Byron,

Can you please send me the collision history within the last five years at the following intersections:

- Hazeldean Road/Toys 'R' Us Signalized Access (5705 Hazeldean) – 325m east of Iber Road
- Hazeldean Road/Lowe's/Michaels/Winners Signalized Access (5617 and 5577 Hazeldean) – 620m east of Iber Road

I have included an aerial showing the above intersections.

Thanks, have a good weekend

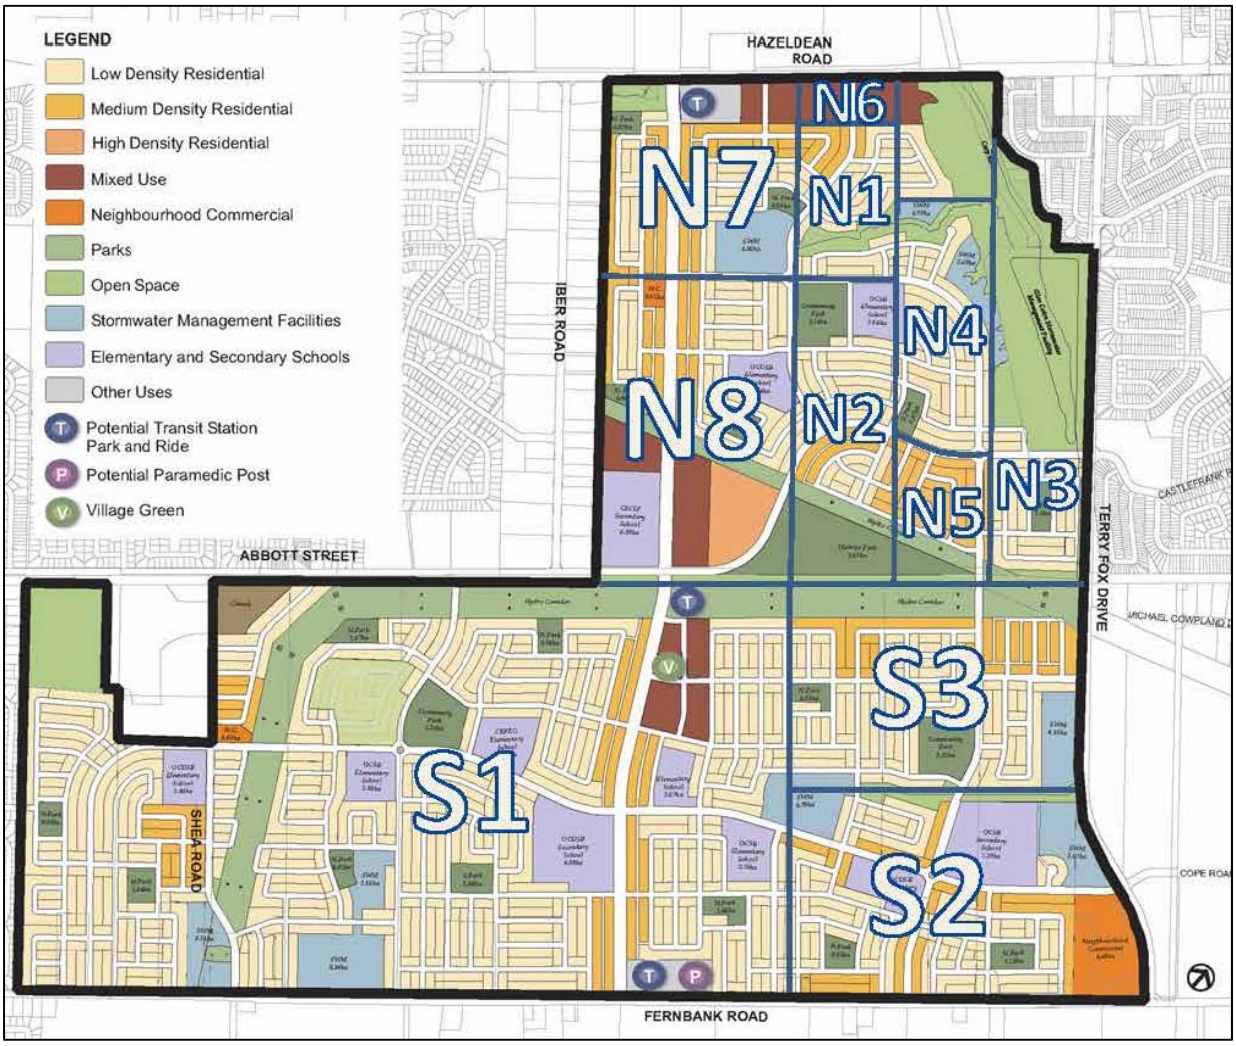
Relevant Transportation Study Excerpts

Figure 10
Fernbank Community Traffic Zones



3.4.2 Background Traffic Growth

Consistent with the Fernbank CDP TMP and with other recent transportation studies prepared for development parcels within the Fernbank Community, a 2% annual growth rate was deemed to be appropriate. This rate was then applied to the existing traffic volumes at the study area intersections until the 2025 horizon. In addition, the trips generated by the other areas of the Fernbank Community (i.e. all areas excluding the subject Richcraft site) were added to the boundary road network.

3.4.3 Future Background Traffic Conditions

The build-out horizons for the background developments must recognize the scale of the developments under consideration. An absorption rate of 500 units per year was applied to the background

Table 3
Fernbank Community Traffic Generation

Transportation Demand Management Checklist

TDM Measures Checklist:
Residential Developments (multi-family, condominium or subdivision)

Legend

BASIC — The measure is generally feasible and effective, and in most cases would benefit the development and its users

BETTER — The measure could maximize support for users of sustainable modes, and optimize development performance

★ — The measure is one of the most dependably effective tools to encourage the use of sustainable modes

		TDM measures: *Residential developments*	Check if proposed & add descriptions
	1.	**TDM PROGRAM MANAGEMENT**	
	1.1	**Program coordinator**	
BASIC ★	1.1.1	Designate an internal coordinator, or contract with an external coordinator	☐
	1.2	**Travel surveys**	
