Executive Summary

EXP Services Inc. (EXP) was retained by 12714001 Canada Inc. to complete a Phase One Environmental Site Assessment (ESA) for the property located at 2983 Navan Road, Ottawa, Ontario hereinafter referred to as the 'Phase One property'. At the time of the investigation, the Phase One property was vacant.

A Phase One ESA is a systematic qualitative process to assess the environmental condition of a site based on its historical and current uses. This Phase One ESA was conducted in accordance the Canadian Standards Association (CSA) Z768 guideline, as amended, in accordance with the Phase One ESA standard as defined by Ontario Regulation 153/04, as amended, and in accordance with generally accepted professional practices. Subject to this standard of care, EXP makes no express or implied warranties regarding its services and no third-party beneficiaries are intended. Limitation of liability, scope of report and third-party reliance are outlined in Section 9 of this report.

The purpose of this Phase One ESA is to determine if past or present site activities have resulted in actual or potential contamination at the Phase One property. It is understood that the report will be used to support a site plan application for residential development. The most recent use of the property is not defined by Ontario Regulation 153/04. It is proposed that a residential development, including 67 townhouse units and two nine-storey condos, be constructed on the vacant property.

The Phase One property has the municipal address of 2983 Navan Road in Ottawa, Ontario. The Phase One property is located on the west side of Navan Road, immediately south of Brian Coburn Boulevard and is currently vacant. The Phase One property is irregular in shape with an area of approximately 11.2 acres (4.5 hectares).

The legal description of the Phase One property is described as Part of Lot 6 Concession 3, Gloucester; Parts 2 and 3 Plan 5R-4675, Part 3 Plan 5R-7985, Part 4 Plan 5R-11005, except Parts 13, 14 and 16 Plan 4R-21265 and Parts 1 to 7 expropriation Plan OC1834435, Ottawa. The property identification number (PIN) for the site is 047561337.

Based on a review of historical aerial photographs, historical maps, fire insurance plans and other records, it appears that the Phase One property has never been developed.

The nearest surface water body to the Phase One property is Mud Creek located approximately 70 m north of the Site. The inferred groundwater flow direction is north towards the creek.

There are no areas of natural or scientific interest (ANSI) within the Phase One study area.

There were 31 well records within the Phase One study area, 30 of which are for potable wells. None of the records are for the Site. Surrounding properties that have been recently developed are serviced by municipal water. Private wells may still be in use in some of the older residences in the Phase One study area.

No on-site PCA were identified. The following off-site PCA were identified:

- PCA #11 Commercial Trucking and Container Terminals
- PCA #28 Gasoline and Associated Products Storage in Fixed Tanks
- PCA #58 Waste Disposal and Waste Management, including thermal treatment, landfilling, and transfer of waste, other than use of biosoils as soil conditioners

Based on the intervening distance, cross-gradient location from the Phase One property, and the low hydraulic conductivity of the native silty clay, none of the PCAs identified in the Phase One study area are an environmental concern to the Phase One property. Therefore, no APECs were identified.

The Qualified Person who oversaw this work, Patricia Stelmack, M.Sc., P.Eng., does not recommend that a Phase Two ESA be conducted since no APECs were identified on the Phase One property.

viii

12714001 Canada Inc, Phase One Environmental Site Assessment 2983 Navan Road, Ottawa, Ontario OTT-21004744-A0 March 26, 2021 (revised July 16, 2021)

The Qualified Person can confirm that the Phase One Environmental Site Assessment was conducted per the requirements of Ontario Regulation 153/04, as amended, and in accordance with generally accepted professional practices.

This executive summary is a brief synopsis of the report and should not be read in lieu of reading the report in its entirety.

1.0 Introduction

EXP Services Inc. (EXP) was retained by 12714001 Canada Inc. to complete a Phase One Environmental Site Assessment (ESA) for the property located at 2983 Navan Road, Ottawa, Ontario hereinafter referred to as the 'Phase One property'. At the time of the investigation, the Phase One property was vacant.

A Phase One ESA is a systematic qualitative process to assess the environmental condition of a site based on its historical and current uses. This Phase One ESA was conducted in accordance the Canadian Standards Association (CSA) Z768 guideline, as amended, in accordance with the Phase One ESA standard as defined by Ontario Regulation 153/04, as amended, and in accordance with generally accepted professional practices. Subject to this standard of care, EXP makes no express or implied warranties regarding its services and no third-party beneficiaries are intended. Limitation of liability, scope of report and third-party reliance are outlined in Section 9 of this report.

Please note that general environmental management and housekeeping practices were reviewed as part of this assessment insofar as they could impact the environmental condition of the property, however, a detailed review of regulatory compliance issues was beyond the scope of our investigation. This Phase One ESA does not constitute an audit of environmental management practices, indicate geotechnical conditions or identify geologic hazards.

1.1 Objective

The purpose of this Phase One ESA is to determine if past or present site activities have resulted in actual or potential contamination at the Phase One property. It is understood that the report will be used to support a site plan application for residential development.

The most recent use of the property is not defined by Ontario Regulation 153/04. It is proposed that a residential development, including 67 townhouse units and two nine-storey condos, be constructed on the vacant property.

EXP personnel who conducted assessment work for this project included Leah Wells, P.Eng. and Patricia Stelmack, P.Eng. An outline of their qualifications is provided in Appendix A.

1.2 Phase One Property Information

The Phase One property has the municipal address of 2983 Navan Road in Ottawa, Ontario. The Phase One property is located on the west side of Navan Road, immediately south of Brian Coburn Boulevard and is currently vacant. The Phase One property is irregular in shape with an area of approximately 11.2 acres (4.5 hectares). A survey plan is provided in Appendix B.

The legal description of the Phase One property is described as Part of Lot 6 Concession 3, Gloucester; Parts 2 and 3 Plan 5R-4675, Part 3 Plan 5R-7985, Part 4 Plan 5R-11005, except Parts 13, 14 and 16 Plan 4R-21265 and Parts 1 to 7 expropriation Plan OC1834435, Ottawa. The property identification number (PIN) for the site is 047561337. The approximate Universal Transverse Mercator (UTM) coordinates for the Phase One property are Zone 18, 459270 m E and 5031104 m N. The UTM coordinates are based on measurements from Google Earth Pro, published by the Google Limited Liability Company (LLC). The accuracy of the centroid is estimated to be less than 10 m.

Authorization to proceed with this investigation was provided by Raad Akrawi on behalf of 12714004 Canada Inc. Contact information for Mr. Akrawi is 768 St. Joseph Boulevard, Gatineau, Quebec, J8Y 4B8.

