EXECUTIVE SUMMARY

IMPORTANT: *This executive summary provides an overview of the main findings of the study to which it pertains. This executive summary does not provide a comprehensive report, and its review should not be considered a substitute for reading the report in its entirety.*

Omni-McCann Inc. (OMI) was retained by March and Main Developments Inc. (March & Main) to conduct a Phase One Environmental Site Assessment (phase one ESA) of the combined properties located at 555, 591, 595, and 603 March Road in Ottawa, Ontario (herein referred to as the 'phase one property'). The phase one property is owned by March and Main Developments Inc. and 519 and 595 March Road Developments Inc. (herein referred to as the 'Owners') and has a variety of uses and structures. It is OMI's understanding that the phase one ESA is required by the Owners in order to redevelop the phase one property into a mixed use residential/commercial complex.

The phase one property is located along the west side of March Road running south from the intersection of Terry Fox Drive and March Road in the Kanata Technology Park of Ottawa, Ontario. A brief description of each municipal address associated with the phase one property is provided below:

- **555 March Road:** The eastern half consists of landscaped areas, a single building, and parking/drive lanes connected to March Road and 591 March Road. The building is a single storey with an approximate area of 1,654.4 m² and sits between the landscaped area adjacent to March Road and Parking to the rear (west) of the building. Presently, the building is used as a fitness centre. A drive land connects to the adjacent municipal address to the north, 591 March Road, via the rear parking area. The remainder of the site is undeveloped vacant land that wraps around the western boundary of 591 March Road.
- **591 March Road:** This portion of the phase one property is surrounded on the south and west by 555 March Road and on the north by 595 March Road. There is a single, multi-unit commercial plaza in an 'L' shape running along the north and west boundaries. The plaza is single storey with an approximate area of 1,748 m² with parking and drive lanes occupying the remainder of this portion of the phase one property.
- **595 March Road:** This address consists of vacant, undeveloped land running from March Road to the east to Hanes Road and a municipal walkway to the west. There are no permanent structures, and the property has significant vegetation growth.
- **603 March Road:** This address occupies the northern most portion of the phase one property with a single, two-storey building, paved parking lot, and landscaped areas. The building is approximately 7,060.6 m² in area and primarily used as office space and high-tech electronic component research and development. This portion of the property extends from

March Road to a municipal walkway on the western boundary. The parking lot extends from the structure to the western boundary of the phase one property.

As per Part V, Section 16 of O. Reg. 153/04, OMI has reviewed, evaluated and interpreted the information obtained from the completion of a records review, interviews with persons knowledgeable of site operations and site history, and a site reconnaissance in order to identify any current and/or historical activities at the phase one property or within the surrounding phase one study area which could have the potential to adversely affect the environmental condition of the phase one property. Based on this evaluation, OMI has identified eight areas of potential environmental concern (APECs) and associated contaminants of potential concern (COPCs) on or under the phase one property as follows:

APEC A: Interior and immediately surrounding area of the 555 March Road building.

- Former (1985 – 2005) use of the building as an electronic component manufacturing facility.
- COPCs associated to APEC A are volatile organic compounds (VOCs).

APEC B: Interior and immediately surrounding area of the 591 March Road building; area of known contamination north of building.

- Former (1991 - 2000) dry cleaning operation where chemicals are used.
- COPCs associated to APEC B are VOCs.

APEC C: Interior and surrounding area of 603 March Road building; area of known groundwater contamination.

- Former (1997 – 2007) use of building as an electronic component manufacturing facility.
- COPCs associated to APEC C are VOCs.

APEC D: Interior and immediately surrounding area adjacent to elevator at 603 March Road.

- Storage of hydraulic oil in a fixed tank.
- COPCs associated with APEC D include petroleum hydrocarbons (PHC) and benzene, toluene, ethylbenzene, and xylenes (BTEX).

APEC E: Northern property boundary, 591 March Road parking area, and southern corner of 555 March Road building.

- Presence of two, oil filled, pad mounted, high voltage transformers along the northern boundary. One additional transformer adjacent to the 591 March Road parking area as well as one transformer adjacent to the southern most corner of 555 March Road.

- COPCs associated with APEC E include PHC, BTEX and polychlorinated biphenyls (PCBs).

APEC F: Southern and southwestern property boundary.

- Potential bulk chemical and ink storage. Electronic component manufacturing in surrounding buildings. Metal fabrication and manufacturing operations in nearby buildings.
- COPCs associated with APEC F include PHC, BTEX, VOC, and metals.

APEC G: Northern and southeastern paved areas; West central area of the phase one property.

- Imported fill of unknown or quality.
- COPCs associated with APEC G include PHC, BTEX, polycyclic aromatic hydrocarbons (PAHs), and metals.

APEC H: All exterior areas of the phase one property.

- Potential chlorinated solvent contamination in groundwater from the former March Landfill which operated from 1963 to 1974.
- COPCs associated with APEC H are VOCs.

Other considerations:

Based on information gathered and the age of the buildings on the phase one property, there is potential for various special attention substances including asbestos, lead, mercury, PCBs and crystalline silica to be present in building materials. It is recommended that a hazardous materials/designated substances survey be completed prior to any major renovations or demolition of the buildings being undertaken.

Conclusions:

Based on a review of the available information and the exercise of professional judgment, OMI has concluded that there is potential for the identified COPCs to have affected land and/or water under the phase one property within the identified APECs. Based on the information obtained in completing this Phase One ESA, it is OMI's opinion that a phase two ESA would be required prior to redevelopment of the phase one property.

1 INTRODUCTION

Omni-McCann Inc. (OMI) was retained by March and Main Developments Inc. (March & Main) to conduct a Phase One Environmental Site Assessment (phase one ESA) of the combined properties located at 555, 591, 595, and 603 March Road in Ottawa, Ontario (herein referred to as the 'phase one property'). The location of the phase one property is shown on Figure 1, Appendix A and the property boundary and phase one study area are shown on Figure 2, Appendix A.

1.1 PHASE ONE PROPERTY INFORMATION

The phase one property is located along the west side of March Road running south from the intersection of Terry Fox Drive and March Road in the Kanata Technology Park of Ottawa, Ontario. The phase one property covers municipal addresses 555, 591, 595, and 603 March Road and are legally described as the following:

- **555 March Road** - Part of Lot 9, Concession 3, Part 1, Plan 5R9546 except Part 1, Plan 4R7933, Part 15, Plan 4R12735, Kanata (PIN 04518-0067).
- **591 March Road** - Part of Lot 9, Concession 3, Part 1, Plan 5R12441 save and except part 1 on 4R94, Kanata (PIN 04518-0061).
- **595 March Road** - Block 1, Plan 4M1104 (PIN 04518-0115).
- **603 March Road** - Part of Lot 9, Concession 3, March (PIN 04518-0065).

The phase one property is irregular in shape, is oriented northwest to southeast, and is approximately 5.55 ha in plan area based on information available through the City of Ottawa's Interactive Online Mapping Tool (GeoOttawa). The phase one property location and boundary are shown on Figure 1 and 2, respectively, in Appendix A. Property boundaries and adjacent land uses are described as follows:

- **North boundary:** Terry Fox Drive followed by a residential sub-division.
- **East boundary:** March Road followed by the Nokia office campus.
- **West boundary:** The Ciena office campus, Hines Road, and small high-tech services and supply businesses.
- **South boundary:** Small high-tech services and supply businesses and an insurance company office (Allan Mann Insurance Ltd.).

The phase one property is owned by March and Main Developments Inc. and 519 and 595 March Road Developments Inc. (herein referred to as the 'Owners') and has a variety of uses and structures. A brief description of each municipal address associated with the phase one property is provided below:

- 555 March Road:** The eastern half consists of landscaped areas, a single structure, and parking/drive lanes connected to March Road and 591 March Road. The structure is a single storey with an approximate footprint area of 1,654.4 m² and sits between the landscaped area adjacent to March Road and Parking to the rear (west) of the structure. Presently, the structure is used as a fitness centre. A drive lane connects to the adjacent municipal address to the north, 591 March Road, via the rear parking area. The remainder of the site is undeveloped vacant land that wraps around the western boundary of 591 March Road.
- 591 March Road:** This portion of the phase one property is surrounded on the south and west by 555 March Road and on the north by 595 March Road. There is a single, multi-unit commercial plaza in an ‘L’ shape running along the north and west boundaries. The structure is single storey with an approximate footprint area of 1748 m² with parking and drive lanes occupying the remainder of this portion of the phase one property.
- 595 March Road:** This address consists of vacant, undeveloped land running from March Road to the east to Hanes Road and a municipal walkway to the west. There are no permanent structures, and the property has significant vegetation growth.
- 603 March Road:** This address occupies the northern most portion of the phase one property with a single, two-storey structure, paved parking lot, and landscaped areas. The structure is approximately 7,060.6 m² in footprint area and primarily used as office space and high-tech electronic component research and development. This portion of the property extends from March Road to a municipal walkway on the western boundary. The parking lot extends from the structure to the western boundary of the phase one property.

It is OMI’s understanding that the phase one ESA is required by the Owners in order to redevelop the phase one property into a mixed use residential/commercial complex. Authorization to proceed with the phase one ESA was provided by the Owners on May 27, 2022. Mr. Fel Petti, Project Manager for March & Main acted as the property owner’s representative and project manager for the phase one ESA. Contact information for Mr. Petti is provided in Table 1-1.

Table 1-1: Owner Representative Contact Information

Project Contact:	Fel Petti
Address:	March and Main Developments Inc. 109 Atlantic Avenue, Suite 302B Toronto, ON M6K 1X4
Phone Number:	(416) 530-2438
Mobile Number:	(613) 407-0553

2 SCOPE OF INVESTIGATION

The scope of the phase one ESA is only sufficient in identifying issues of potential environmental concern which are obvious from a visual examination of surface features or from available sources of information. No soil, water, liquid, biological (including mould), gas, product or chemical sampling or analysis were carried out as part of this phase one ESA. OMI did not conduct a health and safety, engineering, or structural evaluation of the site as part of the scope of work.

The phase one ESA was conducted in accordance with O. Reg. 153/04 (as amended).

According to O.Reg. 153/04, the general objectives of a phase one ESA are the following:

- To develop a preliminary determination of the likelihood that one or more contaminants have affected any land or water on, in or under the phase one property;
- To determine if a phase two ESA is required;
- To provide the basis for carrying out a phase two ESA if one is required;
- To provide adequate preliminary information about environmental conditions in the land or water on, in, or under the phase one property in the event of a risk assessment is required following the completion of a phase two ESA.

In order to fulfill the general objectives of this phase one ESA, the scope of work consisted of the following activities:

- Historical records review;
- Interviews with persons knowledgeable of the subject site;
- Site reconnaissance;
- Reviewing and technically assessing the information collected;
- Preparing this phase one ESA report; and,
- Submitting this phase one ESA report to the owner of the site.

In accordance with O. Reg. 153/04, OMI has determined a “phase one study area” that is outside the phase one property but that is considered in the assessment because uses and activities in this larger area may have affected the phase one property. Assessment of the phase one property and phase one study area has incorporated the determination of O. Reg. 153/04’s prescribed list of “potentially contaminating activities” (PCAs) as defined in Table 2, Schedule D of O. Reg. 153/04. Table 2, Schedule D is reproduced for reference as Table 2-1. Any identified PCAs are used by OMI’s Qualified Person (QP) to determine Areas of Potential Environmental Concern (APECs) on the phase one property, if any.

Table 2-1: PCA Categories as Defined by O.Reg 153/04, Schedule D, Table 2

PCA#	Definition
1	Acid and Alkali Manufacturing, Processing and Bulk Storage
2	Adhesives and Resins Manufacturing, Processing and Bulk Storage
3	Airstrips and Hangars Operation
4	Antifreeze and De-icing Manufacturing and Bulk Storage
5	Asphalt and Bitumen Manufacturing
6	Battery Manufacturing, Recycling and Bulk Storage
7	Boat Manufacturing
8	Chemical Manufacturing, Processing and Bulk Storage
9	Coal Gasification
10	Commercial Autobody Shops
11	Commercial Trucking and Container Terminals
12	Concrete, Cement and Lime Manufacturing
13	Cosmetics Manufacturing, Processing and Bulk Storage
14	Crude Oil Refining, Processing and Bulk Storage
15	Discharge of Brine related to oil and gas production
16	Drum and Barrel and Tank Reconditioning and Recycling
17	Dye Manufacturing, Processing and Bulk Storage
18	Electricity Generation, Transformation and Power Stations
19	Electronic and Computer Equipment Manufacturing
20	Explosives and Ammunition Manufacturing, Production and Bulk Storage
21	Explosives and Firing Range
22	Fertilizer Manufacturing, Processing and Bulk Storage
23	Fire Retardant Manufacturing, Processing and Bulk Storage
24	Fire Training
25	Flocculants Manufacturing, Processing and Bulk Storage
26	Foam and Expanded Foam Manufacturing and Processing
27	Garages and Maintenance and Repair of Railcars, Marine Vehicles and Aviation Vehicles
28	Gasoline and Associated Products Storage in Fixed Tanks
29	Glass Manufacturing
30	Importation of Fill Material of Unknown Quality
31	Ink Manufacturing, Processing and Bulk Storage
32	Iron and Steel Manufacturing and Processing
33	Metal Treatment, Coating, Plating and Finishing
34	Metal Fabrication
35	Mining, Smelting and Refining; Ore Processing; Tailings Storage
36	Oil Production
37	Operation of Dry-Cleaning Equipment (where chemicals are used)
38	Ordnance Use
39	Paints Manufacturing, Processing and Bulk Storage

Table 2-1: PCA Categories as Defined by O.Reg 153/04, Schedule D, Table 2

PCA#	Definition
40	Pesticides (including Herbicides, Fungicides and Anti-Fouling Agents) Manufacturing, Processing, Bulk Storage and Large-Scale Applications
41	Petroleum-derived Gas Refining, Manufacturing, Processing and Bulk Storage
42	Pharmaceutical Manufacturing and Processing
43	Plastics (including Fibreglass) Manufacturing and Processing
44	Port Activities, including Operation and Maintenance of Wharves and Docks
45	Pulp, Paper and Paperboard Manufacturing and Processing
46	Rail Yards, Tracks and Spurs
47	Rubber Manufacturing and Processing
48	Salt Manufacturing, Processing and Bulk Storage
49	Salvage Yard, including automobile wrecking
50	Soap and Detergent Manufacturing, Processing and Bulk Storage
51	Solvent Manufacturing, Processing and Bulk Storage
52	Storage, maintenance, fuelling and repair of equipment, vehicles, and material used to maintain transportation systems
53	Tannery
54	Textile Manufacturing and Processing
55	Transformer Manufacturing, Processing and Use
56	Treatment of Sewage equal to or greater than 10,000 litres per day
57	Vehicles and Associated Parts Manufacturing
58	Waste Disposal and Waste Management, including thermal treatment, landfilling and transfer of waste, other than use of biosoils as soil conditioners
59	Wood Treating and Preservative Facility and Bulk Storage of Treated and Preserved Wood Products

3 RECORDS REVIEW

3.1 GENERAL

3.1.1 PHASE ONE STUDY AREA DETERMINATION

The phase one study area encompasses the phase one property as well as all other properties that are located wholly or partly within 250 metres from the boundary of the phase one property. Results of a preliminary records review did not indicate the need to include any properties located beyond 250 metres from the boundary of the phase one property. The phase one study area is shown on Figure 2 in Appendix A.

3.1.2 FIRST DEVELOPED USE DETERMINATION

Based on information acquired during the records review and interviews, the first developed use of the phase one property was as an agricultural field based on aerial photography from 1934. After 1897, the 555 and 591 March Road portions of the phase one property were split away from 595 and 603 March Road. The following is a breakdown of the development of each municipal address within the phase one property:

- **555 March Road** – Left to fallow between 1965 and 1976, the only structure on this portion of the phase one property was developed between 1985 and 1991. No changes have been made to the structure footprint since development. The western parking area was expanded between 2007 and 2008.
- **591 March Road** – A single family dwelling was constructed on this portion of the phase one property between 1945 and 1958. This dwelling was removed and replaced by a commercial plaza between 1988 and 1991. The commercial plaza and associated parking area have not changed footprints since they were constructed.
- **595 March Road** – Left to fallow in the early 1970's, this portion of the phase one property was used as landscaped lawn area after the development of the neighbouring lot, 603 March Road. From 1985 onward, this portion of the phase one property did not appear to be maintained with vegetation allowed to grow unchecked.
- **603 March Road** – Once acquired by a corporation, development of a structure occurred in the early 1970's. Additions to the site building and parking areas occurred at various points from the 1980's to approximately 2007.

3.1.3 FIRE INSURANCE PLANS

OMI retained ERIS to conduct a fire insurance plan (FIP) search covering the phase one property and/or adjacent areas. ERIS did not identify any FIPs for the phase one property or within the phase one study area. However, inspection reports and multirisk assessment reports were available for the municipal addresses of 555 March Road and 591 March Road between 1995 and 2003. No information in the reports were relevant to the environmental condition of the phase one property. Other information regarding building construction dates, building materials details, and site use details were provided, and have been referenced in other sections of this report. A copy of the reports has been provided in Appendix C

3.1.4 CHAIN OF TITLE

OMI retained Read Abstracts to complete a legal title search of all municipal addresses listed for the phase one property. As indicated in Section 1.1, the phase one property consists of four municipal addresses. They are legally described as follows:

- **555 March Road** - Part of Lot 9, Concession 3, Part 1, Plan 5R9546 except Part 1, Plan 4R7933, Part 15, Plan 4R12735, Kanata (PIN 04518-0067).
- **591 March Road** - Part of Lot 9, Concession 3, Part 1, Plan 5R12441 save and except part 1 on 4R94, Kanata (PIN 04518-0061).
- **595 March Road** - Block 1, Plan 4M1104 (PIN 04518-0115).
- **603 March Road** - Part of Lot 9, Concession 3, March (PIN 04518-0065).

OMI requested that Read Abstracts search records back to the first recorded use of the phase one property. The results of the title search are provided in Appendix D. Results of the search are summarised in Table 3-1 below.

Table 3-1: Chain of Title Results

Table 3-2 summarizes the PCAs, as described in Table 2, Schedule D of O.Reg. 153/04, that were identified at the phase one property through review of the chain of title search. Refer to Section 6 for further discussion on the PCAs identified on the phase one property.

Table 3-2: PCAs Identified from Chain of Title Review

Address	Description	Dates	PCA# (O.Reg 153/04)
603 March	Electronic Component Manufacturing - Mitel Corp - Newbridge Networks Corp - Tundra Semiconductors Corp	1977 – 2020	19

3.1.5 CITY DIRECTORIES

OMI retained ERIS to conduct a city directory search for the phase one property and a phase one study area. The city directory search returned information on a five-year interval from 1992 through 2011 for the phase one property and the phase one study area. The limited nature of the city directory search is not anticipated to impact the findings of this phase one ESA given the alternate information sources that were reviewed. Table 3-3 is a summary of PCAs identified at the phase one property and within the phase one study area. Refer to Section 6 for further discussion on the PCAs identified on the phase one property and within the phase one study area. A copy of the ERIS city directory search is provided in Appendix E.

3.1.6 ENVIRONMENTAL REPORTS

March & Main provided OMI with the following reports and documents related to the environmental condition of the phase one property:

- Oliver, Mangione, McCalla & Associates (OMM), 2000. Phase I Environmental Site Assessment, 603 March Road, Kanata, Ontario.
- Golder Associates (Golder), 2001. Phase I Environmental Site Assessment and Limited Asbestos Sampling Program, 603 March Road, Kanata, Ontario.
- Paterson Group (Paterson), 2016. Phase II Environmental Site Assessment, 555, 591, 595 March Road, Ottawa, Ontario.
- Concentric Geoscience Inc. (CGI), 2022. Phase I Environmental Site Assessment Update and Phase II Environmental Site Assessment, 603 March Road, Ottawa, Ontario

A summary of information relevant to the environmental condition of the phase one property from each report is provided in the following subsections.

OMM, 2000

- The phase one property was first developed with a single storey workshop and office space in 1969. Additional renovations, including a second storey office space, were completed in the 1970's, 1980's and 1990's.
- At the time of the 2000 ESA, the phase one property was being used for research and development of semi-conductors. Small volumes of acetone, isopropanol, solvents, inks, and propane were reportedly used on the phase one property. All generated wastes were handled by Newbridge, the owner at the time.

- Records provided by the MECP indicated that larger quantities of chlorinated solvents and acids were historically used on the phase one property during electronic component manufacturing. Electrical components manufacturing at the phase one property had been discontinued by the time the 2000 ESA was conducted.
- A liquid nitrogen tank located on the western exterior to the building was noted during the site visit. A smaller tank of liquid nitrogen was noted inside the building adjacent to the clean room.
- Potential asbestos containing materials (ACMs) were noted on rain downspout and pipe elbows.
- Based on the age of the building, lead paint and polychlorinated biphenyl (PCB) containing equipment were noted as potential hazards within the site building.
- OMM recommended that any further renovations be preceded by a hazardous substance survey and remedial measures to safely remove ACMs, lead containing materials, and PCB containing materials. No other work was recommended at the time.

Golder, 2001

- At the time of the 2001 ESA, the phase one property consisted of a combined one and two storey permanent building and three mobile structures used for offices and storage.
- The city directory search indicated the presence of two dry cleaning companies at 591 March Road, approximately 48 m south of the site in 1991 and 1996. A third dry cleaner was identified at 700 March Road approximately 140 m north of the phase one property.
- The three dry cleaning facilities identified were not considered PCAs for the phase one property due to the inferred direction of groundwater flow.
- The limited asbestos survey confirmed the presence of asbestos (Chrysotile) in pipe insulation in the former main electrical room.
- No recommendations were made with respect to the subsurface investigation or the presence of ACMs at the site.