BETTER	1.2.1	Conduct periodic surveys to identify travel-related behaviours, attitudes, challenges and solutions, and to track progress	☐
	2.	**WALKING AND CYCLING**	
	2.1	**Information on walking/cycling routes & destinations**	
BASIC	2.1.1	Display local area maps with walking/cycling access routes and key destinations at major entrances *(multi-family, condominium)*	☑ At Sales Centre
	2.2	**Bicycle skills training**	
BETTER	2.2.1	Offer on-site cycling courses for residents, or subsidize off-site courses	☐

			TDM measures: *Residential developments*	Check if proposed & add descriptions
		3.	**TRANSIT**	
		3.1	**Transit information**	
BASIC		3.1.1	Display relevant transit schedules and route maps at entrances *(multi-family, condominium)*	☑ At Sales Centre
BETTER		3.1.2	Provide real-time arrival information display at entrances *(multi-family, condominium)*	☐
		3.2	**Transit fare incentives**	
BASIC	★	3.2.1	Offer PRESTO cards preloaded with one monthly transit pass on residence purchase/move-in, to encourage residents to use transit	☐
BETTER		3.2.2	Offer at least one year of free monthly transit passes on residence purchase/move-in	☐
		3.3	**Enhanced public transit service**	
BETTER	★	3.3.1	Contract with OC Transpo to provide early transit services until regular services are warranted by occupancy levels *(subdivision)*	☐
		3.4	**Private transit service**	
BETTER		3.4.1	Provide shuttle service for seniors homes or lifestyle communities (e.g. scheduled mall or supermarket runs)	☐
		4.	**CARSHARING & BIKESHARING**	
		4.1	**Bikeshare stations & memberships**	
BETTER		4.1.1	Contract with provider to install on-site bikeshare station (*multi-family)*	☐
BETTER		4.1.2	Provide residents with bikeshare memberships, either free or subsidized *(multi-family)*	☐
		4.2	**Carshare vehicles & memberships**	
BETTER		4.2.1	Contract with provider to install on-site carshare vehicles and promote their use by residents	☐
BETTER		4.2.2	Provide residents with carshare memberships, either free or subsidized	☐
		5.	**PARKING**	
		5.1	**Priced parking**	
BASIC	★	5.1.1	Unbundle parking cost from purchase price *(condominium)*	☐
BASIC	★	5.1.2	Unbundle parking cost from monthly rent *(multi-family)*	☐