The Phase One property site location and site layout are shown in Appendix C on Figure 1 and Figure 2, respectively.

2.0 Scope of Investigation

The scope of work for the Phase One ESA consisted of the following activities:

- Reviewing the historical occupancy of the Phase One property through the use of available archived and relevant municipal and business directories, fire insurance plans (FIPs), topographical maps, and aerial photographs;
- Reviewing municipal and provincial records to determine whether activities that have occurred within the Phase One study area pose a potential environmental concern to the Phase One property;
- Obtaining an EcoLog Environmental Risk Information Services Ltd. (ERIS) report for the Phase One property and surrounding properties within a 250-metre radius of the Phase One property;
- Reviewing available geological maps, well records and utility maps for the vicinity of the Phase One property;
- Obtaining a search of land title and assessment rolls for the Phase One property;
- Conducting at least one reconnaissance of the Phase One property and surrounding properties within a 250-metre radius of the Phase One property in order to identify the presence of actual and/or potential environmental contaminants or concerns of significance;
- Conducting interviews with designated representative(s) as a resource for current and historical information;
- Reviewing the current use of the Phase One property and any land use practices that may have impacted its environmental condition;
- Reviewing the current use of the surrounding properties and any land use practices that may have impacted the environmental condition of the Phase One property; and,
- Preparing a report to document the findings.

In completing the scope of work, EXP did not conduct any intrusive investigations, including sampling, analyses, or monitoring. EXP has confirmed neither the completeness nor the accuracy of any of the records that were obtained or of any of the statements made by others.

3.0 Records Review

3.1 Phase One ESA Study Area Determination

The Phase One study area comprises the Phase One property and surrounding properties wholly or partly within 250 metres of the property boundaries. The 250-metre radius was used to gain an understanding of the current and past uses of surrounding properties to determine whether such uses may have contributed to subsurface environmental impacts at the Phase One property.

According to the City of Ottawa GeoOttawa on-line mapping tool, the Phase One property is zoned for general mixed use. Properties to the west, and to the adjacent north and east are zoned development reserve. The area surrounding the creek to the north is zoned open space. The remainder of the study area is zoned for residential use.

The Phase One study area is shown on Figure 3 in Appendix C.

3.2 First Developed Use Determination

The first developed use of a property is defined as use that resulted in the development of a building or structure. Based on a review of historical aerial photographs, historical maps, and other records, it appears that the Phase One property has never been developed.

3.3 Fire Insurance Plans

No fire insurance plans are available for the Phase One study area.

3.4 Chain of Title

A chain of title was requested from Read Abstracts Limited for the Phase One property. A copy of the chain of title information is provided in Appendix C.

The property was owned by individuals since prior to 1875 until May 4, 2021, when title was transferred to 12714001 Canada Inc. The Perrault family owned the property from 1885 to 2021. A summary of the chain of title information is provided in the following table:

Year	Name of Owner	Description of Property Use	Property Use	Other Observations
1868	James Daily	Undeveloped	Agricultural or Other	No evidence of development in the area
1875	Eliza Grant	Undeveloped	Agricultural or Other	No evidence of development in the area
1876	David Miller	Undeveloped	Agricultural or Other	No evidence of development in the area
1885	Louis Perrault Jr.	Undeveloped	Agricultural or Other	No evidence of development in the area
1907	Robert Perrault	Undeveloped	Agricultural or Other	No evidence of development in the area
1929	Elizabeth Perrault	Undeveloped	Agricultural or Other	No evidence of development in the area

12714001 Canada Inc, Phase One Environmental Site Assessment 2983 Navan Road, Ottawa, Ontario OTT-21004744-A0 March 26, 2021 (revised July 16, 2021)

Year	Name of Owner	Description of Property Use	Property Use	Other Observations
1945	William J. Perrault and Louis J. Perrault	Undeveloped	Agricultural or Other	No evidence of development in the area
1951	Louis Perrault	Undeveloped	Agricultural or Other	1965 aerial photograph indicates north part of property has been cleared and south part may have been used for agricultural purposes.
1987	Annette Perrault	Undeveloped	Agricultural or Other	1991 aerial photograph indicates property is covered with trees.
1992	Robert Perrault, Francois Perrault, Louise Cracknell, Andree McNeely, Francine Perrault-Leblanc	Undeveloped	Agricultural or Other	Aerial photographs taken in 1999, 2002, 2011, and 2019 indicate property is covered with trees.
2021	2021 12714001 Canada Inc.		Agricultural or Other	Mature trees were observed during site reconnaissance.

3.5 Environmental Reports

There following previous environmental and/or geotechnical reports pertaining to the Phase One property were available for review:

1. Paterson Group, *Phase I Environmental Site Assessment, Vacant Land, 2983 and 3053 Navan Road, Ottawa, Ontario,* February 2018.

The Phase I ESA was conducted for the Phase One property and the adjacent property to the south. According to a developer who was working in the area, the Phase One property was owned by the Perrault family since 1830. The operations of the service garage and the presence of a private fuel outlet at 3000 Navan Road were identified as potentially contaminating activities (PCAs) within the Phase One study area, however these activities were deemed unlikely to pose an environmental concern to the Phase One property because of its downgradient location with respect to the Phase One property. No areas of potential environmental concern (APEC) were identified and no further environmental assessment was recommended for the Site.

2. Paterson Group, *Geotechnical Investigation, Brian Coburn Boulevard at Navan Road, Ottawa, Ontario*, November 2018.

Four boreholes were advanced to a maximum depth of 9.8 metres below ground surface (m bgs). Subsurface conditions were characterized by a thin layer of silty sand overlying silty clay. Bedrock was not encountered during the investigation. Overburden drift thickness in the area ranges from 25 to 50 m bgs. The groundwater table was encountered between 4 and 5.5 m bgs.

3.6 Environmental Source Information

Information pertaining to the Phase One property was obtained by reviewing documents that are available to the public through municipal and provincial sources. EXP did not identify the need to contact any federal agencies.

Written responses from regulatory agencies and copies of documents obtained via searches are provided in Appendix D.

4

3.6.1 Ontario Ministry of the Environment, Conservation and Parks Records

On March 22, 2021, records pertaining to the site were requested from the Ministry of the Environment, Conservation and Parks (MECP) through the *Freedom of Information and Protection of Privacy Act* (FOI). To date, no response has been received. If environmentally significant information is obtained from the MECP search, it will be provided as an addendum to this report.

3.6.2 Historical Land Use Inventory

On March 22, 2021, records pertaining to the site were requested from the City of Ottawa for the Historical Land Use Inventory (HLUI) through the *Municipal Freedom of Information and Protection of Privacy Act* (FOI). A response was received from the City on July 14, 2021. A copy of the response is provided in Appendix D.