Paterson, 2016

- A brief review of previous environmental studies conducted on 591 and 595 March Road is provided in this report. The previous reports were not available for OMI to review but are listed to be:
 - “Phase I Environmental Site Assessment, 591 March Road, Kanata, Ontario” prepared by AMEC Earth and Environmental Ltd., dated February 2002.

- “Subsurface Investigation, Cisco Systems, Block E, 595 March Road, Kanata, Ontario, Canada” prepared by Environmental Resource Management (ERM), dated December 2007.
 - “Phase II Environmental Site Assessment, Existing Commercial Development, 591 March Road, Ottawa, Ontario” prepared by Paterson, dated March 10, 2008.
 - “Groundwater Monitoring, 595 March Road, Kanata, Ontario, Canada” prepared by ERM, dated August 2009.
 - “Supplemental Phase II Environmental Site Assessment, Existing Commercial Development, 591 March Road, Ottawa, Ontario” prepared by Paterson, dated February 14, 2011.
 - “Groundwater Treatment Program, 591 and 595 March Road, Ottawa, Ontario” prepared by Paterson, dated September 30, 2012.
 - Groundwater monitoring reports prepared by Paterson, 2011-2014.
- Prior reports indicated the presence of chlorinated solvent contamination in the subsurface attributed to the dry cleaning facility previously located at 591 March Road. The main points of the previous studies reviewed by Paterson include:
 - AMEC’s 2002 Phase I ESA highlighted the presence of a dry cleaning facility on the phase one property for a short period in the early 1990’s. A camera inspection of the 591 March Road buildings drain system was completed, confirming the integrity and ruling out a preferential pathway.
 - The 2007 ERM subsurface investigation of 595 March Road installed three monitoring wells, in addition to four existing wells on the 595 March Road portion of the phase one property. A total of seven groundwater samples were analyzed, several of which returned concentrations of chloroform and tetrachloroethylene (PCE) above regulatory standards at the time.
 - The 2008 Paterson Phase II ESA at 591 March Road advanced three boreholes with the installation of one monitoring well. Soil from the area located adjacent to the rear door of the former dry cleaning facility was impacted with PCE at concentration above the regulatory guidelines. Groundwater samples from the monitoring well installed as part of the Phase II ESA returned concentrations of PCE and trichloroethylene (TCE) above the regulatory standards.
 - The follow-up 2011 Supplemental Phase II ESA completed by Paterson added five monitoring wells to the 591 March Road portion of the phase one property. Soil analytical results were in compliance with regulatory standards of the time, whereas groundwater results returned concentrations of PCE above regulatory standards.
 - A program of groundwater remediation to address chlorinated solvent contamination through in-situ chemical injections was implemented by Paterson in 2012. It was reported that the remediation program initially reduced overall solvent concentrations in groundwater, however, concentrations remained above the applicable provincial site

condition standards at the conclusion of the program and concentration re-bounding was observed in subsequent monitoring events.

- Groundwater sampling conducted by Paterson in October 2015 identified concentrations of PCE, TCE, and cis-1,2-dichloroethylene (DCE) at concentrations exceeding the applicable site condition standards in monitoring wells located inside the commercial building at 591 March Road and throughout the adjacent property to the northwest at 595 March Road.

CGI, 2022

- The Phase I ESA update highlighted past electronic component manufacturing activities and the presence of heating oil storage on the 603 March Road portion of the phase one property, as well as the former dry cleaning facility located at 591 March Road.
- Contaminants of concerns (COCs) for 603 March Road were determined to be volatile organic compounds (VOCs), petroleum hydrocarbon fractions 1 to 4 (PHC F1-F4), and benzene, toluene, ethylbenzene, and xylene (BTEX).
- The Phase II ESA conducted at 603 March Road consisted of the advancement of 18 boreholes, the installation of monitoring wells in all 18 boreholes, and the installation of two indoor sub-slab vapour monitoring wells. A total of five soil samples, 24 groundwater samples, and two vapour samples were submitted for analysis of one or more of the COCs.
- Soil was found to be shallow, mostly non-native fill ranging in thickness from 0.15 m to 1.2 m. Bedrock was interbedded dolostone and sandstone to the maximum investigation depth of 12.8 m.
- Analytical results in soil indicated that there were no COCs present.
- Groundwater elevations in shallow monitoring wells indicated a flow direction of northeast in November 2021 and radially outward from an indoor sump pit in January 2022. In deeper monitoring wells, the flow direction was inferred to be north-northeast in January 2022.
- Analytical results from groundwater collected in January 2022 showed concentrations of trichloroethylene (TCE) under and around the southwest portion of the 603 March Road building and a secondary source of PCE and TCE coming on site from the adjacent property to the south, 595 March Road.

Summary of Environmental Reports

The following information relevant to the environmental condition of the phase one property was obtained through review of the environmental reports and drawings provided by March & Main.

- Shallow groundwater flow across the phase one property appears to vary depending on season, but generally shows a northeastern flow direction. Deeper groundwater flow is to the north-northeast.
- Overburden materials at the phase one property are predominantly coarse textured with bedrock close to surface in many areas. Fill of unknown quality is present under hard capped areas of the phase one property.
- The former dry cleaning facility in the 591 March Road commercial building improperly disposed of the cleaning fluids used for operations, releasing an unknown quantity of chlorinated solvents to the ground surface which migrated downward to the underlying groundwater in the bedrock. Groundwater impacts from the dry cleaning facility are present on 591, 595 and 603 March Road.
- Historical use of solvents in the manufacture of electronic components on the 603 March Road property has resulted in groundwater contamination in the vicinity of sumps located near the south corner of the 603 March Road building.
- Remedial actions taken to resolve subsurface contamination under the 591 and 595 March Road portions of the phase one property were unsuccessful at bringing concentrations below applicable site condition standards.
- Concentration re-bounding following remediation was observed on the 591 and 595 March Road properties over subsequent monitoring years.

Additional PCAs identified through review of the provided environmental reports are summarized in Table 3-4.

3.2 ENVIRONMENTAL SOURCE INFORMATION

3.2.1 REGULATORY SOURCE INFORMATION

Requests for information regarding the phase one property were part of the ERIS database search discussed in Section 3.2.2.

City of Ottawa

The City provided results from their Historical Land Use Inventory (HLUI) search. The HLUI returned 88 records with 11 records relating the phase one property and the remaining related to addresses within the phase one study area. A summary of the HLUI records identified as PCAs is provided below in Table 3-5. Refer to Table 2-1 for the corresponding definitions for the PCA number shown. A copy of the HLUI search results are provided in Appendix F.

3.2.2 ENVIRONMENTAL RISK INFORMATION SERVICES (ERIS)

ERIS was contracted to conduct a search of federal and provincial government and private environmental databases pertaining to the phase one property and adjacent lands within a 250m radius from the phase one property boundary. A copy of the report obtained from ERIS is included in Appendix G.

A summary of the database search results pertaining to the phase one property and phase one study area are summarized below.

Phase One Property

A total of 47 records related to the phase one property were identified in the ERIS search as summarised in Table 3-6.

Table 3-6: Summary of Phase One Property ERIS Records

Database Name	Acronym	Number of Records
Borehole	BORE	2
Certificates of Approval	CA	5
Environmental Compliance Approval	ECA	1
ERIS Historical Searches	EHS	6

Table 3-6: Summary of Phase One Property ERIS Records

Database Name	Acronym	Number of Records
Ontario Regulation 347 Waste Generators Summary	GEN	19
Scott's Manufacturing Directory	SCT	9
Water Well Information System	WWIS	5

It is noted that an ERIS Historical Records Search (EHS) record attributed to the phase one property in the ERIS report corresponds to the dates of previously listed Phase I ESAs completed across all of the municipal addresses on the phase one property. The ECA record concerns the installation of sanitary sewers to 555 and 591 March Road by D.I.R Investments Inc. in 2006. The two BORE records appear related to a Canadian Geological Survey study.

The records from the CA databases are related to industrial air emission permits held by Newbridge Networks Corp. (Newbridge) for Exhaust Systems 1, 2, 3, and 5. These permits were issued in 1990 and 1991 and were marked as canceled or revoked. One of the records for 'Exhaust System No. 1' indicates the release of N-propyl alcohol, trifluorotrchloroethane, acetone, methyl chloroform, hydrogen peroxide, and propylene glycolmonomethyl ether acetate (P.M. Acetate).

Four of the WWIS records associated with the phase one property are related to former water supply wells located within the phase one property. One WWIS is associated with the monitoring wells constructed during the 2010-2011 Paterson supplemental Phase II ESA at 591 March Road.

Three of the six SCT records related to 555 March Road indicate that Rohde & Schwarz Canada Inc. (R&S) manufactured communication equipment and electronic components during the 1970's and Tektronix Canada Inc. (Tektronix) manufactured electronic components during unspecified dates. Similarly, two SCT records for 603 March Road indicate that Tundra Semiconductor Corp. (Tundra) manufactured semiconductors and electronic components in the early 1980's until the mid to late 1990's.

There were several GEN records associated with the generation of unspecified volumes of halogenated solvents at the 591 March Road former dry cleaning facility from 1995 – 2001 and the 603 March Road facility from 1986 – 1998. Another GEN record indicated the generation of unspecified quantities of acid waste – other metals from 1992 – 1998 and organic laboratory chemicals in 2005 at the 603 March Road facility. Although registration as a waste generator indicates that the substances specified above were stored, handled and disposed of in a manner compliant with provincial regulations, the potential bulk storage of these waste products at the phase one property is identified as a PCA in accordance with O.Reg.153/04.

Phase One Study Area

A total of 241 records were returned for properties within the phase one study area as summarised in Table 3-7.

Table 3-7: Summary of ERIS Records in Phase One Study Area

Database Name	Acronym	Number of Records
Borehole	BORE	1
Certificates of Approval	CA	15
Delisted Fuel Tanks	DTNK	5
Environmental Activity and Sector Registry	EASR	1

Ontario Regulation 347 Waste Generators Summary	GEN	106
National Pollutant Release Inventory	NPRI	2
Pesticide Register	PES	3
Scott's Manufacturing Directory	SCT	45
Water Well Information System	WWIS	2

A description of each database is provided in the ERIS report (Appendix G). In addition to the above records, 102 records were identified which did not include enough information for ERIS to associate the record with a plottable address.

OMI reviewed all plottable ERIS records identified within the phase one study area to evaluate if they constituted PCAs as defined by O.Reg. 153/04. PCAs identified through the review of the plottable ERIS records are summarised in Table 3-8. Refer to Table 2-1 for a description of each PCA number.

 (ENV) – PCA also identified in Environmental Reports Review
 (HLUI) - PCA also identified in HLUI

Discussion and evaluation of off-site PCAs identified during the ERIS review can be found in Section 6.

The unplottable ERIS records included multiple AAGR, CA, CONV, ECA, LIMO, PTTW, SPL and WWIS records. Based on the information provided in the unplottable records, most of the

unplottable records are associated with locations outside of the phase one study area and/or are not indicative of PCAs. No additional PCAs are identified in the unplottable records.

3.3 PHYSICAL SETTING SOURCES

3.3.1 AERIAL PHOTOGRAPHS

OMI used the National Air Photo Library (NAPL) to search for aerial photographs that cover the phase one property and study area. OMI also reviewed aerial photographs available through the GeoOttawa website and Google Earth. Refer to aerial photos in Appendix H. A summary of aerial photograph observations as they relate to the phase one property and study area is provided in Table 3-9.

Table 3-9: Aerial Photograph Review – Observations

Year	Scale	Source	Observations
1934	1:15,000	NAPL	<p>The phase one property appears to be used as an agricultural field with no visible structures.</p> <p>Immediately adjacent properties to the north, south, east and west also appear to be used as agricultural fields and have no visible structures.</p> <p>March Road is present to the northeast of the phase one property. Several structures to the west-northwest of the phase one property appear to be a farm homestead with associated barns and/or sheds. No other structures are located within the phase one study area.</p>
1945	1:15,000	NAPL	There are no notable changes to the phase one property or phase one study area in comparison to the 1934 photo.
1958	1:15,000	NAPL	<p>A single structure has been placed on the 591 March Road portion of the phase one property. The structure appears to be a single family dwelling with associated attached garage.</p> <p>What appears to be a single family dwelling has been constructed on the property immediately adjacent to the south of the phase one property. Otherwise, there are no notable changes to the phase one study area in comparison to the 1945 photo.</p>
1965	1:15,000	NAPL	There are no notable changes to the phase one property or phase one study area in comparison to the 1958 photo.

Table 3-9: Aerial Photograph Review – Observations

Year	Scale	Source	Observations
			What appears to be a second single family dwelling has been constructed on the property immediately adjacent to the south of the phase one property. Otherwise, there are no notable changes to the phase one study area in comparison to the 1958 photo.
1976	NA	GeoOttawa	<p>A structure with associated parking area has been constructed on the northern portion of the phase one property. The structure appears to be the original extents of the 603 March Road building.</p> <p>The farm house and associated building to west-northwest of the phase one property have been removed. Otherwise, there are no notable changes to the phase one study area in comparison to the 1965 photo.</p>
1985	1:15,000	NAPL	<p>An addition has been added to the west side of the 603 March Road structure. Additional parking with a small shed or garage has been added to the west of the 603 March Road structure. A tank can be seen close to the western wall of the building.</p> <p>Changes to the directly adjacent properties are as follows:</p> <ul style="list-style-type: none"> Hines Road has been constructed ending shortly after turning southwest from the phase one property. <p>There are no notable changes to the phase one study area in comparison to the 1976 photo.</p>
1991	NA	GeoOttawa	<p>The single family dwelling has been completely removed from the 591 March Road portion of the phase one property. The 555 and 591 March Road portions of the phase one property have been developed with structures matching the footprints of present-day of the buildings. An addition to the east side of the 603 March Road building has been constructed. A driveway from Terry Fox Drive and storage trailers are present in the western parking lot of the 603 March Road portion of the phase one property.</p> <p>Changes to the directly adjacent properties are as follows:</p> <ul style="list-style-type: none"> Terry Fox Drive has been constructed along the northwestern property boundary. The residential sub-division to the north of the phase one property has been constructed. A tower and multi-level structure has been constructed at 600 March Road, known as the Nokia Campus, to the east, across March Road.

Table 3-9: Aerial Photograph Review – Observations

Year	Scale	Source	Observations
			<ul style="list-style-type: none"> 95 Hines Road has been constructed to the southwest of the phase one property, across Hines Road. <p>In the phase one study area, the following changes were observed:</p> <ul style="list-style-type: none"> A structure matching the present-day footprint of the eastern most structure at 84 Hines Road has been developed. A structure matching the present-day footprint of 70 Hines Road has been developed. Further sub-division development is under construction to the northwest and north to northeast of the phase one property.
1999	NA	GeoOttawa	<p>There are no notable changes to the phase one property in comparison to the 1991 photo.</p> <p>The following changes were noted in the immediately adjacent properties:</p> <ul style="list-style-type: none"> March Road has been expanded and configured to the present-day layout. The 700 March Road commercial plaza has been developed. Additional towers and connecting buildings matching the present-day footprint have been developed at the 600 March Road property. 93 Hines Road has been constructed to the west of the phase one property, across Hines Road. <p>In the greater phase one study area, the following changes were observed:</p> <ul style="list-style-type: none"> The 50 Hines Road property has been developed with structures matching the present-day footprints. Structures matching the present-day footprint have been built at the 555 Legget Dr. property. Sub-division development northwest to northeast of the phase one property has been partially or fully completed.
2005	NA	GeoOttawa	<p>An addition to the north side of the 603 March Road building has been added, the structure now matches the present-day footprint. The western parking area of the 603 March Road portion of the phase one property has been expanded and the garage/shed as well as the trailers have been removed. The</p>

Year	Scale	Source	Observations
			<p>driveway from Terry Fox Drive now matches the present-day location.</p> <p>In the broader phase one study area, the buildings at 1000 Innovation Drive and 535 Legget Drive have been developed. The Shell gasoline service station at 720 March Road has also been developed. There were no other notable changes in comparison to the 1999 photo.</p>
2011	NA	GeoOttawa	<p>The volleyball pitch in the northwestern corner of the phase one property has been constructed. There is no longer a tank visible on the western wall of the 603 March Road structure. The parking area west of the 555 March Road has been connected to the 591 March Road parking area, matching the present-day conditions. No other notable changes to the phase one property or phase one study area were observed in comparison to the 2005 photo.</p>
2015	NA	GeoOttawa	<p>No changes to the phase one property were observed in comparison to the 2011 photo.</p> <p>Development of the 96 Hines Road/385 Terry Fox Drive properties, known as the Ciena Campus, to the west is underway. No other changes to the phase one study area were observed in comparison to the 2011 photo.</p>
2021	NA	GeoOttawa	<p>No notable changes to the phase one property or phase one study area were observed in comparison to the 2015 photo with the following exception:</p> <ul style="list-style-type: none"> The Ciena campus construction to the west appears complete.

The following information about the phase one property was collected through the air photo review:

- The phase one property was used as an agricultural field from at least 1934 to between 1945 and 1958, when a private residence was constructed on the 591 March Road portion of the phase one property. The northern portion of the phase one property remained agricultural fields until the early 1970's when it was purchased by a corporation and developed with their office (based on information from the chain of title search). Between 1965 and 1976, the 555 March Road portion of the phase one property was no longer used for agriculture and was left fallow.
- The 555 and 591 March Road portions of the phase one property were developed between 1985 and 1991 with structures matching their present-day building footprints. The 603 March Road portion of the phase one property underwent several additions until approximately 2005, when the building matched the present-day footprint. The 591 portion of the phase one property was never developed.

- The above ground storage tank (AST) located on the western wall of the 603 March Road building was reportedly used for liquid nitrogen (Section 3.1.6). The AST was reported to have been removed between 2005 and 2007.

The following phase one study area information relevant to the environmental condition of the phase one property was obtained through the air photo review:

- Much of the surrounding area was developed between 1985 and 1991. Developments filling in the remainder of the areas continued throughout the 1990's to the 2010's.
- Development has been largely dominated by office and/or high-tech manufacturing and residential with some commercial spaces to service the area.

No additional PCAs were identified through the aerial photo review.

3.3.2 TOPOGRAPHY, HYDROLOGY, AND GEOLOGY

The following maps and reports were reviewed to obtain topography, regional hydrology and geology information for the phase one property and surrounding phase one study area:

- GeoOttawa online mapping tool (<http://maps.ottawa.ca/geoottawa/>)
- Ontario Geological Survey (OGS), 2011. 1:250 000 scale bedrock geology of Ontario; Ontario Geological Survey, Miscellaneous Release---Data 126-Revision 1
- Ontario Geological Survey (OGS), 2010. Surficial geology of southern Ontario; Ontario Geological Survey, Miscellaneous Release— Data 128 – Revised
- Chapman, L.J. and Putnam, D.F. 2007. Physiography of Southern Ontario; Ontario Geological Survey, Miscellaneous Release — Data 22
- Ontario Ministry of the Environment Conservation and Parks (MECP), 2021. Water Well Information System (WWIS) Well Records Database.

The phase one property is located on a local topographic slope falling from the southwest to the northeast with an elevation of approximately 84 m above sea level (MASL). The phase one property is generally flat lying, however, infiltration swales on the northwestern edge and an elevation increase from the 595 to the 591 March Road portions of the phase one property are present. There are no permanent surface water bodies or areas of standing water on the phase one property or in the phase one study area. Surface Runoff is directed to parking lot edges, infiltration swales or March Road stormwater catchments. Shirleys Brook is the closest natural surface water body to the phase one property at a distance of approximately 513 m northeast at its closest point. Shirleys Bay, in Lac Deschenes on the Ottawa River is located approximately 2.8 km northeast of the phase one property.

No exposed native soil was observed during the site visit; however, topsoil was present across the landscaped areas of the phase one property. Surrounding properties either had similar exterior surface finishes or hard capped systems (i.e., asphalt or concrete) and exposed native soil was not observed. No bedrock outcrops were observed near the phase one property or in the immediate surrounding area. Geologic mapping indicates that the phase one property rests on Paleozoic bedrock terrain with little to no soil cover. Bedrock beneath the phase one property is described as Lower Ordovician dolostone and sandstone of the Beekmantown Group. Borehole logs provided in previous environmental reports (Section 3.1.6) indicate that surficial materials at the phase one property consist of topsoil, sand, and gravel between 0.15 – 1.2 m thick underlain by silty clay with gravel to the top of bedrock between 1.2 – 2.72 m below ground surface (mbgs). Bedrock was logged as interbedded dolostone and sandstone during one previous subsurface investigation conducted at the phase one property. These logs are consistent with published materials for the phase one property.

Based on previous environmental investigations (Section 3.1.6) groundwater is not found in significant quantities in overburden beneath the phase one property. Groundwater flow in the shallow bedrock is highly variable, but generally from the southwest to northeast. Regional groundwater flow is expected to be toward both the Ottawa River, located to the northeast of the phase one property.

3.3.3 FILL MATERIALS

The records review indicates that sand and gravel fill materials ranging in thickness from approximately 0.5 – 1.6 m are present under the 591 and 603 March Road parking areas of the phase one property. Fill materials may be present in other areas of the phase one property. The presence of fill materials of unknown quality on the phase one property is identified as a PCA as outlined in section 3.1.6.