TDM measures: *Residential developments*				Check if proposed & add descriptions
		6.	**TDM MARKETING & COMMUNICATIONS**	
		6.1	**Multimodal travel information**	
BASIC	★	6.1.1	Provide a multimodal travel option information package to new residents	☑ At Sales Centre
		6.2	**Personalized trip planning**	
BETTER	★	6.2.1	Offer personalized trip planning to new residents	☐

Intersection Summary

Area Type: Other
Cycle Length: 120
Actuated Cycle Length: 120
Offset: 6 (5%), Referenced to phase 2:EBT, Start of Green
Natural Cycle: 110
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.75
Intersection Signal Delay: 29.7 Intersection LOS: C
Intersection Capacity Utilization 75.0% ICU Level of Service D
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 1: Robert Grant Avenue & Hazeldean Road

Intersection Summary

Area Type: Other
Cycle Length: 140
Actuated Cycle Length: 140
Offset: 46 (33%), Referenced to phase 2:EBT, Start of Green
Natural Cycle: 130
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.96
Intersection Signal Delay: 44.3 Intersection LOS: D
Intersection Capacity Utilization 88.3% ICU Level of Service E
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 1: Robert Grant Avenue & Hazeldean Road

Intersection Summary

Area Type: Other
Cycle Length: 120
Actuated Cycle Length: 120
Offset: 6 (5%), Referenced to phase 2:EBT and 6:WBT, Start of Green
Natural Cycle: 110
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.87
Intersection Signal Delay: 38.0 Intersection LOS: D
Intersection Capacity Utilization 84.7% ICU Level of Service E
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 1: Robert Grant Avenue & Hazeldean Road

Intersection Summary

Area Type: Other
Cycle Length: 140
Actuated Cycle Length: 140
Offset: 46 (33%), Referenced to phase 2:EBT and 6:WBT, Start of Green
Natural Cycle: 140
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.98
Intersection Signal Delay: 49.3 Intersection LOS: D
Intersection Capacity Utilization 94.0% ICU Level of Service F
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 1: Robert Grant Avenue & Hazeldean Road

Intersection Summary

Area Type: Other
Cycle Length: 140
Actuated Cycle Length: 140
Offset: 16 (11%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green
Natural Cycle: 120
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.81
Intersection Signal Delay: 23.0 Intersection LOS: C
Intersection Capacity Utilization 75.5% ICU Level of Service D
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 8: Mixed-Use/Grant Crossing & Hazeldean Road

Intersection Summary

Area Type: Other
Cycle Length: 140
Actuated Cycle Length: 140
Offset: 27 (19%), Referenced to phase 2:EBT, Start of Green
Natural Cycle: 120
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.88
Intersection Signal Delay: 40.6 Intersection LOS: D
Intersection Capacity Utilization 83.6% ICU Level of Service E
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Area Type: Other
Cycle Length: 120
Actuated Cycle Length: 120
Offset: 5 (4%), Referenced to phase 2:EBT and 6:WBT, Start of Green
Natural Cycle: 110
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.82
Intersection Signal Delay: 36.0 Intersection LOS: D
Intersection Capacity Utilization 81.0% ICU Level of Service D
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other
Cycle Length: 120
Actuated Cycle Length: 120
Offset: 0 (0%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green
Natural Cycle: 100
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.47
Intersection Signal Delay: 10.7 Intersection LOS: B
Intersection Capacity Utilization 54.9% ICU Level of Service A
Analysis Period (min) 15
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 8: Mixed-Use/Grant Crossing & Hazeldean Road

Intersection Summary

Area Type: Other
Cycle Length: 140
Actuated Cycle Length: 140
Offset: 24 (17%), Referenced to phase 2:EBT and 6:WBT, Start of Green
Natural Cycle: 130
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.93
Intersection Signal Delay: 48.3 Intersection LOS: D
Intersection Capacity Utilization 89.5% ICU Level of Service E
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Area Type: Other
Cycle Length: 140
Actuated Cycle Length: 140
Offset: 2 (1%), Referenced to phase 2:EBTL and 6:WBTL, Start of Green
Natural Cycle: 120
Control Type: Actuated-Coordinated
Maximum v/c Ratio: 0.91
Intersection Signal Delay: 26.9 Intersection LOS: C
Intersection Capacity Utilization 76.1% ICU Level of Service D
Analysis Period (min) 15
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 8: Mixed-Use/Grant Crossing & Hazeldean Road