No records pertaining to the Phase One property were found. With regards to neighbouring properties, the following findings were noted:

- 3000 Navan Road (80 m west) Marcel Brazeau Ltd. is registered as a truck transport industry, as well as having a
 private fuel outlet on the property.
- 6101 Renaud Road (3060 Navan Road, 70 m southwest) Marcel Brazeau Ltd. is registered as a truck transport industry
- East of Page Road (150 m northeast) unnamed sand and gravel pit
- 2983 Navan Road (100 m north) unnamed sand and gravel pit

A heating and cooling company, electrician, and a construction company were also identified in the Phase One study area. Based on the intervening distance, cross-gradient location from the Phase One property, and the low hydraulic conductivity of the native silty clay, none of the records reviewed are considered an environmental concern to the Phase One property.

3.6.3 Environmental Registry

On March 18, 2021, the MECP Environmental Registry website was searched for postings in the vicinity of the Phase One property. No records were found.

3.6.4 Environmental Access

On March 18, 2021, the MECP Environmental Access website was searched for postings within the Phase One study area. The following records were found:

- 3000 Navan Road (80 m south) 2561678 Ontario Inc. registered a waste management in February 2000. Use of this waste management system is limited to the collection, handling and transportation of waste (PCA #58 Waste Disposal and Waste Management, including thermal treatment, landfilling, and transfer of waste, other than use of biosoils as soil conditioners). Waste is limited to leaf/yard waste, non-hazardous solid industrial waste, contaminated soil, non-hazardous spill cleanup material.
- 2995 Navan Road (30 m north) City of Ottawa, ECA for establishment of wastewater infrastructure at the Chapel Hill Park and Ride, including storm sewers and a bioretention basin that discharges to Mud Creek.

An ECA for a waste management system was issued in 2000 for 3000 Navan Road (PCA #58 – Waste Disposal and Waste Management, including thermal treatment, landfilling, and transfer of waste, other than use of biosoils as soil conditioners). Based on the intervening distance, cross-gradient location from the Phase One property, low hydraulic conductivity of the native silty clay, and the EASR which states no on-site storage of wastes is associated with the operation of the waste management system, this is not an environmental concern to the Phase One property.

12714001 Canada Inc, Phase One Environmental Site Assessment 2983 Navan Road, Ottawa, Ontario OTT-21004744-A0 March 26, 2021 (revised July 16, 2021)

3.6.5 Hazardous Waste Information Network

On March 16, 2020, the MECP Hazardous Waste Information Network (HWIN) website was searched for registered waste generators within the Phase One study area. Search parameters included "Navan", "Perrault", "Brazeau", "Leblanc", and all of the generator numbers provided in the ERIS report. The following records were found:

Location (Generator)	Proximity to the Site	Wastes Generated	Years	Environmental Concern to Site and Rationale
1310034 Ontario Inc. 2624 Page Road (ON4100513)	250 m north	Paint/pigment/coating residues	2011 to 2021	No, based on the intervening distance and the down-gradient location of the property.

3.6.6 Records of Site Condition

On March 18, 2021, the MECP Brownfields Registry website was searched for postings of Records of Site Condition (RSC) within the Phase One study area. No records were found.

3.6.7 Coal Gasification Plants

Documents entitled *Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario* prepared by the MECP and *Inventory of Coal Gasification Plant Waste Sites in Ontario* prepared by Intera Technologies Ltd. were reviewed. There were no coal gasification plants identified within the Phase One study area.

3.6.8 PCB Storage Sites

Documents entitled National Inventory of PCBs in Use and PCB Wastes in Storage in Canada, 2003 Annual Report prepared by Environment Canada and Ontario Inventory of PCB Storage Sites prepared by the MECP were reviewed. No records pertaining to PCB storage sites were identified within the Phase One study area.

3.6.9 Waste Disposal Sites

Documents entitled Old Landfill Management Strategy, Phase 1, Identification of Sites, City of Ottawa, Ontario prepared by Golder Associates Ltd. and Waste Disposal Site Inventory prepared by the MECP were reviewed. No former landfills or waste disposal sites were identified within the Phase One study area.

3.6.10 Street Directories

Records pertaining to the site were requested from the EcoLog Environmental Risk Information Services (or EcoLog ERIS) for the municipal street directories in the Phase One study area. EcoLog ERIS is an environmental database and information service provider.

As a result of the COVID-19 pandemic, the government has closed various institutions which limits EXP's ability to access government libraries and archives. As such the city directories available for review were limited at this time.

Partial city directories for 1988, 1995, 2001, 2005, and 2011 were reviewed. The following was noted:

- No city directories for this area are available prior to 1988.
- All of listings in the available city directories are for residential properties, with the exception of DJ Snack Bar listed for 3079 Navan Road in 1985.

12714001 Canada Inc, Phase One Environmental Site Assessment 2983 Navan Road, Ottawa, Ontario OTT-21004744-A0 March 26, 2021 (revised July 16, 2021)

Based on a review of the aerial photographs (Section 3.8.1) and current observations of the surrounding properties (section 5.14) EXP does not anticipate any additional PCAs on nearby properties that are not already addressed in this report.

3.7 EcoLog ERIS Database Search

A search of provincial and federal databases for records pertaining to the Phase One property and properties within the Phase One study area was conducted by EcoLog ERIS. EXP has confirmed neither the completeness nor the accuracy of the records that were provided. A summary of the more significant findings is provided below. A copy of the EcoLog ERIS report is provided in Appendix E.

Location	Proximity to the Site	Description	Database	Environmental Concern to Site (Yes/No) & Rationale
3000 Navan	80 m south	Laurent LeBlanc Ltd., registered waste generator of aliphatic solvents, oil skimmings and sludges, petroleum distillates, and waste oils and lubricants from 1994 to 2020 (ON1875101, ON4141965).	GEN	No, due to the distance and cross-gradient location from the Site.
Road		Use of this waste management system is limited to the collection, handling and transportation of waste. Waste is limited to leaf/yard waste, non- hazardous solid industrial waste, contaminated soil, non-hazardous spill cleanup material.	CA, EASR	No, no storage of wastes is associated with the operation of the waste management system
3060 Navan Road	140 m south	Marcel Brazeau Ltd., registered waste generator of light fuels, aliphatic solvents, light fuels, and waste oils and lubricants from 1989 to 2009 (ON1212200). Private fuel outlet, two single wall gasoline ASTs	FST GEN SPL	No, based on the intervening distance, cross-gradient location from the Phase One property, and the low hydraulic conductivity of the native silty clay
Navan Road and Paige Road	140 m southeast	February 2, 1996 OC Transpo vehicle spilled 5 L of hydraulic oil to road.	SPL	No, due to the small volume of contaminant spilled.
Navan Road and Renaud Road	140 m southeast	June 4, 2012 motor vehicle accident spilled 265 L of diesel fuel to ditch.	SPL	No, due to the distance from the Site.
2624 Paige Road	250 m north	1310034 Ontario Inc. (Cobb National Coatings), registered waste generator of paint/pigment/ coating residues from 2011 to 2020 (ON4100513).	GEN	No, due to the distance from the Site.