3.3.4 WATER BODIES AND AREAS OF NATURAL SIGNIFICANCE

As noted in section 3.3.2, Shirleys Brook is the closest natural surface water body to the phase one property at a distance of approximately 513 m northeast at its closest point. Shirleys Bay, in Lac Deschenes on the Ottawa River is located approximately 2.8 km northeast of the phase one property. Based on the Ontario Ministry of Natural Resources Areas of Natural and Scientific Interest (ANSI) map, there are no ANSI on the phase one property or within the phase one study area (Figure 3, Appendix A).

3.3.5 WELL RECORDS

The Ontario water well records database was accessed directly and reviewed as part of the ERIS search. The five WWIS records associated with the phase one property are related to the installation of four water supply wells (one industrial and three domestic) in the 1950's and 1960's and the installation of monitoring wells related to environmental site assessments conducted by Patterson detailed in Section 3.1.6. The two WWIS records identified in the phase one study area were related to a monitoring well installed on the north side of Hines Road directly adjacent to the southwest phase one property boundary in 2014, and a monitoring well installed on 720 March Road approximately 235 m north of the phase one property in 2018. The 2018 monitoring well was installed behind a shell gas station at 720 March Road, the gas station has already been identified as a PCA based on other records reviewed.

Given that the phase one property and surrounding phase one study area are now serviced by the municipal water supply, it is assumed that the supply wells identified in the well records are no longer in use and have likely been abandoned. As the monitoring well records identified both on the phase one property and in the phase one study area are related to PCAs that have already been identified through the review of other records, no additional PCAs were noted from the WWIS records.

3.3.6 SITE OPERATING RECORDS

Based on information acquired during this phase one ESA, a portion of the phase one property (a unit in the building at 591 March Road) was historically operated as a commercial dry cleaner and chlorinated solvent contamination was subsequently discovered in soil and groundwater. Therefore, the phase one property is considered an "enhanced investigation property" as defined by O.Reg. 153/04 due to its historic use. Based on information obtained during the site reconnaissance (Section 5), there is no longer any dry cleaning equipment in operation on phase one property; however, chlorinated solvent contamination in groundwater is still present.

Given the enhanced investigation property designation, OMI requested that March & Main provide additional operational records for the phase one property including: waste generation records associated with the historical registered waste Ontario waste generator number for the property, waste disposal records/information related to the historical waste generator number, and any emergency response plan/spill response plan for the phase one property. Since the waste generator records pre-date the current phase one property owners, no additional records could be produced for review. During the site reconnaissance (Section 5), no bulk storage of chemicals was observed to be stored on the phase one property. Therefore, no emergency response or spill response plans have been created.

Other information that is required to be reviewed at an enhanced investigation property including underground utility drawings, historic environmental monitoring data and environmental reports, and an inventory of ASTs and USTs were provided by March & Main (Section 3.1.6). Chemical use and storage areas that are part of the current onsite operations were inspected as part of the site reconnaissance (Section 5).

4 INTERVIEWS

OMI requested that March & Main identify the person(s) thought to be relevant to meeting the general and specific objectives of the phase one ESA (i.e. most knowledgeable of the history and operations of the phase one property and study area). March & Main proposed the interview be conducted with the following individual:

- Tim Kidney, Facility Operator at 603 March Road from 2016 to 2022. Tim oversaw the building operations, maintenance, and security while the 603 March Road portion of the phase one property was owned by Tundra, which was later acquired by Renesas.

Tim Kidney accompanied OMI during the site reconnaissance of 603 March Road, that was conducted on July 19, 2022. Questions related to current and historical operations at the facility were asked during the site reconnaissance. Information gathered from the interview is provided where relevant throughout this report. The most relevant information gathered from the interviewee (site representative) over the course of the phase one site reconnaissance concerning PCAs or APECs is as follows:

- The 603 March Road building is primarily of block and steel construction with slab on grade flooring.
- The 603 March Road building is heated using natural gas, however, the interviewee was not aware of any other heating fuel being historically used.
- To the knowledge of the interviewee, there had been no major spills at the 603 March Road portion of the phase one property.
- The interviewee was not aware of any hazardous waste being generated or managed at that phase one property.
- The interviewee was aware that OMI had discovered chlorinated solvent contamination in the shallow groundwater under and around the 603 March Road building but did not have any information as to the potential source.
- No major building renovations have been completed at the 603 March Road portion of the phase one property since the 2001 addition to the north side of the building. To the interviewee's knowledge, the asbestos identified in the 2001 Golder report was not disturbed or removed.
- Sporadic roof leaks in the connection between the original building and the addition on the eastern side of the 603 March Road building, between 1985 and 1991, have been dealt with as needed. No mould was identified as a result of the leaks and no major remediations or renovations were required.

- The current use of the 603 March Road building is for research and development of microprocessors and microcontrollers, and national sales for all of Renesas products and services.
- The interviewee indicated that historically, 603 March Road operated a clean room where electronic chip manufacturing was conducted.
- One former sump pit, now filled in, was used to pump liquid wastes generated in the clean room to the municipally connected sanitary sewer main. A second sump pit, still in operation, appears to be connected to a floor drain in the adjacent laboratory space. The interviewee did not have any information regarding the frequency of operation of the sump pit.
- The interviewee indicated that the 603 March Road building elevator, and associated hydraulic oil pump and tank, are serviced by a licenced elevator contractor on a quarterly basis.

A summary of PCAs identified through the interviews is provided in Table 4-1.

Table 4-1: PCAs Identified through Interviews

Address	Dist. (m)	Dir.	Description	Dates	PCA # (O.Reg. 153/04)
Phase one property	-	-	Former manufacturing of electronic components in a clean room. Elevator with associated hydraulic oil pump and storage tank.	1990s – 2000 2001 – present	19, 28

5 SITE RECONNAISSANCE

5.1 GENERAL REQUIREMENTS

The site reconnaissance consisted of two site visits, one to go through the buildings present on the phase one property and a second to explore the vegetated brush. The first site visit was conducted by Daniel Elliot and Eric Shilts of OMI, the second site visit was conducted by Daniel Elliot. Eric Shilts is a Qualified Person under O. Reg. 153/04 for the purpose of conducting or supervising a phase one ESA. Pertinent details of the site visit are included in Table 5-1 below.

Table 5-1: Site Visit Information

Date	Time and Duration	Weather Conditions	Personnel
July 19, 2022	09:00, 4 hrs	28 °C, clear	D. Elliot, E. Shilts
August 4, 2022	13:00, 4 hrs	28 °C, overcast	D. Elliot

All areas of the phase one property were accessible during the site reconnaissance. Due to proprietary and developmental research being conducted at 603 March Road, certain rooms were not photographed. Photographs taken during the site visits are presented in Appendix B. Appendix B includes a written description of each photograph with respect to records and figures, and an orientation for each photograph.

5.2 SPECIFIC OBSERVATIONS

The phase one property is irregular in shape and approximately 5.55 ha in plan area based on information gathered from the GeoOttawa online geographical information system. There are currently three permanent buildings on the phase one property; a single storey fitness centre (555 March Road), a single storey commercial strip plaza (591 March Road), and a two storey office building (603 March Road).

Other areas of the phase one property include paved parking areas which wrap around the south and west of 555 March and connect to the 591 March parking area encompassing the southeastern area of that portion of the phase one property. The paved parking area of 603 March also wraps around the southern and western portions on the building, extending to the western property boundary. The remainder of the phase one property is unmaintained vegetated area which covers the western portion of 555 March and all of 595 March.

As previously indicated, the 555 and 591 March portions of the phase one property are connected via parking areas and can only be accessed from March Road. 603 March can be accessed via Terry Fox Drive or March Road. A fence runs along the 603 March western property boundary and

a portion of the southern boundary, between 603 and 595 March. Another fence runs along the southern phase one property boundary.

5.2.1 ABOVE-GROUND STRUCTURES

Current Above-Ground Structures

555 March Road

Based on information obtained through review of FIPs and aerial photos, the 555 March Road building on the phase one property was constructed in 1988, with no external renovations occurring since. According to the chain of title search, it appears the last major interior renovation occurred prior to leasing to Good Life Fitness in 2007.

The 555 March Road building is currently utilized as an exercise and fitness centre. The main area consists of a reception desk, exercise and weight training equipment, and access to offices and change rooms. Located in the southwestern corner of the building are private fitness studio rooms and a former childcare room. Utility rooms are located in the western portion of the building accessed through the men's change room. A loading bay door and water main with fire suppression system plumbing are also located in the western portion of the building, accessible through the northwestern area of the main room.

The building is of block construction with a poured concrete foundation and is clad with metal siding in all areas. Interior building finishes are summarized as follows:

- Walls – mix of temporary paneling, dry wall and exposed painted block
- Ceilings – mix of mineral fibre ceiling tiles (drop ceiling) and exposed roof deck
- Floors – mix of carpet on top of concrete, ceramic/porcelain tiles, rubber matting, and concrete

591 March Road

Based on information obtained through review of FIPs and aerial photos, the commercial plaza building was constructed in 1989 and has remained relatively unchanged since construction. The foundation of the building is slab on grade concrete, it has a steel frame construction with walls and ceiling constructed of steel on steel or stucco on steel walls and steel roof decking. The building is separated into several units using metal studs and drywall. Each unit can be accessed via exterior doors along the southern side of the building which open on to the parking area. At the time of the site visit, the building was being used for the following:

- Unit #1 – March Road Veterinary Hospital, veterinary services

- Unit #5 – Harbin Chinese Casserole Restaurant, restaurant
- Unit #6 – Green Leaf Bubble Tea, beverage vendor
- Unit #7 – Cooperators Insurance, insurance broker
- Unit #8 – Chicco Optical, optometrist and eye glasses sales
- Unit #9 – Currently vacant, formerly occupied by Ottawa Lifestyle Medicine, supplement supplies
- Unit #10 – Currently vacant, formerly occupied by an Asian language arts and music school/tutor
- Unit #12 – Sunny Day Foot Spa, pedicure and spa services
- Unit #15 – Casey’s Pet Grooming and Doggie Daycare, pet grooming and day care services

Each interior unit contained different finishes depending on the business operating within. Generally, the finishes were as follows:

- Walls – mix of drywall and/or temporary paneling.
- Ceilings – mix of mineral fibre ceiling tiles (drop ceiling) and exposed roof deck.
- Floors – mix of bare or painted concrete, laminate flooring, ceramic/porcelain tiles, and linoleum tiles.

603 March Road

Based on information obtained through review of chain of title records, client supplied construction drawings, and aerial photos, the original building was constructed between 1969 and 1976 with major additions in 1983, 1989 – 1990, and 2001. The foundation of the building is slab on grade concrete, it has a steel frame construction with walls and ceiling constructed of steel on steel or masonry veneer on steel walls and steel roof decking. The building is separated into several units using metal studs and drywall. Each unit is accessed internally after entry to the building via exterior doors in the northwest, southwest, south, and southeast areas of the building which open on to the parking area. At the time of the site visit, the building was being used for office space and high-tech research and development labs. Open atriums were present to accommodate second floor access in the northwest and southeast entry foyers.

Interior finishes are summarized as follows:

- Walls – mix of drywall and/or temporary paneling.
- Ceilings – mix of mineral fibre ceiling tiles (drop ceiling) and exposed roof deck.

- Floors – mix of bare or painted concrete, laminate flooring, ceramic/porcelain tiles, and linoleum tiles.

Historical Above-Ground Structures

Based on the aerial photo review, there was one building historically on the phase one property; a single family dwelling was located on the 591 March Road portion of the phase one property from the 1950s through the late 1980s.

There is no information available relating to the specific use of the former building, however, the chain of title for the time period indicates private owners of that municipal address until that portion of the phase one property was re-developed into a commercial strip plaza in the late 1980s. No evidence of the historic building was observed during the site visit.

5.2.2 BELOW-GROUND STRUCTURES

Current Below-Ground Structures

All buildings on the phase one property are of slab on grade construction and do not have any below grade portions. The phase one property is serviced by underground utilities included potable water, sanitary and storm sewers, electricity, and natural gas. The location of underground utilities is shown on Figure 4, Appendix A.

Historical Below-Ground Structures

No below-ground structures are known to have existed at the phase one property in the past.

5.2.3 SITE OPERATIONS

Current Site Operations

The phase one property is currently being operated as a fitness centre (555 March), a commercial strip plaza (591 March), and high-tech research and development labs and office space (603 March). Additional details regarding the current operations on the phase one property are provided in previous sections.

Historical Site Operations

The phase one property was historically used as an agricultural field until the 1940s or 1950s when a portion of it was developed with a private residence. In the 1970s, the 603 March portion of the phase one property was developed with an office building, which underwent additions in 1983,

1989 – 1990, and 2001. From the 1990s to the early 2000s the facility was partially used for the manufacturing of electronic components. In the late 1980s, the southern portion of the phase one property was re-developed into electronic component manufacturing (555 March) and a commercial strip plaza (591 March). The phase one property has operated in generally the same capacity as described above under “current site operations” since 2005.

5.2.4 HARZARDOUS WASTE

As noted in Section 3.2.2, there are multiple waste generator records associated with the phase one property for the years 1995-2005 indicating that some hazardous waste including; halogenated solvents, acid wastes – other metals, and organic laboratory chemicals, were once generated on the property, but no longer are. OMI requested that the Owners provide additional information regarding the quantities of waste generated at the phase one property and management practices specific to the waste generator records; however, no additional information or documentation were available since these records pre-date the current phase one property owners.

No significant quantities of hazardous chemicals were observed to be stored on the phase one property during the site visit. Cleaning chemicals and paints were stored in the utility room of 555 March Road and within each unit of 591 March Road. Similarly, small quantities of cleaning chemicals and paints were stored in a flammable’s cabinet in the maintenance workshop of 603 March Road.

5.2.5 DRAINS AND SUMPS

There is a sump in the former loading bay and an elevator sump beside the only elevator in 603 March Road. According to the site representatives, the sumps are rarely activated.

Small floor drains are located throughout the 555, 591, and 603 March Road buildings in washrooms, the change rooms/showers, storage rooms, the janitorial rooms, and in the cafeteria.

Grease traps were observed in the restaurant unit of 591 March Road and the cafeteria of 603 March Road. The restaurant grease trap is serviced by the business owner on a monthly basis. The 603 March Road grease trap has not been in use since the cafeteria was closed in early 2020.

5.2.6 MECHANICAL EQUIPMENT

Mechanical equipment observed on the phase one property during the site reconnaissance is summarised as follows:

- Hot water tanks in utility room of 555 March Road.

- Hot water tank in each unit of 591 March Road.
- Hot water tanks in various locations throughout 603 March Road.

Air handling units which are located on the roofs of each of the phase one property buildings were not inspected as part of the site reconnaissance.

There is a hydraulic elevator installed in a stairwell in the southeast area of the 603 March Road building. The elevator has an approximately 630 L hydraulic oil storage tank in an adjacent room. Elevator and tank maintenance records were reviewed during site reconnaissance. The records indicate that the system is checked and maintained by an elevator contractor on a quarterly basis.

5.2.7 STORAGE TANKS

There are currently 5 ASTs on the phase one property:

- A single walled steel AST manufactured in 2001 with a capacity of approximately 630 L used to store hydraulic oil for the elevator.
- Two mineral oil-filled pad mounted transformers of unknown volume along Terry Fox Drive at the northern phase one property boundary.
- One pad mounted transformer adjacent to the parking area of 591 March Road.
- One pad mounted transformer adjacent to the southern corner of the 555 March Road building.

The hydraulic oil AST is stored inside the 603 March Road building, in a utility room adjacent to the elevator. The AST is adjacent to a sump pit, which is intended to capture any spills or releases. According to the site representatives, the AST, hydraulic pump, and elevator system are maintained on a quarterly basis by an elevator contractor.

The mineral oil filled transformers indicated that the oil contained within did not contain PCB's at the time of manufacture. The older transformer had a manufacture date of 2001, while the newer transformer had a manufacture date of 2015. No information plates were available for the remaining two transformers. As such, OMI could not determine if the transformers were filled with oil. No evidence of material degradation or spills were observed during the site reconnaissance.

The presence of an AST and transformers on the phase one property have been identified as a PCA.

5.2.8 SPILLS AND RELEASES

No spill records associated with the phase one property were identified in the ERIS search. During the site reconnaissance, no evidence of recent spills or releases were observed.

As indicated by past environmental investigations on the phase one property, historical releases of halogenated solvents occurred on the 591 and 603 portions of the phase one property. These releases, and areas of known contamination, have been identified as a PCA.

5.2.9 GENERAL UTILITY SERVICES

Based on discussions with interviewees, observations at the time of the reconnaissance, and the utility layout on GeoOttawa, the phase one property is serviced with municipal services including potable water, electricity, sanitary and storm sewers, and natural gas. Potable water, storm, and sanitary sewer services are supplied by the City of Ottawa. Electricity is provided by Hydro Ottawa. All heating systems at the phase one property are fueled using natural gas supplied by Enbridge.

Refer to Appendix A, Figure 4 which shows locations of underground site utilities at the phase one property.

5.2.10 SOLID WASTE GENERATION, STORAGE, AND DISPOSAL

According to interviewees and based on observations made during the site reconnaissance, solid wastes generated at the phase one property include domestic/office-type waste from the office building, fitness centre, and several of the commercial tenants, as well as food wastes and used cooking oil/grease from the restaurant. Although waste generator records for the phase one property were identified in the ERIS report, no further information regarding hazardous waste generation or disposal could be provided by the site representatives. All solid waste and recycling are collected for off-site disposal by third party waste removal contractors and licenced haulers.

5.2.11 AIR EMISSIONS

There are no current reported/registered air emissions associated with the phase one property.

5.2.12 WATER SOURCES

As stated above, potable water is supplied to the phase one property via the municipal distribution system. There are no other potable or non-potable water sources on the phase one property.

5.2.13 WELLS

No wells (as defined in or under the Ontario Water Resources Act and the Oil, Gas and Salt Resources Act) were identified on the phase one property during the site reconnaissance. Several monitoring wells were observed in locations specified by previous environmental reports.

Five WWIS records associated with the phase one property were identified in the ERIS search (section 3.2.2). Four of the records are related to the supply wells installed on the phase one property (one for industrial supply and three for domestic water supply). One of the records pertains to the 2010 – 2011 Phase II ESA conducted by Paterson as part of the investigation of subsurface contamination attributed to the former dry cleaner. There are no records indicating any of the wells, domestic or monitoring, were decommissioned. In 2021 – 2022, OMI's predecessor company Concentric Geoscience oversaw the installation of 18 monitoring wells on the 603 March portion of the phase one property as part of a Phase II ESA.

During the site reconnaissance, dozens of unprotected monitoring well pipes were observed on the 595 March Road portion of the phase one property. No records for the installation of these wells could be located; however it is assumed the wells were installed by Paterson as part of the site characterization and remediation programs they carried out. Documentation related to the installation of these wells was requested from the site representatives. No records had been provided by the time of this writing.

5.2.14 SEWAGE WORKS

Based on observations made during the site reconnaissance and information collected during the records review, there are no sewage works present at the phase one property.

5.2.15 GROUND COVER

The total area of the phase one property is approximately 5.55 ha. Ground cover at the phase one property is broken down as follows:

- Approximately 15% buildings
- Approximately 25% asphalt (parking areas, uncovered loading docks, and access roads)
- Approximately 60% brush/grass/landscaping

Vegetated areas appeared unmaintained with areas of potential broken rock fill at the corner of Hines Road. General litter and rubbish were observed within the vegetated areas, but no other signs of filling or dumping were present. Fill of unknown quality observed on the phase one property has been identified as a PCA.

5.2.16 RAILWAY LINES AND RAIL SPURS

Based on information collected during the historical records review, the site visits, and the interview, no rail lines or spurs have ever been present at the phase one property.

5.2.17 SPECIAL ATTENTION SUBSTANCES

Previous environmental reports indicated that a limited asbestos survey of the 603 March Road building had been conducted (Section 3.1.6). The results of the limited survey are as follows:

- Asbestos: Potentially still present in pipe insulation of the former main electrical room at 603 March Road.

During the site reconnaissance, the following special attention substances were observed, or have the potential to be present, on or in building materials based on the ages of the buildings:

- Asbestos: Not expected beyond what was noted above.
- Lead: Potentially present in surface coatings (paint) at 603 March Road only
- Crystalline Silica: Potentially present in cement
- Mercury and PCBS: Potentially present in fluorescent lights/light ballasts. Mercury thermostats were noted in one unit of 591 March Road and at various locations in 603 March Road.

Completion of an asbestos/hazardous materials survey or review of existing reports relating to the onsite buildings would be required to confirm the presence/absence of the above-noted special attention substances and to evaluate any risks associated with their presence.

5.2.18 POTENTIAL CONTAMINATING ACTIVITIES

Additional PCAs as described in Table 2, Schedule D of O.Reg. 153/04 were identified on the phase one property as a result of the site visit and are summarised in Table 5-2 in Section 5.4.

5.2.19 UNIDENTIFIED SUBSTANCES

No unidentified substances were observed at the time of the site reconnaissance.

5.2.20 ENHANCED INVESTIGATION OF PROPERTY

As stated in section 3.3.6, the phase one property is considered an “enhanced investigation property,” as defined by O.Reg.153/04. Enhanced investigation activities initiated as part of the phase one ESA are described in Section 3.3.6.

5.3 INVESTIGATION OF PHASE ONE STUDY AREA

The site reconnaissance of the phase one study area (other than the phase one property) was carried out as required by section 14 of Schedule D in O. Reg. 153/04 to identify, locate and document PCAs, water bodies and areas of natural significance in the part of the phase one study area that is outside of the phase property and that is not covered by buildings or other structures. The investigation involved a combination of walking and windshield reconnaissance.

The following relevant information relating to properties adjacent to the phase one property in the phase one study area was collected during the site visit:

Acklam Terrace (north and northwest of phase one property):

- Consistent with historical documents and aerial photos, the area north and northwest of the phase one property is a residential neighbourhood.