The following entries from the EcoLog ERIS report were reviewed and summarized below:

• In addition to the above, The CA and ECA database identified three records for the Phase One study area. These records were for municipal and private sewage works;

• The TSSA Historic Incidents database and Pipeline Incidents database identified four records in the study area. All of the records were for natural gas pipeline strikes. As natural gas dissipates rapidly, the pipeline strike is unlikely to pose an environmental concern to the Phase One property;

- The Ontario Spills database also identified four records for natural gas leaks. As natural gas dissipates rapidly, the pipeline strike is unlikely to pose an environmental concern to the Phase One property;
- In addition to the above, the Environmental Activity and Sector Registry identified one record for the Phase One study area. The record was for construction dewatering; and,
- There were 33 records found in the Water Well Information System (WWIS) database for the Phase One study area. Three of the records were for monitoring wells, three records were for abandoned wells and the remainder were for potable wells.

Based on the review of the ERIS report one additional PCA was identified at 3060 Navan Road. A private fuel outlet was present on the property (**PCA #28** – Gasoline and Associated Products Storage in Fixed Tanks). Based on the intervening distance, cross-gradient location from the Phase One property, and the low hydraulic conductivity of the native silty clay, this is not an environmental concern to the Phase One property.

3.8 Physical Setting Sources

3.8.1 Aerial Photographs

Aerial photographs dated 1965, 1976, 1991, 1999, 2008, 2011, and 2019 were available for review on the City of Ottawa website. Aerial photographs dated prior to 1965 were not available for review. The following table summarizes the development and land use history of the Phase One property and adjacent properties as depicted on the reviewed aerial photographs. Copies of the aerial photographs are provided in Appendix F.

Year	Details
1965	The Phase One property is undeveloped. The groundcover on the north part of the Phase One property appears to have been cleared. The south part of the Phase One property appears to have been formerly used for agricultural purposes. Navan Road and Pagé Road are present to the west and east of the Phase One property. Single family residences are present bordering the west side of the Phase One property fronting Navan Road.
1976	The Phase One property appears to be similarly developed to the 1965 aerial photograph. Single family residences have been constructed east of the Site, fronting Paige Road. A hydro corridor has been developed north of the Site.
1991	The Phase One property appears to be completely tree covered. The study area appears to be similarly developed to the 1976 aerial photograph. Residential development is underway on the north side of the hydro corridor.
1999	The Phase One property and study area appear to be similarly developed to the 1991 aerial photograph.
2002	The Phase One property and study area appear to be similarly developed to the 1999 aerial photograph. Three ASTs are present at 3000 Navan Road. Three ASTs are also present at 3060 Navan Road. Both the property at 3000 Navan Road and 3060 Navan Road are yards for construction and haulage companies.
2008	The Phase One property appears to be similarly developed to the 2002 aerial photograph. A residential subdivision is under construction on the west side of Navan Road.
2011	The Phase One property and study area appear to be similarly developed to the 2008 aerial photograph. Stormwater management ponds have been constructed north of the Site. The fuel tanks at 3060 Navan Road appear to have been removed.
2019	The Phase One property appears to be similarly developed to the 2011 aerial photograph. Brian Coburn Boulevard and the Chapel Hill Park and Ride have been constructed north of the Site.

Based on the review of the aerial photographs, three PCAs were identified at 3000 Navan Road and 3060 Navan Road. A private fuel outlet was present at 3060 Navan Road (**PCA #28** – Gasoline and Associated Products Storage in Fixed Tanks). Both 3000 Navan Road and 3060 Navan Road are yards for construction and haulage companies (**PCA #11** – Commercial

12714001 Canada Inc, Phase One Environmental Site Assessment 2983 Navan Road, Ottawa, Ontario OTT-21004744-A0 March 26, 2021 (revised July 16, 2021)

Trucking and Container Terminals). Based on the intervening distance, cross-gradient location from the Phase One property, and the low hydraulic conductivity of the native silty clay, this is not an environmental concern to the Phase One property. No other PCAs were identified in the aerial photographs that were not previously addressed.

3.8.2 Topography, Hydrology, Geology

Bedrock and surficial geology were reviewed via the Google Earth applications published by the Ontario Ministry of Energy, Northern Development and Mines. The bedrock geology application is available via www.mndm.gov.on.ca/en/mines-andminerals/applications/ogsearth/bedrock-geology and was last modified on March 19, 2018. The surficial geology application is available via www.mndm.gov.on.ca/en/mines-and-minerals/applications/ogsearth/surficial-geology and was last modified on May 23, 2017.

Based on these applications, bedrock in the general area of the Phase One property consists of dolostone and limestone of the Ottawa Formation. Beneath any fill, the site is underlain is clay and silt over erosional terraces. Ground surface is approximately 89 metres above sea level (masl). Based on the site visit, the local topography slopes downwards to the southwest.

3.8.3 Fill Materials

There was no evidence of any imported fill present on the Site.

3.8.4 Water Bodies and Areas of Natural Significance

The nearest surface water body to the Phase One property is Mud Creek located approximately 70 m north of the Site. The inferred groundwater flow direction is north towards the creek.

There are no Area of Natural Significance (ANSI) within the Phase One study area, according to the Ministry of Natural Resources and Forestry Natural Heritage website (www.gisapplication.lrc.gov.on.ca/mamnh/Index.html).

3.8.5 Well Records

The Ontario well records website (www.ontario.ca/environment-and-energy/map-well-records water wells) was accessed. There were 31 well records within the Phase One study area, 30 of which are for potable wells. None of the records are for the Site. Surrounding properties that have been recently developed are serviced by municipal water. Private wells may still be in use in some of the older residences in the Phase One study area.

It is acknowledged that the number of wells within the Phase One study area identified by EXP when searching the database doesn't match exactly the number of wells documented in the ERIS report. The discrepancy may be related to actual date of search or centroid of area searched and does not affect the conclusions presented in this report.

There are no oil, gas, or salt wells within the Phase One study area, according to the Oil, Gas & Salt Resources Library (maps.ogsrlibrary.com/wells/).

3.9 Site Operating Records

No site operating records were available for review.

12714001 Canada Inc, Phase One Environmental Site Assessment 2983 Navan Road, Ottawa, Ontario OTT-21004744-A0 March 26, 2021 (revised July 16, 2021)

4.0 Interviews

The purpose of interviews is to obtain information to assist in identifying areas of potential environmental concern and identify details of potentially contaminating activities or potential contaminant pathways, in, on or below the Phase One property.

As the Phase One property was vacant, there was no person available during the ESA who was knowledgeable about the history of the subject site. The owner of the property could not be contacted.

11

5.0 Site Reconnaissance

5.1 General Requirements

On March 16, 2021, Ms. Leah Wells, of EXP conducted the Phase One property visit. The site visit was conducted in accordance with EXP's internal health and safety protocols and with the Ministry of Labour health and safety regulations. The purpose of the site visit was to assess the current conditions of the Phase One property.

The general environmental management and housekeeping practices at the Phase One property were reviewed as part of this assessment insofar as they could impact the environmental condition of the property; however, a detailed review of regulatory compliance issues was beyond the scope of EXP's investigation.

Observations of the subject property and surrounding properties were made. The site reconnaissance began at approximately 1:00 p.m. and lasted approximately ½ hour. The weather was approximately 3 °C and sunny. Adjacent properties were observed from within the grounds of the Phase One property, as well as publicly accessible areas. Photographs documenting the site visit are included in Appendix G.

5.2 Specific Observations at the Phase One Property

The ground cover at the Phase One property consists primarily of trees.

5.2.1 Buildings and Structures

There are no buildings or structures present on the Phase One property.

5.2.2 Site Utilities and Services

The Phase One property is not currently serviced. However, surrounding properties are fully serviced by water, sewer, electricity, natural gas, and telecommunications.

5.3 Storage Tanks

5.3.1 Underground Storage Tanks

No UST were observed on the Phase One property and there was no evidence of historical UST.

5.3.2 Above Ground Storage Tanks

No AST were observed on the Phase One property and there was no evidence of historical AST.

5.4 Chemical Storage Handling and Floor Condition

No chemicals are stored at the Phase One property.

5.5 Areas of Stained Soil, Pavement or Stressed Vegetation

The property was snow covered at the time of the Site visit. Trees present on the property were dormant.

12714001 Canada Inc, Phase One Environmental Site Assessment 2983 Navan Road, Ottawa, Ontario OTT-21004744-A0 March 26, 2021 (revised July 16, 2021)

5.6 Fill and Debris

No fill appears to be present on the Phase One property.

5.7 Air Emissions

As the Phase One property was vacant, there was no evidence of air emissions.

5.8 Odours

No strong odours were present during the site visit.

5.9 Noise

No excessive noise was heard during the site visit.

5.10 Other Observations

There were no pits and lagoons, no railways or spurs and no unidentified substances observed on the Phase One property.

Surrounding properties within the Phase One study area are used for commercial purpose to the north and west and mixed use residential and commercial to the east and south of the Phase One property.

5.11 Special Attention Items, Hazardous Building Materials and Designated Substances

No buildings were present on the Phase One property. Therefore, there was no evidence of any special attention items, hazardous building materials or designated substances (asbestos, zone depleting substances, lead, mercury, polychlorinated biphenyls (PCB), urea formaldehyde foam insulation, mould, or other special attention substances).

5.12 Abandoned and Existing Wells

There is no evidence that there are any water wells on the Phase One property.

5.13 Roads, Parking Facilities and Right of Ways

Vehicular access to the Phase One property is from Navan Road.

5.14 Adjacent and Surrounding Properties

A visual inspection of the adjacent properties and properties within 250 m of the Phase One property was conducted from publicly accessible areas to identify the occupants and document the uses and sources of potential environmental concerns that may impact the Phase One property. Refer to Figure 3 in Appendix C for the adjacent land uses.

The following land uses border the Phase One property:

- North: Brian Coburn Boulevard, followed by Chapel Hill South Park and Ride and a hydro corridor;
- West: Residential and commercial (Laurent Leblanc Ltd.);
- East: Residential; and
- South: Residential.

12714001 Canada Inc, Phase One Environmental Site Assessment 2983 Navan Road, Ottawa, Ontario OTT-21004744-A0 March 26, 2021 (revised July 16, 2021)

5.15 Enhanced Investigation Property

Ontario Regulation 153/04 defines an enhanced investigation property as a "property that is used, or has ever been used, in whole or in part for an industrial use or any of the following commercial uses: a garage; a bulk liquid dispensing facility, including a gasoline outlet; or, for the operation of dry-cleaning equipment."

Therefore, in accordance with Regulation 153/04, the property is not considered to be an enhanced investigation property.

5.16 Summary and Written Description of Investigation

Based on the findings of this investigation, PCAs have been identified in the Phase One study area, however, all of the PCA are off-site and none of them pose an environmental concern to the Phase One property. Therefore, there were no APEC identified.

6.0 Review and Evaluation of Information

6.1 Current and Past Uses

Based on a review of historical aerial photographs, historical maps, fire insurance plans and other records, it appears that the Phase One property has always been vacant.

6.2 Potentially Contaminating Activity

Ontario Regulation (O. Reg.) 153/04 defines a Potential Contaminating Activity (PCA) as one of fifty-nine (59) industrial operations set out in Table 2 of Schedule D that occurs or has occurred in the Phase One study area. The following PCAs were identified in the Phase One study area:

- **PCA #11** Commercial Trucking and Container Terminals; 3000 Navan Road (located 80 m west of the Phase One property), on-site service garage for equipment maintenance and repair;
- **PCA #11** Commercial Trucking and Container Terminals; 3060 Navan Road (located 70 m southwest of the Phase One property), on-site service garage for equipment maintenance and repair;
- PCA #28 Gasoline and Associated Products Storage in Fixed Tanks; 3000 Navan Road (located 80 m west of the Phase One property), three ASTs;
- PCA #28 Gasoline and Associated Products Storage in Fixed Tanks; 3060 Navan Road (located 70 m southwest of the Phase One property), three ASTs;
- PCA #58 Waste Disposal and Waste Management, including thermal treatment, landfilling, and transfer of waste, other than use of biosoils as soil conditioners; 3000 Navan Road (located 80 m west of the Phase One property), ECA for waste management system;

6.3 Areas of Potential Environmental Concern

Ontario Regulation 153/04 defines an APEC as an area on a property where one or more contaminants are potentially present. Based on the intervening distance, cross-gradient location from the Phase One property, and the low hydraulic conductivity of the native silty clay, none of the PCAs identified in the Phase One study area are an environmental concern to the Phase One property. Therefore, no APECs were identified.