700 March Road (north of phase one property):

- Commercial plaza with various retail outlets, restaurants, and dental and medical offices.
- Star Fashion Cleaners, a dry cleaning facility, was noted among the retail outlets.

720 March Road (north of phase one property):

- This property is operated as a Shell retail gasoline station.

600 March Road (northeast and east of phase one property)

- This property is operated as the Nokia campus and parking area.

525 March Road (southeast of phase one property)

- This property is operated as an independent insurance provider/broker.

88 Hines Road (southeast of phase one property)

- This property is operated by CCI/Telemus, radio antennae and electronic warfare hardware and software manufacturers.

1000 Innovation Drive (south of phase one property)

- An office building with several different commercial and high-tech tenants

93 – 95 Hines Road (southwest of phase one property)

- Various high-tech software manufacturers, trade contractors' shops (HVAC and electrical), contractor supply stores, and a fitness centre.

96 Hines Road and 385 Terry Fox Drive (west of phase one property)

- Ciena campus, buildings B and C and parking lot.

5.4 SUMMARY OF INVESTIGATION

The investigations associated with the site reconnaissance of the phase one property and study area (as described in 5.1, 5.2, and 5.3 including subsections) involved two site visits and associated inquiries in accordance with Sections 13 and 14 of Schedule D in O. Reg 153/04 (as amended).

Three additional PCAs were identified on the phase one property as a result of the site reconnaissance as summarized in Table 5-2. Refer to Table 2-1 for the corresponding definitions for each PCA number shown in Table 5-2.

Table 5-2: PCAs Identified on through Site Reconnaissance

Address	Dist. (m)	Dir.	Description	Dates	PCA # (O.Reg 153/04)
Phase one property	-	-	Storage of hydraulic oil in a fixed tank for use in an elevator system. Two pad mounted, oil filled transformers located on the northern property boundary. One transformer adjacent to the 591 March Road parking area. One transformer adjacent to the 555 March Road building. Broken rock fill at the corner of Hines Road, west of the phase one property.	2001 – present; 2001 – Present; 2015 – present; Unknown – present	28, 30, 55

6 REVIEW AND EVALUATION OF INFORMATION

Review, evaluation, and interpretation of information obtained from the records review, the interviews and the site reconnaissance components of this phase one ESA was completed with consideration of the general and specific objectives of this phase one ESA. The following subsections provide information on the review and evaluation of the information in accordance with Part V of Schedule D, O. Reg. 153/04.

6.1 CURRENT AND PAST USES

Table 6-1 provides a description of the current and past uses of the phase one property to its first developed use, as per section 16 of Schedule D of O. Reg. 153/04.

Table 6-1: Current and Past Uses of Phase One Property

Years	Name of Owner	Description of Property Use	Property Use	Other Observations from Aerial Photos, FIPs etc.
555 March Road				
1837 – 1960	Various individuals/ private landowners	Privately owned; agricultural land/ unknown/ fallow	Agricultural	
1960 – 1963	Mic Mac Realty (Ottawa)	Agricultural land/ fallow	Agricultural	Land appears to be fallow in aerial photos.
1963 – 1972	Various individuals/ private landowners	Privately owned; agricultural land/ fallow	Agricultural	Land appears to be fallow in aerial photos.
1972 – 1989	South March Developments Ltd; Fussen Investments (Ontario) Inc.; Rusint Property Inc.	Agricultural land/ fallow	Agricultural	Land appears to be fallow in aerial photos.
1989 – 2007	Rusint Property Inc.; 555 March Rd Inc.	Single structure used by electronic component manufacturers	Industrial	Building footprint does not change from time of construction in 1989.

1983 – 1989	Trillium Telephone Systems Inc.; Mitel Corp.	Property used for the development and possible manufacture of electronic components.	Industrial	Addition to the southwest side of the building extending footprint.
1989 – 2001	Regional Development Corp.; Newbridge Networks Corp.; Tundra Semiconductors Corp.	Property used for the development and possible manufacture of electronic components.	Industrial	Addition to the northeast side of the building extending footprint.
2001 – present	Tundra Semiconductors Corp.; Renesas Electronics Canada Ltd.; March and Main Developments Inc.	Property no longer used for manufacture of electronic components. Research and development of microprocessors and microcontrollers. Portions of the building used for office space.	Industrial/ Commercial Office	An addition to the northwest side of the building further extending footprint. Building footprint matches present-day outline as of 2001.

6.2 POTENTIALLY CONTAMINATING ACTIVITIES

6.2.1 PHASE ONE PROPERTY

Table 6-2 documents the PCAs (as prescribed by O. Reg. 153/04 under Schedule D, Table 2) that were identified at the phase one property as a result of the records review, interviews and site reconnaissance. Refer to Figure 5 for locations of the PCAs.

Table 6-2: PCAs Identified at the Phase One Property

O.Reg. 153/04 Schedule D, Table 2 PCA Category	Location/Description
8. Chemical manufacturing, processing, and bulk storage	Based on waste generator records, 603 March Road may have stored bulk quantities of laboratory chemicals.
19. Electronic and computer equipment manufacturing	Former clean room manufacturing of electronic components within the 603 March Road building. Electronic equipment manufacturing operations within the 555 March Road building.
28. Gasoline and associated products storage in fixed tanks	603 March Road building elevator and associated hydraulic oil pump and storage tank.
30. Importation of fill of unknown quality	Fill identified from borehole logs beneath asphalt driveways and parking areas across the phase one property. Broken rock filling on corner of Hines Rd.
37. Operation of dry-cleaning equipment (where chemicals are used)	Dry cleaning facility within 591 March Road, known subsurface contamination due to release of dry cleaning chemicals.
55. Transformer manufacturing, processing and use	Two oil filled, pad mounted, high voltage electrical transformers located along the northern property boundary. One transformer adjacent to the 591 March Road parking area. One transformer adjacent to the 555 March Road building.
58. Waste disposal and waste management, including thermal treatment, landfilling and transfer of waste, other than use of biosoils as soil conditioners	The phase one property is within the risk management area of the former March Landfill located approximately 1.6 km to the west of the phase one property.

6.2.2 PHASE ONE STUDY AREA

Table 6-3 documents the PCAs (as prescribed by O. Reg. 153/04 under Schedule D, Table 2) that were identified within the phase one study area (other than the phase one property) as a result of the records review, interviews and site reconnaissance. Refer to Table 2-1 for the corresponding definitions of each PCA number shown in Table 6-3. PCAs in the phase one study area are shown on Figure 5, Appendix A.

PCA Category	Location/Description			
	Address	Dist. (m)	Dir.	Description
				NPRI – Exhaust release from Tower C for the following contaminants: Nitrous Oxide, Oxides of nitrogen, methane, volatile organic compounds (VOCs), carbon monoxide, hydrofluorocarbon, particulate matter <10 microns, particulate matter <2.5 microns, sulphur dioxide, total particulate matter GEN – Misc. waste organic chemicals, waste compressed gases, wastes from the use of pigments, coatings and paints

As shown in Table 6-3, PCAs were associated with 19 different addresses within the phase one study area and are primarily associated with both current and historical commercial or industrial operations including gas stations, commercial printing operations, dry cleaners, metal fabrication, and high-tech manufacturing. Only the PCAs identified in Table 6-3 highlighted in grey are considered to pose a risk to the environmental condition of the phase one property; the rest are not considered to pose a risk to the environmental condition of the phase one property given their nature, age and/or separation distance and direction from the phase one property.

6.3 AREAS OF POTENTIAL ENVIRONMENTAL CONCERN

Table 6-4 below identifies and describes APECs in accordance with clause 16 (2) (a) in Schedule D of O. Reg. 153/04. Each PCA was evaluated in accordance with the criteria described in Section 6.3.1. Refer to Figure 6 for location of APECs on the phase one property. See Section 6.3.2 for further description of contaminants of potential concern (COPCs).

Table 6-4: Areas of Potential Environmental Concern

APEC	Location of APEC	PCA No.	PCA – on-site or off-site	COPCs	Media Potentially Impacted
APEC A Former electronic component manufacturing	Interior and immediately surrounding area of the 555 March Road building on the phase one property.	19	On-site	VOC	Soil and Groundwater
APEC B Former dry cleaning facility	Interior and immediately surrounding area	37	On-site	VOC	Soil and Groundwater

6.3.1 EVALUATION LOGIC AND REASONING

OMI’s evaluation related to the existence of APECs on, in or under the phase one property was based on the review of available information and exercise of professional judgement. All of the identified PCA’s were evaluated in the context of:

- Distance and direction from the site in relation to the inferred direction of groundwater flow;
- The age of the PCA;
- Changes/redevelopment to the property on which the PCA is located since the occurrence of the PCA;
- The potential for the PCA to generate lasting, mobile contamination.

PCAs were not carried forward as APECs if the above evaluation determined that they did not have potential of posing an actual risk to the environmental condition of the phase one property. All of the PCAs identified on the phase one property have been carried forward as APECs based on the evidence collected through the phase one ESA and the above evaluation.

In regard to APEC C, the former electronic component manufacturing operations, the Phase II ESA conducted by OMI (Section 3.1.6) indicates that subsurface impacts related to the former site operations are present. However, the impacts were not fully delineated laterally or vertically at the time of the study. Therefore, uncertainty remains as to the maximum concentrations of VOC parameters in groundwater and the location of the source zone. For this reason, the area of known groundwater impacts was included as part of APEC C.

The on-site PCA associated with the hydraulic oil AST in the elevator machine room that has resulted in APEC D is considered to pose a low risk of impacts to the underlying soil and/or groundwater. No staining was observed on the floor and there is an interceptor sump adjacent to the AST. Elevator equipment is inspected quarterly by a licenced elevator contractor. Despite the low potential for impacts from the hydraulic oil AST, it is an on-site PCA according to Table 2, Schedule D of O. Reg.

153/04 and as such automatically results in an APEC that requires further assessment should an RSC be required in future.

Similarly, APEC E refers to the presence of oil filled transformers along the northern boundary of the phase one property as well as one each, adjacent to the 555 and 591 March Road buildings. The transformers on the northern property boundary were found to be manufactured in 2001 and 2015, with the identification plate on the 2001 transformer indicating the oil at the time of manufacture was non-PCB containing mineral oil, with less than 1 part per billion (ppb) PCBs. As indicated in Section 5.2.7, the transformers were in good condition with no staining or evidence of releases in the surrounding area. As such, OMI considers the presence of these transformers to pose a low potential risk to the environmental quality of the phase one property. However, according to Table 2, Schedule D of O. Reg. 153/04, the presence of transformers on the property requires follow-up investigation.

Since the phase one property is wholly encompassed in the risk management area of the former March Landfill, the whole phase one property is included in APEC H. Records indicate that the COPCs within the risk area are chlorinated solvents, which are the primary COPCs of most other on-site APECs on the phase one property. Additional information regarding the location, depth, compounds, and age of the COPCs was requested from the City, however, at the time of this writing no response had been provided.

6.3.2 SUMMARY, DESCRIPTION, AND RATIONALE FOR COPCS

COPCs identified in one or more APECs at the phase one property include the following:

- Petroleum Hydrocarbons (PHCs)
- Benzene, Toluene, Ethylbenzene, Xylene (BTEX)
- Volatile Organic Compounds (VOCs)
- Polycyclic Aromatic Hydrocarbons (PAHs)
- Polychlorinated biphenyl (PCBs)
- Metals

COPCs identified with respect to each APEC are summarized in Table 6-5.

Table 6-5: Rational for COPCs

APEC & COPCs	Rational for COPCs
APEC A VOC	Solvents and cleaners associated with electronic component manufacturing.
APEC B VOC	Known halogenated solvent contamination in soil and groundwater from dry cleaning chemicals.

Table 6-5: Rational for COPCs

APEC & COPCs	Rational for COPCs
APEC C VOC	Solvents and cleaners associated with electronic component manufacturing.
APEC D PHC, BTEX	COPCs associated with hydraulic oil (PHC, BTEX) stored in a fixed tank to operate an elevator.
APEC E PHC, BTEX, PCB	COPCs associated with oil filled transformers.
APEC F PHC/BTEX, VOC, Metals	PHC/BTEX – Waste generator records indicate petroleum product generation from contractor shop spaces where work vehicle operating fluids were changed. VOC – Solvents and cleaners associates with electronic component manufacturing. Solvents and thinners are also associated with ink processing. Metals – Heavy metals associated with metal fabrication.
APEC G PHC, BTEX, PAH, Metals	Petroleum and semi-volatile parameters are common COPCs given the ubiquitous use of petroleum-based products and associated releases and combustion by-products that can affect soil materials. Metals contaminants associated with anthropogenic sources can adsorb to soil particles and generally do not readily breakdown in the environment. Soil fill with one or more of these potential COPCs could more readily move from one site to another during the time period when the phase one property was re-graded, when the Ontario environmental regulatory framework was not as stringent as it is currently.
APEC H VOC	Chlorinated solvents identified as a known groundwater contaminant within the environmental risk management area of the former March Landfill

6.3.3 UNCERTAINTIES

Subsection (6) of Schedule D of O. Reg 153/04 requires consideration and documentation of how any uncertainty or absence of information obtained in each of the components of the phase one ESA could affect the validity of the conclusions, tables and phase one conceptual site model (refer to Section 6.4 for further description of the phase one conceptual site model).

Records Review

Some of the records information provided from various sources do not contain enough information to conclusively determine if the record is indicative of a PCA. Similarly, volumes of potential contaminants associated with records in the city directory/HLUI/ERIS for various land uses (e.g. manufacturers or institutions) cannot be determined.

Other common phase one ESA uncertainties are associated with lack of FIP coverage, aerial photographs with small scale coverage (i.e. small detail vs. large detail), limited or no information received from the MECP, and unplottable records in the ERIS report.

Although the phase one property was identified as an enhanced investigation property, detailed operating records associated with past property uses were not available for review and records associated with current operations were not provided by the site representatives at the time of writing.

The above noted uncertainties associated with the records review do not affect the conclusions of the phase one ESA because the conclusions take into account the above-described uncertainties while considering other evidence and factors.

Interviews

There are uncertainties associated with the potential for limited direct knowledge of the older history of the phase one property prior to the interviewee's involvement. Uncertainty associated with the interviews does not affect the conclusions of the phase one ESA because the conclusions are conservative and take into account the above described uncertainty.

6.4 PHASE ONE CONCEPTUAL SITE MODEL

As part of the requirements of Part V in Schedule D of O. Reg. 153/04, a phase one conceptual site model (CSM) was developed as part of the review and evaluation.

The phase one CSM consists of a figure and narrative descriptions that are intended to illustrate the results of the phase one ESA and to provide a basis of further work if required.

The phase one CSM is illustrated in Figure 6, Appendix A. The narrative is provided below, in accordance with the mandatory requirements of Table 1 of Schedule D.

6.4.1 AREAS OF PCAS POTENTIALLY AFFECTING THE PHASE ONE PROPERTY

Refer to Section 6.2 for a description of areas of PCAs identified on the phase one property and in the phase one study area. Refer to section 6.3 for a description of APECs on the phase one property based on the identified PCAs.

6.4.2 POTENTIAL INFLUENCE OF UNDERGROUND UTILITIES

COPCs have the potential to preferentially migrate in utility backfills at the site. The current location of some buried utilities is shown on drawings collected from GeoOttawa. The general location of these utilities is shown on Figures 4 and 6, Appendix A.

6.4.3 REGIONAL OR SITE SPECIFIC GEOLOGICAL/HYDROGEOLOGICAL INFORMATION

Based on the records review the following is known of the phase one property:

- The phase one property is generally flat lying and has a slight slope down from northwest to southeast with an elevation of 82.25 MASL in the center of the phase one property.
- Fill materials are present below paved surfaces and in the southwest central area near the corner of Hines Road.
- Native overburden material consists of silty clay till with some sand and gravel.
- Depth to bedrock varies across the phase one property but ranges from 0.15 m in the north of the to 2.72 m in the central area of the phase one property. Dipping trends in the bedrock surface indicate thicker overburden up to approximately 4.5 m in the southeast corner of the phase one property.
- Till material is described as quaternary age, stone-poor, sandy silt to silty sand textured till.
- Bedrock beneath the phase one property and the majority of the phase one study area is described Lower Ordovician age dolostone and sandstone of the Beekmantown Group.
- There are no permanent surface water bodies on the phase one property or within the phase one study area. The closest surface water bodies are Shirleys Brook approximately 513 m to the northeast. Shirleys Bay, in Lac Deschenes on the Ottawa River is located approximately 2.8 km northeast.

Shallow groundwater flow in the north portion of the phase one property varies with surface influences, generally it flows to the north and east. Deeper groundwater flow appears to be consistent with deep regional groundwater flow which is expected to be influenced by the presence of the Ottawa River to the northeast. Since the water table is within bedrock, and no permanent or substantial aquifer has been observed in overburden, groundwater flow is not likely to be affected by subsurface utilities.

6.4.4 UNCERTAINTIES ASSOCIATES WITH CSM

Uncertainties associated with the phase one ESA are identified in Section 6.3.3 and can also be considered for the phase one CSM.

Additional uncertainties to consider from the context of the CSM include:

- Location and distribution of COPCs laterally and vertically across the site.
- Varying COPCs and differing migration behaviours in soils and groundwater.

7 CONCLUSIONS

As per Part V, Section 16 of O. Reg. 153/04, OMI has reviewed, evaluated and interpreted the information obtained from the records review, the interviews and the site reconnaissance components of this phase one ESA so as to achieve the general and specific objectives of a phase one ESA.

Based on a review of the available information and the exercise of professional judgment, OMI has concluded that there is potential for the identified COPCs to have affected land and/or water under the phase one property within the identified APECs. Should future redevelopment of the phase one property to a more sensitive land use be desired, a Record of Site Condition (RSC) would be required prior to redevelopment for compliance with the O. Reg. 153/04. Based on the information obtained in completing this Phase One ESA, it is OMI's opinion that a phase two ESA would be required prior to any redevelopment of the phase one property.

This conclusion is based on APECs identified by OMI on and/or under the phase one property as follows:

APEC A: Interior and immediately surrounding area of the 555 March Road building.

- Former (1985 – 2005) use of the building as an electronic component manufacturing facility.
- COPCs associated to APEC A are VOCs.

APEC B: Interior and immediately surrounding area of the 591 March Road building; area of known contamination north of building.

- Former (1991 - 2000) dry cleaning operation where chemicals are used.
- COPCs associated to APEC B are VOCs.

APEC C: Interior and surrounding area of 603 March Road building; area of known groundwater contamination.

- Former (1997 – 2007) use of building as an electronic component manufacturing facility.
- COPCs associated to APEC C are VOCs.

APEC D: Interior and immediately surrounding area adjacent to elevator at 603 March Road.

- Storage of hydraulic oil in a fixed tank.
- COPCs associated with APEC D include PHC and BTEX.

APEC E: Northern property boundary, 591 March Road parking area, and southern corner of 555 March Road building.

- Presence of two, oil filled, pad mounted, high voltage transformers along the northern boundary. One additional transformer adjacent to the 591 March Road parking area as well as one transformer adjacent to the southern most corner of 555 March Road.
- COPCs associated with APEC E include PHC, BTEX and PCBs.

APEC F: Southern and southwestern property boundary.

- Potential bulk chemical and ink storage. Electronic component manufacturing in surrounding buildings. Metal fabrication and manufacturing operations in nearby buildings.
- COPCs associated with APEC F include PHC, BTEX, VOC, and metals.

APEC G: Northern and southeastern paved areas; West central area of the phase one property.

- Imported fill of unknown or quality.
- COPCs associated with APEC G include PHC, BTEX, PAH, and metals.

APEC H: All exterior areas of the phase one property.

- Potential chlorinated solvent contamination in groundwater from the former March Landfill which operated from 1963 to 1974.
- COPCs associated with APEC H are VOCs.

Other considerations:

Based on information gathered and the age of the buildings on the phase one property, there is potential for various special attention substances including asbestos, lead, mercury, PCBs and crystalline silica to be present in building materials. It is recommended that a hazardous materials/designated substances survey be completed prior to any major renovations or demolition of the buildings being undertaken.

9 LIMITATIONS

This report was prepared exclusively for the purposes, project and site locations outlined in the report. The report is based on information provided to, or obtained by Omni-McCann Inc. (OMI), as indicated in the report, and applies solely to site conditions existing at the time of the site investigation. Although a reasonable investigation was conducted by OMI, OMI's investigation was by no means exhaustive and cannot be construed as a certification of absence of any contaminants from the site. Rather, OMI's report represents a reasonable review of available information within an established work scope, schedule and budget. It is therefore possible that currently unrecognized contamination or potentially hazardous materials may exist at the site, and the levels of contamination or hazardous materials may vary across the site. Further review and updating of the report may be required as local and site conditions, and the regulatory and planning frameworks, change over time.

This report was prepared by OMI for the sole benefit of March and Main Developments Inc. The material in it reflects OMI's judgment in light of the information available to it at the time of preparation. Any use which a third party makes of this report, or any reliance on or decisions made based on it, are the responsibilities of such third parties. OMI accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

Respectfully Submitted,
Omni-McCann Inc.

Report

The documents (hereinafter referred to as the "Documents") to be released as part of the report (hereinafter referred to as the "Report") to be delivered to the purchaser as set out above are documents in Opta's records relating to the described property (hereinafter referred to as the "Property"). Opta makes no representations or warranties respecting the Documents whatsoever, including, without limitation, with respect to the completeness, accuracy or usefulness of the Documents, and does not represent or warrant that these are the only plans and reports prepared in association with the Property or in Opta's possession at the time of Report delivery to the purchaser. The Documents are current as of the date(s) indicated on them. Interpretation of the Documents, if any, is by inference based upon the information which is apparent and obvious on the face of the Documents only. Opta does not represent, warrant or guarantee that interpretations other than those referred to do not exist from other sources. The Report will be prepared for use by the purchaser of the services as shown above hereof only.

Disclaimer

Opta disclaims responsibility for any losses or damages of any kind whatsoever, whether consequential or other, however caused, incurred or suffered, arising directly or indirectly as a result of the services (which services include, but are not limited to, the preparation of the Report provided hereunder), including but not limited to, any losses or damages arising directly or indirectly from any breach of contract, fundamental or otherwise, from reliance on Opta Reports or from any tortious acts or omissions of Opta's agents, employees or representatives.

Entire Agreement

The parties hereto acknowledge and agree to be bound by the terms and conditions hereof. The request form constitutes the entire agreement between the parties pertaining to the subject matter hereof and supersedes all prior and contemporaneous agreements, negotiations and discussions, whether oral or written, and there are no representations or warranties, or other agreements between the parties in connection with the subject matter hereof except as specifically set forth herein. No supplement, modification, waiver, or termination of the request shall be binding, unless confirmed in writing by the parties hereto.

Governing Document

In the event of any conflicts or inconsistencies between the provisions hereof and the Reports, the rights and obligations of the parties shall be deemed to be governed by the request form, which shall be the paramount document.

Law

This agreement shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein.

The **IAO Risk•Score** and comments contained in this report are based on conditions and practices observed during our survey and other pertinent data supplied by management personnel at the risk.

Recommendations in this report are made to point out those areas where remedial action could have the beneficial effect of making the above premises safer, and thus more desirable from an underwriting standpoint.

Thank you for choosing IAO to perform this inspection. Please do not hesitate to contact us if we can be of any further assistance.

RISK ALERT ISSUED : Yes No If yes, describe (A risk alert is a telephone notification to the Inspection requestor, of a situation which could imminently cause a serious loss. A Critical Recommendation will be issued to address the situation.)

Committed to Service Excellence

IAO reports, prepared in compliance with commonly accepted risk control standards existing at the time services are rendered, are developed from an inspection of the premises and/or from data supplied by or on behalf of the Purchaser. IAO does not purport to list all hazards. While changes and modifications referred to in the reports are designed to upgrade protection and loss prevention of the premises, IAO assumes no responsibility for management and control of these activities. IAO will not be responsible to the Purchaser for any losses or damages, whether consequential or other, however caused, incurred or suffered, as a result of the services being provided.

Meaning of the IAO Risk-Score: The IAO Score is a grading of the risk inspected versus other risks in this class. Similar to the "Commercial" Fire Protection Grading system in design, there is range of 9 categories, with a grading or "score" of 1 being the most desirable. The IAO Score is based on a number of objective criteria pertaining to the risk at the time of our survey, tempered with the experienced judgement of our Loss Control Specialist. As a general guideline, the scores mean the following criteria:

1-3	Risks in this range are well maintained, with no apparent moral hazards or management problems. Undesirable features are non-existent and recommendations, if any, are minor. Risks in this category are excellent (no deficiencies) to better than average for their class.
4-6	The maintenance of Risks in this range is considered average. Moral hazards are not apparent, but there may be possible management problems (e.g. poor housekeeping). Undesirable features noted are correctable, and recommendations will vary from desirable to important. Risks in this category are considered average for their class.
7-9	Risks in this range tend to be poorly maintained. Moral hazards and management problems (e.g. poor housekeeping and maintenance, poor attitude) are evident. Significant undesirable conditions are present and cannot or will not be corrected. Critical Recommendations may be present. Risks in this category are significantly below average for their class with little or no indication for improvement.

3.0 REMARKS

The risk is located on a busy road in Kanata in a high tech sector in the new city of Ottawa. The risk is occupied by multiple tenants who are all involved in the high tech industry. The building was found to be very well protected and maintained. Each tenant has a security system plus the building has one as well for all common areas. The risk is also equipped with fire pull stations and air exchangers for the manufacturing areas.

No liability hazards noted at the time of this survey.

No special crime hazards noted at the time of this survey.

4.0 RECOMMENDATIONS

Please note that these recommendations are classified as either **Critical**, **Important**, or **Desirable Improvement**. "**Critical**" recommendations are those aimed at correcting undesirable feature/s which, if left unattended, could cause a serious loss and should be rectified immediately. This class of recommendation is only used in extreme situations. "**Important**" recommendations are intended to highlight undesirable feature/s which if left unattended, could cause a serious loss and should be rectified as soon as possible. "**Desirable Improvement**" recommendations are those aimed at correcting an undesirable feature which can be improved when feasible, to help reduce the risk of a loss.

Surveyed by: B. Young
Date of Survey: 1999.03.31

Committed to Service Excellence

NOTE: The sole purpose of this report is to provide insurance pricing and underwriting information about the particular insured and location named. Only the person requesting this survey will receive a copy of the report, and IAO asks that it be kept strictly confidential. This report does not guarantee compliance with any standards or with any federal, provincial or municipal codes, ordinances or regulations. Tests of fire and other protection equipment have not been conducted or witnessed during this survey.

IAO reports, prepared in compliance with commonly accepted risk control standards existing at the time services are rendered, are developed from a survey of the premises and/or from data supplied by or on behalf of the Purchaser. IAO does not purport to list all hazards. While changes and modifications, referred to in the reports are designed to upgrade protection and loss prevention of the premises, IAO assumes no responsibility for management and control of these activities. IAO will not be responsible to the Purchaser for any loss or damages, whether consequential or other, however caused, incurred or suffered, as a result of the services being provided.

M U L T I R I S K - F I R E , L I A B I L I T Y A N D
B A S I C C R I M E

OCCUPANCY:

The insured is a non-occupant building owner at this location. The premises are in good condition. It could not be determined whether the insured is interested in loss prevention, and loss information was not available at the time of the survey.

* Occupancy Description (Insured / major tenant if insured is non-occupant)

The major occupant is Rohde & Schwarz Inc occupying approximately 428sq.m as an office and warehouse for telecommunication equipment sales and service. Minor repairs are conducted on premises and on occasion will involve some soldering.

* Other Classes of Occupants

Office and warehouse for computer consulting company; part vacant

* Undersirable Features

None

It is recommended that this location be resurveyed in 1 year(s).

BUILDING:

* Built - 1988 Height: Storey(s) (excluding basement) - 1

* There are no additions.

* There are no renovations.

* Building condition - Good

* Area: Ground Floor - 1673 sq. m Total (including basement) - 1673 sq. m

BASIC CONSTRUCTION:

* Walls - 100% Non-combustible - Steel on steel

* Floors - (excluding basement) 100% Concrete

* Roof - 100% - Steel Deck Class II
- Surface material(s) - Tar and gravel
- Original roof.

INTERIOR FINISH:

- * Walls - 98% non-combustible
- 2% open
- * Ceilings - 98% non-combustible
- 2% open

BASEMENTS: None

VERTICAL OPENINGS: None

MEZZANINE: None

OUTBUILDINGS: None

HEATING:

This report section is designed to provide basic crime information only. More detailed crime information can be obtained by ordering an Expanded Crime Supplement.

M U L T I R I S K
R E M A R K S / R E C O M M E N D A T I O N S

REMARKS:

* Fire, Liability & Basic Crime - This is a well maintained building located in an established commercial area of north Kanata. The premises were clean at the time of survey. Housekeeping was found to be satisfactory.

Adequate portable fire extinguishers are provided throughout the building and appear to be serviced regularly. The whole building is protected by a monitored burglar alarm system.

There were no unusual premises liability exposures noted.

The contact was co-operative and readily provided access to the premises.

No recommendations made at this time.

Exterior Lighting, Interior Lighting, Roof Accessability, Police Patrols

- * Security Alarm System - Yes

SECURITY SYSTEM (TENANT or OWNER/OCCUPANT):

- * A premises alarm system is in place
- * The extent of protection by this system is perimeter, space/area
- * The alarm is Local alarm
- * Line security is not provided
- * The type of line security is Not applicable

PHYSICAL PROTECTION (TENANT or OWNER/OCCUPANT):

- * The exterior locks at this location are deadbolt
- * The windows are not barred

This report section is designed to provide basic crime information only. More detailed crime information can be obtained by ordering an Expanded Crime Supplement.

M U L T I R I S K
R E M A R K S / R E C O M M E N D A T I O N S

REMARKS:

* Fire, Liability & Basic Crime - The insured occupies a segregated section of the multi-tenanted and non sprinklered building which appears to be in good condition. The insured expresses an interest in loss prevention, however several deficiencies were noted, including stock stored on the floor, unskidded and unsupervised local alarms.

Servicing of computer equipment is performed by two technicians.

There are no unusual hazards, situations or conditions.

RECOMMENDATIONS:

- * 95-1 Fire, Liability & Basic Crime - All stock currently stored on the floor should be skidded or raised at least 4 inches off the floor to reduce the possibility of water damage in the event water leakage or seepage occurs.

- * 95-2 Fire, Liability & Basic Crime - The existing security alarm system with local alarm capabilities only should be monitored by a ULC listed central station or monitoring station.

AIS Reference: 70462641

Surveyed by: P.C. Tomlinson
Date of Survey: 1999.11.05

Committed to Service Excellence

NOTE: The sole purpose of this report is to provide insurance pricing and underwriting information about the particular insured and location named. Only the person requesting this survey will receive a copy of the report, and IAO asks that it be kept strictly confidential. This report does not guarantee compliance with any standards or with any federal, provincial or municipal codes, ordinances or regulations. Tests of fire and other protection equipment have not been conducted or witnessed during this survey.

IAO reports, prepared in compliance with commonly accepted risk control standards existing at the time services are rendered, are developed from a survey of the premises and/or from data supplied by or on behalf of the Purchaser. IAO does not purport to list all hazards. While changes and modifications, referred to in the reports are designed to upgrade protection and loss prevention of the premises, IAO assumes no responsibility for management and control of these activities. IAO will not be responsible to the Purchaser for any loss or damages, whether consequential or other, however caused, incurred or suffered, as a result of the services being provided.

M U L T I R I S K - F I R E , L I A B I L I T Y A N D
B A S I C C R I M E

OCCUPANCY:

The insured is a non-occupant building owner at this location. The premises are in good condition. The insured is interested in loss prevention, however there have not been any losses during the last 3 years.

* Occupancy Description (Insured / major tenant if insured is non-occupant)

The insured is the off premises building owner of this multi-tenant retail plaza. Normally the restaurant would be considered the major tenant, however the restaurant was locked at the time of the survey. Indication was given the restaurant by lease agreement must have a semi-annual maintenance contract for the fixed fire suppression system. In light of the above, the major tenant is deemed to be "Winning Circle Martial Arts". This tenant operates a self defence/health studio with tanning salon. There are no unusual or unsafe conditions or situations pertaining to this operation.

* Other Classes of Occupants

Restaurant vacant units, Doctor's offices, veterinary clinic, and retail wine

* Undersirable Features

None

Risk is Rateable under the Commercial Property Fire Schedule.
It is recommended that this location be resurveyed in 1 year(s).

BUILDING:

- * Built - 1989 Height: Storey(s) (excluding basement) - 1
- * There are no additions.
- * There are no renovations.
- * Building condition - Good

- * Area: Ground Floor - 1304 sq. m Total (including basement) - 1304 sq. m

BASIC CONSTRUCTION:

- * Walls - 75% Non-combustible - Steel on steel
 25% Non-combustible - Stucco on steel frame

- * Floors - (excluding basement) 100% Concrete

- * Roof - 100% - Steel Deck Class II
 - Surface material(s) - Tar and gravel
 - Original roof.

INTERIOR FINISH:

- * Walls - 100% non-combustible
- * Ceilings - 100% non-combustible

BASEMENTS: None

VERTICAL OPENINGS: None

MEZZANINE: None

OUTBUILDINGS: None

HEATING:

- * Roof Mounted Units - 100% - Natural gas
 - Original installation.
 - Installation appears safe

ELECTRICAL:

- * Condition - Good and appeared safe at the time of the survey.
- * Wiring - Conduit, BX
- * Overcurrent protection - Circuit Breakers.
- * Electrical system - Original installation.

PLUMBING:

- * Condition - Good at the time of the survey.
- * Piping is Copper
- * Plumbing - Original installation.

EXPOSURES: (within 15m of the risk):

- * FRONT: OPEN
- * REAR: OPEN
- * RIGHT: OPEN
- * LEFT: OPEN

MUNICIPAL PROTECTION:

- * The FUS Public Fire Protection Classification is 4
- * Responding (career) fire department Kanata
- * Distance from risk Less than 2.5 km
- * Access via Paved roads. Year-round.

- * The building itself is easily accesible to the fire department.
- * Two hydrants within 155m (standard)

PRIVATE PROTECTION at this location includes the following:

- * Standard extinguishers

- * An automatic sprinkler system is not present.

M U L T I R I S K - L I A B I L I T Y

OCCUPANCY - GENERAL INFORMATION

- * Neighbourhood is predominantly commercial
- * Insured - non-occupant building owner Area occupied - 1304 sq. m
- * 90% accessible to public. Public access is considered heavy
- * Gross revenue - could not be determined at the time of the survey

PREMISES information at the time of this survey

- * The following appeared to be SATISFACTORY:

Floor surfaces & coverings; Wall & ceilings; Interior Lighting; Exterior Lighting; Emergency Lighting; Interior Housekeeping; Exterior Housekeeping; Washrooms; Sidewalks, Yards & Parking Lots; Snow & ice removal; Signs & Awnings; Fire exits; Fire alarms

- * Elevating devices in operation - none

M U L T I R I S K - B A S I C C R I M E

NEIGHBOURHOOD:

- * Predominantly commercial
- * Stable
- * Best described as having a low crime rate

BUSINESS:

- * Description - Martial arts studio
- * Hours of Operation - 8.00am-9.00pm 6 days
- * Typical Stock - Standard furniture and fixtures
- * Smash and Grab exposure is low
- * There is no safe on the premises

GENERAL PROTECTION at the time of this survey:

- * The following appeared to be SATISFACTORY:

Exterior Lighting, Interior Lighting, Roof Accessibility, Police Patrols

- * Security Alarm System - Yes

This report section is designed to provide basic crime information only. More detailed crime information can be obtained by ordering an Expanded Crime Supplement.

M U L T I R I S K
R E M A R K S / R E C O M M E N D A T I O N S

REMARKS:

- * Fire, Liability & Basic Crime - This building is located on the west side of March Road, north of "The Queensway" in a busy newly established area of Kanata. The building is in good condition and has been well maintained over the years. There are no obvious or uncontrolled premises liability situations. The insured and tenants are co-operative, responsible, and interested in loss control. Housekeeping is good and the supply of portable fire extinguishers is standard with updated service tags attached.

No recommendations made at this time.

	<i>(1=Excellent & 9=Poor)</i>									

RISK ALERT ISSUED : Yes No If yes, describe (A risk alert is a telephone notification to the Inspection requestor, of a situation which could imminently cause a serious loss. A Critical Recommendation will be issued to address the situation.)

Committed to Service Excellence

IAO reports, prepared in compliance with commonly accepted risk control standards existing at the time services are rendered, are developed from an inspection of the premises and/or from data supplied by or on behalf of the Purchaser. IAO does not purport to list all hazards. While changes and modifications referred to in the reports are designed to upgrade protection and loss prevention of the premises, IAO assumes no responsibility for management and control of these activities. IAO will not be responsible to the Purchaser for any losses or damages, whether consequential or other, however caused, incurred or suffered, as a result of the services being provided.

Meaning of the IAO Risk-Score: The IAO Score is a grading of the risk inspected versus other risks in this class. Similar to the "Commercial" Fire Protection Grading system in design, there is range of 9 categories, with a grading or "score" of 1 being the most desirable. The IAO Score is based on a number of objective criteria pertaining to the risk at the time of our survey, tempered with the experienced judgement of our Loss Control Specialist. As a general guideline, the scores mean the following criteria:

1-3	Risks in this range are well maintained, with no apparent moral hazards or management problems. Undesirable features are non-existent and recommendations, if any, are minor. Risks in this category are excellent (no deficiencies) to better than average for their class.
4-6	The maintenance of Risks in this range is considered average. Moral hazards are not apparent, but there may be possible management problems (e.g. poor housekeeping). Undesirable features noted are correctable, and recommendations will vary from desirable to important. Risks in this category are considered average for their class.
7-9	Risks in this range tend to be poorly maintained. Moral hazards and management problems (e.g. poor housekeeping and maintenance, poor attitude) are evident. Significant undesirable conditions are present and cannot or will not be corrected. Critical Recommendations may be present. Risks in this category are significantly below average for their class with little or no indication for improvement.

3.0 REMARKS

Located in the Kanata North Technopark, this mall is fully occupied. No special fire hazards noted at the time of this survey.

No special liability hazards noted at the time of this survey.

No special crime hazards noted at the time of this survey.

4.0 RECOMMENDATIONS

Please note that these recommendations are classified as either **Critical**, **Important**, or **Desirable Improvement**. "**Critical**" recommendations are those aimed at correcting undesirable feature/s which, if left unattended, could cause a serious loss and should be rectified immediately. This class of recommendation is only used in extreme situations. "**Important**" recommendations are intended to highlight undesirable feature/s which if left unattended, could cause a serious loss and should be rectified as soon as possible. "**Desirable Improvement**" recommendations are those aimed at correcting an undesirable feature which can be improved when feasible, to help reduce the risk of a loss.

-All listings for businesses were listed as they are in the city directory.

-Listings that are residential are listed as “residential” with the number of tenants. The name of the residential tenant is not listed in the above city directory.

*****Kanata, ON is listed from 1992 to 2011 within the city directory archives.*****

APPENDIX F

Historic Land Use Inventory

File Number: D06-03-22-0103

August 11, 2022

Daniel Elliot
Omni-McCann

Sent via email [dan@omnimccann]

Dear Daniel Elliot,

**Re: Information Request
555, 591, 595, 603 March, Ottawa, Ontario (“Subject Property”)**

Internal Department Circulation:

The Planning, Infrastructure and Economic Development Department has the following information in response to your request for information regarding the Subject Property:

- The identified properties are located within the footprint of an Environmental Risk Management Area (ERMA) associated with the former March Road Landfill. Details related to ERMAs are provided as part of the HLUI report.

Documents Provided:

HLUI Summary Report and HLUI Map

The HLUI Summary Report Excel spreadsheet identifies HLUI area, point and line features within 250 metres of the Subject Property, as shown on the provided HLUI Map PDF. Within 500 metres of the Subject Property, landfills and Environmental Risk Management Area (ERMA) are also identified if applicable.

Additional information may be obtained by contacting:

Ontario’s Environmental Registry

The Environmental Registry found at <https://ero.ontario.ca/> contains "public notices" about environmental matters being proposed by all government ministries covered by the Environmental Bill of Rights. The public notices may contain information about proposed new laws, regulations, policies and programs or about proposals to change or eliminate existing ones. By using key words i.e. name of proponent/owner and the address one can ascertain if there is any information on the proponent and address under the following categories: Ministry, keywords, notice types, Notice Status, Acts, Instruments and published date (all years).

The Ontario Land Registry Office

Registration of real property is recorded in the Ontario Land Registry Office through the Land Titles Act or the Registry Act. Documents relating to title and other agreements that may affect your property are available to the public for a fee. It is recommended that a property search at the Land Registry Office be included in any investigation as to the historic use of your property. The City of Ottawa cannot comment on any documents to which it is not a party.

Court House
161 Elgin Street 4th Floor
Ottawa ON K2P 2K1
Tel: (613) 239-1230
Fax: (613) 239-1422

Please note, as per the HLUI Disclaimer, that the information contained in the HLUI database has been compiled from publicly available records and other sources of information. The HLUI may contain erroneous information given that the records used as sources of information may be flawed. For instance, changes in municipal addresses over time may introduce error. Accordingly, all information from the HLUI database is provided on an “as is” basis with no representation or warranty by the City with respect to the information’s accuracy or exhaustiveness in responding to the request.

Furthermore, the HLUI database and the results of this search in no way confirm the presence or absence of contamination or pollution of any kind. This information is provided on the assumption that it will not be relied upon by any person for any purpose whatsoever. The City of Ottawa denies all liability to any persons attempting to rely on any information provided from the HLUI database.

Please note that in responding to your request, the City of Ottawa does not guarantee or comment on the environmental condition of the Subject Property. You may wish to contact the Ontario Ministry of Environment and Climate Change for additional information.

If you have any further questions or comments, please contact HLUI@ottawa.ca.