6.4 Phase One Conceptual Site Model

To develop a conceptual model for the Phase One property, the following physical characteristics and pathways were considered. A conceptual site model (CSM) showing the topography of the site, inferred groundwater flow, general site features, APEC, and PCA is shown in Figure 3.

6.4.1 Buildings and Structures

No buildings or structures are present on the Phase One property.

6.4.2 Water Bodies and Groundwater Flow Direction

The nearest surface water body to the Phase One property is Mud Creek located approximately 70 m north of the Site. The inferred groundwater flow direction is north towards the creek.

6.4.3 Areas of Natural Significance

There are no ANSI within the Phase One study area.

6.4.4 Water Wells

There were 31 well records within the Phase One study area, 30 of which are for potable wells. None of the records are for the Site. Surrounding properties that have been recently developed are serviced by municipal water. Private wells may still be in use in some of the older residences in the Phase One study area.

6.4.5 Potentially Contaminating Activity

The following off-site PCA were identified:

- PCA #11 Commercial Trucking and Container Terminals
- PCA #28 Gasoline and Associated Products Storage in Fixed Tanks
- PCA #58 Waste Disposal and Waste Management, including thermal treatment, landfilling, and transfer of waste, other than use of biosoils as soil conditioners

No on-Site PCA were identified.

6.4.6 Areas of Potential Environmental Concern

No APEC were identified on the Phase One property. Based on the intervening distance, cross-gradient location from the Phase One property, and the low hydraulic conductivity of the native silty clay, none of the PCAs identified in the Phase One study area are an environmental concern to the Phase One property.

6.4.7 Underground Utilities

The Phase One property is not currently serviced. However, surrounding properties are fully serviced by water, sewer, electricity, natural gas, and telecommunications.

6.4.8 Subsurface Stratigraphy

Bedrock in the general area of the Phase One property consists of dolostone and limestone of the Ottawa Formation. Beneath any fill, the site is underlain is clay and silt. Ground surface is approximately 89 metres above sea level (masl). Based on the site visit, the local topography slopes downwards to the southwest.

6.4.9 Uncertainty Analysis

The CSM is a simplification of reality, which aims to provide a description and assessment of any areas where potentially contaminating activity that occurred within the Phase One study area may have adversely affected the Phase One property. All information collected during this investigation, including records, interviews, and site reconnaissance, has contributed to the formulation of the CSM.

Information was assessed for consistency, however EXP has confirmed neither the completeness nor the accuracy of any of the records that were obtained or of any of the statements made by others. All reasonable inquiries to obtain accessible information were made, as required by Schedule D, Table 1, Mandatory Requirements for Phase One Environmental Site Assessment Reports. The CSM reflects our best interpretation of the information that was available during this investigation.

12714001 Canada Inc, Phase One Environmental Site Assessment 2983 Navan Road, Ottawa, Ontario OTT-21004744-A0 March 26, 2021 (revised July 16, 2021)

7.0 Conclusions

The Qualified Person who oversaw this work, Patricia Stelmack, M.Sc., P.Eng., does not recommend that a Phase Two ESA be conducted since no APECs were identified on the Phase One property.

The Qualified Person can confirm that the Phase One Environmental Site Assessment was conducted per the requirements of Ontario Regulation 153/04, as amended, and in accordance with generally accepted professional practices.

9.0 Limitation of Liability, Scope of Report, and Third Party Reliance

Basis of Report

This report ("Report") is based on site conditions known or inferred by the investigation undertaken as of the date of the Report. Should changes occur which potentially impact the condition of the site the recommendations of EXP may require reevaluation. Where special concerns exist, or 12714001 Canada Inc. ("the Client") has special considerations or requirements, these should be disclosed to EXP to allow for additional or special investigations to be undertaken not otherwise within the scope of investigation conducted for the purpose of the Report.

Reliance on Information Provided

The evaluation and conclusions contained in the Report are based on conditions in evidence at the time of site inspections and information provided to EXP by the Client and others. The Report has been prepared for the specific site, development, building, design or building assessment objectives and purpose as communicated by the Client. EXP has relied in good faith upon such representations, information and instructions and accepts no responsibility for any deficiency, misstatement or inaccuracy contained in the Report as a result of any misstatements, omissions, misrepresentation or fraudulent acts of persons providing information. Unless specifically stated otherwise, the applicability and reliability of the findings, recommendations, suggestions or opinions expressed in the Report are only valid to the extent that there has been no material alteration to or variation from any of the information provided to EXP so that it can be reviewed and revisions to the conclusions and/or recommendations can be made, if warranted.

Standard of Care

The Report has been prepared in a manner consistent with the degree of care and skill exercised by engineering consultants currently practicing under similar circumstances and locale. No other warranty, expressed or implied, is made. Unless specifically stated otherwise, the Report does not contain environmental consulting advice.

Complete Report

All documents, records, data and files, whether electronic or otherwise, generated as part of this assignment form part of the Report. This material includes, but is not limited to, the terms of reference given to EXP by the Client, communications between EXP and the Client, other reports, proposals or documents prepared by EXP for the Client in connection with the site described in the Report. In order to properly understand the suggestions, recommendations and opinions expressed in the Report, reference must be made to the Report in its entirety. EXP is not responsible for use by any party of portions of the Report.

Use of Report

The information and opinions expressed in the Report, or any document forming part of the Report, are for the sole benefit of the Client. No other party may use or rely upon the Report in whole or in part without the written consent of EXP. Any use of the Report, or any portion of the Report, by a third party are the sole responsibility of such third party. EXP is not responsible for damages suffered by any third party resulting from unauthorised use of the Report.

Report Format

Where EXP has submitted both electronic file and a hard copy of the Report, or any document forming part of the Report, only the signed and sealed hard copy shall be the original documents for record and working purposes. In the event of a dispute or discrepancy, the hard copy shall govern. Electronic files transmitted by EXP utilize specific software and hardware systems. EXP makes no representation about the compatibility of these files with the Client's current or future software and hardware systems. Regardless of format, the documents described herein are EXP's instruments of professional service and shall not be altered without the written consent of EXP.