Sincerely,

Steven Payne
Student Planner

Environmental Risk Management Area (ERMA)

Site ID: 2

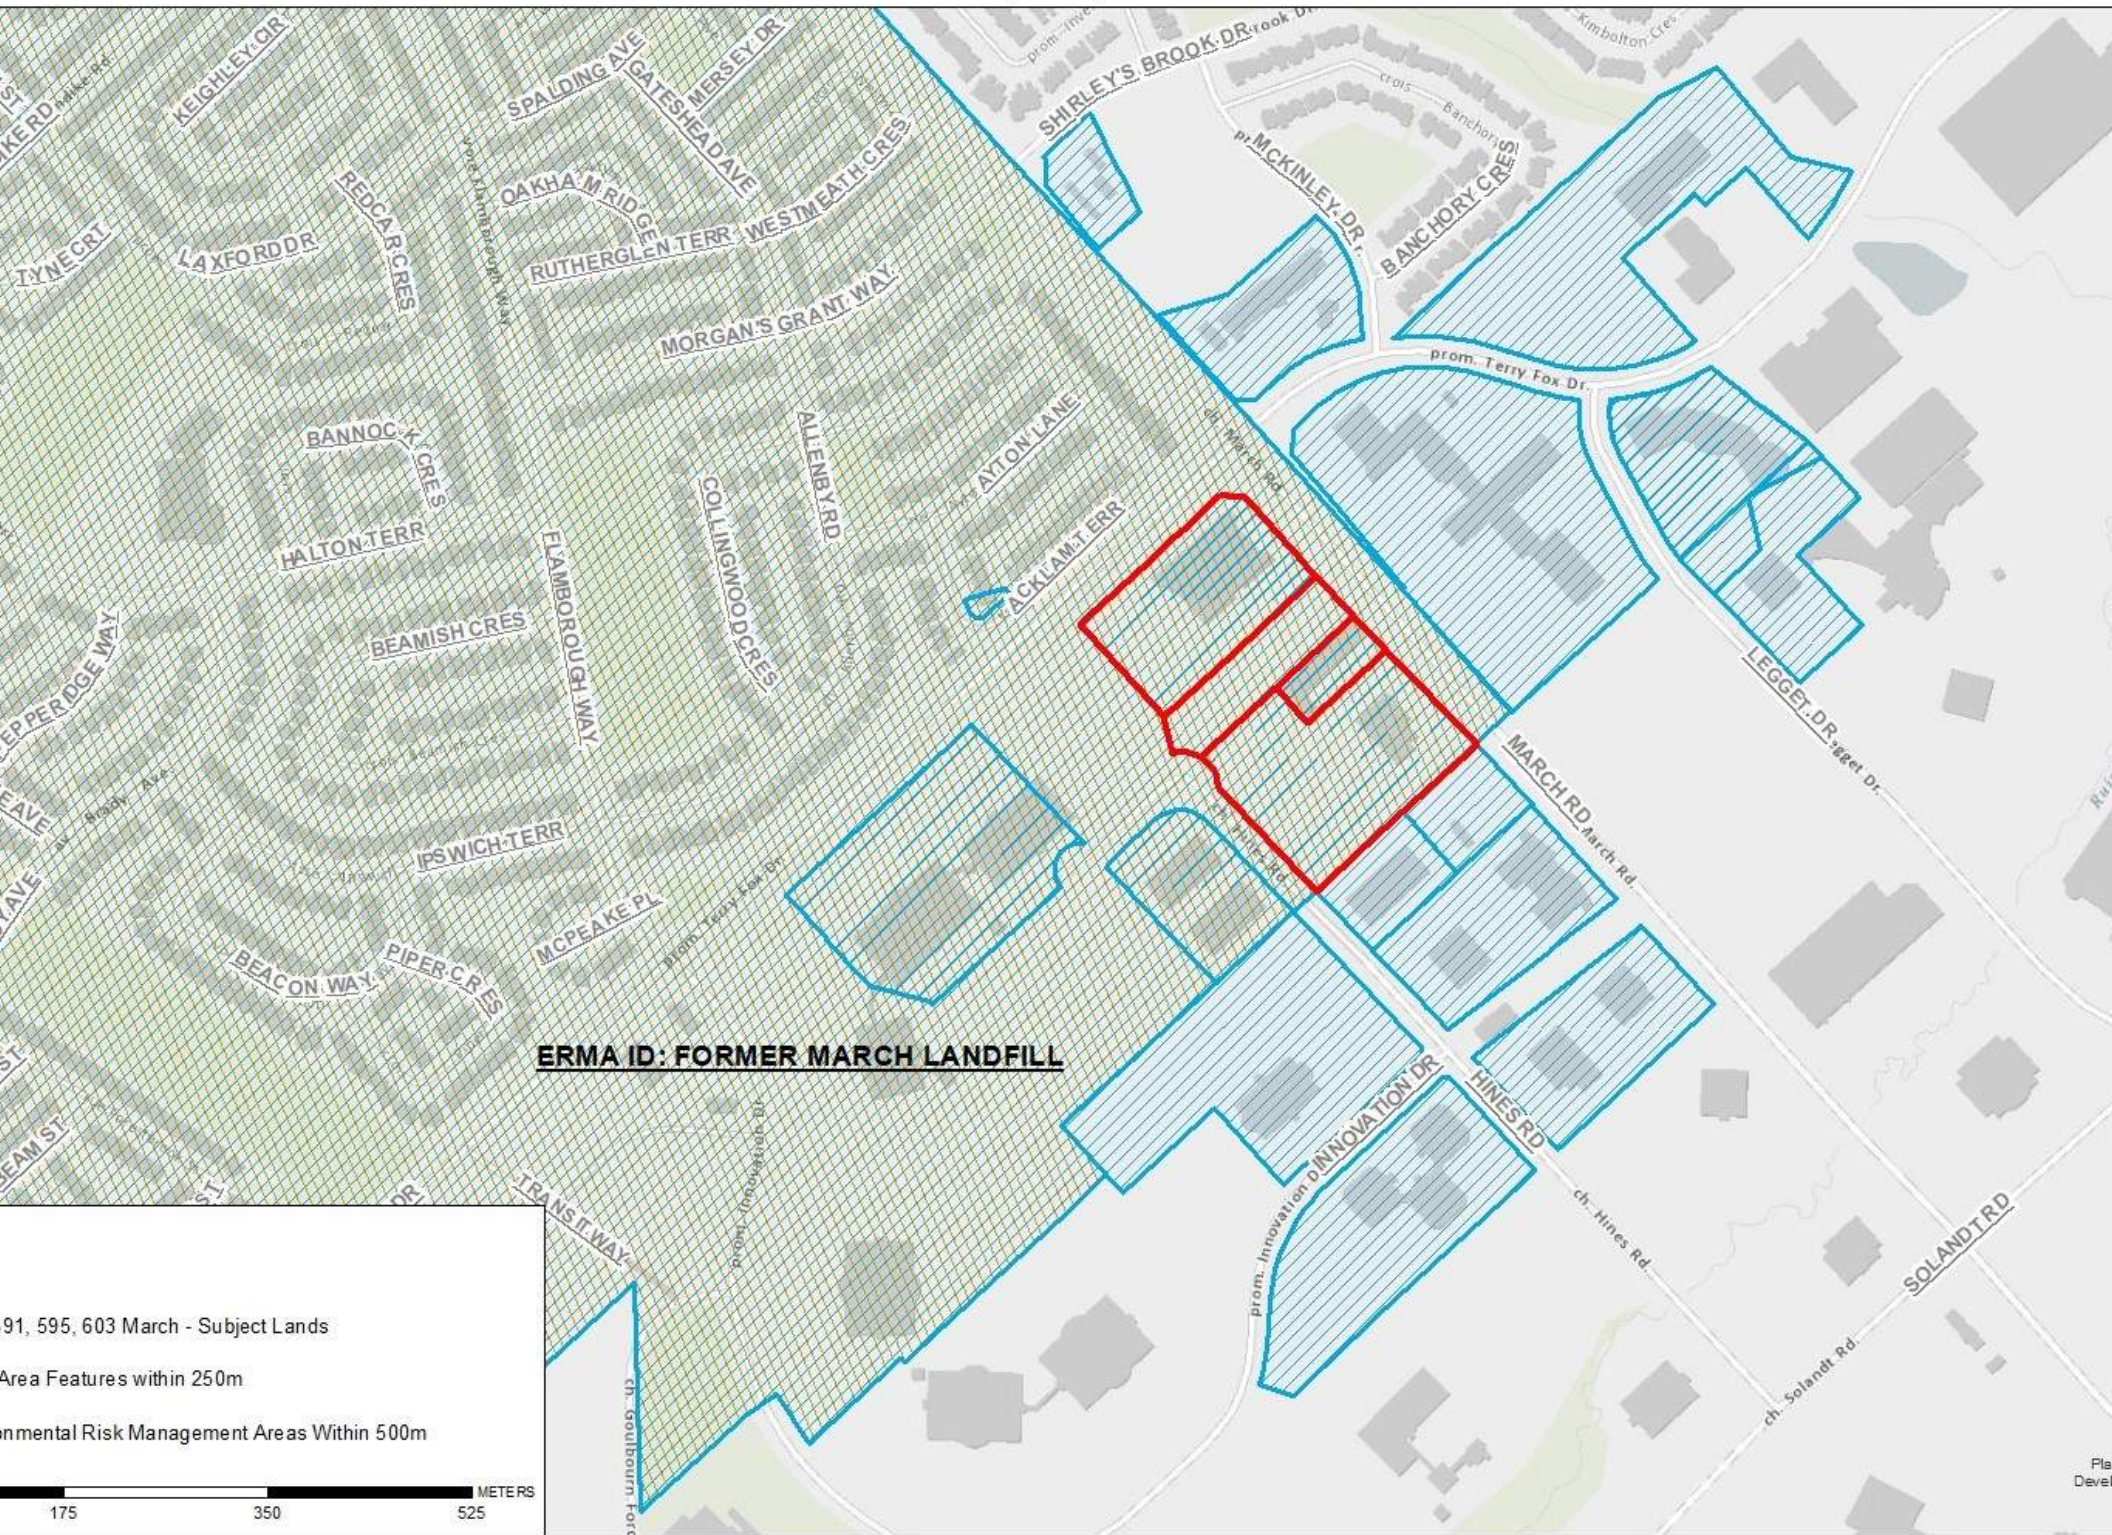

TERRY FOX DRIVE AT MARCH ROAD – FORMER MARCH LANDFILL

The historic March Landfill operated in this area from 1963 to 1974. There is known groundwater contamination (chlorinated solvents) that extends about 1.5 km from the former March Landfill. Special consideration should be given for projects involving management of groundwater (i.e. contact w/ groundwater, pumping and/or dewatering).

For more information please contact the City's Environmental Remediation Unit (ERU) at ERU-UAE@ottawa.ca

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Limited Partnership ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Limited Partnership. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Executive Summary

Property Information:

Project Property: *March Road Phase One ESA
555, 591, 595, and 603 March Road Kanata ON K2K 2M5*

Project No: 2200626

Order Information:

Order No: 22051300303
Date Requested: May 13, 2022
Requested by: Omni-McCann Inc.
Report Type: RSC Report - Quote

Historical/Products:

City Directory Search *CD - Subject Site plus 250m Radius*
ERIS Xplorer [ERIS Xplorer](#)
Insurance Products *Fire Insurance Maps/Inspection Reports/Site Plans*
Topographic Map *RSC Maps*

Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " * " indicates that the database will no longer be updated. See the individual database description for more information.

Abandoned Aggregate Inventory:

Provincial [AAGR](#)

The MAAP Program maintains a database of abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.*

Government Publication Date: Sept 2002*

Aggregate Inventory:

Provincial [AGR](#)

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

Government Publication Date: Up to Nov 2021

Abandoned Mine Information System:

Provincial [AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

Government Publication Date: 1800-Mar 2022

Anderson's Waste Disposal Sites:

Private [ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1860s-Present

Aboveground Storage Tanks:

Provincial [AST](#)

Historical listing of aboveground storage tanks made available by the Department of Natural Resources and Forestry. Includes tanks used to hold water or petroleum. This dataset has been retired as of September 25, 2014 and will no longer be updated.

Government Publication Date: May 31, 2014

Automobile Wrecking & Supplies:

Private [AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

Government Publication Date: 1999-Sep 30, 2021

Borehole:

Provincial [BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

Government Publication Date: 1875-Jul 2018

Certificates of Approval:

Provincial CA

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

Government Publication Date: 1985-Oct 30, 2011*

Dry Cleaning Facilities:

Federal CDRY

List of dry cleaning facilities made available by Environment and Climate Change Canada. Environment and Climate Change Canada's Tetrachloroethylene (Use in Dry Cleaning and Reporting Requirements) Regulations (SOR/2003-79) are intended to reduce releases of tetrachloroethylene to the environment from dry cleaning facilities.

Government Publication Date: Jan 2004-Dec 2019

Commercial Fuel Oil Tanks:

Provincial CFOT

Locations of commercial underground fuel oil tanks. This is not a comprehensive or complete inventory of commercial fuel tanks in the province; this listing is a copy of records of registered commercial underground fuel oil tanks obtained under Access to Public Information.

Note that the following types of tanks do not require registration: waste oil tanks in apartments, office buildings, residences, etc.; aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Chemical Manufacturers and Distributors:

Private CHEM

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

Government Publication Date: 1999-Jan 31, 2020

Chemical Register:

Private CHM

This database includes a listing of locations of facilities within the Province or Territory that either manufacture and/or distributes chemicals.

Government Publication Date: 1999-Sep 30, 2021

Compressed Natural Gas Stations:

Private CNG

Canada has a network of public access compressed natural gas (CNG) refuelling stations. These stations dispense natural gas in compressed form at 3,000 pounds per square inch (psi), the pressure which is allowed within the current Canadian codes and standards. The majority of natural gas refuelling is located at existing retail gasoline that have a separate refuelling island for natural gas. This list of stations is made available by the Canadian Natural Gas Vehicle Alliance.

Government Publication Date: Dec 2012 -Apr 2022

Inventory of Coal Gasification Plants and Coal Tar Sites:

Provincial COAL

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.*

Government Publication Date: Apr 1987 and Nov 1988*

Compliance and Convictions:

Provincial CONV

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

Government Publication Date: 1989-Jan 2022

Certificates of Property Use:

Provincial CPU

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

Government Publication Date: 1994 - Apr 30, 2022

Drill Hole Database:

Provincial [DRL](#)

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

Government Publication Date: 1886 - Sep 2020

Delisted Fuel Tanks:

Provincial [DTNK](#)

List of fuel storage tank sites that were once found in - and have since been removed from - the list of fuel storage tanks made available by the regulatory agency under Access to Public Information.

Government Publication Date: Feb 28, 2022

Environmental Activity and Sector Registry:

Provincial [EASR](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

Government Publication Date: Oct 2011- Apr 30, 2022

Environmental Registry:

Provincial [EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

Government Publication Date: 1994 - Apr 30, 2022

Environmental Compliance Approval:

Provincial [ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

Government Publication Date: Oct 2011- Apr 30, 2022

Environmental Effects Monitoring:

Federal [EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

Government Publication Date: 1992-2007*

ERIS Historical Searches:

Private [EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

Government Publication Date: 1999-Mar 31, 2022

Environmental Issues Inventory System:

Federal [EIIS](#)

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

Government Publication Date: 1992-2001*

Emergency Management Historical Event:

Provincial **EMHE**

List of locations of historical occurrences of emergency events, including those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act, as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance. EMHE record details are reproduced by ERIS under License with the Ontario Ministry of Natural Resources © Queen's Printer for Ontario, 2017.

Government Publication Date: Dec 31, 2016

Environmental Penalty Annual Report:

Provincial **EPAR**

This database contains data from Ontario's annual environmental penalty report published by the Ministry of the Environment and Climate Change. These reports provide information on environmental penalties for land / water violations issued to companies in one of the nine industrial sectors covered by the Municipal Industrial Strategy for Abatement (MISA) regulations.

Government Publication Date: Jan 1, 2011 - Dec 31, 2021

List of Expired Fuels Safety Facilities:

Provincial **EXP**

List of facilities and tanks for which there was once a fuel registration. This is not a comprehensive or complete inventory of expired tanks/tank facilities in the province; this listing is a copy of previously registered tanks and facilities obtained under Access to Public Information. Includes private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc; includes tanks which have been removed from the ground.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Federal Convictions:

Federal **FCON**

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

Government Publication Date: 1988-Jun 2007*

Contaminated Sites on Federal Land:

Federal **FCS**

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government. Includes fire training sites and sites at which Per- and Polyfluoroalkyl Substances (PFAS) are a concern.

Government Publication Date: Jun 2000-Apr 2022

Fisheries & Oceans Fuel Tanks:

Federal **FOFT**

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

Government Publication Date: 1964-Sep 2019

Federal Identification Registry for Storage Tank Systems (FIRSTS):

Federal **FRST**

A list of federally regulated Storage tanks from the Federal Identification Registry for Storage Tank Systems (FIRSTS). FIRSTS is Environment and Climate Change Canada's database of storage tank systems subject to the Storage Tank for Petroleum Products and Allied Petroleum Products Regulations. The main objective of the Regulations is to prevent soil and groundwater contamination from storage tank systems located on federal and aboriginal lands. Storage tank systems that do not have a valid identification number displayed in a readily visible location on or near the storage tank system may be refused product delivery.

Government Publication Date: May 31, 2018

Fuel Storage Tank:

Provincial **FST**

List of registered private and retail fuel storage tanks. This is not a comprehensive or complete inventory of private and retail fuel storage tanks in the province; this listing is a copy of registered private and retail fuel storage tanks, obtained under Access to Public Information.

Notes: registration was not required for private fuel underground/aboveground storage tanks prior to January 1990, nor for furnace oil tanks prior to May 1, 2002; registration is not required for waste oil tanks in apartments, office buildings, residences, etc., or aboveground gas or diesel tanks. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Fuel Storage Tank - Historic:

Provincial

[FSTH](#)

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks. Public records of private fuel storage tanks are only available since the registration became effective in September 1989. This information is now collected by the Technical Standards and Safety Authority.

Government Publication Date: Pre-Jan 2010*

Ontario Regulation 347 Waste Generators Summary:

Provincial

[GEN](#)

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

Government Publication Date: 1986-Feb 28, 2022

Greenhouse Gas Emissions from Large Facilities:

Federal

[GHG](#)

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO₂ eq).

Government Publication Date: 2013-Dec 2019

TSSA Historic Incidents:

Provincial

[HINC](#)

List of historic incidences of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen recorded by the TSSA in their previous incident tracking system. The TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, the TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Records are not verified for accuracy or completeness. This is not a comprehensive or complete inventory of historical fuel spills and leaks in the province. This listing is a copy of the data captured at one moment in time and is hence limited by the record date provided here.

Government Publication Date: 2006-June 2009*

Indian & Northern Affairs Fuel Tanks:

Federal

[IAFT](#)

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

Government Publication Date: 1950-Aug 2003*

Fuel Oil Spills and Leaks:

Provincial

[INC](#)

Listing of spills and leaks of diesel, fuel oil, gasoline, natural gas, propane, and hydrogen reported to the Spills Action Centre (SAC). This is not a comprehensive or complete inventory of fuel-related leaks, spills, and incidents in the province; this listing is a copy of incidents reported to the SAC, obtained under Access to Public Information. Includes incidents from fuel-related hazards such as spills, fires, and explosions. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Landfill Inventory Management Ontario:

Provincial

[LIMO](#)

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the Ministry of the Environment, Conservation and Parks compiles new and updated information. Includes small and large landfills currently operating as well as those which are closed and historic. Operators of larger landfills provide landfill information for the previous operating year to the ministry for LIMO including: estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills include information such as site owner, site location and certificate of approval # and status.

Government Publication Date: Feb 28, 2019

Canadian Mine Locations:

Private

[MINE](#)

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

Government Publication Date: 1998-2009*

Mineral Occurrences:

Provincial [MNR](#)

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

Government Publication Date: 1846-Feb 2022

National Analysis of Trends in Emergencies System (NATES):

Federal [NATE](#)

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

Government Publication Date: 1974-1994*

Non-Compliance Reports:

Provincial [NCPL](#)

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

Government Publication Date: Dec 31, 2020

National Defense & Canadian Forces Fuel Tanks:

Federal [NDFT](#)

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

Government Publication Date: Up to May 2001*

National Defense & Canadian Forces Spills:

Federal [NDSP](#)

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

Government Publication Date: Mar 1999-Apr 2018

National Defence & Canadian Forces Waste Disposal Sites:

Federal [NDWD](#)

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

Government Publication Date: 2001-Apr 2007*

National Energy Board Pipeline Incidents:

Federal [NEBI](#)

Locations of pipeline incidents from 2008 to present, made available by the Canada Energy Regulator (CER) - previously the National Energy Board (NEB). Includes incidents reported under the Onshore Pipeline Regulations and the Processing Plant Regulations related to pipelines under federal jurisdiction, does not include incident data related to pipelines under provincial or territorial jurisdiction.

Government Publication Date: 2008-Jun 30, 2021

National Energy Board Wells:

Federal [NEBP](#)

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

Government Publication Date: 1920-Feb 2003*

National Environmental Emergencies System (NEES):

Federal

NEES

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

Government Publication Date: 1974-2003***National PCB Inventory:**

Federal

NPCB

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

Government Publication Date: 1988-2008***National Pollutant Release Inventory:**

Federal

NPRI

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

Government Publication Date: 1993-May 2017**Oil and Gas Wells:**

Private

OGWE

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at www.nickles.com.

Government Publication Date: 1988-Feb 28, 2022**Ontario Oil and Gas Wells:**

Provincial

OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

Government Publication Date: 1800-Jan 2021**Inventory of PCB Storage Sites:**

Provincial

OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

Government Publication Date: 1987-Oct 2004; 2012-Dec 2013**Orders:**

Provincial

ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

Government Publication Date: 1994 - Apr 30, 2022**Canadian Pulp and Paper:**

Private

PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

Government Publication Date: 1999, 2002, 2004, 2005, 2009-2014**Parks Canada Fuel Storage Tanks:**

Federal

PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

Government Publication Date: 1920-Jan 2005*

Pesticide Register:

Provincial PES

The Ontario Ministry of the Environment and Climate Change maintains a database of licensed operators and vendors of registered pesticides.

Government Publication Date: Oct 2011- Apr 30, 2022

Pipeline Incidents:

Provincial PINC

List of pipeline incidents (strikes, leaks, spills). This is not a comprehensive or complete inventory of pipeline incidents in the province; this listing in an historical copy of records previously obtained under Access to Public Information. Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2021

Private and Retail Fuel Storage Tanks:

Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

Government Publication Date: 1989-1996*

Permit to Take Water:

Provincial PTTW

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

Government Publication Date: 1994 - Apr 30, 2022

Ontario Regulation 347 Waste Receivers Summary:

Provincial REC

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

Government Publication Date: 1986-1990, 1992-2019

Record of Site Condition:

Provincial RSC

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

Government Publication Date: 1997-Sept 2001, Oct 2004-Apr 2022

Retail Fuel Storage Tanks:

Private RST

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

Government Publication Date: 1999-Sep 30, 2021

Scott's Manufacturing Directory:

Private SCT

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

Government Publication Date: 1992-Mar 2011*

Ontario Spills:

Provincial SPL

List of spills and incidents made available the Ministry of the Environment, Conservation and Parks. This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X. The Ministry of the Environment, Conservation and Parks cites the coronavirus pandemic as an explanation for delays in releasing data pursuant to requests.

Government Publication Date: 1988-Sep 2020; Dec 2020-Mar 2021

Wastewater Discharger Registration Database:

Provincial [SRDS](#)

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

Government Publication Date: 1990-Dec 31, 2019

Anderson's Storage Tanks:

Private [TANK](#)

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

Government Publication Date: 1915-1953*

Transport Canada Fuel Storage Tanks:

Federal [TCFT](#)

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

Government Publication Date: 1970 - Dec 2020

Variations for Abandonment of Underground Storage Tanks:

Provincial [VAR](#)

Listing of variances granted for storage tank abandonment. This is not a comprehensive or complete inventory of tank abandonment variances in the province; this listing is a copy of tank abandonment variance records previously obtained under Access to Public Information. In Ontario, registered underground storage tanks must be removed within two years of disuse; if removal of a tank is not feasible, an application may be sought for a variance from this code requirement.

Records are not verified for accuracy or completeness.

Government Publication Date: Feb 28, 2022

Waste Disposal Sites - MOE CA Inventory:

Provincial [WDS](#)

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

Government Publication Date: Oct 2011- Apr 30, 2022

Waste Disposal Sites - MOE 1991 Historical Approval Inventory:

Provincial [WDSH](#)

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30th, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

Government Publication Date: Up to Oct 1990*

Water Well Information System:

Provincial [WWIS](#)

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

Government Publication Date: Sep 30, 2021

Definitions

Database Descriptions: This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

Detail Report: This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

Distance: The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

Direction: The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

Elevation: The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

Executive Summary: This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

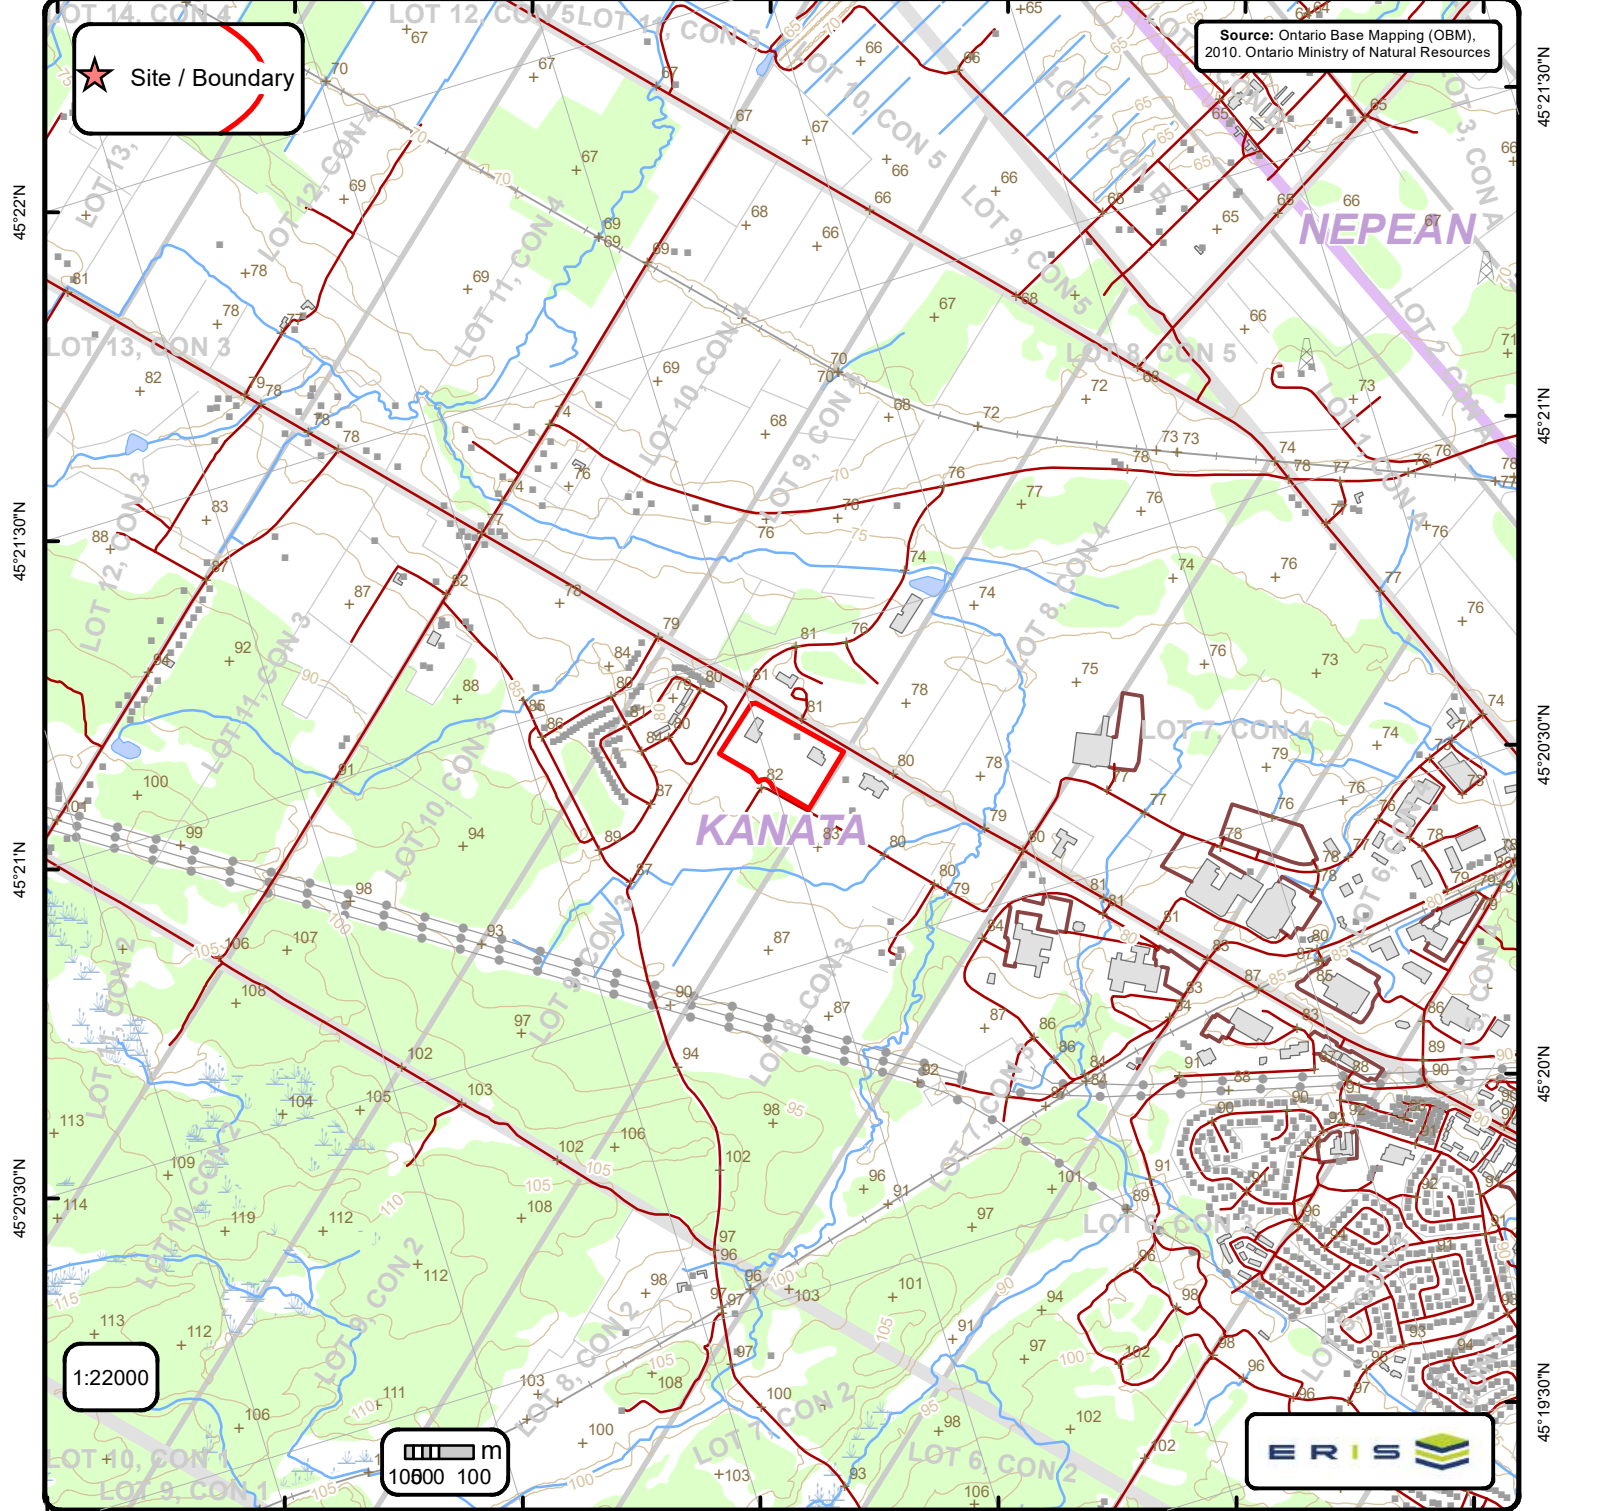

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

Map Key: The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

Unplottables: These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

Surface Geology Report Metadata

Ontario Geological Survey 2010. Surficial geology of southern Ontario;
Ontario Geological Survey, Miscellaneous Release - Data 128 - Revised.

ONTARIO MINISTRY OF NORTHERN DEVELOPMENT, MINES AND FORESTRY

ID - ID applied to the Unit

Unit Name - Name of deposit

Deposit Type Code - The geological unit number taken from the original map legend.

Deposit Age - to show the age when the sediments were deposited, e.g., Wisconsinan, postglacial or recent.

Map Number - Original map series number, eg., 'M2402' or 'P1973'. Each sgu_point feature is tagged to its original map.

Map Name - Usually NTS area where mapping was completed, e.g., 'Golden Lake'

Source Map Scale - The scale at which the original map was captured, e.g., '1:50 000'

Primary Material - This attribute provides the user with information regarding the most prevalent material present within a given area.

Primary Material Modifier - This attribute provides the user with a more refined description of the lithological classification of the primary material.

Secondary Material - This attribute provides the user with information regarding subordinate materials present within a given area.

Primary General - This attribute provides the user with an interpretation of the depositional environment within which the primary material was deposited.

Primary General Modifier - This attribute provides the user with a refined interpretation of the primary genetic modifier.

Veneer - This attribute provides the user with information regarding the type of material that forms a thin, discontinuous veneer over the primary material.

Sub Episode - A diachronic stratigraphic unit in a lower order than Episode and the proposed sequence-stratigraphic classification, consists in descending order of Michigan, Elgin and Ontario in the eastern and northern Great Lakes area in the Wisconsin Episode (Johnson et al. 1997; Karrow et al. 2000).

Sub Episode - A diachronic stratigraphic unit in a lower order than Episode and the proposed sequence-stratigraphic classification, consists in descending order of Michigan, Elgin and Ontario in the eastern and northern Great Lakes area in the Wisconsin Episode (Johnson et al. 1997; Karrow et al. 2000).

Phase - A diachronic stratigraphic unit in a lower order than Subepisode, and the proposed sequence-stratigraphic classification is listed in the following table in the eastern and northern Great Lakes area (Karrow et al. 2000)

Stratus Modifier - This attribute provides the user information regarding the stratigraphic position of the mapped unit (i.e., whether the unit occurs primarily on the surface or in the subsurface).

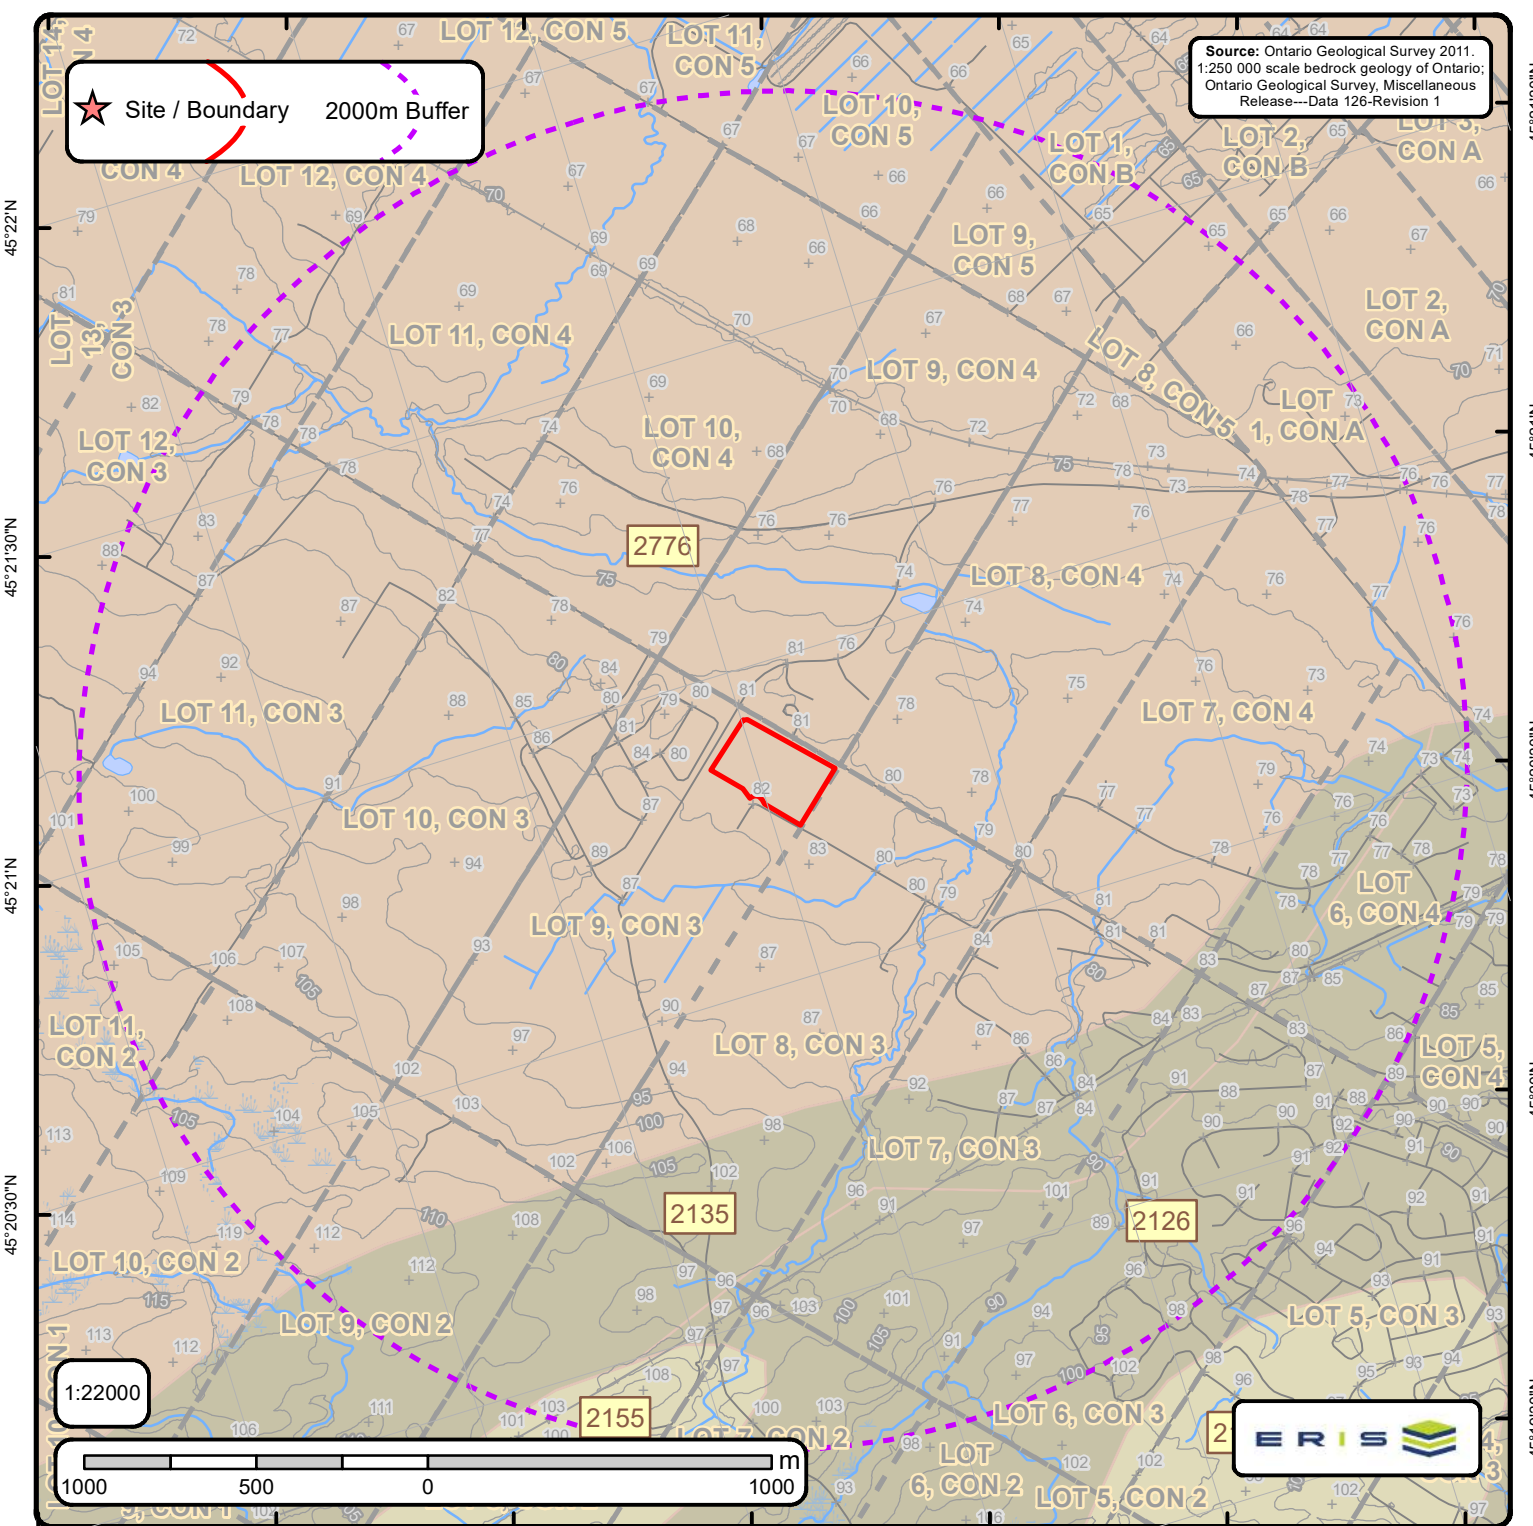

Provenance - This attribute provides the user with information regarding the provenance of a particular till unit (i.e. direction or lobe from which the till is derived).

Carbon Content - This attribute provides the user with information regarding the carbonate content of till.

Formation - This attribute provides the user with information regarding the formation to which a given primary material belongs (e.g., Tavistock Till, Port Stanley Till, Scarborough Formation). This attribute is seamless and allows the user to create a map based on formation.

Permeability - This attribute provides the user with basic information about permeability of the sediments in a ranking of high, medium and low.

Material Description - Material or sediment description, e.g., 'sand and silty fine sand', 'silty sand and gravel' and 'silty till with low stone content'.