Appendix A: Qualifications of Assessors

12714001 Canada Inc, Phase One Environmental Site Assessment 2983 Navan Road, Ottawa, Ontario OTT-21004744-A0 March 26, 2021 (revised July 16, 2021)

Qualifications of Assessors

EXP provides a full range of environmental services through a full-time Environmental Services Group. EXP's Earth and Environment Group has developed a strong working relationship with clients in both the private and public sectors and has developed a positive relationship with Ontario Ministry of the Environment, Conservation and Parks. Personnel in the numerous branch offices form part of a large network of full-time dedicated environmental professionals in the EXP organization.

Patricia Stelmack, M.Sc., P.Eng., is a Senior Chemical Engineer/Senior Project Manager who has been working in the environmental field as a consultant and in industry since 1997. Since joining EXP (formerly Barenco Inc.) in 2000, Ms. Stelmack has conducted and managed over 1,000 environmental assessment and remediation projects. Ms. Stelmack earned her B.Sc. in biochemistry and B.A.Sc. in chemical engineering at the University of Ottawa and earned her M.Sc. in chemical and materials engineering at the University of Alberta. She is licensed as a professional engineer in Ontario, Manitoba, and Saskatchewan and is a Qualified Person, as defined in Ontario Regulation 153/04.

Leah Wells, B.A.Sc., P.Eng. has four years of experience in the environmental consulting field. She has worked on numerous Phase I Environmental Site Assessments (ESA); Phase II ESAs, completing soil and groundwater sampling, soil vapour sampling, assisting in report preparation and data entry and analysis. She is licensed as a professional engineer in Ontario.

Kathy Radisch EXP Services Inc. 100-2650 Queensview Drive Ottawa, ON K2B 8H6

Sent via email [kathy.radisch@exp.com]

Dear Ms. Radisch,

Re: Information Request 2983 Navan Road, Ottawa, Ontario ("Subject Property")

Internal Department Circulation:

The Planning, Infrastructure and Economic Development Department has the following information in response to your request for information regarding the Subject Property:

- Disposals and Environmental Remediation Unit: The City's Environmental Remediation Unit has environmental records on file pertaining to the subject property noted above either directly on or adjacent to the subject property. To submit requests for information under the Municipal Freedom of Information and Protection of Privacy Act, please visit <u>https://ottawa.ca/en/city-hall/accountabilityand-transparency/accountability-framework/freedom-information-and-protectionprivacy/access-information
 </u>
- Solid Waste Services: The subject property is within 2 kilometers of the WSI Landfill located at 3354 Navan Road.

Documents Provided:

HLUI Summary Report and HLUI Map

The HLUI Summary Report Excel spreadsheet identifies HLUI area, point and line features within 250 metres of the Subject Property, as shown on the provided HLUI Map PDF. Within 500 metres of the Subject Property, landfills and Environmental Risk Management Area (ERMA) are also identified if applicable.

Additional information may be obtained by contacting:

Ontario's Environmental Registry

The Environmental Registry found at <u>https://ero.ontario.ca/</u> contains "public notices" about environmental matters being proposed by all government ministries covered by the Environmental Bill of Rights. The public notices may contain information about proposed new laws, regulations, policies and programs or about proposals to change or eliminate existing ones. By using keys words i.e. name of proponent/owner and the address one can ascertain if there is any information on the proponent and address under the following categories: Ministry, keywords, notice types, Notice Status, Acts, Instruments and published date (all years).

The Ontario Land Registry Office

Registration of real property is recorded in the Ontario Land Registry Office through the Land Titles Act or the Registry Act. Documents relating to title and other agreements that may affect your property are available to the public for a fee. It is recommended that a property search at the Land Registry Office be included in any investigation as to the historic use of your property. The City of Ottawa cannot comment on any documents to which it is not a party.

Confirmation of Registration

Registration Number: R-004-5110517687 Version Number: 001 Date Registration Filed: Jul 04, 2018 19:43:03 PM

Dear Sir/Madam,

2561678 ONTARIO INC.

17113 MCLEAN Road PO BOX 135 MOOSE CREEK ON K0C 1W0

You have registered, in accordance with Section 20.21(1)(a) of the *Environmental Protection Act*, the use, operation, establishment, alteration, engagement or extension or replacement of a waste management system serving the Province of Ontario. The Waste Management System storage yard related to this registration is located at:

3000 NAVAN Road ORLEANS ON K1C 7G4

Please note that the Waste Management System is subject to the applicable provisions of O.Reg 245/11 and O. Reg. 351/12.

The activity related information provided during the registration process is included as part of the confirmation of registration as schedule 'A'.

Dated on Jul 04, 2018

Director

Environmental Approvals Access and Service Integration Branch Ministry of the Environment and Climate Change 135 St. Clair Avenue West, 1st Floor Toronto ON M4V 1P5

Any questions related to this registration and the Environmental Activity and the Sector Registry should be directed to:

Schedule 'A'

Part 3 . Activity Information		
3.1 This form is to be used to register the use, operation, establishment, alteration, enlargement or extension of a waste management system that is a waste transportation system. Please confirm that you will be engaging in one or more of these activities.	Ves Yes	No
3.2 For the waste management system that is the subject of this registration, please confirm that ALL of the	following stat	ements apply:
(a) The waste management system involves only the collection, handling, transportation and transfer of waste by waste transportation vehicle (truck).	Ves Yes	No
(b) The waste transportation system does not include any on-truck processing of waste.	V Yes	No
3.3 Does the waste management system involve the management of any of the following waste types (as th meaning of Regulation 347 of the Environmental Protection Act, or in the case of biomedical waste or treate Ministry of the Environment.s Guideline C-4: The Management of Biomedical Waste in Ontario)?		
(a) Hazardous waste*	Yes	No No
(b) Liquid industrial waste	Yes	No
(c) Biomedical waste or treated biomedical waste	Yes	No
(d) Asbestos waste	Yes	√ No

* Please note that hazardous waste should also be interpreted to include waste that was characteristic waste but that has been treated so that it is no longer characteristic waste, if the waste may not be disposed of by land disposal under subsection 79 (1) of Regulation 347 of the Revised Regulations of Ontario, 1990 made under the Act.

3.4 Please select in the table below all of the categories of waste that will be transported by the system. Note that the responses given in question 3.3 should be true for any of the waste categories selected.