ID: 2776 | **Unit Name:** |
Type (All): 53 | **Type (Primary):** 53 | **Type (Secondary):** | **Type (Tertiary):** | **Rock Type (Primary):** Dolostone, sandstone | **Strata (Primary):** Beekmantown Group | **Super Eon (Primary):** | **Eon (Primary):** PHANEROZOIC (Present to 542.0 Ma) | **Era (Primary):** PALEOZOIC (251.0 Ma to 542.0 Ma) | **Period (Primary):** ORDOVICIAN (443.7 Ma to 488.3 Ma) | **Epoch (Primary):** LOWER ORDOVICIAN | **Province (Primary):**

ID: 2126 | **Unit Name:** Clastic metasedimentary rocks |
Type (All): 45 | **Type (Primary):** 45 | **Type (Secondary):** | **Type (Tertiary):** | **Rock Type (Primary):** Conglomerate, wacke, quartz arenite, arkose, limestone, siltstone, chert, minor iron formation, minor metavolcanic rocks | **Strata (Primary):** Grenville Supergroup and Flinton Group (ask Mike if this covers any other units) | **Super Eon (Primary):** PRECAMBRIAN (0.542 Ga to <3.85 Ga) | **Eon (Primary):** PROTEROZOIC (0.542 Ga to 2.50 Ga) | **Era (Primary):** NEO-TO MESOPROTEROZOIC (0.542 Ga to 1.6 Ga) | **Period (Primary):** | **Epoch (Primary):** | **Province (Primary):** GRENVILLE

ID: 2135 | **Unit Name:** Clastic metasedimentary rocks |
Type (All): 45 | **Type (Primary):** 45 | **Type (Secondary):** | **Type (Tertiary):** | **Rock Type (Primary):** Conglomerate, wacke, quartz arenite, arkose, limestone, siltstone, chert, minor iron formation, minor metavolcanic rocks | **Strata (Primary):** Grenville Supergroup and Flinton Group (ask Mike if this covers any other units) | **Super Eon (Primary):** PRECAMBRIAN (0.542 Ga to <3.85 Ga) | **Eon (Primary):** PROTEROZOIC (0.542 Ga to 2.50 Ga) | **Era (Primary):** NEO-TO MESOPROTEROZOIC (0.542 Ga to 1.6 Ga) | **Period (Primary):** | **Epoch (Primary):** | **Province (Primary):** GRENVILLE

ID: 2155 | **Unit Name:** Mafic to ultramafic plutonic rocks |
Type (All): 49 | **Type (Primary):** 49 | **Type (Secondary):** | **Type (Tertiary):** | **Rock Type (Primary):** Diorite, gabbro, peridotite, pyroxenite, anorthosite, derived metamorphic rocks | **Strata (Primary):** | **Super Eon (Primary):** PRECAMBRIAN (0.542 Ga to <3.85 Ga) | **Eon (Primary):** PROTEROZOIC (0.542 Ga to 2.50 Ga) | **Era (Primary):** NEO-TO MESOPROTEROZOIC (0.542 Ga to 1.6 Ga) | **Period (Primary):** | **Epoch (Primary):** | **Province (Primary):** GRENVILLE

Bedrock Geology Report Metadata

Ontario Geological Survey 2011. 1:250 000 scale bedrock geology of Ontario; Ontario Geological Survey, Miscellaneous Release-Data 126
Revision1
ONTARIO MINISTRY OF NORTHERN DEVELOPMENT, MINES AND FORESTRY

ID - Unit ID **Unit Name** - Generalized geological unit classification

Type (All) - The geological unit number(s) or code(s) for all rock types present in an individual polygon.

Type (Primary) - The primary geological unit number or code for the primary rock type in an individual polygon

Type (Secondary) - The secondary geological unit number or code for the secondary rock type, if present, in an individual polygon

Type (Tertiary) - The tertiary geological unit number or code for the tertiary rock type, if present, in an individual polygon

Rock Type (Primary) - Rock type or sub-unit description

Status (Primary) - The Stratigraphic unit. Divided into:

Supergroup (two or more groups and lone formations)
Group (two or more formations)
Formation (primary unit of lithostratigraphy)
Member (named lithologic subdivision of a formation)
Bed (named distinctive layer in a member or formation)

Super Eon (Primary) - A name given to the largest defined unit of geological time, divided into Eons. Unique values which this field may contain (Domains) are:

PRECAMBRIAN (0.542 Ga to <3.85 Ga)

Eon (Primary) - A name given to a defined unit of geological time, divided into Eras. Unique values which this field may contain (Domains) are:

ARCHEAN (2.5 Ga to <3.85 Ga)
PROTEROZOIC (0.542 Ga to 2.50 Ga)
PHANEROZOIC (Present to 542.0 Ma)

Era (Primary) - A name given to a defined unit of geological time, divided into Periods. Each era on the scale is separated from the next by a major event or change. Unique values which this field may contain (Domains) are:

MESOARCHEAN (2.8 Ga to 3.2 Ga)	MESOPROTEROZOIC (1.0 Ga to 1.6 Ga)
NEO-TO MESOARCHEAN (2.5 Ga to 3.2 Ga)	EARLY PALEOZOIC TO NEOPROTEROZOIC (443.7 Ma to 1.0 Ga)
NEOARCHEAN (2.5 Ga to 2.8 Ga)	NEO-TO MESOPROTEROZOIC (0.542 Ga to 1.6 Ga)
PALEOPROTEROZOIC (1.6 Ga to 2.5 Ga)	PALEOZOIC (251.0 Ma to 542.0 Ma)
MESO-TO PALEOPROTEROZOIC (1.0 Ga to 2.5 Ga)	MESOZOIC (65.5 Ma to 251.0 Ma)

Period (Primary) - A name given to a defined unit of geological time, divided into Epochs. Unique values which this field may contain (Domains) are:

CAMBRIAN (488.3 Ma to 542.0 Ma)
ORDOVICIAN (443.7 Ma to 488.3 Ma)
SILURIAN (416.0 Ma to 443.7 Ma)
DEVONIAN (359.2 Ma to 416.0 Ma)
MISSISSIPPIAN TO DEVONIAN (318.1 Ma to 416.0 Ma)
JURASSIC (145.5 Ma to 199.6 Ma)
CRETACEOUS AND JURASSIC (65.5 Ma to 199.6 Ma)

Epoch (Primary) - A name given to a defined unit of geological time. Unique values which this field may contain (Domains) are:

LOWER ORDOVICIAN	UPPER SILURIAN
MIDDLE ORDOVICIAN	LOWER DEVONIAN
UPPER ORDOVICIAN	MIDDLE DEVONIAN
MIDDLE AND LOWER SILURIAN	UPPER DEVONIAN
UPPER SILURIAN TO LOWER DEVONIAN	LOWER CRETACEOUS AND MIDDLE JURASSIC

Province (Primary) - The Geological Province the geological unit is in. Unique values which this field may contain (Domains) are:

SUPERIOR
SOUTHERN
SUPERIOR
GRENVILLE

Aerial Photos

1934 Aerial Photo – Scale 1:15,000. Phase one property roughly outlined in red

1945 Aerial Photo – Scale 1:15,000. Phase one property roughly outlined in red

1958 Aerial Photo – Scale 1:20,000. Phase one property roughly outlined in red

1965 Aerial Photo – Scale 1:15,000. Phase one property roughly outlined in red

1976 Aerial Photo – Collected from GeoOttawa. Phase one property roughly outlined in red

1985 Aerial Photo – Scale 1:15,000. Phase one property roughly outlined in red

1991 Aerial Photo – Collected from GeoOttawa. Phase one property roughly outlined in red

1999 Aerial Photo – Collected from GeoOttawa. Phase one property roughly outlined in red

2005 Aerial Photo – Collected from GeoOttawa. Phase one property roughly outlined in red

2011 Aerial Photo – Collected from GeoOttawa. Phase one property roughly outlined in red

2015 Aerial Photo – Collected from GeoOttawa. Phase one property roughly outlined in red

2021 Aerial Photo – Collected from GeoOttawa. Phase one property roughly outlined in red

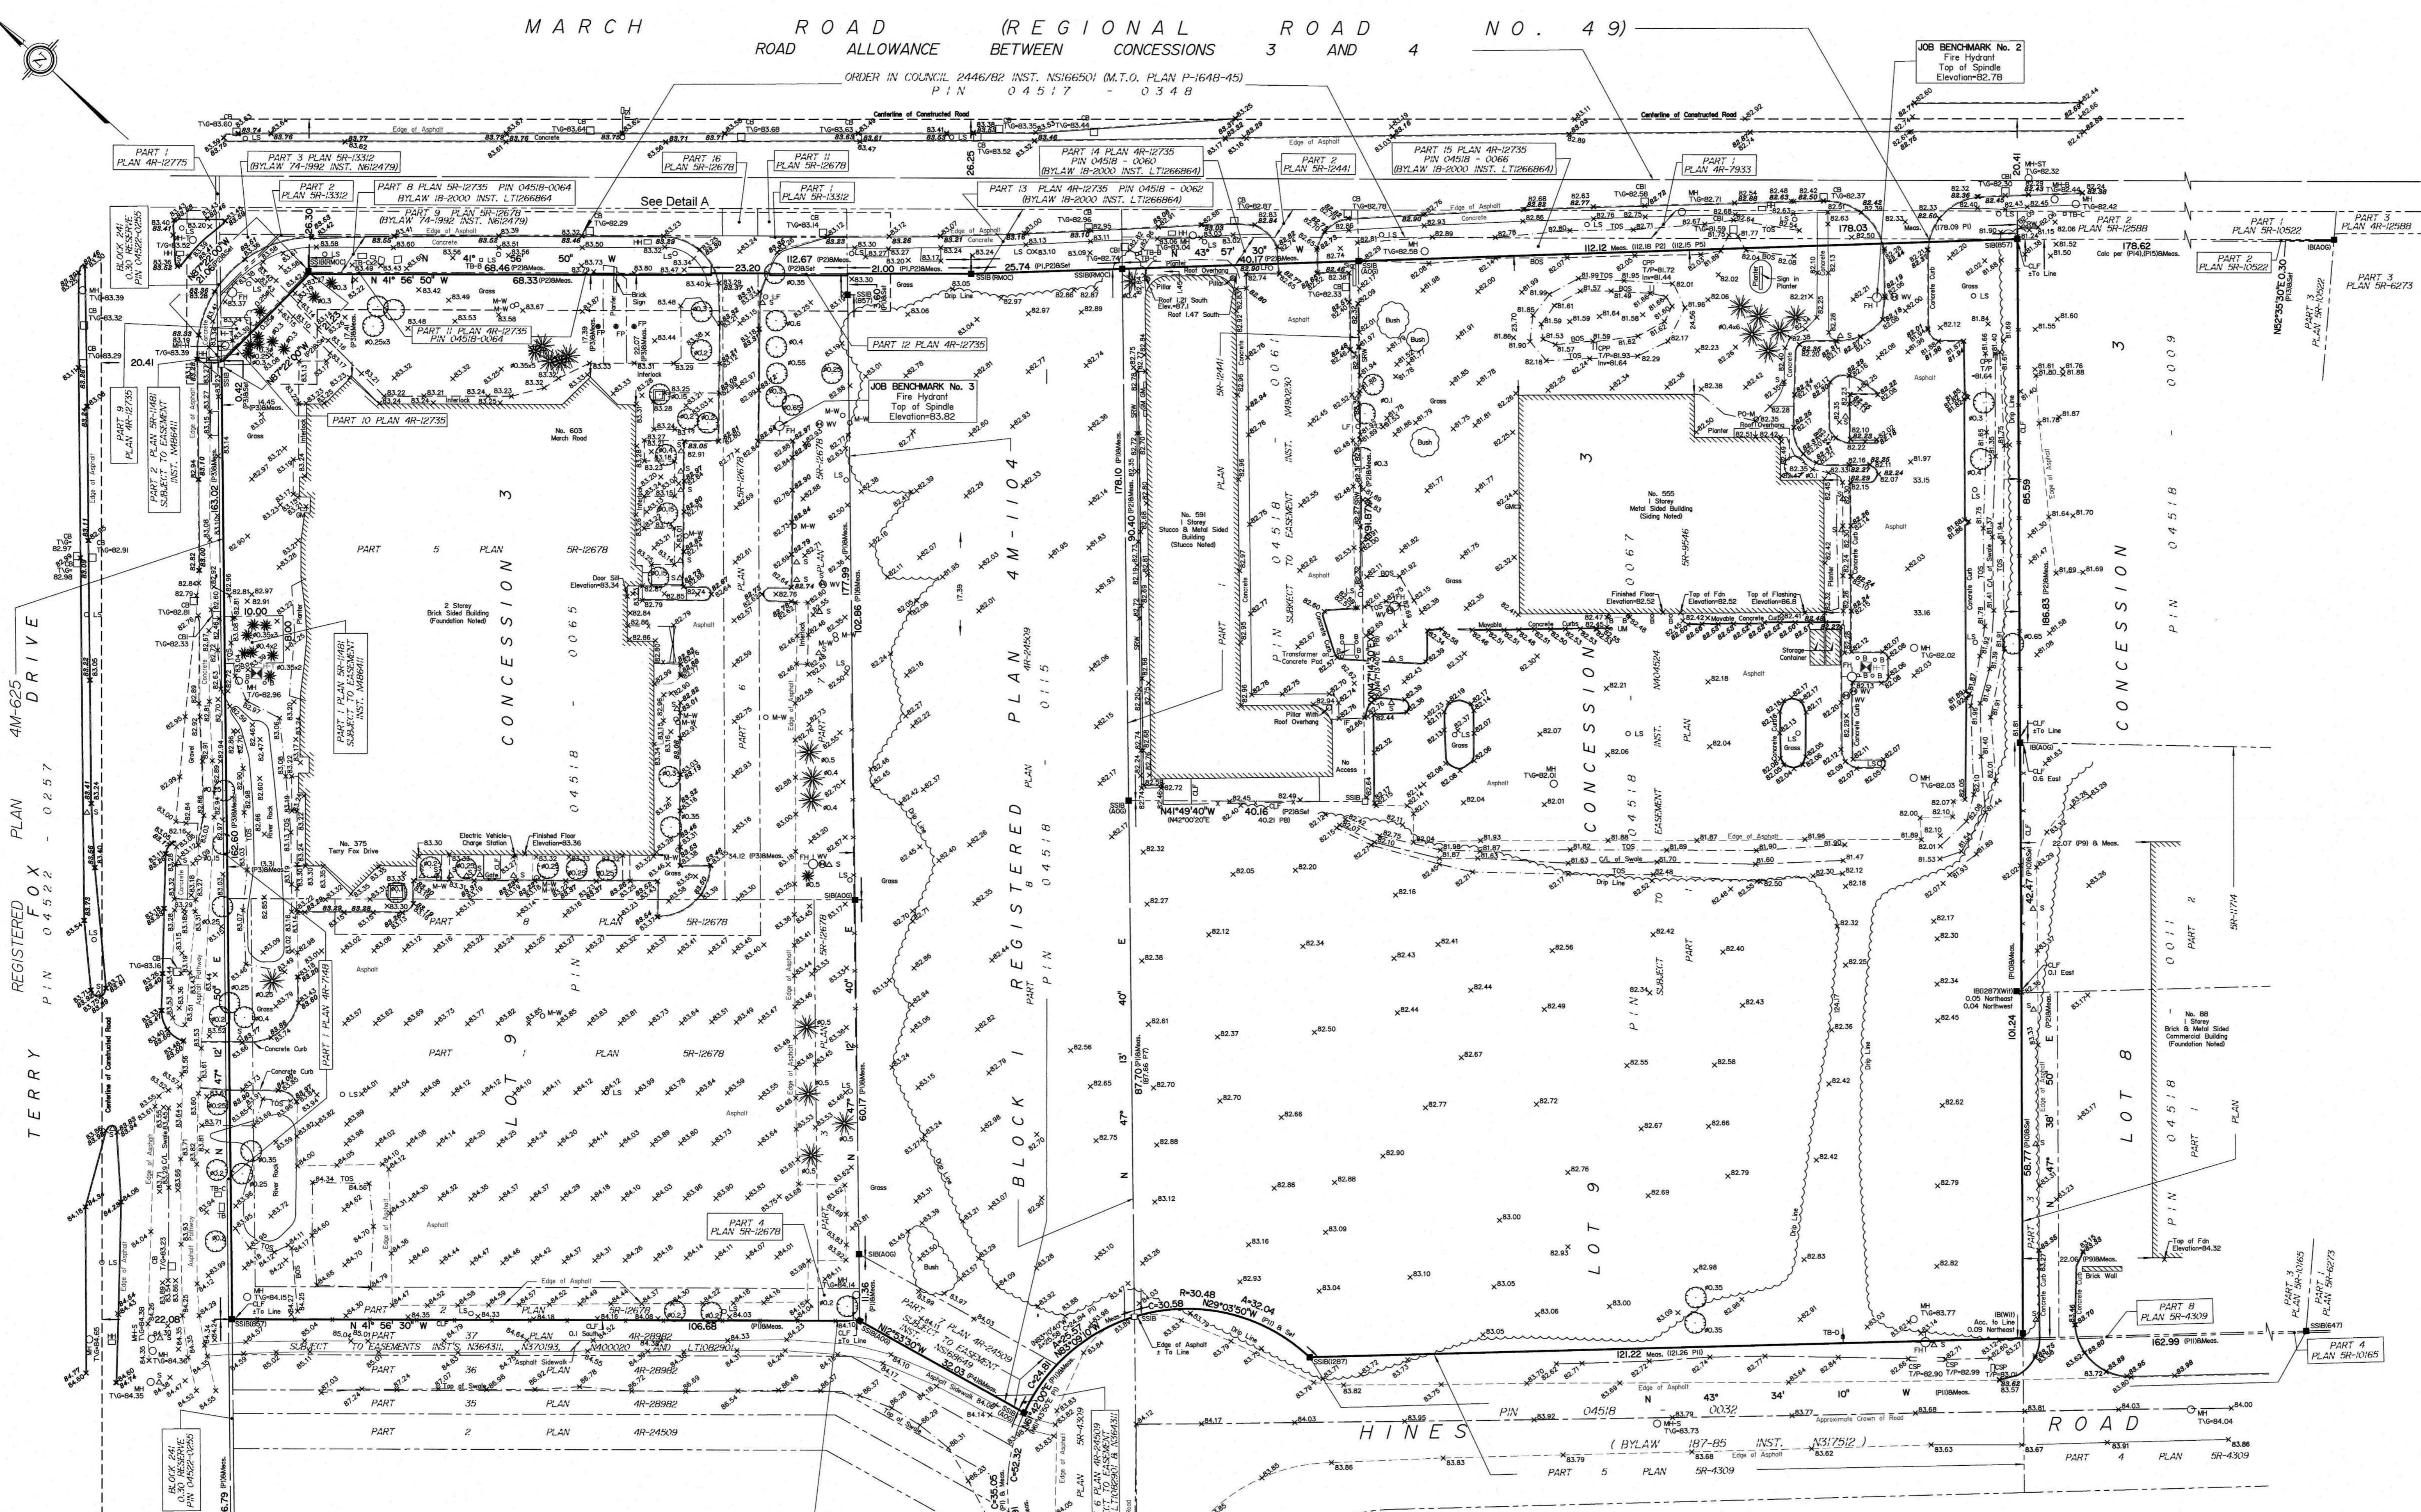

APPENDIX I

Plan of Survey

MARCH ROAD ROAD ALLOWANCE BETWEEN CONCESSIONS 3 AND 4 NO. 49

ORDER IN COUNCIL 2446/92 INST. NS166501 (M.T.O. PLAN P-1648-45)
P.I.N. 04517 - 0348

TOPOGRAPHICAL PLAN OF SURVEY OF
BLOCK 1
REGISTERED PLAN 4M-1104
AND PART OF LOT 9
CONCESSION 3
Geographic Township of March
OTTAWA
Surveyed by Annis, O'Sullivan, Vollebek Ltd.

Scale 1:500
0 10 20 30 40 50 60 70 80 90 100 Metres

Metric
DISTANCES SHOWN ON THIS PLAN ARE IN METRES AND
CAN BE CONVERTED TO FEET BY DIVIDING BY 0.3048

Surveyor's Certificate
I CERTIFY THAT:
1. This survey and plan are correct and in accordance with the Surveys
Act and the Surveyors Act and the regulations made under them.
2. The survey was completed on the 30th day of June, 2022.

July 13, 2022
Date
J. E. Anderson
Ontario Land Surveyor

Notes & Legend

- Denotes
- Survey Monument Planted

 - (P13) Plan 5R-16522
 - (P14) Plan 4R-12558
 - (P15) (AOG) Plan dated July 6, 1999
 - Deciduous Tree
 - Coniferous Tree
 - Fire Hydrant
 - Water Valve
 - Water Stand Post
 - Maintenance Hole (Sanitary)
 - Maintenance Hole (Bell Telephone)
 - Maintenance Hole (Traffic)
 - Maintenance Hole (Hydro)
 - Maintenance Hole (Unidentified)
 - Valve Chamber (Watermain)
 - Catch Basin
 - Corrugated Steel Pipe
 - Corrugated Plastic Pipe
 - Gas Meter
 - Handhole
 - Bell Terminal Box
 - Cable Terminal Box
 - Traffic Terminal Box
 - Unidentified Terminal Box
 - Traffic Signal Post
 - Bollard
 - Monitoring Well
 - Chain Link Fence
 - Sign
 - Board Fence
 - Iron Fence
 - Gate
 - Metal Pole
 - Traffic Light
 - Light Standard
 - Flag Pole
 - Diameter
 - Location of Elevations
 - Top of Concrete Curb Elevation
 - Centreline

Distances shown on this plan are ground distances and can be converted to grid distances by multiplying by the combined scale factor of 0.999912.
Bearings are grid, derived from Can-Net 2016 Real Time Network GPS observations referenced to Specified Control Points 0191980037 and 0191979151, MTM Zone 9 (79°30' West Longitude) NAD-83 (original).
For bearing comparisons, a rotation of 0°23'07" counter-clockwise was applied to bearings on plans P1 and P4, a rotation of 0°25'10" counter-clockwise was applied to bearings on plan P8 and a rotation of 0°24'40" counter-clockwise was applied to bearings on plan P11.

SITE AREA = 55524 m²

UTILITY NOTES
1. This drawing cannot be accepted as acknowledging all of the utilities and it will be the responsibility of the user to contact the respective utility authorities for confirmation.
2. Only visible surface utilities were located.
3. A field location of underground plant by the permit utility authority is mandatory before any work involving breaking ground, probing, excavating etc.

ELEVATION NOTES
1. Elevations shown are geodetic and are referred to the CGVD28 geodetic datum and are related to the Ministry of Natural Resources monument number 001198U001 having an elevation of 78.945.
2. It is the responsibility of the user of this information to verify that the job benchmark has not been altered or disturbed and that its relative elevation and description agrees with the information shown on this drawing.