(a) Blue Box Materials	
(b) Domestic Sources	
(c) Dewatered Catch Basin Clean-Out Material	
(d) Waste from Food Processing/Preparation Operations	
(e) Leaf/Yard Waste	\checkmark
(f) Tires	
(g) Commercial Waste	
(h) Wood Waste	
(i) Waste Wash Water	
(j) Non-hazardous Solid Industrial Waste	\checkmark
(k) Contaminated Soil	\checkmark
(I) Processed Organics	
(m) Hauled Sewage	
(n) Non-hazardous Spill Cleanup Material	\checkmark

(o)	Describe a	any other	waste types	managed by	the system, if	applicable:

3.5 Will waste be stored at any truck storage yard or other location as part of the operation of the waste management system?	Yes	No
3.6 (a) How many waste transportation vehicles (trucks) are included in the waste management system?	1	
(b) Does the waste management system involve transportation of waste into or out of the Province of Ontario?	Yes	No
(c) Please indicate the jurisdictions from which the waste transportation vehicle(s) normally enter/exit Ontario Please check all that apply:		
Quebec	Enter from	m Exit to
Manitoba	Enter fro	m Exit to
New York	Enter fro	m Exit to
 Michigan	Enter fro	m Exit to
Minnesota	Enter fro	mExit to

(d) Please indicate all jurisdictions in which waste is transferred to a storage or disposal site outside of Ontario.

Please check all that apply:

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Certificate #:	4785-4XFRCP
Application Year:	01
Issue Date:	6/8/01
Approval Type:	Municipal & Private sewage
Status:	Approved
Application Type:	New Certificate of Approval
Client Name:	Corporation of the City of Ottawa
Client Address:	110 Laurier Avenue West
Client City:	Ottawa
Client Postal Code:	K1P 1J1
Project Description:	The works consist of installation of about 240 m of twin forcemains (300 mm and 400 mm dia.) that will become part of the future Forest Valley P.S. forcemains. The works will be done at this time to take advantage of the road construction. The works include connection to the existing M. H. (bulkheads will be provided at stub ends) and installation of the drain chamber. The forcemains is located within Page Road from approximately 40 m south of Montpelier PL to approximately 280 m south of Montpelier PL.

<u>Site:</u> Taggart Construction Limited Ottawa ON

012802

File No: Crown Brief No: Court Location: Publication City: Publication Title: Act: Act(s): First Matter: Second Matter: Investigation 1: Investigation 2: Penalty Imposed: Description:

Taggart Construction Limited, Paterson Group Inc. and Robert Passmore have been fined \$5,000 each, totalling \$15,000 plus a victim fine surcharge, after pleading guilty on January 15, 2009 to violations under the Ontario Water Resources Act. Taggart Construction Limited and Paterson Group Inc. were convicted of failing to comply with a Provincial Officer Order by taking more than 50,000 litres of water per day, and Mr. Passmore was convicted of giving false or misleading information to the ministry. The parties were given six months to pay the fine. The Court heard that Taggart Construction Limited was contracted by a developer to install municipal services at a subdivision in Ottawa which required dewatering activities. After being issued a Provincial Officer Order to restrict water taking activities to below 50,000 litres per day until a permit had been obtained, Taggart hired Paterson Group Inc. to submit an application for the permit. Taggart then pumped over 50,000 litres of water based on information provided by Paterson Group employee, Mr. Passmore, that the go ahead to pump had been given when a permit had yet to be issued. In an interview with ministry investigators, Mr. Passmore denied giving Taggart verbal approval to pump in excess of 50,000 litres per day. Taggart Construction Limited, Paterson Group Inc. and Mr. Passmore were charged following an investigation by the Ministry of the Environment's Investigations and Enforcement Branch.

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. Note: Databases denoted with "*" indicates that the database will no longer be updated. See the individual database description for more information.

Abandoned Aggregate Inventory:

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.* Government Publication Date: Sept 2002*

Aggregate Inventory:

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage. Government Publication Date: Up to Sep 2020

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Oct 2018

Abandoned Mine Information System:

Anderson's Waste Disposal Sites:

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks:

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated. Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type. Government Publication Date: 1999-Dec 31, 2020

Borehole: BORE A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW. Government Publication Date: 1875-Jul 2018

Certificates of Property Use:

201

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) -Certificate of Property Use. Government Publication Date: 1994-Jan 31, 2020

Government Publication Date: 1989-Nov 2020

Canadian Natural Gas Vehicle Alliance. Government Publication Date: Dec 2012 -Dec 2020

Inventory of Coal Gasification Plants and Coal Tar Sites:

Compliance and Convictions: Provincial CONV This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.* Government Publication Date: Apr 1987 and Nov 1988*

or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce

Private Compressed Natural Gas Stations: refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the

(i.e. fractionation, solvent extraction, crystallization, etc.). Government Publication Date: 1999-Jan 31, 2020

Chemical Register: Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals. Government Publication Date: 1999-Dec 31, 2020

CNG Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas

Government Publication Date: Jul 31, 2020 Chemical Manufacturers and Distributors: Private CHEM This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities. Government Publication Date: Jan 2004-Dec 2018

operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA).

Provincial CFOT

Commercial Fuel Oil Tanks:

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this

listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information. Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Dry Cleaning Facilities:

Government Publication Date: 1985-Oct 30, 2011*

Please refer to those individual databases for any information after Oct.31, 2011.

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can

Environmental Registry: Provincial FBR The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data

activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database. Government Publication Date: Oct 2011-Dec 31, 2020

Provincial Environmental Activity and Sector Registry: EASR On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain

regulatory agency under Access to Public Information.

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed

includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994-Jan 31, 2020

company map; or from submitted a "Report of Work". Government Publication Date: 1886 - Sep 2020

Provincial Environmental Compliance Approval: **FCA** On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste

Disposal Sites please refer to the WDS database. Government Publication Date: Oct 2011- Dec 31, 2020

Federal Environmental Effects Monitoring: EEM The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of database provides information on the mill name, geographical location and sub-lethal toxicity data.

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed. Contaminated Sites on Federal Land:

Federal Convictions:

FCON Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty. Government Publication Date: 1988-Jun 2007*

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Sep 2020

Fisheries & Oceans Fuel Tanks:

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation. Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS): A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and

Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fuel Storage Tank - Historic:

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Jul 31, 2020

Greenhouse Gas Emissions from Large Facilities:

Provincial **TSSA Historic Incidents:** HINC List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here. Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks: IAFT The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks:

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing in a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Jul 31, 2020

Landfill Inventory Management Ontario:

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status. Government Publication Date: Feb 28, 2019

Canadian Mine Locations: MINE This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Mineral Occurrences:

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Jan 2020

National Analysis of Trends in Emergencies System (NATES):

significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released. Government Publication Date: 1974-1994*

Non-Compliance Reports: NCPL The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

National Environmental Emergencies System (NEES):

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003*

National PCB Inventory:

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008*

National Pollutant Release Inventory:

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances. Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

<u>Map Key:</u> The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

<u>Unplottables:</u> These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.
